Mr. BRANDEGEE. Mr. President, the American Pin Co., of Waterbury, Conn., make hooks and eyes, both brass and steel. They say

Although we have endeavored to honestly represent, through briefs filed with the Ways and Means Committee of the House and Finance Committee of the Senate, conditions relating to the hook-and-eye business in this country, we seemed to have falled to receive the recognition which the subject deserves, judging from our viewpoint as manufacturers. The following is a condensation of briefs filed, and we take this last opportunity of placing before you the facts, in hope that in the final consideration of the measure we may receive some consideration

Under the McKinley bill, in the saving clause, the duty on hooks and eyes was 45 per cent, equal to 49 cents per great gross. We can not give the amount of importations, as they were covered by the saving clause and no record kept, but very large quantities came in, due to undervaluations.

The Wilson bill gave us a duty of 20 per cent, equal to 20 cents per great gross, and, remaining still in the saving clause of the tariff, no statistics were kept as to importations. Undervaluations continued and our machinery for this class of goods was practically closed down. Under the Dingley bill hooks and eyes were removed from the saving clause and given a duty of 5½ cents per pound, plus 15 per cent ad valorem, equal to 37 cents per great gross. The year previous importations amounted to 237,860 pounds, valued at \$43,666.

During the year 1901 importations amounted to 63,572 pounds, valued at \$15,033.

During the year 1909 they amounted to 11,486 pounds, valued at \$2,507.

During the year 1909 they amounted to 11,100 points, \$2.507.

The Payne bill reduced the duty to 4½ cents per pound and 15 per cent ad valorem, equal to 32 cents per great gross.

Importations during 1910 amounted to 19,318 pounds, valued at \$5,741; 1911, 54,463 pounds, valued at \$15,583; 1912, estimated, 60,000 pounds.

The Underwood bill and the Finance Committee bill abolishes the specific duty and leaves only an ad valorem duty of 15 per cent, equal to 11 cents per great gross, which will undoubtedly force us to stop our machines if the experience under the Wilson bill is repeated.

COMPARISON OF WAGES.

For operators of automatic machinery: PEngland pays.
Germany pays
United States pays
For women employed in packing goods, or "bench work," so called: Per week. - \$10.00 - 7.50 20, 00 called: England pays.

United States pays.

England pays.

England pays.

States pays.

The number of people employed in the hook-and-eye business in the United States is approximately 3,500, mostly women, engaged in sewing hooks and eyes upon cards, and to this latter operation we wish to call your particular attention. In foreign countries this work is done for from 4½ to 6 cents per great gross, while we actually pay in this country, not less than 30 cents and as high as 53 cents per great gross.

That the subject of carding has received the attention of the English Parliament is proven by the inclosed pamphlet, and as many paper boxes are used in connection with this product we inclose a copy of a law in England, and in comparison with the minimum wage in England our women who are engaged in the paper-box industry in our own plant are receiving from \$9 to \$12 per week, and no children employed.

It has been said to me in a letter from a Senator that under date of May 15, 1913, it was published that the percentage of wage cost of our product in this line is estimated to be 30.8 cents of the total and that the statistics were taken from the latest census. This statement is not true, as is obvious from the fact that hooks and eyes are made from both brass and steel wire, and while the labor cost per great gross is the same the material cost differs widely, which is shown as follows:

Hooks and eyes, made of brass wire, the percentages are: Material, 22 per cent of the whole; labor, 5

Mr. President, the President of the United States came before the Congress on the 8th day of April, 1913, at the opening of this special session of Congress, and made an address calling the attention of Congress to the purpose for which he had summoned us in extraordinary session. Here is what he said:

summoned us in extraordinary session. Here is what he said:

Aside from the duties laid upon articles which we do not, and probably can not, produce, therefore, and the duties laid upon luxuries and merely for the sake of the revenues they yield, the object of the tariff duties henceforth laid must be effective competition, the whetting of American wits by contest with the wits of the rest of the world.

It would be unwise to move toward this end headlong, with reckless haste, or with strokes that cut at the very roots of what has grown up amongst us by long process and at our own invitation. It does not alter a thing to upset it and break it and deprive it of a chance to change. It destroys it. We must make changes in our fiscal laws, in our fiscal system, whose object is development, a more free and wholesome development, not revolution or upset or confusion. We must build up trade, especially foreign trade. We need the outlet and the enlarged field of energy more than we ever did before. We must build up industry as well, and must adopt freedom in the place of artificial stimulation only so far as it will build, not pull down. In dealing with the tariff the method by which this may be done will be a matter of judgment exercised item by item. To some not accustomed to the excitements and responsibilities of greater freedom our methods may in some respects and at some points seem herole, but remedies may be herole and yet be remedies. It is our business to make sure that they are genuine remedies. Our object is clear. If our motive

is above just challenge and only an occasional error of judgment is chargeable against us, we shall be fortunate.

Now, his object is not to destroy, not to upset, not to produce confusion, not to produce revolution.

Mr. President, if that is his object and if that is the policy of the Democratic Party in revising the whole tariff fiscal system under which this country has flourished and grown so great, why do they not proceed to reduce duties slightly where they find them too high instead of cutting off such a percentage of the duty as that, according to the incontestable facts presented here by the responsible people engaged in the production of these articles, absolutely makes it impossible for them to compete with the foreigners?

I do not think anyone will claim that, in the long run, it is going to be beneficial to this country to turn over one by one the different industries of the country to the foreigners. Many of these items seem small in themselves but each manufactory is engaged in producing its part of the total product of this country.

Can anyone explain how it is that our manufacturers are to be able to compete with the foreign competitors except under equal conditions at least? Can anyone claim that we can continue to pay the men who are working in these mills in this country two or three times the wages which are paid by those producing competing products on the other side of the ocean unless we reduce the cost of wages? How are we to compete? What is going to be the situation of our manufacturers when this bill in clauses like this is put into actual operation? They are to say to their men, "You, men, know the cost of the production of this article. Here are our books. Here are our costs." costs. You know what our competitors are paying in the way of wages. We can not continue this factory; in spite of threats to investigate us or in spite of accusations that we are conspiring to produce panic for the purpose of discrediting the efficiency of the Democratic Party to govern this country we do not propose to continue this business at a loss, and we put it right up to you, men, Do you want to reduce your wages voluntarily and have us continue in this business or do you want us to go out of the business?" What are the men going to say?

Mr. President, the men are powerless. In many instances they are practically tied to the locality in which they live and work. Their children are there in school; their houses are there; their friends are there. They know this one occupationhow to run this special machine-and they are all experts in that line of business. Those men have got to agree, if they are to continue those positions, to a reduction of wages if the Democratic Party insists upon its program of reducing the protective tariff.

The President says these matters ought to be considered item by item, and he says we are not to destroy. What ought to be done, it seems to me, if the Democratic Party is in good faith about this matter, is to try to equalize the conditions under which these people compete. Everyone should want the highest standard of living in this country for the greatest number of its citizens, and no one ought to want to reduce our standard of living to the low level that admittedly exists abroad among our competitors.

Now, what is pursuing the Democratic Party to compel them to this line of action, to violate the advice of their President and to destroy these concerns? Would it not be enough reduction to place them upon an even basis? Would it not, as the President said, be a sufficient competition if every industry in America, the cost of production having been equalized, is competing upon an even plane, upon equal conditions, except as to the standard of living of its employees with its foreign competi-

Would not that satisfy whatever justice there may have been in the accusation that capital was getting too much of its share of the joint product of the efforts of labor and capital? Would not that cut down any exorbitant dividends that may be paid? Is not the Democratic Party satisfied to have this question shaved right down to a competition based absolutely upon the cost of production and leave the manufacturers and producers of the country, in the language of the President, to survive by the superiority of their wits and their inventive genius and their capacity for business? Is not that a hard enough test and, a great enough change to spring upon them suddenly, in view of the assurances that were given by the Democratic cam-paigners and promisers that no legitimate industry should be harmed and that anybody who attributed to the Democratic Party either the folly or the unpatriotic frame of mind which would be involved in a deliberate attempt to put them out of business was a fool and ought to have no attention paid to him?

Many of the people who are producing the commodities which we are glad to see the American people get, and which con-

tribute to the prosperity of this country, took the word of the Democratic orators that no legitimate industry was to be injured. They were assured and told not to get panicky; that it was simply Republican misrepresentation that their business was liable to be injured. Yet here what do we see. Of course I know more about it in my own State, because I am acquainted with many of its mills and with a great many of the men who own them and manage them. They are in large measure local industries, and a great many of them small industries, each one involving not only the prosperity but the entire life of the small community in which they have grown up for generations.

What purpose is to be subserved by turning these prosperous

little New England hamlets into deserted villages, with closed mills and abandoned houses? Even if it was right to do it, even if loyalty to some cold theory which had been put in some platform in the past demanded it, will it be good policy from the Democratic standpoint itself? Will it be a good illustration of the conservative capacity of the Democratic Party to preside over and adjust properly the wonderfully intricate mechanism that maintains productive activity in this country? I say, would it be a good demonstration of Democratic capacity to produce prosperity in this country and a good demonstration of the

sincerity of their preelection promises?

I will go further and say, Is it a good demonstration? What is the effect being produced right now upon the producers of this country at home? My colleague [Mr. McLean] put into the RECORD a letter this morning from one of the producers of woolen goods in my State absolutely denying and repudiating a statement made by somebody in a letter which the Senator from Missouri [Mr. STONE] put into the RECORD the other day. He says his mill is running well now because it is running on orders heretofore received; that his business is a seasonal one. After the passage of this bill he hopes, of course-I will not say he hopes against hope, but he hopes to be able to continue to run his mill, and he will run it so long as he can do it at a profit; but he can not be expected to imperil all that he has produced in his whole life work by attempting to run it at a loss in order to prove a Democratic theory at his expense or in order to reduce the pains of privation to those to whom he has heretofore been able to give employment at profitable

The cumulative effect of this, going on in every town and hamlet of this country, has already impaired confidence in the Democratic Party, both in the sincerity of its promises and in the expectancy of its capacity to accomplish any readjustment of the fiscal policies of this country without injury to business.

I say, as the President said, treating this revision of the tariff as a matter to be done item by item, this tremendous reduction put upon this product of my State should not prevail, and the

rates of duty as heretofore existing should be maintained.

Mr. STONE. Mr. President, there is nothing pending.

The VICE PRESIDENT. The Secretary will state the amend-

ment to paragraph 154.

The Secretary. On page 44, line 25, before the word "cent," the committee report to strike out "1" and insert "2," so as to

Lead-bearing ores of all kinds containing more than 3 per cent of lead, $\frac{\pi}{2}$ cent per pound on the lead contained therein.

Mr. STONE. That paragraph and the succeeding one were passed over to accommodate the junior Senator from Idaho [Mr. Brady]. We were told that he desires to submit some remarks on both paragraphs.

Mr. BRADY. I am not prepared to address the Senate this morning, and I will defer my remarks until the bill has been

reported to the Senate.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Utah [Mr. SUTHERLAND] to strike out "4 cent" and insert "12 cents."

Mr. STONE. I will ask whether the committee amendment

has been agreed to?

The VICE PRESIDENT. The committee amendment has not been passed upon yet.

Mr. STONE. I ask that it be submitted. Mr. LODGE. Is not the amendment of the Senator from Utah an amendment to the committee amendment?

Mr. STONE. That may be so. Then I ask for a vote upon it. The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Utah to the amendment of the committee.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

Mr. SMOOT. Mr. President, I desire to offer an amendment

to the committee amendment. I move to strike out "a" and

insert "1," so as to read "1 cent per pound." I hope the Senator from Missouri will accept that amendment.

Mr. STONE. No; I can not.

Mr. SMOOT. I expected that answer. I am not disappointed, Mr. STONE. I will say to the Senator I have no authority to accept it.

Mr. SMOOT. I think if the Senator would just indicate that it is a proper amendment we can get votes enough to secure its adoption

Mr. STONE. Let the Senator proceed in his own way. Mr. SMOOT. I am not going to take much time to discuss the amendment, because it was pretty thoroughly discussed yesterday. I have submitted some remarks upon this item before. I have no desire whatever to detain the Senate, but it is a vital question to the great mining interests of the intermountain country.

It is true that the Senate committee has increased the rate from one-half cent provided in the bill as it passed the House to three-fourths of a cent, and I want to thank the committee for so doing. Lead is the only one of the great products of my State that there has been an increase in the rates provided by the House. Sugar is placed on the free list; wool goes on the free list; nearly everything that we produce in the State is placed on the free list. I am very, very thankful that the State of Utah produces one product produced in Missouri and other States of the Union and thus receives at least a partial protection. I would not ask for a further increase if I did not feel it was absolutely necessary for that industry.

Mr. President, I move to strike out "4" and insert "1." That will help a little toward what the rate ought to be; and

upon that question I shall ask for the yeas and nays.

Mr. CLARK of Wyoming. When the Senator from Utah speaks of an increase, he means an increase over the rate in the House bill, and not over that contained in the present law? Mr. SMOOT. Not an increase over the present law. present law is 1½ cents a pound.

Mr. CLARK of Wyoming. I wanted to make that plain. Mr. SMOOT. I am now simply trying to see if Senators on the other side will not yield that one-fourth of a cent increase, because it may mean death or it may mean life to hundreds of mining properties, and particularly to those that are struggling for existence to-day. Therefore I offer the amendstruggling for existence to-day. Therefore I offer the amendment and ask for the yeas and nays upon it.

The VICE PRESIDENT. The question is on the amendment

proposed by the Senator from Utah to the amendment of the committee, on which he demands the yeas and nays.

The yeas and nays were ordered, and the Secretary pro-

ceeded to call the roll.

Mr. CHILTON (when his name was called). I have a pair with the junior Senator from Maryland [Mr. Jackson], and therefore I withhold my vote.

Mr. SHEPPARD (when Mr. Culberson's name was called). My colleague [Mr. Culberson] is unavoidably absent. He has a pair with the Senator from Delaware [Mr. Du Pont]. I will let this announcement stand for the day.

Mr. JAMES (when his name was called). I have a general pair with the Senator from Massachusetts [Mr. Weeks]. transfer that pair to the junior Senator from Louisiana [Mr. RANSDELL] and will vote. I vote "nay."

I desire also to state that my colleague [Mr. Bradley] is

detained from attendance here by reason of illness, but that he has a general pair with the Senator from Indiana [Mr. Kern].

Mr. KERN (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. Bradley]. T transfer that pair to the senior Senator from Maryland [Mr. SMITH] and vote. I vote "nay."

Mr. LA FOLLETTE. Mr. President, because I am interested

in property which would in some measure be affected by the increased duty proposed in the amendment, I ask to be excused from voting on this question.

The VICE PRESIDENT. Is there objection to the Senator from Wisconsin being excused from voting? The Chair hears none, and the Senator is excused.

Mr. THORNTON (when Mr. RANSDELL's name was called). I announce the necessary absence of my colleague [Mr. Rans-DELL] on account of illness. I ask that this announcement stand

for the day.

Mr. SAULSBURY (when his name was called). I have a general pair with the junior Senator from Rhode Island [Mr. Colf]. I transfer that pair to the Senator from Oklahoma [Mr. Gore] and vote. I vote "nay."

Mr. SUTHERLAND (when his name was called). I inquire

whether the Senator from Arkansas [Mr. Clarke] has voted.

The VICE PRESIDENT. The Chair is informed that that Senator has not voted.

Then I withhold my vote, as I have a Mr. SUTHERLAND.

pair with that Senator.

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from New York [Mr. Root], and therefore withhold my vote. I want to say, however, that if the Senator from New York were present, I should ask unanimous consent to be excused from voting because I am interested to a small extent in the subject matter to which this paragraph relates.

The roll call was concluded.

Mr. SUTHERLAND. I will transfer my pair with the Senator from Arkansas [Mr. CLARKE] to the Senator from Maine [Mr. Burleigh] and vote. I vote "yea."

Mr. GRONNA. I wish to announce that my colleague [Mr.

McCumber] is absent on account of sickness in his family. He is paired with the senior Senator from Nevada [Mr. Newlands]. I wish this announcement to stand for the remainder of the day.

Mr. CHILTON. I will transfer my pair with the junior Senator from Maryland [Mr. Jackson] to the junior Senator from South Carolina [Mr. SMITH] and vote. I vote "nay."

Mr. CHAMBERIAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. Oliver]. I transfer that pair to the Senator from Illinois [Mr. LEWIS] and vote. I vote

Mr. THORNTON. I announce the necessary absence of the Senator from Alabama [Mr. BANKHEAD] and also the fact that he is paired with the junior Senator from West Virginia [Mr. GOFF]. I ask that this announcement stand for the day.

Mr. KERN. I desire to announce that the junior Senator from Missouri [Mr. Reed] is detained from the Senate on business of the Senate. He is paired with the senior Senator from Michigan [Mr. SMITH]. I ask that this announcement stand

for the day

Mr. GALLINGER. I have been requested to announce that the junior Senator from West Virginia [Mr. Goff] is paired with the Senator from Alabama [Mr. BANKHEAD]. I also announce that the Senator from Wisconsin [Mr. Stephenson], the Senator from California [Mr. Works], and the Senator from New Mexico [Mr. Fall] are necessarily absent, and that they are unpaired.

Mr. CHILTON (after having voted in the negative). The junior Senator from South Carolina [Mr. SMITH] having come into the Chamber, I will transfer my pair with the Senator from Maryland [Mr. Jackson] to the junior Senator from New

Jersey [Mr. Hughes], and let my vote stand.

The result was announced—yeas 24, nays 40, as follows:

Smith, Md. Smith, Mich.

tee was rejected. The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The Secretary concluded the reading of paragraph 154 and read paragraph 155.

Mr. STONE. There is no amendment pending to that para-

graph.

The VICE PRESIDENT. There is no amendment pending. Mr. STONE. Mr. President, on the suggestion of the Senator from Colorado [Mr. Thomas], I find that we have not considered paragraph 126, which was passed over for the accommodation of the junior Senator from Massachusetts [Mr. Weeks].

Mr. LODGE. Mr. President, that paragraph was passed over at the request of my colleague, and, as he is not here to-day. I hope the paragraph may be passed over for another day. I think he will be here in a day or two.

Mr. STONE. We have passed over the paragraph several times, but if the Senator so desires we will pass it over again.

The next paragraph passed over is paragraph 163.

Mr. LODGE. Mr. President, that is the paragraph that was passed over at my request. I am entirely ready to go on with it now.

Mr. STONE. Let me inquire of the Chair whether the

committee amendments have been acted upon?

The VICE PRESIDENT. The committee amendments have

not been acted upon.

Mr. STONE. Will it interfere with the purpose of the Senator from Massachusetts if we should act on the committee amendments?

Mr. LODGE. There is only one committee amendment striking out the word "or" and inserting the words "or meters." I have no objection to that being acted upon.

Mr. STONE. I think that is the only committee amendment,

and I ask that it be disposed of.

The VICE PRESIDENT. The Secretary will state the amend-

The Secretary. In paragraph 163, page 47, line 18, before the word "clocks," it is proposed to strike out "or," and in the same line, after the word "clocks," to insert "or meters," so as to read:

163. Watch movements, including time detectors, whether imported in cases or not, watchcases and parts of watches, chronometers, box or ship, and parts thereof, lever clock movements having jewels in the escapement, and clocks containing such movements, all other clocks and parts thereof, not otherwise provided for in this section, whether separately packed or otherwise, rot composed wholly or in chief value of china, porcelain, parian, bisque, or earthenware, 30 per cent ad valorem; all jewels for use in the manufacture of watches, clocks, or meters, 10 per cent ad valorem; enameled dials and dial plates for watches or other instruments, 30 per cent ad valorem.

The amendment was agreed to.

Mr. LODGE. Mr. President, this paragraph, known as the watch paragraph, in past years and at the time of the passage of the act of 1900 was made an object of particular attack. do not think there was any great popular movement in regard to watches and the duties thereon. The demand came, so far as I can make out, from one of those disinterested philanthropists who carry on business entirely for the benefit of the American public-a New York importer. I think the longdrawn howls in which he indulged made so much noise as to cause it to be believed that there was a real popular clamor about watches. It always reminded me of that little anecdote which Gen. Grant tells in his autobiography. He says that when he was a young officer at the time of the Mexican War and was returning late to camp with a friend they heard a tremendous howling of coyotes ahead of them. His friend asked him how many he thought there were. He said he did not want to seem green, and therefore he replied that there might be 50, although it seemed to him there must be 5,000. As they topped the next hill and caught sight of the coyotes just across a little gulch he saw that there were two, with their heads close together. [Laughter.] I think the clamor and agitation about watches is very much like that.

The fact is the consumer does not suffer from the high price of watches, when a watch serviceable for ordinary purposes may be bought for a dollar. We are all familiar with that most ingenious and humorous of advertisements—"The watch which made the dollar famous"—and we are told by the same high authority that some 32,000,000 of them have been sold. There is no doubt that in this country watches are very cheap.

Mr. President, I am not going to waste my time or strength

in going into the question of labor costs, which are totally disregarded by those who are manufacturing this bill; nor am I going into the question of competition or anything of that sort. want to call the attention of the committee to the way in which the substitution of ad valorem for specific duties in this paragraph works out. I think the cut has been too severe, but I am not going to argue that part of it at all.

In the last bill we added what are known as the marking provisions. Those, I am glad to see, have been retained in this bill. But those marking provisions are of but little value when you shift from specifics to ad valorems. The duties on watches under the Dingley Act were mixed duties; they were specifics and ad valorems. When that paragraph came up in 1909 it was referred to the Senator from Utah [Mr. Smoot] and myself as a subcommittee, and we reframed it. As we drafted it it now stands in the law. We drafted the marking provisions which

have been retained, and we substituted for the mixed duties straight specifics.

Watch movements, which are the important thing, are graded according to the number of jewels in the works, which is the only real test of the value of a movement that there is. In putting on these specifics we did not increase the Dingley rates; we lowered them slightly throughout. The rates of 1900 were less than the rates of 1897. I want to call the attention of the committee to the result.

In 1909, the last year under the Dingley Act—not a complete year, but the last year—the unit of value of watches containing not over 7 jewels was 80 cents. In 1911, after the Payne bill yas in full operation, the unit of value was \$1.07. In 1912 the unit of value of the lowest grade was \$1.20. We had not increased the duties. Bear that in mind. We had slightly lowered them. The value of the importations of watch movements containing not over 7 jewels fell off from \$425,000 in 1909 to \$369,000 in 1911, and \$329,000 in 1912. That was not done by an increase of duties; it was done by making the duties specific, and adding the marking provisions. In other words, we stopped the undervaluations. The fraudulent watches that were brought in here were the cause of all the difficulty, and the specific duties, coupled with the marking provisions, ended the frauds and thereby reduced the importations.

You have now restored the ad valorems and abolished the specifics. The result will be that your market will be flooded by undervalued watches of the worst kind and frauds on the purchasers. You will not get the revenue to which you are

Let me call attention, also, to the way the ad valorem duty works out that you have imposed on all watches, without reference to their grade. I am taking now the equivalent ad valorems. You have reduced the rate on the cheapest watches, taking the figures for 1912, from 58.54 to 30 per cent. You have increased the rate on the 11-jewel watch from 23 per cent to 30 per cent. You have diminished the rate on the 15-jewel watch from 45 per cent to 30 per cent; on the 15 to 17 jewel watch from 46 to 30 per cent; on watches containing over 17 jewels from 36 to 30 per cent. You observe the enormous difference in the decrease in the different grades of watches, and also that in one case you have raised the duty 7 per cent.

Take another and even more striking instance. You include in that list watch movements and time detectors. Everybody knows, I assume, what a time detector is. It is a species of watch or clock in which a spring has to be pressed at certain periods through the night to show that the watchman is on duty. These detectors contain either 7 or 11 jewels. They came in under the old specifics at 75 cents for the 7-jewel time detector and at \$1.35 for those containing 7 to 11 jewels. The average value of the time detector imported is \$10. They now pay a duty of either 75 cents or \$1.35. You have put on them a 30 per cent ad valorem duty. You have thus increased the duty on time detectors to \$3 apiece. You have put on a prohibitive duty, a thing that never existed before. That is merely a forcible illustration of the absolute necessity of putting on specifics in the case of an article of this kind.

If you will take specifics equivalent to your 30 per cent, taking your unit of value, and taking 30 per cent of that, making it equivalent to what you propose, and put on specifics for each grade of watches according to the number of jewels in the works, you will get a duty that will yield the highest revenue possible for that grade. You will prevent frauds on the revenue, taking the specific in conjunction with the marking provisions. You will get the revenue to which you are entitled; you will stop the undervaluation importation and the frauds, which perhaps were greater in this article than almost any in the tariff. You will avoid, also, the utter inequality which the sweeping ad valorem for every grade of watch inevitably causes.

Mr. President, I can not conceive that any framers of a tariff bill should desire to open the door to undervaluations. That is not sound from the revenue point of view. You impose a duty of 30 per cent ad valorem. We assume that you mean to collect that duty on the proper value of the watch. But you can not do it, as these figures show plainly, because the moment we put on specifics, together with the marking provisions, the unit of value rose and the importations fell off.

As I said at the beginning, I am not entering at all on any vain attempt to give to the watch industry the protection which I think it ought to have. I am merely discussing this duty from the point of view of intelligent revenue legislation. I say it is not intelligent revenue legislation to impose a duty which, on the item of time detectors alone, increases the rate from 75 cents or \$1.35 to \$3, and makes a prohibitory rate under which

nothing can come in, which reduces the duty on the lowest grade of watches 28 per cent and on the next grade increases it 7 per cent.

I think this is one of the schedules in which the rates, as experience has shown, in the interest of the honest collection of the revenue, ought to be made specific rates throughout. I submit that for the consideration of the committee. It seems to me that it is desirable that we should have an honest collection of revenue no matter what the economic policy of the tariff may be. The necessity of a revision of this paragraph is demonstrated by those figures, if I may call attention to them once more, because I wish to emphasize the point that when we changed the rates, without increasing them, to pure specifics, adding the marking provisions, the unit of value rose and the importations decreased, showing beyond a peradventure that we had been suffering from enormous undervaluation. As I say, the one instance of the time detector shows the falsity of this system where, by putting on the ad valorem of 30 per cent, you increase the duty from 75 cents or \$1.35 to \$3, making it prohibitory.

It seems to me, if I may venture to say so, that this paragraph would profit by revision.

I also wish to say a single word in regard to lever clock movements, which are also included under this paragraph. Under the former act they had a specific duty of \$1 and an ad valorem of 40 per cent. The specific duty has been removed entirely and the ad valorem reduced from 40 to 30 per cent.

That is an industry which has been recently developed in this country. The company with which I am familiar in my own State has not yet paid a dividend. It meets very severe foreign competition, but the business is growing. The clocks with the lever escapement are luxuries. They are not the clocks in common use. They are the little traveling clocks with which you are familiar, with glass sides for the most part. They have met very severe competition from abroad.

I have a letter from the treasurer of the Chelsea Clock Co., in which he says:

Over 95 per cent of our product is of "lever clocks and lever-clock movements having jewels in the escapements," every one of which is a luxury, as you can see by referring to the prices of same in our catalogue, a copy of which is being sent to you under separate cover.

That industry is a comparatively new one. It has been making its way and gradually establishing itself under great difficulty. Its product is sold principally by jewelers, almost entirely, in fact, in the shops of large jewelers. I do not suppose it is worth while for me to go into the question of costs, but I think the clock movement having jewels in the escapement ought to have a specific duty of \$1. There can be no good purpose served in annihilating this new and valuable industry, as would come to pass under the committee rate.

come to pass under the committee rate.

It is almost impossible to undertake to amend this paragraph; for, in my opinion, it ought to be redrafted, and, in the interest of the revenue, keeping the rate of 30 per cent proposed specific duties, ought to be restored.

I shall ask to print with what I have been saying some statements in regard to these lever clocks. I do not know precisely what amendment to propose, for the whole paragraph ought to be redrawn; but I will move to recommit paragraph 163 to the committee.

I ask that this table which I have prepared, showing the comparative ad valorems and specifics, may be printed as part of my remarks, and also some matter in regard to clocks which I send up.

The PRESIDING OFFICER (Mr. O'Gorman in the chair). If there be no objection, the matter will be printed as requested. The matter referred to is as follows:

	Not over 7 jewels.	7-11 jewels.	11-15 jewels.	15-17 jewels.	Over 17 jewels.	Total.

BOSTON, August 9, 1913.

Hon. Henry Cabot Lodge,

United States Senate, Washington, D. C.

My Dear Senators: I have received a copy of the proposed new tariff bill and feel considerably airmed over the proposition of reducing the rate on "lever clocks and lever-clock movements having jewels in the escapement" from the present (none too great) rate of 40 per cent and \$1 per such clock or such clock movement to 30 per cent without any specific duty. The country has been led to believe that the policy of the framers of the present proposed new tariff bill would be to increase the duty on luxuries and decrease them on necessities.

Over 95 per cent of our product is of "lever clocks and lever-clock movements having jewels in the escapements," every one of which is a luxury, as you can see by referring to the prices of same in our catalogue, a copy of which is being sent to you under separate cover. I believe that we have never sold more than two clocks to go to Japan, and I have no doubt that they are being duplicated, as the Japa are notorious for great skill in copying goods. Labor costs there, so I am informed, range from 16 to 30 cents per day, and the mills run long hours and employ thousands of children of tender age. I am sending a clipping from the Boston Transcript, dated July 31, 1913, referring to a recent report from our consul in Japan. The original of that report you no doubt can readily obtain, but the mere fact of such an exhibit of American-made goods (and I notice clocks and watches are in that list) with duplicates of same made in Japan shown side by side should be a warning to our Representatives in Congress not to subject the industries of America to any such competition. Look that list over and see how many of the goods are made right here in Massa-chusetts. All the Representatives from the Pacific coast and far West section ought to help in keeping out goods made with cheap labor in Japan.

On Monday, August 4, 1913 (this week), the works manager of one

Section ought to help in keeping out goods made with cheap laboration and paper.

Japan.

On Monday, August 4, 1913 (this week), the works manager of one of the largest factories in Switzerland was in our office seeking business in certain material, large quantities of which we have bought in this country, and he informed me that for "matchers" and "finishers" (the most skillful men in our employ and in watch factories, doing the finnal timing, adjusting, and escapement work) his factory paid the equivalent of \$10 to \$12 per week. We pay such men all the way from \$4 to \$7.50 per day.

All these foreign countries obtain their raw material (chiefly brass and steel) as cheap or cheaper than we do. In size and shape of movements and general finish our goods are being copied by foreign makers. The duty on these luxuries should certainly not be reduced from the present rate of 40 per cent and \$1 per clock or per clock movement.

Yours, truly,

CHELSEA CLOCK Co.,
By CHAS, H. PEARSON, Treasurer.

[Clipping from Boston Transcript, July 31, 1913.] JAPAN'S HOME MANUFACTURES—TOKYO COMMERCIAL MUSEUM HAS EX-HIBIT OF ARTICLES WHICH MAY NO LONGER BE IMPORTED.

(From Consul General Sammons, Yokohama.)

(From Consul General Sammons, Yokohama.)

One of the most interesting exhibits at the Commercial Museum at Tokyo as recently arranged consists of Japanese manufactured products which those interested believe may become suitable substitutes for manufactured products of various parts of the world.

The Japanese-made articles are exhibited side by side with similar products from other countries. This unique exhibit comprises the following articles, herewith alphabetically arranged:

Bookbinders' cloth.
Caplets and window curtains.
Clothing and accessories:

Blankets.

Buttons.

Cutlery.

Cutlery.

ally arranged:
Leather and manufactures:
Leather, sole.
Fittings for machinery.
Metal manufactures:
Clips for hairdressing.
Cutlery.
Enameled ware.
Lead tubes for gas and water works.
Locks.
Nails.
Scissors. Buttons. Hats. Laces. Ribbons. Neckties

Tollet soaps and water.
Stationery: Pencils and pens.
Watches and clocks.
Toys. Glassware, India-rubber manufactures.

India-rubber manufactures. Toys.

The Chelsea Clock Co. was established in 1897 and is and always has been engaged in making high-grade clocks, almost exclusively of the lever type, having jewels in the escapement. Previous to 1897 there had been repeated attempts to start an industry of this kind in the United States, but did not succeed. One concern, the Boston Clock Co., with ample financial backing, started in or about 1880, and while producing a good, high-grade lever clock, the handicap of higher costs was too much and it threw up its hands and went out of business a loser of about \$750,000. That concern was followed by about one-half dozen corporations every one of which failed or went out of business, and the Chelsea Clock Co. bought the plant of the last of these nonsuccessful

companies and with ample financial backing and the best of machinery has succeeded in holding its own and gradually building a business, and thus far has never paid a dividend nor, until the present year, has its chief owner and manager even had a salary, and now only at a modest rate. It is in the line of being moderately successful and its business, if unassaled, should constantly increase. It has never had any strike or labor trouble at its factory. Voluntarily and of its own accord and not compelled to by any law it established in 1906 a weekly schedule of 54 hours per week without any reduction in pay; but, on the contrary, it has voluntarily made several advances in rates of wages, so that to-day its operatives are well paid, and the nature of the work in making "lever clocks with jewels in the escapement" is in most respects practically the same as making the highest grade of watches, but being a clock is of a much larger type and material and requires specially trained workmen, who receive higher wages than ordinary watchfactory help, some as high as \$7.50 per day. In what is known as finishing and timing. About 85 per cent of the cost is labor, and comparing with rate of wages paid in like industries in England, Germany, and especially Switzerland, a protective tariff not less than the present is needed. Keep in mind that the goods (lever clocks with jewels in the escapement) are luxuries. The present duty of 40 per cent and \$1 per clock is hardly enough; in fact, some foreign makers—aside from the about 30,000 annually imported, the trade in which they have held for years on account of low labor costs and artistic designs of the French cases, a skill acquired by over a hundred years' experience—are now attempting to take over a new industry for them by copying our high-grade auto-clock movements and other clocks, "all lever clocks with jewels in the escapement," and, by copying exactly our designs and models, with their exceedingly low labor cost, have been and now are selling this (to them, new) clas

Mr. BRANDEGEE. Mr. President, the President of the United States says:

We are called upon to render the country a great service in more matters than one. Our responsibility should be met and our methods should be thorough, as thorough as moderate and well considered, based upon the facts as they are, and not worked out as if we were beginners. We are to deal with the facts of our own day, with the facts of no other, and to make laws which square with those facts. It is best—indeed, it is necessary—to begin with the tariff.

What are the facts about the clock industry? This is one of the paragraphs in the bill which deal with the clock industry. This is an exceedingly important industry in the State of Connecticut. It is a very old industry. It has existed there since the year 1800, beginning with small beginnings in the days of the old wooden grandfather's clocks. At present this New Haven Clock Co., of New Haven, Conn., employs over 2,000 skilled mechanics. The president of that company, in his distress at what he believes to be the havoc which threatens that industry, writes to me, saying:

There must be some type of manufacturing industry that the present administration in power believes should exist, and if you can get them to describe that ideal type you will find it corresponds with ours.

Things that happen here from day to day lead me to think that perhaps the industry which will be allowed to proceed upon its legitimate way unhampered is an ideal industry at present.

The Wm. L. Gilbert Clock Co., of Winsted, Conn., write:

We are sending you copies of the brief of the clock manufacturers of the United States sent to the Ways and Means Committee, conreming our business.

Please place them where they will do us some good, if possible, and

Mr. President, I have not as yet been able to find the place which they are in search of as one which will do them any good, but I think at least they are entitled to have the facts which the President has advised Congress to ascertain before it proceeds, for it would be unwise, in his own language, "to move toward this end headlong, with reckless haste, or with strokes that cut at the very roots of what has grown up among us by long process and at our own invitation." He says: "It does not alter a thing to upset it and break it and deprive it of a chance to change. It destroys it." And he says that we ought to be in favor of "a more free and wholesome development, not recognition for upset or confusion. We must build me that. revolution or upset or confusion. We must build up trade, especially foreign trade."

Mr. President, what is being done in this paragraph as in others is not only not to build up foreign trade, but to allow the foreigners to build up their trade by surrendering our own market to them and abandoning our own productive activities.

The Sessions Clock Co., of Forestville, Conn., write:

Permit us to call your attention to the fact that a lowering of the duties on the ordinary low-priced clocks would be a great hardship to the employees as well as to the employers in the clock industry in America. The net profit on clock manufacturing is a very moderate one. The wages paid are moderate and only such as are necessary to support the workmen and their families in comfortable circumstances, and any reduction in the tariff would certainly require a reduction in wages, which would be most unfortunate, and would also bring to America a large amount of German and other foreign clocks, causing lack of employment here. lack of employment here.

There is no watered stock in any of the leading companies in this line of business.

Mr. Walter Camp, who in his day was the most celebrated football player in this country

Mr. SIMMONS. Mr. President-

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from North Carolina?

Mr. BRANDEGEE. I yield.

Mr. SIMMONS. After conferring with members of the subcommittee

Mr. BRANDEGEE. I can not hear the Senator.

Mr. SIMMONS. I say after some conference with members of the subcommittee, we are willing that this paragraph shall be passed over for further consideration by the committee.

Mr. BRANDEGEE. But there is a motion pending to recommit the paragraph, made by the Senator from Massachusetts

[Mr. LODGE]

Mr. SIMMONS. I said that we are willing that it shall be passed over and go back to the committee. That is agreed upon after conference with the Senator from Massachusetts a few

Mr. BRANDEGEE. I did not hear the latter part of the Senator's sentence. To resume, Mr. Walter Camp, the president of the New Haven Clock Co., writes as follows:

As nearly as I can make out, the reasons for reduction of our tariff were that the clock companies do an export business amounting to some 8 or 9 per cent, and that the importation of clocks into this country is only about the same proportion of the total volume of business.

country is only about the same proportion of the total volume of business done.

It is assumed, in view of the above, that in these foreign markets we compete on a parity with the Germans and other foreign manufacturers, and that without the benefit of the duty, hence the question arises, Why should we not compete here without a duty? That is vitiated by the fact that in the countries where we do the best export business we are protected by a preferential. For instance, if you will examine into the facts relating to our business in Brazil, you will find that we have a preferential there over the Germans of 20 per cent in all the figures that have been collected.

Mr. President, I do not intend to read the whole of this communication, but in view of the suggestion made by the chairman of the committee that he will consent that the paragraph be recommitted, I will ask that the rest of the letter may be printed in the Record and that the brief of the American Clock Manufacturers, which I have here, may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, that will be done. The Chair hears no objection, and by consent, if there be no objection, paragraph 163 will be recommitted.

The matter referred to is as follows:

The matter referred to is as follows:

Furthermore, even with this, our export business is gradually dwindling in its proportion, and the clocks we are now exporting we are permitted to export merely from the fact that the foreign competitors have not yet dared to copy those particular patterns, and, as you probably know, the fashions in clocks of some of those far eastern countries do not change as they do with us. Hence, until the Germans desire to copy these patterns, which undoubtedly they will do eventually, we hold this trade by their sufferance. They can take it at any moment they desire, because they have copied every machine we have made to reduce the cost of our clocks, and there is nothing now in the way of efficiency that is left to us. This you can easily judge from the fact that we sell a nickel alarm clock—263 operations besides the other cost—for 42½ cents. Now, the foreigners, with machinery just as up to date as ours and with help that on an average is paid 8 cents an hour, where we pay 20, can supplant us in any market. Were we a big monopoly or combination that had accumulated large profits or had paid on watered capitalization, we might have something to go upon, but as we have steadily reduced the cost of clocks to the consumer through our perfecting of machinery and competition, one with another, until we sell a clock to-day at the lowest price it was ever sold for in the history of the world, we can not be charged with having increased the cost of living or our product having in any way furnished profits for us at the expense of the consumer, and we have no pile of profits made in this way to draw upon.

Hence I hope you will excuse me for referring to us as the "forgotten man" in this case and asking that your committee consider our brief, already filed, together with the above-mentioned facts in addition.

There is one other thing I mentioned to you and which you asked me to put in writing, and that is this: I understand that because the imports are only about one-eleventh or one-twelf

are as much a matter of fashion as are ladies' frocks. No manufacturer, therefore, could stock up during dull periods with clocks which in another year may be unsalable. The staple clock in which fashion does not change is the nickel alarm clock, and hence in dull periods the American clock manufacturers have no fear in stocking up heavily in these goods, thus enabling them to run their factories in dull periods. Under the proposed reduction in duty the German clock of this character will come in so much cheaper than ours that even our best efforts will not enable us to make up the difference and we shall not be able to stock on these staples, as a type of clock—the one that we sell—as mentioned above, for 42½ cents—can be landed in here to sell something under 35 cents.

I would also call attention to the point that many of these foreign

we sell—as mentioned above, for 42½ cents—can be landed in here to sell something under 35 cents.

I would also call attention to the point that many of these foreign clocks have been made up, but are held back pending the proposed reduction, and last year's imports were less considerably than they would have been had there been no prospect of this reduction coming. The importers were not averse to having the volume of imports during the last year lessened as far as possible, for this was their argument.

I appreciate very much the opportunity of putting this before you and your committee, and I hope that they will find the time to go over my original brief, together with this additional matter, for even those who feel most strongly that the tariff should be revised have gone over this brief and have stated that the case of the clock industry was absolutely unique, and from every standpoint having reduced the cost to the consumer to the lowest limit, having perfected to the highest degree the manufacture by the use of ingenious machines, having not averaged in the last 25 years a profit above legal interest on the money invested, having a capitalization—on which its dividends have been paid—not water, but actually less than the amount of money put in, being in no combination or trust, in active competition with each other, who do not sell their goods cheaper abroad than at home—an industry, in fact, which answers every criticism that has been brought against the so-called vested and protected interests.

WALTER CAMP.

PARAGRAPH 163 .- CLOCKS.

THE NEW HAVEN CLOCK Co., New Haven, Conn., April 25, 1913.

The New Haven Clock Co., New Haven, Conn., April 25, 1913.

Hon. Furnifold McL. Simmons.
Chairman Finance Committee.
United States Senate, Washington, D. C.

Dear Mr. Simmons: We have asked your consideration of clocks on their merits in the tariff matter. There is just one point we wish to call to your attention showing that they should have this consideration. A clock is not an article of daily consumption. The life of an eight-day striking mantel clock is at least 10 years, and such a clock-can be bought anywhere in this country to-day at retail for \$2 or less, making it represent an annual outlay of 20 cents. These prices have been made possible by the introduction of special machinery, and we have reduced the cost of clocks to the consumer 50 per cent in the last 25 years. We have practically reached the limit of human ingenuity in the matter of machine work on clocks, and we haven't room to go further. Our brief, which we have presented, shows how the foreigners have gradually initated our machinery until they are as well equipped as we are and paying their labor only about one-third or one-half. The increase of these foreign clocks from 1908 to 1912 was 70 per cent. Somewhere between two and three million of them came in last year.

A skilled clock worker's budget shows that he and his wife and three children—all of them working—earn 1,540 marks a year, approximately \$365. Our people earn two and one-half times that.

We are already informed that there are large shipments awaiting the reduction in duty, and, of course, we realize that any of the patterns that are brought below a margin of profit must be abandoned, and we do not see why the Germans will not then increase their prices. The saving in any event to the consumer, when he is only paying 20 cents a year for his clock, is of course infinitesimal.

Apologizing for troubling you further on this matter, but wishing to have you note wherein the clock industry should be heard on its merits, I beg to remain,

WALTER CAMP.

THE ANSONIA CLOCK Co., 99 JOHN STREET, New York, N. Y., May 6, 1913.

The Ansonia Clock Co., 99 John Street, New York, N. Y., May 6, 1913.

Hon. Furnifold M. Simmons.

Chairman Committee on Finance.

United States Senate, Washington, D. C.

Dear Sie: I take the liberty to write to you as briefly as I can in regard to the duties on clocks, being fully aware that any letter, however short, is a tax on your most valuable time.

I understand that it was proposed to reduce the duty on clocks from 40 per cent ad valorem to 30 per cent ad valorem, and I understand that after the brief of the clock manufacturers was filed it was proposed to reduce this duty from 40 to 35 per cent; then, at the last moment, before the bill went in, this was again reduced to 30 per cent. The wages which we pay and which have gradually and steadily increased within the last 10 years and the reduction in the number of hours which we are allowed to operate our factories have gradually increased the cost of our production, while the competition here and abroad is such that the prices at which we sell our goods have been reduced to such an extent that to-day we receive for our product fully 40 per cent less than we obtained five years ago. We have been adopting new methods and purchasing at very great expense the most improved machinery, and yet we have been compelled to reduce our prices on account of the German competition.

I hope you will permit me to submit to you respectfully my personal investigation in regard to this matter:

1. The wages paid for similar work in Germany are 60 per cent less than the wages we pay here.

2. They have imitated all our machinery, and they have imitated the patterns of every clock we make.

3. They have sent their product to this country at less prices than they sell the same in their own country.

They have imitated not only the shapes and styles of our clocks, but they have even copied the names which we use.

In exporting their goods to other countries they have the assistance of the Government in that they only pay a small percentage of freight on goods thus exported. I

ular charge; and while our tariff has nothing to do with our business abroad, yet it is well to mention that we are crowded out by these people from all foreign countries, and we are compelled to rely on home consumption. We therefore consider that the small duty of 35 per cent is not even equal to the difference in wages existing between German manufacturers and American manufacturers.

The wage question in the manufacture of clocks is one of the most important features of our business. The wages we pay amount to a greater percentage than the amount we have to pay for raw material. Therefore in the manufacture of our product we are not assisted by any reduction that may take place in the tariff for the importation of raw material. Our principal outlay in the manufacture of our ware is for wages, and any further reduction in the price of our goods to meet foreign competition will only eventually result in a compelled reduction in wages in our factorless.

I submit this most respectfully, and I hope that I have not given undue extension to this letter.

BRIEF OF CLOCK MANUFACTURERS OF THE UNITED STATES.

BRIEF OF CLOCK MANUFACTURERS OF THE UNITED STATES.

The American was the ploneer in introducing to the world the manufacture of serviceable clocks at low prices to the consumer. Unlike almost all other articles, clocks are sold to-day lower than ever before, and the cost to the consumer has been reduced 50 per cent in the last 25 years. The cost now for an eight-day striking mantel clock for the living room and a nickel alarm clock for the bedroom does not exceed a rate of 45 cents a year for both.

In the United States there are 15,000 hands employed in the clock industry. They are paid on an average of two and a half times what their competitors receive in foreign countries. Here are the budgets of such help, from which may be gathered an idea of the value of the wages. For instance, the budget of a skilled clock maker in Germany, with family of 5 persons, during one year (these people had as a dwelling place three rooms and kitchen):

The wages of the husband alone were only 864 marks, but his wife

with infully of 5 persons, during one year (these people had as a dwelling place three rooms and kitchen):

The wages of the husband alone were only 864 marks, but his wife worked also and earned 432 marks. As this did not come up to their expenses, they both worked overtime, the pay for this overtime reaching the total sum during the year of 280 marks. In this way they overcovered by 70 marks their total expenses of the year, but it will be noted in looking over those expenses that the only allowance for all five of them for amusement was 20 marks for the year.

A woodworker in the same factory shows similar conditions, being obliged to work overtime to make both ends meet, and, in addition, in this case both the son and daughter worked.

In taking these various budgets all through they show both overtime and the working of children as well, in some cases revenue from field work, and also that the cost of living ate up all the receipts and forced this overtime and work upon them. For instance, Budget No. 7, clock-case maker, family of 6 persons, for one year, gives the total of the wages of father, son, and daughter, together with revenue from boarders, as 1,598 marks, and the cost of living 1,597 marks.

A savyer, skilled worker, during one year shows 950 marks receipts and 953 marks expenses.

Lathe hand in millwork, with a family of 5, taking a period of fear and person the state of the same period of fear and person the same period of fear and period of fear and person the same person the same period of fear and person the same person to a

and 953 marks expenses.

Lathe hand in millwork, with a family of 5, taking a period of four and one-half months, shows receipts of 371 marks and expenses of 388 marks, while a pivot turner, in the same period, shows receipts of 393 marks and expenses of 445 marks. Milling-machine hand in clock shop shows in three months receipts of 272 marks and cost of living 251 marks, while a brass turner, in a six months' period, shows wages of 638 marks and expenses of 620 marks.

Budget No. 1 .- Skilled clock maker.

Consul Harris, of Mannheim, in reporting on factory inspection in the Grand Duchy of Baden in 1906, states that the earnings of many of those employed in factory labor in their homes exceed those of like employees in factories, adding: "But these earnings are often the result of labor extended far into the night. In the Black Forest clock industry a working day of from 14 to 16 hours is common; also in many other industries. In the city of Pforzheim, which is a center of an enormous jewelry manufacture, the average daily wages for adult females is said to be 38 cents, and in the surrounding villages 31 cents, while the average daily wages of female chain makers is 45 cents, and in other branches of jewelry manufacture is 45 cents. The average daily wages of burnishers of silverware at Carlsruhe is 70 cents, while that of other female employees in factories in that city is 36 cents, and in the surrounding villages 31 cents. Adult females, working at their homes for a metal-ware factory at Bohrenbach, earn an average of 45 cents per day, while the average paid for female labor in that locality is 33 cents per day. Females of the doil department of a large celluloid factory near Mannheim are said to carn from 45 cents to 53 cents per day in home labor, while the average wage paid female labor in the suburb is 41 cents."

There are between twelve and fifteen thousand people in this country engaged in the clock industry. There is no combination or trust, the capital employed is not watered, and the profits have never been large enough to tempt larger investment, while two or three of the clock companies have failed, owing to the small margin between cost and senially price. Improvement in machinery is the only thing that has enabled the manufacturers to thus steadily reduce the cost to the consumer. The clock manufacturers were at one time protected by a duty of 50 per cent. This has been reduced to 40 per cent, and at this duty the foreign clocks have been coming in in steadily increasing numbers, thus threatening

Imports of clocks from Germany.

Year ended June 30-

Illustrations of this kind of competition tell the difficulties under which the clock makers have been working:

Some years ago we had a fairly flourishing export trade. Certain foreign manufacturers sent experts, posing as ordinary laborers, into our factories, where they remained, in some cases as long as two years, making drawings of our machinery, and finally returning and copying that machinery. Not content with this, they further copied the exact shape of our clocks, and, finally, that not being sufficiently effective, they used our very names; going into Australia and other markets and making a clock of inferior model, they cut our prices and succeeded in practically rulning our trade, not only by this inferior article but by creating the impression, through the use of our clock names, that our clocks had become inferior. Such export trade as is now left goes to countries giving us a preferential duty against the Germans or in patterns not yet copied.

The New Haven Clock Co. had a recent experience in Canada which is even more illustrative. They produced a clock called the "Tattoo Intermittent." This clock is a special alarm clock designed to awaken heavy sleepers and has its name in red on the dial. They had built up a very considerable trade in it, when some foreign makers copied it out of cheaper material and sent it into Canada, deliberately printing the words "Tattoo Intermittent" in red on the dial with the intention of deceiving the trade. The New Haven Clock Co. protested, and the Canadian Government were good enough to tell the foreign makers that they must stop. They sent in an importation of the same clock and obeyed the Government's orders by leaving the words "Tattoo Intermittent" off the dial, but instead they placed the following inscription in red on the dial. "Identical New Haven."

This is the kind of competition to which we refer, but there is still another side to the question of considering us separately.

We are constantly being classed in with groups where there are trusts, no com

A striking example of this was in the case of a New York body last fall. The following was sent by the tariff reform committee of the Reform Club to widely distributed papers and printed in large capital

letters: "Made in New Haven; for export, 55 cents: in America, 68 cents. (Picture of clock.) Discrimination against American purchaser, 25 per cent, protected by duty of 40 per cent."

Now, as already repeatedly stated, the New Haven Clock Co. does not sell its product at lower prices abroad than it does in this country, and at the very time the above article was published was selling the clock mentioned in New York City to the trade at the same price as quoted in the foreign market, and this clock was then being sold to several domestic concerns in New York at 55 cents.

The New Haven Clock Co. promptly took this up with Mr. Holt, chairman of the tariff reform committee, asking him to come to New Haven, offering him access to their books, but this he said he was unable to do.

He, however, called at their New York office, where he was shown

He, however, called at their New York office, where he was shown their sales books, and he was thoroughly convinced that the statement was an error and agreed to make a correction.

The following letter was received from him:

TARIFF REFORM COMMITTEE, September 10, 1912.

Mr. Walter Camp,
President and Treasurer the New Haven Clock Co.

DEAR MR. CAMP: I am sorry to have delayed so long the preparation and publication of the correction inclosed herewith, which I hope will be satisfactory to you and to the New Haven Clock Co. This correction is being sent this week to all the newspapers to which the export and domestic price articles were sent. Very truly, yours,

BYRON W. HOLT. Chairman.

Extract from inclosure:

"The tariff-reform committee has investigated and is convinced that these companies do not discriminate against the American consumer."

To sum up, the clock industry would like to be judged upon the merits of their own case and believe that the present duty should remain. The proposed new duty is a cut of 25 per cent, which would only reduce the cost to the consumer about the amount of a postage stamp a year, while it would jeopardize the continuance in the industry of some 15,000 people. Naturally, if the manufacture of clocks were stopped in the United States, the price to the consumer of the imported article would be raised at once, so that the net result would be higher prices for clocks.

The facts upon which this is based are that—

First. The clock makers have steadily reduced the price of clocks to the consumer of the United States, who now pays only a little more than half what he paid for similar clocks 25 years ago, and in spite of the increased cost of labor and material and the rising tendency in other lines this is still downward.

Second. That foreign importations under the present duty have steadily increased and are now threatening the industry.

Third. That the wages paid in foreign countries are so low in comparison with the American clock makers' pay that a man receives over here in approximately two and one-half days what he would receive over there in a week, and that even a lower rate prevails in the case of women.

case of women.

case of women.

Fourth. That the clock manufacturers of the United States do not sell their product abroad at lower prices than for home consumption.

Fifth. That they are in no trust, and competition prevails at all times among them to such an extent as to enforce the strictest economy and greatest efficiency upon these plants.

Sixth. That the amount of dividends on the invested capital has been hardly commensurate to the amount of risk involved. This is particularly emphasized by the fact that, while two or three of the companies have failed, there has, with one exception, been no new concern tempted to go into the business by the probability of profitable returns.

able returns.

Seventh. That there is no water or capitalization of good will in the clock companies of the United States.

Eighth. That their stocks have never been subjects of stock-market manipulation.

manipulation.

Ninth. That approximately 50 per cent of the cost of the ordinary clock is labor.

Tenth. That the horological schools established by the Government in the clock-making districts of foreign countries save the manufacturers the cost of experts and experimental work, all of which the American manufacturer is obliged to bear himself.

Eleventh. That the methods employed in this competition by the foreign makers are what would be classed in this country as unfair, if not illegitimate, making use even of the very names of our clocks on their products.

Twelfth. That the clock makers are paying more and more for materials and help, while furnishing clocks for lower and lower prices.

prices.

Thirteenth. That, as far as an element in the high cost of living is concerned, the actual consumer can buy a mantel clock for \$2 and an alarm clock for 75 cents. The life of the former is at least 10 years and the latter 3, so that less than 1 cent a week covers clocks at their

present prices.

Representatives of the present party in power have repeatedly asserted that the individual or the small business, in contradistinction to the overcapitalized trust or monopoly, would be given a fair show, and that such legitimate industry would have nothing to fear from tariff legislation. Hence it seems reasonable that the clock industry should be considered upon its own merits and should not be made to suffer for the sins of others.

The reading of the bill was resumed.

The next amendment of the committee was, in paragraph 169, page 50, line 8, before the words "per centum," to strike out "25" and insert "20," so as to make the paragraph read:

169. Articles or wares not specially provided for in this section; if composed wholly or in part of platinum, gold, or silver, and articles or wares plated with gold or silver, and whether partly or wholly manufactured. 50 per cent ad valorem; if composed wholly or in chief value of iron, steel, lead, copper, nickel, pewter, zinc, aluminum, or other metal, but not plated with gold or silver, and whether partly or wholly manufactured, 20 per cent ad valorem.

Mr. SIMMONS. Mr. President, before paragraph 169 is disposed of I desire to submit some general observations upon this schedule. I shall be very brief and shall content myself with printing the tables and documents to which I may refer instead of reading them.

The census figures of 1904 place the value of products of iron and steel manufactured in the United States at about \$2,200,-000,000 and the value of products of metals other than iron and steel at about \$920,000,000, or a total of about \$3,100,000,000.

The census of 1910, covering the census year of 1909 and relating to the same manufactures, shows a total of nearly \$4,400,000,000, or an increase of more than 40 per cent in five

Against this enormous domestic production there were imported into the United States in 1912 products dutiable under the metal schedule to the value of only about \$50,000,000, being practically little more than 1 per cent of the domestic production. The significance of these small imports is emphasized by the fact that during the same year our exports of these products amounted to \$306,000,000, or six times as much as we imported.

These official figures would seem to show two things:

First. That the duties in the present law upon many of the products embraced in this schedule are prohibitive.

Second. That this industry needs no tariff protection, even from the Republican standpoint, and that but for the necessity of revenue these products could in the main be transferred to the free list without any injury to the domestic producers.

In confirmation of the prima facie case made out by these general figures I have here a table showing the production, exportation, and importation of about 30 of the leading products covered by this schedule, which, without reading, I will

ask to have embodied in my remarks.

Mr. President, these 30 leading products contained in these tables carry duties which the imports show to be practically prohibitive. It shows, first, that the domestic production of these products last year amounted to \$2,059,000,000, the imports amounted to \$10,420,000, and the exports to \$107,000,000, and revenue actually collected by the Government only \$3,314,000.

It will be noted from this table, first, that upon these 30 articles, covering one-fifteenth of our entire domestic production of all things, products of the mines and of the forests and of the factories and fields, the imports amounted to \$10,000,000, while the exports amounted to \$107,000,000; or, that we exported last year more than ten times as much of these 30 leading

products as we imported.

It shows, secondly, that from this domestic production of over \$2,000,000,000, representing, as I said, one-fifteenth of the entire domestic production of this country, the revenue received by the Government under these prohibitive duties amounted to only \$3,300,000; that is to say, the imports of these products amounted to only fifty-six one-hundredths of 1 per cent of the domestic production, and the revenues derived from these items amounted to only 1 per cent of the total revenues collected by the Government in that year. In other words, one-fifteenth of the production of this country, on account of these prohibitive duties, paid only 1 per cent of the revenues of the Government, while the other fourteen-fifteenths of our production paid 99 per cent of the customs revenues of the Government.

These facts, Mr. President, would seem to demonstrate conclusively that the duties upon these 30 leading products in the

metal schedule are prohibitive.

I ask permission, without reading, to insert the table as a part of my remarks. The PRESIDING OFFICER (Mr. O'GORMAN in the chair).

There being no objection, it will be so ordered. The table referred to is as follows:

> Prohibitive rates of Schedule C. [Exports and imports for 1912, production for 1909.]

1 Estimated.
2 Fifty-six one-hundredths of 1 per cent of production.

Average ad valorem duty on above, 31.80 per cent.

Note.—This average may be claimed to be a low rate of duty, but in the case of some of the above articles, in fact in the case of most of them, the industry is so strong in this country that the only effect of this duty is to enhance the price to the consumer. In many cases no more goods would be imported, even if the entire duty were removed.

Mr. GRONNA. May I ask the Senator from North Carolina if all the 30 leading products to which he has referred are now placed on the free list in this bill?

Mr. SIMMONS. I am not speaking of the free list under this bill. I am speaking with reference to the present law and not the bill. I have stated that they were all under high duties, which were prohibitive.

Mr. President, I offer another table here in confirmation— Mr. NORRIS. Before the Senator reaches that subject, I should like to inquire if the list he prints in the RECORD gives the names of the particular products.

Mr. SIMMONS. Yes, of each one of them. It specifies the production, the exports, the imports, and the revenues received from them.

Mr. President, in confirmation of the statement that most of these things require no protection, even from the Republican standpoint, I have here a statement of exports for the year 1912 of a large number of the more important commodities embraced in this schedule. It will appear from this table that there is hardly a country in the world to which we are not exporting these commodities, and in many instances in competition, upon equal terms, with the very countries the opponents of this bill have contended, in the arguments we have had here, that we can not compete with in our own market places, where we have a tariff advantage under this bill of about 19 per cent.

Mr. President, I shall read but briefly from this table, because it is very long; but taking the subject of wire rods and all other bars or rods embraced in the schedule, I find that last year we exported \$4,250,000 worth of these products to Europe and to Canada, exporting to England, a country which the op-\$257,000 worth of these commodities.

Billets, ingots, and blooms of steel. We will all recall the fact that when these subjects were up for discussion during the consideration of that paragraph, Senators on the other side of the Chamber declared we would be able to compete in this market with England and with Germany in the manufacture of even these products, if duties in the present law were reduced. I find, Mr. President, that of these products we exported last year to England \$3,839,000 worth; to Scotland \$100,000 worth; and to Canada \$1,200,000 worth.

Steel rails we exported all over the world-to England, to Scotland, to Canada, to Brazil, to Chile, to Japan, and to a number of other countries. Of steel we exported to Italy \$300,000 worth; to the Netherlands \$100,000 worth; to England and Scotland \$427,000 worth; to Canada, where England has, I believe, a preferential tariff against us of 30 per cent, in competition with England we exported of this product about \$1,500,000 worth.

Of barbed wire I find that we exported last year to 15 different countries, some of them European countries. Builders' hardware is another item that we were told, when we had that subject under consideration, we would be unable to compete in our own markets with England and Germany and France if the duties were reduced to any considerable extent; and yet I find that last year we exported to Europe nearly \$2,000,000 worth of hardware—locks, hinges, and so on—to France \$136,000 worth, Germany \$169,000 worth, Russia \$171,000 worth,

England \$517,000 worth, and to other European countries \$594,000 worth, in addition to exportations to many other coun-

Now, as to tools, I recall how insistent Senators on the other side were in their contention that we could not compete upon tools. Yet, Mr. President, last year we imported to Belgium, where it is said that iron and steel and their products were manufactured cheaper than in any other country in Europe, \$207,000 worth, to France \$390,000 worth, to Germany \$588,000 worth, to the Netherlands \$115,000 worth, to Norway \$111,000 worth, to Russia \$269,000 worth, to Sweden \$111,000 worth, to England \$1,062,000 worth, to Scotland \$106,000 worth, and to Canada \$1,686,000 worth.

Of cash registers we exported last year \$3,500,000 worth, and of this over \$2,000,000 worth were exported to European coun-

Of metal-working machinery we exported last year to Europe alone over \$10,000,000 worth.

Of typewriting machinery we exported to Europe last year about \$10,000,000 worth.

Of all other machinery we exported to Europe last year about 4,000,000 worth.

Of pipes and fittings, which have been the subject of discussion here, we exported to Europe last year about \$6,000,000 worth.

If we could sell all these products abroad after paying the tariff duties of the country of exportation in competition with the local producer who paid no tariff tax, why do we need protection against the foreign producers in our own market, where they pay in many a tariff tax and our producers none?

will not detain the Senate to read the long table, but I ask unanimous consent that it may be incorporated as a part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table referred to is as follows:

Mr. SIMMONS. Mr. President, the metal industry is next to

agriculture, our largest single industry.

As before shown, the annual production of the commodities embraced in the metal schedule constitute about one-sixth of our total annual production of mine, forest, field, and factory; but the revenue derived from this schedule last year amounted to only about \$17,000,000.

In view of the fact that the metal industry is an international industry, in which there is keen competition in both production and selling, why has our income from tariff duties in this schedule been so small?

In the answer to this question will be found the philosophy of the protective system as interpreted by the men who controlled the Republican Party when the Payne-Aldrich bill was enacted into law. These men regarded the Government's interest in the tariff as only incidental and as subsidiary to the interest of those engaged in the industry. They considered it entirely proper to so adjust these tariff duties that they would yield to the Government a minimum and to those engaged in the industry a maximum of revenue.

From the arguments daily made here against many of the reductions in these demonstrated prohibitive duties of the Payne-Aldrich bill it is evident that that is the interpretation which many of the present leaders on the other side of this Chamber still give to the protective system. These arguments make it clear that that wing of the Republican Party still want these duties maintained at so high a level that there will be no revenue to the Government, but big revenue to those engaged in

I am glad to see from the various roll calls we have had on this schedule that this view of protection is not maintained by a considerable number of Senators on the other side, and that the reductions made in this schedule meet the approval of many Republican Senators. With the view of showing the weakness of the standpat cause in the Senate and the repudiation by many Republican Senators of their attitude toward the reductions this bill makes in the excessive duties of the Payne-Aldrich bill. I wish to publish as a part of my remarks the result of the roll calls upon this schedule.

These roll calls have not been numerous, but they show that there are on the other side of this Chamber as well as on this side of the Chamber those who approve the duties imposed in this bill upon some of the very items that have been singled out for assault and who have by their votes signified their disagreement with their standpat colleagues on the other side of the Chamber and their approval of the reductions that we have made in the bill.

Mr. President, on the first roll call that he had, upon a committee amendment, the yeas were 51 and the nays 22; on the second roll call we had, the proposition being to change a committee amendment in the paragraph as amended by the committee, the yeas were 21, the nays 47; in the next roll call, on a motion to strike out a paragraph, the yeas were 17 and the nays 45; on the next, it being an amendment to the bill, proposed by an opposition Senator, the yeas were 31, the nays 40; on the next, also an opposition amendment to the bill, the year were 18 and the mays 50; on the next, being an amendment from the opposition, the yeas were 25, the nays 45; on the next, still an opposition amendment, the yeas were 27, the nays were 42; on the next, being on a committee amendment, the yeas were 39, the nays were 28; on the next, on an amendment offered by the Senator from Ohio [Mr. BURTON], the yeas were 11 and the nays were 38; on the last vote taken on yesterday, on the proposition to put cast-iron pipe upon the free list, brought in by the Committee on Finance, the yeas were 41 and the nays were only 17.

I will insert the votes as given in the RECORD without reading

On August 5—page 3107 of the Record—Mr. Brandegre offered an amendment to paragraph 121, to insert the words "and chassis," after the word "automobiles," in lines 1, 3, and 4;

and in lines 5 and 6 to strike out the words "automobile chassis and." This proposition was to increase the duty on automobile chassis from 30 to 45 per cent. On page 3112-of the RECORD the vote was taken, with the following result-yeas 21, nays 47, not voting 28:

not voting 28	VE	AS-21.

Bankhead Borah Bradley Burleigh Burton Clark, Wyo. Clarke, Ark.	Crawford Culberson Cummins du Pont Fall Goff Gore	Hitchcock Jackson Johnston, Ala. Lodge McCumber Newlands Pittman	Poindexter Root Smith, Md. Stephenson Sutherland Swanson Townsend

On August 6 Mr. Gallinger moved to strike out paragraph 137 as printed in the bill and insert in lieu thereof a new paragraph, as follows:

graph, as follows:

137. Needles for knitting or sewing machines, 75 cents per thousand and 20 per cent ad valorem; latch needles, 90 cents per thousand and 25 per cent ad valorem; crochet needles and tape needles, knitting and all other needles, not specially provided for in this section, and bodkins of metal, 20 per cent ad valorem, but no articles other than the needles which are specifically named in this section shall be dutiable as needles unless having an eye and fitted and used for carrying a thread. Needlecases or needlebooks furnished with assortments of needles or combinations of needles and other articles shall pay duty as entireties according to the component material of chief value therein.

Mr. Gallinger said that his impression was that it would place the ad valorem a little below 40 per cent. The committee's proposed amendment was 20 per cent.

The result was announced-yeas 25, nays 45, as follows:

	Y			
Brandegee Burton Catron Clapp Clark, Wyo. Colt Dillingham	Gallinger Gronna Jones La Follette Lippitt McLean Nelson	Oliver Page Penrose Perkins Sherman Smith, Mich. Smoot	Sterling Warren Weeks Works

So the amendment reported by the committee was agreed to.

On August 9-page 3230 of the Record-Mr. Burton offered his amendment, originally offered on May 26, to impose the same duty on scissors and shears as upon penknives and razors, so as to make paragraph 130 read as follows:

so as to make paragraph 130 read as follows:

130. Penknives, pocketknives, clasp knives, pruning knives, budding knives erasers, manicure knives, and all knives by whatever name known, including such as are denominatively mentioned in this section, which have folding or other than fixed blades or attachments, and razors, scissors and shears, and blades for the same; all the foregoing, whether assembled but not fully finished or finished; valued at not more than \$1 per dozen, 35 per cent ad valorem; valued at more than \$1 per dozen, 55 per cent ad valorem; Provided, That blades, handles, or other parts of any of the foregoing knives, razors, shears, scissors, or erasers shall be dutiable at not less than the rate herein imposed upon the knives, razors, shears, scissors, and erasers, of which they are parts: Provided further—

And so forth.

In the bill, scissors and shears carried a 30 per cent duty, and this amendment increased that duty.

The result was announced-yeas 11, nays 38, as follows:

	, YE	AS-11.

Smith, Md. Smith, Mich. Stephenson Lodge McCumber du Pont So the amendment of the committee was agreed to.

Mr. GALLINGER. Mr. President—
The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from New Hampshire?

Mr. SIMMONS. Yes.

Culberson

Mr. GALLINGER. I have not been privileged to hear all of the speech which the Senator from North Carolina is deliver-

Mr. SIMMONS. I am not delivering exactly a speech; I am simply making a statement.

Mr. GALLINGER. But as I came into the Senate Chamber I wondered why, in view of the fact that the Senator is anxious to have the consideration of the bill go on—

Mr. SIMMONS. Oh, Mr. President, I do not care to go into nat. The Senator knows I have taken very little time in discussion. I am simply making a few remarks on the schedule as a whole.

Mr. GALLINGER. What I rose to ask the Senator was whether he is complaining because the majority for the bill is

so large?

Mr. SIMMONS. The Senator from New Hampshire did not hear what I said before he came into the Chamber. I was stating what I regarded as the significance of these votes as indicating that many of the Senator's colleagues on the other side of the Chamber are against many of the amendments which are being proposed from that side, and in many of these votes have sustained the provisions in the bill.

Mr. GALLINGER. Then why does the Senator complain? Mr. SIMMONS. I am not complaining of that; I am rejoicing that that is so.

Mr. GALLINGER. We have noticed it on this side of the

Chamber.

Mr. SIMMONS. I supposed the Senator had.

Mr. GALLINGER. But I notice that the Senator used the "standpat" quite a number of times. I do not think the standpat" element has given the Senator much concern.

Mr. SIMMONS. If that designation or that description of one element of the party on the other side of the Chamber does not suit the Senator and he will give me a more acceptable and an equally comprehensive term, I shall be glad to substitute it.

Mr. GALLINGER. When we come to vote upon the passage of the bill the Senator will then see how the lining up is.

Mr. SIMMONS. I hope that the lining up on the other side may continue as the lining up has been upon the amendments which have been proposed.

Mr. SMOOT. Mr. President, I simply wish to say to the Senator from North Carolina that some of the amendments which have been defeated have been amendments to decrease the

rates rather than to increase them.

Mr. SIMMONS. I now recall but one such amendment to this schedule, and that was to reduce the rate on shotguns, though there may have been one or two; but that has not been the character of the amendments. Though I do not now recall exactly the character of each of the amendments, they have The Senator from Utah, been to increase not to reduce rates. however, knows that has not been their character.

I do not want to enter, Mr. President, into any general discussion of the profits of the steel industry. It is a matter of common knowledge that those profits have been large, both the profits of the Steel Corporation, which is probably the biggest single combination or trust in the country, and also the profits of the independent producers. I think I could easily show that the articles placed on the free list in this schedule can be produced as cheaply here as anywhere in the world; and, in my opinion, I could also show, and easily show, that the duties retained upon the articles in this schedule, even from the Republican standpoint, represent more than the difference between the cost of production here and abroad, and certainly they more than cover the difference in the selling price of these products here and abroad.

Instead of entering upon a discussion of these questions, I shall content myself-and that was my chief object in risingwith putting into the RECORD certain data, tables, and statements with reference to the steel industry. First, I present a statement showing the profits, and so forth, of the United States Steel Corporation. It is a marvelous story, Mr. President, of big dividends upon stock, one-half of which is nothing but water. I ask, without reading, to put into the RECORD as a part of my remarks this statement with reference to the operation of the Steel Corporation.

The PRESIDING OFFICER. If there be no objection, permission to do so is granted.

The statement referred to is as follows:

ORGANIZATION OF THE STEEL CORPORATION.

"When the United States Steel Corporation was organized, in 1901, it took over 10 iron and steel producing concerns, each of which was itself a combination. Three of the 10 were making chiefly crude and semifinished steel or the heavier finished products, and 7 of them were making the more highly finished products. It also took over a mining concern that was a consolidation of several iron mines and a steamship company operating a large fleet of ore vessels on the Great Lakes. The 10 consolidations taken over by the Steel Corporation owned and controlled more than 225 concerns, nearly all of which were manufacturing steel or steel products. Some of them, however, were coal or coke companies, and there were one or two railroad companies. The various consolidations purchased by the Steel Corporation were undoubtedly vastly overcapitalized, but the new corporation swelled the already-inflated securities more than \$440,000,000. In taking over the various corpora-

tions the United States Steel Corporation acquired securities and cash valued at more than \$881,000,000, for which it issued securities with a face value of over \$1,321,000,000. But, as I have just stated, it added 'water,' which it valued at more

than \$440,000,000.

"There might have been some excuse for this addition to capital if the properties had been bought cheap, but they were not. It has been estimated by the Commissioner of Corporations that the total tangible assets above underlying indebtedness of the various concerns taken over by the Steel Corporation were worth \$570,000,000. Adding to this purchase money obligations and cash provided for the organization of the Steel Corporation, the total assets on April 1, 1901, were \$676,000,000. The tangible property of the constituent concerns at the time were organized was approximately \$452,000,000. Adding to this the underlying indebtedness of \$60,000,000 gives a total of \$512,000,000 as the value of the properties of the constituent concerns at the time of their organization. In other words, the property of the constituent concerns between the time of their organization and the organization of the steel companies increased from \$512,000,000 to \$676,000,000. In every case except one the amount of stock issued by the Steel Corporation was in excess of the market value of the stock acquired. Usually it was very largely in excess. As before stated, the stocks acquired by the Steel Corporation had a face value of more than \$881,000,000. Taking these stocks at their market values in 1900, they were worth \$687,000,000.

"This enormous inflation of capital was based on the theory that the consolidation of these big steel concerns would eliminate competition and that the consequent increased profits in the steel business would be sufficient to pay dividends on all this watered stock. The tangible property, including manufacturing plants, transportation companies, coal, coke, and natural gas and limestone properties, and necessary working capital, amounted to \$582,000,000. The ore properties at the time of acquisition were worth about \$79,000,000. The Commissioner of Corporations, after making due allowances for all possible errors in estimate, fixed the value of property acquired by the Steel Corporation, as before stated, at \$676,000,000. The corporation itself one year later fixed the value of its properties at \$1,457,000,000. This value was fixed by the corporation in its defense in what is known as the 'Hodge suit.' This was a suit brought to prevent the company issuing bonds amounting to \$200,000,000 for the purpose of retiring a like amount of preferred stock. The company thus valued its property high enough to make its assets equal to its capitalization. As a matter of fact, however, the securities of the corporation in July, 1902,

represented over \$700,000,000 of fictitions value.

"The estimates of the value of the investments of the United States Steel Corporation were arrived at in three different ways by the Commissioner of Corporations. First, he entered into a historical analysis of the tangible property; second, he computed the value of all property upon the basis of the market prices of the securities of the constituent concerns; and, third, he estimated the value of the tangible property by departments of the business as indicated by the character of products made. "A brief summary comparison of assets acquired and capital

issued is shown below:

EARNINGS.

"I have already intimated that the capitalization of the Steel Corporation was, in a measure at least, based upon the earning power of the monopoly. It is therefore important to discuss briefly the earnings of the corporation as compared with the real investment as above outlined. It should be stated in this connection that the statement of the Steel Corporation issued from time to time to the public did not show the real earnings of the corporation. Of course the primary purpose of this statement is to furnish the investing public and stockholders with information as to the amount of earnings that is available for interest and dividends or surplus. An analysis of the earnings of the corporation reveals a considerable excess over that shown by the annual reports of the company. It is interesting at the outset to note the fact that gross sales and gross earnings have risen very rapidly. The total income, however, has not increased in the same proportion. While sales and earnings from 1902 to 1910 increased 25 per cent, the total income increased only

Si per cent.
"The total net earnings, as shown by the annual reports of the corporation, increased from \$108,534,374 in 1902 to \$116,738,158. A revision of these figures, as made by the Commissioner of Corporations, adds several million dollars to these earnings, so that the total as adjusted for the two years above named were \$121,502,344 for 1902 and \$127,216,084

for 1910.

"The actual earnings of the Steel Corporation on these investments and a comparison of investments with earnings as adjusted by the Commissioner of Corporations are shown in the statements below:

"The above statement shows that \$422,279,067 was reinvested in the property and applied to sinking funds. were various reserve funds that included more than \$8,000,000 representing insurance funds. Adding the insurance funds to the amount reinvested would give an equity of more than \$430,000,000 which can be considered as benefiting stockholders. In other words, the capital stock of the corporation which in the beginning contained over \$720,000,000 that was mere 'water,' received during the period from April 1, 1901, to December 31, 1910, nearly \$400,000,000 in cash dividends, and in addition thereto \$422,479,000 of earnings went to increase the equity accrued to stockholders."

Mr. SIMMONS. Not only has the Steel Corporation been wonderfully prosperous, and paid big dividends, but the independent companies have been likewise prosperous-so pros-perous that year by year they have been increasing the per-centage of their total production in this country as compared with that of the Steel Corporation, their competitor. It is true that the independent producer's cost of production is a little higher but in the matter of selling prices there is no competition between the independents and the trusts. For the purpose of fixing prices every steel manufacturer in this country is a part of the trust and benefits equally in the extortion of artificial prices that that company has imposed upon the domestic products of this country. In the prices of these products there is a monopoly in which the independent producers participate with the Steel Corporation. That the independent producers are prosperous will be shown by a statement which I ask to incorporate in my remarks, showing the profits made by various mills during the last two or three years.

The statement is as follows:

THE IRON AND STEEL INDUSTRY.

"The iron and steel industry is another conspicuous beneficiary of the protective system, and there can be little doubt that at the present time the many branches of the industry are in so prosperous a state and able to produce their goods at a cost that enables them to enter the world's markets successfully.

"While it is true that many of the corporate concerns engaged in these branches of industry are probably capitalized in excess of their actual value, it will nevertheless be generally admitted that they have been earning at least reasonable returns upon the invested capital.

"Taking a few typical establishments by way of illustration. I find that

"The Belfont Iron Works, at Ironton, Ohio, making wire nails and cut nails, and capitalized at \$625,000, has paid the following dividends: 1901, 15 per cent; 1902; 35 per cent; 1903, 30 per cent; 1904, 15 per cent; 1905, 10 per cent; 1906, 20 per cent; 1907, 40 per cent; 1908, 10 per cent; 1909, 15 per cent; later dividends not made public.

The Berger Manufacturing Co., of Canton, Ohio, makes sheet steel and sheet-steel specialties. It is capitalized at \$2,500,000 of 7 per cent preferred stock and \$2,500,000 common stock, and pays 12 per cent annually on the common stock.

"The Continental Bolt & Iron Works, of Chicago, Ill., has paid an average of over 20 per cent dividend per annum during

the last 12 years.
"The Devlin Manufacturing Co., of Philadelphia, making malleable iron and hardware, capitalized at \$1,000,000, paid average dividends of 7 per cent from 1907 to 1912 and a stock dividend of 331 per cent in 1910.

"The Eagle Lock Co., of Terryville, Conn., increased its capital stock in 1912 from \$400,000 to \$1,000,000 by a stock divi-

After deducting employees' bonus fund, which in this year was taken out after stating net earnings, but which in other years is deducted before determining the net

Approximated; this amount never computed by the corporation.
 In these years the intercompany profits and inventories were not deducted by the corporation and hence need not be restored.

[&]quot;The result of these revisions, it will be seen, is an addition of \$120,305,019 to the net earnings as given in the published reports, making a total of \$1,100,350,857.

Indicated rate per annum based on actual earnings for 9 months.
Average yearly profits for 93 years.

[&]quot;The above comparison of earnings clearly brings out the earning power of the corporation as indicated by the per cent of profits. An analysis of these statements reveals the earnings that went to the stockholders for the period from 1901 to 1910 to have been \$\$16,430,854. Of this amount \$393,951,787 was actually paid out in dividends. The distribution of earnings is shown in the following statement,

dend of 150 per cent, having previously paid 10 per cent per

"The Nicholson File Co., of Providence, R. I., has issued five millions of capital stock, paying 16 per cent per annum since 1908 and an extra cash dividend of 50 per cent out of sur-

"The Scranton Bolt & Nut Co. paid a stock dividend of 100

per cent in 1907.

"The Sharon Steel Hoop Co., of Pennsylvania, capitalized at \$2,500,000, pays 7 per cent, and issued a stock dividend of 33½ per cent in 1912. This company makes steel billets and

"These figures would seem to indicate that the iron and steel industry in the United States is still safely removed from the danger of having to operate at a loss, not to say from the danger of extinction. Let me not be misunderstood as challenging the right of those industries to earn liberal profits upon the invested capital, whenever and wherever these profits are due to productive ingenuity, business skill, and efficient management. The purpose of the proposed modifications in the tariff is to stimulate and emphasize these very qualities, which in many lines of production have already been manifested by American producers to such an extent that their goods command not only the envious admiration of our foreign competitors, but a considerable and increasing share of the foreign markets."

Mr. President, in the interest of time, I do not wish to pursue

this subject any further.

I have here also a statement of the wages paid in the steel industry. An examination of these statements will show that whatever may be the wages in other parts of the world in this industry, the wages here compared with what ought to be paid to American labor are pitiably inadequate. It will show, furthermore, the character of labor employed in these factories; but I do not wish to detain the Senate with reading it. My only purpose, as I said, was to present this data to the Senate, and I have taken only such time as was necessary to explain the character of the data. I ask unanimous consent that this statement may be printed in the Record as a part of my remarks.

The PRESIDING OFFICER. If there be no objection, it

will be so ordered.

The statement referred to is as follows:

WAGES PAID IN IRON AND STEEL INDUSTRY.

"In most branches of the iron and steel industry the American producer has little or nothing to fear from a material reduction of import duties. When, however, it is contended that the high wages and high standard of living of the American worker necessitate a continuance of the present high duties upon manufactures of iron and steel, it is legitimate to make some inquiry into the wages and conditions of employment of those who furnish the labor employed in these industries.

"With regard to these matters, we are fortunate in having a the Commissioner of Labor. This report relates to conditions existing at the end of the year 1911. The data presented in this report cover approximately 82 per cent of the employees engaged in the industry—that is to say, nearly 200,000 employees in the blast furnaces, steel works, rolling mills, and steel foundries of the United States.

ries of the United States.

"The most striking fact brought out by the report is the unusually long schedule of working hours to which the larger number of the employees in this industry are subject. Twentynine per cent of the employees of blast furnaces, steel works, and rolling mills worked customarily 7 days per week, and 20 per cent of them worked 84 hours or more per week, which, in effect, means a 12-hour working day every day in the week, including Sunday. The 7-day work was not confined to the blast-furnace department, where there appears to be a metallurgical necessity for continuous operation, but it was also found in other departments.

"The conditions of labor characteristic of the iron and steel industry are more significant when we consider that the general tendency in other industries has been toward a shorter working day. In the iron and steel industry, however, only 14 per cent of the employees work less than 60 hours per week, and almost

43 per cent work 72 hours or more per week.

"Of course, a large proportion of the employees in this industry are unskilled workmen who are very largely recruited from the ranks of recent immigrants. Nearly 60 per cent of the employees are foreign born, and of these nearly two-thirds are of Slavic races. The increasing use of mechanical appliances is constantly diminishing the proportion of skilled laborers required by the industry.

"As for annual earnings of iron and steel workers, the recent report of the Immigration Commission indicates the following | now come in.

general conclusions: Adult males average \$346 per annum, varying from \$330 in the Birmingham, Ala., district to \$390 in a typical iron and steel community in New York State. But the proportion of adult males earning less than \$400 a year is 68.4 per cent for all districts comprised in the investigation.

"It is customary to supplement the family income by having the women of the family look after boarders and lodgers. In families in which the income of the husband is under \$400 per annum, 45 per cent of the wives either have employment or keep boarders and lodgers; in the cases of 15.1 per cent of the

families the children furnish part of the family income. "It is scarcely necessary to point out the dangers and in many respects the unhealthful character of the iron and steel industry. But it is noteworthy that in an industry where there is so much pressure for Sunday and overtime work there should also be such irregularity of employment. The iron and steel industry, however, shows greater fluctuations in its labor force during the course of the year than any of the large manufacturing industries where the demand is not seasonal. seems to be to run the department at top speed and under the heaviest pressure while there is an active demand for its products, and then shut it down as soon as the market becomes weak. Only 63 per cent of the employees worked as long as 44 weeks during the year. The average, therefore, would probably not reach 40 weeks, even in prosperous years in the industry. in 1910, 44 per cent of the employees in departments that were operated more than 6 months during the year could not earn as

much as \$600.

"As for the general increase in wages from year to year, the Commissioner of Labor reports that from 1901 to 1910 the retail prices of food increased 32.8 per cent, while the wages of unskilled laborers, which predominate in this industry, increased

only 17.5 per cent."

The PRESIDING OFFICER. The question is on the amendment of the committee in paragraph 169, page 50, line 8, to strike out "25" and to insert "20." Mr. GALLINGER. Mr. President, the senior Senator from

Massachusetts [Mr. Lodge] has been called out of the Chamber and will return in a few moments. He wishes that that paragraph might not be considered until his return. I presume there will be no objection to postponing the matter for a few moments.

Mr. STONE. The Senator from Massachusetts did speak to me about it, and said he would be obliged to be absent for a few moments and would then return. This is the last paragraph in the schedule.

Mr. SIMMONS. We might during the absence of the Senator

from Massachusetts take up Schedule E.

Mr. SMOOT. Mr. President, the other day I offered an amendment to one of the paragraphs of the bill providing a 40 per cent ad valorem rate upon surgical and dental instruments or parts thereof. I offered that in the paragraph relating to scissors, penknives, and so forth. I do not exactly remember whether or not the Senator from Colorado [Mr. Thomas] stated that the committee would take this question under ad-

Mr. THOMAS. My recollection is that that was voted upon after some remarks by the Senator from Mississippi [Mr.

WILLIAMS]

Mr. SMOOT. That was voted upon as to the 40 per cent rate, but after that the question arose, and I understood the Senator from Colorado to say that the committee would take the matter under consideration with other items. If not, Mr. President, I will say that I think there should be an amendment to paragraph 168, which provides:

Nippers and pilers of all kinds, wholly or partly manufactured, 30 per cent ad valorem.

Mr. THOMAS. I recall that the Senator from Utah called my attention to that, and I think I said to him privately that we would consider it.

Mr. SMOOT. It was either privately or else on the floor of

the Senate; I have forgotten which.

Mr. THOMAS. I think I made that statement.

Mr. SMOOT. I simply call the Senator's attention to it and express the hope that the committee will take the matter into consideration with other unsettled matters.

Mr. THOMAS. We will consider it with the other matters.

The next schedule is Schedule E.

Mr. SIMMONS. Mr. President, on account of the illness of the Senator from Louisiana [Mr. RANSDELL], I think it has been understood that the sugar schedule might go over. would bring us to Schedule F, and we might take that up now.

Mr. LODGE entered the Chamber.

Mr. SIMMONS. I see the Senator from Massachusetts has

Mr. STONE. Paragraph 169 has been passed over during the

temporary absence of the Senator from Massachusetts.

Mr. LODGE. Mr. President, I desire merely in connection with paragraph 169, which is known as the basket paragraph, to say a word in regard to one particular article which is in-cluded in the second part of the basket clause. Of course, that clause covers a multitude of articles, but I am particularly interested in one article, because the only people I have heard from in regard to it are the men employed in the industry.

Mr. STONE. Does the Senator refer to that part of the paragraph which reads, "if composed wholly or in part of platinum," and so forth, "50 per cent ad valorem"?

Mr. LODGE No.: I refer to the portion which reads "if

Mr. LODGE. No; I refer to the portion which reads, "if composed wholly or in chief value of iron, steel, lead, copper,"

and so forth.

The article I have in mind is one composed in chief value of steel. The duties on the articles included in the second half of the paragraph were brought down by the House from 45 to 25 per cent, and the Senate has lowered them still further. The particular article that I desire to speak about is wire cloth which is used in paper making. It is manufactured at Springfield in my State.

Mr. THOMAS. Mr. President—
The VICE PRESIDENT. Does the Sen. tor from Massachusetts yield to the Senator from Colorado?

Mr. LODGE. Certainly.
Mr. THOMAS. I think, if the Senator will turn back to paragraph 116, he will find that wire cloth has been provided for in that paragraph.

Mr. LODGE. I think not the kind of wire cloth which I have in mind, unless there has been some change of which I have

not been advised.

Mr. BURTON. Just at the end of paragraph 116 an amendment has been reported by the committee and agreed to, as I understand, reading:

Steel, copper, brass, and bronze woven-wire cloth, 30 mesh and above, 30 per cent ad valorem.

Brass or bronze woven-wire cloth is especially used in paper

I have an amendment pending

making. I have an amendment pending——
Mr. LODGE. I had not noticed that amendment. I see woven-wire cloth has been taken out of the basket clause. The Senator from Colorado is right. I had not observed the amendment, which involves a reduction on the article mentioned from 45 per cent to 30 per cent. Mr. BURTON. Yes.

Mr. STONE. But the Senator from Ohio, as I understand, has offered an amendment in reference to another class of wire cloth. Mr. BURTON. To include wire cloth made of iron and also

of nickel and other metals.

Mr. STONE. Yes, Mr. BURTON. This paragraph as it stands now only refers to certain kinds of wire cloth. I am inclined to believe that it

was an oversight. Mr. STONE, I think I understand the view of the Senator

Mr. THOMAS. That is one of the paragraphs the committee

will take under further consideration.

Mr. BURTON. I will say to the Senator from Massachusetts that wire used in paper making is practically provided for in

paragraph 116.

Mr. LODGE. Oh, yes; that is provided for in the amendment. It applies to bronze and woven wire cloth. The amendment had escaped me; I had not noticed it. I think the duty is too low, even with the amendment; but I am very glad the article has been classified. I ask leave to print, in connection with what I have said, the statements which I have here from men who are engaged in the industry-not the manufacturers, but the workingmen.

The VICE PRESIDENT. Is there objection? The Chair hears none, and permission is granted.

The matter referred to is as follows:

EASTERN DIVISION OF THE AMERICAN
WIRE WEAVERS' PROTECTIVE ASSOCIATION,
Springfield, Mass., May, 13, 1913.

Senator H. C. Lodge, Washington, D. C.

Washington, D. C.

Dear Sir.: I wish to protest against any reduction in the tariff on wire cloth when imported for use in the manufacture of paper and pulp. Wire cloth is in the Underwood bill (H. R. 3321), Schedule C, section 169. I feel that a reduction from 45 per cent to 25 per cent, as proposed in this bill, will compel my fellow workmen and myself to accept a reduction in wages. During the past few years quite a large amount of foreign-made Fourdrinier wires have been imported to the detriment of my trade. The Mount Holyoke Tissue Mill, of South Hadley Falls, Mass., have imported French wires and secured them \$15 cheaper than they pald for American-made wires. If the duty is reduced I can see where we get off at. The American manufacturers of Fourdrinier wires are independent concerns. I have worked in shops located at Appleton,

Wis., Belleville, N. J., Harrison, N. J., and Springfield, Mass., and know that competition is keen, and that they are not in a combination. The wages paid in this country in my trade will average \$24 per week, and this standard has been paid for the past 25 years. Our week consists of 50 hours, while the foreign weavers work 60 hours, and in Germany they receive about \$7 per week; in Great Britain from \$10 to \$12. It think the men in my trade are getting the benefit of the protection the present tariff law gives and that a great injustice will be done us if it is reduced; and I ask of you, who, I am sure, have the best interest of the American workman at heart, to use your best efforts to retain the present rate of duty on wire cloth. A brief will be presented to the Finance Committee by our national secretary and such information that our association can give will be given. Trusting you will favor me by protecting the interests of my trade, I remain,

JOHN L. KRULL, 23 Cleveland Street, Springfield, Mass.

EASTERN DIVISION OF THE AMERICAN
WIRE WEAVERS' PROTECTIVE ASSOCIATION,
Springfield, Mass., May 18, 1913.

Dear Sir: As there is a bill now before the United States Senate known as the Underwood bill (H. R. 10), the nature of said measure being, in the event of its passage, to reduce the tariff on all foreign-made products and which will, I might state, be very detrimental to the Interests of home industries, I would respectfully call your attention to Schedule C, paragraph 169, of the same, as it deals with the most vital interests of the American wire weavers, whose art and craft is the weaving of Fourdrinier wire cloth, one of the most essential factors used in the art of paper making, of which said measure proposes to reduce the tariff from 45 to 25 per cent, which will mean the annihilation of our industry. Even at the present time, with the rate of fareign-made wire cloth.

In the interest of a home industry I would most respectfully request that you give this matter your most earnest consideration when it comes before the Senate for its final action, using your best effort to retain the present rate of tariff on this product, as with the same once reduced it will be utterly impossible for the American workman to compete against foreign labor, working as they do for such low wages, making it possible for this article, viz, wire cloth, to be shipped into the country and sold far below that of American manufacture.

I would beg to inform you that our organization is not asking for intervention because of possible results from the reduction of the tariff, but from actual facts, as during the last few years we have had an agent looking up the matter of the importation of foreign-made wires and found that in such short time there have been from 800 to 1,000 of the same imported, and the number is still increasing each year, so it may be easily seen that with the reduction of the tariff it would be but a short time before the American market would be flooded with this foreign-made product.

To conclude, will say

Recording Secretary, 194 Grover Street, Springfield, Mass.

EASTERN DIVISION OF THE AMERICAN
WIRE WEAVERS' PROTECTIVE ASSOCIATION,
Springfield, Mass., May 4, 1913.

Hon. HENRY CABOT LODGE, Washington, D. C.

Washington, D. C.

Dear Sir: As I have had the pleasure of the interchange of correspondence with you in the past in reference to the reduction of the tariff on wire cloth, and which has been greatly reduced under the measure now before Congress, and in the event of the same becoming a law will mean almost the annihilation of a home industry. I would most respectfully introduce one of our members, Mr. Frederick Childs, who is in Washington in the interests of our association, which, I might state, is now in the midst of a fight for their existence against the reduction of the tariff on wire cloth.

To explain more explicitly why we as a body are so bitterly opposed to the proposed reduction will say that at the present time, with the duty on said product as it is, our business has been retarded to a great extent by the importation of foreign-made goods, selling as they do at a price far below that of American manufacture. With the tariff once reduced on this article it will be utterly impossible for the American made goods to enter into competition.

Trusting that you may be of great assistance to us in this our fight for the existence of a home industry, and respectfully requesting that you cooperate with Senator Weeks, with whom I am now communicating, I beg to remain,

Very respectfully,

Freed. C. Blair,

Recording Eceretary, 194 Grover Street.

FRED. C. BLAIR, Recording Secretary, 194 Grover Street.

To the Ways and Means Committee of the Congress of the United States.

HONORABLE SIRS: We submit the following statement of facts concerning the manufacture of wire cloth and the nature of the materials used therein; also suggestions as to method of classifying for the purposes of assessing duty thereon:

COMPOSITION.

Wire cloth and wire screen are metal fabrics woven of wire of various gauges and of different metals, namely, iron, steel, brass, copper, bronze, phosphor bronze, nickel, aluminum, and German silver.

METHOD OF MANUFACTURE.

The above-mentioned wire fabrics are manufactured by being woven on looms specially built for that purpose. The method of weaving is similar to that used in weaving cotton and woolen and other textile fabrics. The nature of the metal is such that very expensive machinery is necessary to weave wire of various gauges, so that a large investment is required for plants manufacturing these goods.

PLACE OF FOREIGN MANUFACTURE.

The wire fabrics which are imported into this country are manufactured principally in Germany, Austria, France, England, and Scotland, the largest amount being from Germany.

METHOD OF CLASSIFICATION.

The classification of this article is determined by the mesh, or, rather, the number of wires to the linear inch, just as it is in determining the value of cotton, woolen; and other woven fabrics. The percentage of labor per square foot in the fine meshes is very much greater than in the coarser meshes. For example, the length of time, and, consequently, the cost of labor, is just twice as much for 40 mesh as it is for 20 mesh. PRESENT BASIS OF ASSESSING DUTY ON WIRE CLOTH UNDER THE PRESENT

Iron and steel wire cloth is assessed for duty, under paragraph 135, at 40 per cent ad valorem. Wire cloth woven from wire composed of brass, bronze, copper, phosphor bronze, nickel, or metals other than iron or steel is assessed at 45 per cent ad valorem plus 1 cent per pound under paragraph 199 and paragraph 135. There is no classification for wire cloth under the present act. Iron and steel wire cloth is assessed at a rate just 5 per cent more than on the wire from which it is composed, while on brass, copper, bronze, and other metals the duty is approximately 2 per cent more on the woven fabric than on the wire used in the manufacture of same.

As shown by the foregoing, it appears that in steel and iron wire fabrics the duty is the same on all meshes, whether coarse or fine, and the duty upon the manufactured article is only 5 per cent greater than the duty upon unmanufactured material, whereas in the wire fabrics manufactured from brass, bronze, and other metals there is only a difference of approximately 2 per cent in the duty as between wire cloth and on wire before it is woven, notwithstanding the great difference in the cost of manufacture between wire cloth and wire. Furthermore, there is no distinction whatever made between the coarse and the finer and on wire before it is woven, notwithstanding the great difference in cost of weaving. Under the operation of the present rates the coarser meshes are practically excluded—that is, the duty is almost prohibitive—whereas on the finer meshes, in which the largest frem of cost is labor, the duty on the above basis is very low, resulting in very large importations. It also results in a discrimination in favor of one branch of an industry as against another branch of the same industry. It therefore appears to be not only desirable but fair to establish a uniform percentage method based upon the number of meshes per inch which would comply with the method of classification already adopted for the assessing of duty upon other textiles.

We suggest the followin

Wire cloth and wire screen, all metals. Per cent. warp _____ Finer than 30 and not finer than 40 wires to the linear inch in the 40 50 warp_____All meshes finer than 60 wires in the warp___

We respectfully submit the foregoing to your consideration and request that a classification providing especially for wire cloth be adopted as above.

Mr. LODGE. Also, in connection with paragraph 169, wish to have printed with what I have said a statement in regard to brass and other metal screen fenders for fireplaces, which are really articles of luxury, the duties upon which have been heavily reduced in this basket clause. There are many other articles on which the duty has been carried down by this sweeping reduction, but it would take a long time to go into the subject in detail, and I do not desire to occupy the attention of the Senate to so great an extent as that would involve. I ask that the paper I send to the desk relating to brass and other metal screens and fenders for fireplaces be printed in the RECORD as a part of my remarks.

The VICE PRESIDENT. In the absence of objection, per-

mission is granted.

The matter referred to is as follows:

BRASS AND OTHER METAL SCREENS AND FENDERS FOR FIREPLACES.

Present duty, 45 per cent ad valorem, under tariff act of 1909, Schedule C, No. 199, as decided by Treasury Decision 8684. Proposed duty, 25 per cent ad valorem, H. R. 10, page 45, lines 14 to 17, inclusive.

We submit the following reasons why present duty should be retained:
These autility and the state of the sta

We submit the following reasons why present duty should be retained:

These articles are luxuries, and are used by more wealthy people who are able to afford the pleasure of an open wood or coal fire. They are bought in the higher-priced finishes so as to conform with the interior decorations of the house, club, camp, etc.

Fireplace screens are principally manufactured in France, and it has been slow and difficult work to make goods equal to the imported in design and finish. Among the best trade there is a strong preference for foreign-made goods. In manufacturing our goods it has been necessary to follow largely the foreign makers as to design, finish, etc., also to educate our labor, both of which have been slow and expensive. A large portion of the cost of the completed article, viz, about 65 per cent, is made up of labor. We have to take raw labor and educate it. Our mechanics' wages average about \$3 to \$3.25 per man per day. We believe—but of this we have not definite knowledge—that our labor cost is about 100 per cent more than foreign labor; and as their labor is thoroughly educated, we believe it is more efficient as to the quality of goods manufactured.

The amount of these goods made yearly in this country we estimate at about \$300,000. There are two other concerns in the United States besides ourselves making these goods. We estimate sales as above, as we do not know the amount of our competitors' business. There is not now, nor ever has been, between our competitors and ourselves

any pool agreement or collusion as to production or selling prices. The selling prices are made in open competition, based on quality of production, finish, etc.

We ask for the retention of the 45 per cent ad valorem duties, and contend that as these articles are luxuries it works no hardship to the consumer, as it affects only those who are able and willing to pay higher prices for the best made and most attractive goods.

THE S. M. HOWES Co., JOHN E. FRENNING, President.

Mr. STONE. Has paragraph 169 been read, Mr. President? The VICE PRESIDENT. It has been read. Mr. STONE. Has the amendment been passed upon? The VICE PRESIDENT. It has not. The amendment will

be stated.

The Secretary. In paragraph 169, page 50, line 8, after the word "manufactured," the committee report an amendment to strike out "25" and insert "20," so as to make the paragraph read:

169. Articles or wares not specially provided for in this section, if composed wholly or in part of platinum, gold, or silver, and articles or wares plated with gold or silver, and whether partly or wholly manufactured, 50 per cent ad valorem; if composed wholly or in chief value of iron, steel, lead, copper, nickel, pewter, zinc, aluminum, or other metal, but not plated with gold or silver, and whether partly or wholly manufactured, 20 per cent ad valorem.

The amendment was agreed to.

Mr. STONE. Mr. President, I ask the attention of my colleague on the committee, the Senator from Colorado [Mr. THOMAS], to see if I am correct in the statement I am about to make. Paragraph 106, paragraph 116, and paragraph 163 have been passed over for further consideration by the Committee on Finance.

Mr. SMOOT. And paragraph 136.

Mr. STONE. That is correct. Paragraphs 106, 116, 136, and

163 have been passed over.

Mr. THOMAS. Also paragraph 146, with a view of determining whether "matte" is not synonymous with "regulus" and should not be made dutiable. I think the suggestion of the Senator from Utah [Mr. Smoot] in that respect is undoubtedly correct.

Mr. STONE. Then paragraphs 106, 116, 136, 146, and 163

have been passed over.

Mr. THOMAS. And paragraph 168.

Mr. SMOOT. Paragraph 168 relating to nippers, pliers, and so forth.

Mr. STONE. And paragraph 168 has also been passed over for further consideration. Paragraph 145 has been passed over for the accommodation of the junior Senator from Pennsylvania [Mr. Oliver], to be taken up when he returns in a few days.

I think, Mr. President, except as I have stated, the para-

graphs in Schedule C have been agreed to.

Mr. SMOOT. There is just one other, and that is paragraph 126, covering card clothing, and so forth, which was to go over until to-morrow or until the junior Senator from Massachusetts [Mr. Weeks] can be present.

Mr. STONE. That is correct; paragraph 126 goes over until to-morrow, or until the junior Senator from Massachusetts can be present, when it is to be disposed of; and paragraph 145, as I have said, goes over until the Senator from Pennsylvania [Mr. OLIVER] returns. Those are the only two paragraphs remaining for consideration as in Committee of the Whole. The others I have mentioned have been passed over for the consideration of the Finance Committee.

Mr. SIMMONS. I ask that Schedule F, tobacco and manu-

Mr. SIAMONS. I ask that schedule r, tobacco and manufactures of, be taken up.

Mr. BURTON. Mr. President, I should like to understand exactly what paragraphs have been passed over. As I understand, the following is the list? Paragraphs 106, 116, 126, 136, 140, 145, 146, 163, and 168, all but two of which have been passed over for further consideration by the committee, and two have been passed over to suit the convenience of Senators. That is correct, is it not?

Mr. THOMAS. Mr. BURTON. That is correct.

May I ask which are the two which have been passed over until Senators can be present?

Mr. THOMAS. Paragraph 126 and paragraph 145, the latter being the aluminum paragraph.

Mr. BURTON. Paragraphs 126 and 145 have been passed over to await the presence of Senators.

Mr. STONE. Paragraphs 126 and 145 have been passed over, the first until the junior Senator from Massachusetts [Mr. Weeks] can be present, and the second until the junior Senator from Pennsylvania [Mr. Oliver] can be present. I have already stated the paragraphs which I understand have been passed over for the consideration of the committee.

The VICE PRESIDENT. The Secretary will resume the

reading of the bill.

The reading of the bill was resumed at Schedule F, tobacco and manufactures of, and the Secretary read paragraph 183,

183. Wrapper tobacco, and filler tobacco when mixed or packed with more than 15 per cent of wrapper tobacco, and all leaf tobacco the product of two or more countries or dependencies when mixed or packed together, if unstemmed, \$1.85 per pound; if stemmed, \$2.50 per pound; filler tobacco not specially provided for in this section, if unstemmed, 35 cents per pound; if stemmed, 50 cents per pound.

Mr. SMOOT. Mr. President, I notice that the only change in this paragraph is the reduction of the duty on scrap tobacco from 55 cents a pound to 35 cents a pound.

Mr. SIMMONS. What paragraph is that?
Mr. SMOOT. Paragraph 185. The only change from the present law is the reduction of the duty on scrap tobacco from 55 cents a pound to 35 cents a pound. I should like to ask the Senator why that change is made?

Mr. SIMMONS. If the Senator will let that go until we finish this schedule, I will see if I can find what he asks for.
Mr. BRISTOW. Mr. President, I have a complaint from a

constituent in regard to the duty on wrappers. He claims that the excessive duty on wrapper tobacco is in the interest of the Tobacco Trust.

Mr. SIMMONS. I will state to the Senator that that is exactly the duty that is found in the present law. There has been no change made in the duty under the present law. The policy with reference to this product has always been to impose very high duties upon it. I can not see how the high duty imposed on wrappers is any more in the interest of the Tobacco Trust than in the interest of any other manufacturer of tobacco. However, if the Senator can demonstrate that it is, I shall be very glad to have him do so.

Mr. BRISTOW. This constituent complains that the excessive duty on wrappers gave the Tobacco Trust an advantage because it made them so expensive. It seems to me that if it is desired to levy a very high tax upon tobacco for revenue purposes, it would be just as easy to levy it as an internal-

revenue tax as it is to levy it as a customs tax.

Mr. SIMMONS. The Senator recognizes the fact that we are levying very high internal-revenue taxes upon tobacco.

Mr. BRISTOW. They could be increased.

Mr. SIMMONS. So that we are getting revenue from it, not only through the internal-revenue system of taxation, but through the customs system of taxation. I have not, up to this time, heard any complaint of these duties.

Mr. BRISTOW. I remember that four years ago I had the same complaint from cigar makers in my own State. I wanted to call the attention of the Senator to this complaint at this time, because I believe we ought to have legislation that will give the independent cigar manufacturer an opportunity in his efforts to compete with the great monopoly that prevails in

the tobacco manufacturing business.

Mr. SMOOT. Mr. President, I remember that four years ago, when the tobacco schedule was under consideration, I happened to be chairman of the subcommittee that had this matter in charge. I do not remember that the independent manufacturers requested a reduction upon wrappers of tobacco because of the fact that it would assist them as against the Tobacco Trust, and I can not see how it would. Where an independent company imports but a very few pounds the Tobacco Trust imports millions of pounds; and whatever advantage there might be in a decrease, it seems to me, would be an advantage to the trust even to a greater extent than to the independent.

Mr. BRISTOW. The complaint is that the high duty on the imported wrapper enables the trust which controls the domestic production to increase very greatly the price of the domestic product to the manufacturers of the cheaper grades of cigars.

Mr. SIMMONS. I will state to the Senator that no complaint whatsoever of that character or of any character was made before the Finance Committee with reference to these duties. do not think any was made before the Ways and Means Committee. I am having the matter looked up now. I can not for the life of me see how the effect would be such as the Senator's correspondent indicates. I think he is simply mistaken.

Mr. BRISTOW. I present the matter because, while I am not familiar with the details of the manufacturing business, I

have had this letter from a very estimable gentleman in my State, and I wanted to make this inquiry.

I might say, in passing, that it is exceedingly unfortunate that all of the farmers in the United States can not engage in the tobacco business. If they could, they would be very amply protected in their business. The producer of this luxury, which is regarded as a desirable article for taxation, is very fortunate, because under the guise of raising revenue the farmers that grow tobacco have the highest protection, by all odds, of any of those who engage in agricultural pursuits, and, indeed,

a higher degree of protection than anyone in any other kind of

Mr. SIMMONS. The Senator does not hold that when these duties were imposed by the Republican Party in the Payne-Aldrich bill they were imposed for purposes of protection, does he? I had always understood that these duties were imposed by both parties for the purpose of raising revenue. There is produced in this country very little of the character of tobacco that is imported, although there is some.

Mr. BRISTOW. But the local producer of tobacco must certainly benefit very largely by the excessive customs tax imposed on imported tobacco. The Senator well knows that when a certain number of cigars were put on the free list-cigars from the Philippine Islands-there was very vigorous protest from the American manufacturers because of that action. The

manufacturers of cigars objected.

I think free tobacco would certainly be very greatly against the financial interest of the American farmer that grows tobacco; but since the American farmer sees fit to grow tobacco instead of wheat or cattle or any of the other staple farm products, he is selected as the recipient of very great favor in the making of our customs laws.

Mr. SIMMONS. If the Senator views these duties in that light, I want to ask him what he thinks about the internalrevenue duties. If this duty is a benefit to the tobacco producer, and is imposed for that purpose, what does the Senator think about the burden which the Government, through its internal system of taxation, imposes upon this industry and not upon any other industry in the country except that of the manufacture of distilled spirits?

Mr. BRISTOW. That is explained upon the theory that tobacco is regarded as a proper subject of taxation. For myself, I think it is taxed at a pretty high rate. While I am not a user of tobacco, and I am sorry so many of my countrymen use it as I think they frequently use it to their detriment, at the same time it is to many men a good deal of a necessity, because of the habit they have formed in early life. It is unfortunate, but it does rest upon them as a great burden. I am not complaining about the internal-revenue taxation on tobacco, but if we are to make it a subject of taxation the tariff should not be used in order to give any particular individuals a monopoly or to encourage a monopoly in its manufacture.

The Senator from Utah has handed me volume 3 of the tariff hearings before the Committee on Ways and Means. I find here a letter from C. H. Brenaman & Co., directed to Mr. UNDERWOOD, dated at Baltimore, in which complaint is made of the excessive tax of \$1.85 per pound on Sumatra wrappers. That complaint, made by them to Mr. Underwood, the chairman of the Committee on Ways and Means of the House, is, in substance, the complaint that was made to me by my constituent. I am inclined to think there is a good deal in it, and I commend it to the attention of the chairman of the committee for his

consideration.

Mr. NELSON. Mr. President, I think this duty on tobacco is beyond all reason. It is the highest protective duty in the whole schedule. The farmers who raise tobacco in the Northwest and the Middle West hardly realize more than from 10 to 12 cents a pound for their tobacco when it is cured, stripped, and sorted. Yet this bill imposes on that kind of tobacco a duty of 35 cents a pound, more than 300 per cent upon what the farmers actually get for their tobacco.

Most of the tobacco raised in the Northwest is what is called binder tobacco; that is, it is the part of the cigar that is put around the filler and underneath the wrapper. Under the definition given in section 184, that kind of tobacco—binder tobacco—would come under the head of fillers.

In two respects this high duty on tobacco impresses me unfavorably. First, I look upon tobacco, no matter how moralists look upon it, as in a measure one of the necessities of life, for this reason: You can go all over this country, among all classes of laboring and working men, or you can go among the men of our Army and Navy, and you will find that from 75 to 80 per cent of them smoke smoking tobacco and chew plug tobacco. In old times there was a kind of tobacco that we used to call "dude tobacco," but the technical name of which was "fine-cut tobacco," that was much in use and regarded as more fashionable than plug; but that has gone out of fashion long ago and but a trifle of it is now sold. We now have various kinds of plug tobacco in common use among men in general. Gentlemen here may smile and moralists elsewhere may smile, but, as a matter of fact, the laboring man wants his plug tobacco and his old corncob or clay pipe with tobacco in it just as much as he wants his tea or coffee. He needs it just as much. It is a species of comfort and stimulant, and when you tax that

ou tax one of the articles that is to him, in a measure, one of the necessaries of life.

If you take a narrow view of the matter, you may say coffee and tea are not necessaries of life. Coffee and tea are drunk because they are stimulating and comforting, and it is on the same principle that men take tobacco. I have always felt that in the case of smoking and chewing tobacco a great injustice was done to laboring men, both in imposing such excessive tariff faxes and also in imposing excessive internal-revenue taxes. I believe it is just and proper to put a high tax on cigars, because they are a luxury not consumed by the ordinary working man; and as to cigarettes, I believe their use is deleterious, and for that reason the higher the tax the better. It would be well if they could be taxed out of use. But when it comes to plain, old-fashioned smoking tobaccos, and good, old-fashioned plug tobaccos, to tax them is a burden upon the laboring man.

Look at our United States Navy, in which we all have a pride; go among the sailors there and you will find that they have the very best kind of plug tobacco. The Government appoints a committee of sailors to pass upon the different brands and to select the best quality of tobacco. The result is that our sailors get a species of high-grade plug tobacco that they smoke and chew, and it is a great comfort to them. It is a means of maintaining discipline on our men-of-war. If you deprived the sailors of tobacco and shore leave, you would soon dismantle our Navy. But the sailors have to buy this tobacco. Why should there be such a high double tax on it?

The other point I want to make in reference to this matter is that this tariff bill is a discrimination against one class of our farmers in favor of another. Aside from cotton, in which there is no competition and no necessity for a duty, the main crops of the South are rice and tobacco. Both are protected by tariff taxes, rice moderately and tobacco highly protected in this tariff bill, while the farmers of the Northwest who raise wheat and

oats and barley and flax are left to shift for themselves. You talk about the necessaries of life and say you want to cheapen them. Is it not of as much importance to the poor fellow working on the street or working in the harvest field to have cheap rice, cheap tobacco, and a cheap pair of cotton pants as it is to have a cheap loaf of bread? You have had no scruples about putting a fair protective duty on cotton goods. If you want to cheapen things for the poor man, if you want to give him cheap bread and cheap meat, as you say, why not give him cheap trousers, cheap coats, cheap jackets, cheap everything except cheap whisky? Why do you practice this discrimination in favor of the manufacturers and in favor of the farmers of one part of the country? I am not objecting to the tariff on cotton goods or on rice, per se; I am only calling attention to the discrimination.

Mr. JAMES. Mr. President, the Senator speaks of tobacco being a southern product. I will state to the Senator, as perhaps he is not familiar with the fact, that the southern tobacco is almost entirely an export tobacco, which has to be and is sold in open competition with the world.

Mr. NELSON. That may be true of the burley or dark tobacco in Kentucky, but it is not true of the North Carolina

tobacco.

Mr. JAMES. It is true. Mr. NELSON. A large share of the North Carolina tobacco is a kiln-dried smoking tobacco.

Mr. JAMES. It is also true of the dark tobacco that is made in my part of Kentucky. Practically all of that tobacco is shipped abroad and has to be sold in competition with the world.

Mr. NELSON. Who is there to compete with that? Mr. JAMES. The other countries of the earth that produce

Mr. NELSON. The only other country that produces much tobacco is Sumatra, and that tobacco is of a quality entirely unfit for chewing tobacco. It is of such a bitter and mean quality that if you had a cigar made entirely of Sumatra tobacco there is no man in this Chamber who would smoke it. It is used simply for the finest kind of wrappers; that is all.

Mr. JAMES. Of course if there is no tobacco produced any-

where else to compete with the Kentucky tobacco, then a protective duty, to which the Senator has referred and so severely inveighed against, is of no benefit. It strikes me that the

Senator refutes his own argument.

Mr. NELSON. As I have said, this tariff bill-take it in the matter of tobacco and rice, take it in the matter of cotton fabrics-is simply an illustration of how the welfare of one part of the country is taken care of while another part of the country is neglected. I do not say that it is unjustly taken care of except by way of discrimination. I do not find fault

with you gentlemen on that side of the Chamber for trying to have a protective tariff for your cotton factories in the South, or for your rice in Louisiana, or for your tobacco in North Carolina and in Kentucky. I am not finding fault with that. the same measure that you measure to yourselves you ought to measure to the products of the North and the West. Our cattle, our sheep, our horses, our wheat, our barley, our oats, and our flax are as dear to us as your rice and your tobacco and your cotton factories are to you in the South. Why do you

Mr. JAMES. If the Senator will permit me, I should like to state right there that the reason there is a tariff placed upon tobacco is because there is an internal-revenue tax placed upon If you will take the internal-revenue tax off the tobacco of Kentucky, we are willing to have you let down the bars to all the rest of the world, and we will compete with them. But as long as you burden our product with a tax that hinders and depresses the sale of it to the consumer because it increases its price, of course you have to have a tariff equal to our internal tax upon the tobacco imported here. If you did not, you would be giving other countries a very great advantage over the American producer.

Mr. NELSON. What is to hinder you from taking off your

internal-revenue tax on tobacco any more than taking off the

tariff taxes on our wheat in the North?

Mr. JAMES. There is no internal-revenue tax upon wheat, is

Mr. NELSON. No; I said the tariff taxes. What is to hinder that side of the Chamber from removing the internal-revenue taxes on tobacco any more than there is to hinder them from taking the tariff taxes off from our wheat?

Mr. JAMES. Because this side of the Chamber takes the position that tobacco is a luxury and not a necessity, and wheat is a food and therefore a necessity. We want to cheapen those things that men have to eat rather than those things that they have to chew

Mr. NELSON. What about rice, and what about cotton cloth, cotton pants, cotton shirts, cotton jackets, and all that? Tariff reform is very good if you keep it a good way from your own door.

Mr. WILLIAMS rose.

The VICE PRESIDENT. Does the Senator from Minnesota yield to the Senator from Mississippi?

Mr. NELSON. I was watching for the Senator from Missis-

sippi, for the purpose of yielding to him.

Mr. WILLIAMS. I did not ask the Senator to yield. I was merely waiting for him to get through.

Mr. NELSON. I was expecting the Senator from Mississippi

to sympathize with me.

I want to say a few words further. I have no disposition to delay this bill. If I had my way—but I can not get my friends to agree with me—I would like to see the American people take this unadulterated Democratic tariff bill just as it is, without any change or amendment, just as it came from the I would like to see the experiment tried in all its House. originality. If it proves a blessing to our country, I shall be more than gratified; but if it proves an injury to the country, the sooner we find it out the better, for then the people will be swift to seek relief and academic free-trade doctrines will not stop them.

Ever since I have been a Member of Congress I have been in favor of a moderate protective tariff. I have always been opposed to a high protective tariff. I have always felt that wherever an industry of this country needed protection to maintain it, it ought to have reasonable protection; but whenever a reasonable amount is exceeded it is apt to lead to excessive prices and to monopoly. Hence, I have always been opposed to what I term an unduly high protection. The tariff protection where needed ought never to exceed the difference in the cost of production at home and abroad.

In the Republican convention that nominated Mr. Taft for the first time for the Presidency, in Chicago, I was a member of the subcommittee that formulated the platform, and was instrumental as a member of the committee in injecting into the platform the words that "the proper measure of protection was the difference in the cost of production at home and abroad." Unfortunately, however, as I recall, a rider was attached to my phraseology, and they added to it, I think, the words "and a reasonable profit," contrary to my wishes and my faith and

There are a great many good features in this Democratic tariff bill. There are a great many matters in it of which I highly approve. I had hoped that I could see my way clear to support it. But taking the bill in its entirety there is, as it

seems to me and to my mind, gross discrimination against the farmers of the West and the Northwest and all along our northern border.

It will not do to say that you have atoned for this by putting agricultural implements on the free list. I want to call your attention to the fact that in the matter of agricultural implements there is no country on the face of the earth that can compete with us. We have the best and most efficient agricultural implements of any people in the world. When you go over to Europe you find that the farmers are proud of the fact that they can show you that they have an American harvester or an American mower or an American plow. Our agricultural implements are better than anything they have in those countries. You could have had the doors wide open for years, and there would have been no competition. By putting agricultural implements on the free list you do not add one iota to the welfare of our northern and western farmer. He would not buy and would not use the clumsy implements of the Old World, even if he could get them cheaper. In the matter of agricultural implements, the Old World is but a feeble and clumsy imitator of ours.

You have put, I believe, leather and certain leather goods, harness, and so forth, I believe, on the free list. I am afraid the experiment will prove the same that we had with free hides. When the Payne-Aldrich bill was pending the question of free hides was under consideration. Our New England friends intimated to us that if they could only get free hides up in that part of the country we would have cheaper boots and shoes. What was the result? They got free hides, but all our leather goods, boots, shoes, harness, and everything else in that line became higher than before.

You need not think that you will cheapen the cost to the consumer by denying all protection to the northern and northwestern farmers. Whatever profits you may take away from the farmers will be absorbed by the middlemen and retail dealers in the large cities and industrial centers. The laborer who buys a sack of flour, a loaf of bread, a pound of pork, a pound of beef, a pound of mutton, or a peck of potatoes will pay just as big a price after you pass this bill as before—perhaps higher.

The men who will suffer by this tariff change will be our northwestern farmers. Some years ago, up to about 10 years ago, the tariff on wheat was a good deal as a tariff on cotton would be to-day. There was nothing that could compete with the wheat farmer. Up to 10 years ago the nearest points from where they could get competitive wheat into this country were from Argentina, from the Black Sea country around Odessa, and the Danubian Provinces. But within the last 10 years three great Provinces north of our country, lying between the west end of Lake Superior and the Rocky Mountains—three great Provinces six times larger than the great State of Minnesota, with its 80,000 square miles of fertile land-have been opened to settlers under more liberal land laws than we have in this That great northern country of fertile land has settled up within the last 10 years, and has become in the way of agricultural products our greatest and fiercest competitor. have lost within the last 10 years upward of a million of our farmers in the Northwestern States, who have sold out their small or encumbered holdings, or who were tenant farmers, and have gone to that country and cettled in those three great Provinces of Canada. Some of them have taken land under Many of them have bought land from their homestead laws. the Hudson Bay Co. and from railroad companies, and they have opened up great farms there, and they are in those Canadian Provinces to-day. There has, besides, been a great influx from Great Britain and other parts of Europe. Those Canadian Provinces this year will probably produce upward of 200,000,000 bushels of spring wheat of the very best quality, what is known as No. 1 hard wheat. That is an avalanche of competition we knew nothing about some years ago. Until comparatively recent times all that country was a game preserve of the Hudson Bay Co. It was only after the seventies, after the Riel rebellion had been suppressed, that that country was opened to settlers. When the British Government had bought out the Hudson Bay Co. and opened the country to settlement the Canadians began building railroads and securing transportation facilities.

Now, what are they doing and what have they been doing in the way of railroad building? They built years ago, and have for years had one great transcontinental railroad, the Canadian Pacific, extending from eastern Canada along the north shore of Lake Superior through the three great Provinces, Manitoba, Saskatchewan, and Alberta, through British Columbia to Vancouver at the upper end of Puget Sound, and they are now constructing and soon will have completed two other transcontinental lines—the Grand Trunk Pacific and the Canadian Northern Railroad.

The Grand Trunk Pacific will have a complete line within the boundaries of Canada from the Province of New Brunswick on the east to Prince Rupert on the Pacific coast. The Canadian Northern is building in the same direction. They are building another route northward toward Hudson Bay up to Port Churchill, expecting to transport their grain by water through Hudson Bay, which I look at as somewhat chimerical.

Now, the competition between the Canadian farmers and our farmers in the matter of raising oats, barley, wheat, and flax has been and is intense. That has been the case more especially in the matter of flax. The Senator from Montana [Mr. Walsh] the other day dwelt a great deal upon the duty of 15 cents a bushel upon flax, and he went on to state how much profit can be made by raising flax, and how one crop would pay for the land. But he forgot to state what we farmers of the Northwest know, that we can only raise flax on land and get a fair crop once in six or seven years. It is the most soil-exhausting crop of all the cereals we raise in the Northwest. Flax is mainly raised on new land—land that is just broken up. They raise it on that because they can break up the land and sow the flax the first season, which they can not do with wheat; but no farmer who knows anything about it will undertake to sow another crop of flax upon that same land within the next six years, for if he does his crop will prove a failure and the land will be in bad shape for other crops.

Now, in the northwest Provinces of Canada they are continually breaking up new land year by year, and as they break it up they immediately sow flax the first season, and the crop of flax raised in those Provinces is an immense one, and it entails the fiercest competition upon our northwest farmers.

To show what the flax industry is, while Minnesota is a fertile and good State and has probably more fertile land than North Dakota, yet of all States in the Union North Dakota is the greatest flax-producing State. Why is that so? Because North Dakota is a new country. They have been continually taking new homesteads, extending westward to the Red River Valley into the Missouri River bottom and beyond, and as they break up that land the first season they raise a crop of flax on it.

But after they have broken up their new land they will find the same uphill work that we do in Minnesota. We know by experience, I know and so do many farmers, that you can not raise flax successfully on land oftener than once in six or seven years. It is a soil-exhausting crop. We usually raise it on new land—the first crop—or on timothy and other grass and pasture land plowed and broken up again for cereals. If you raise one crop of flax, you need not try another in a less time than six or seven years. That is why that crop needs greater protection than other cereals.

What are our crops in the Northwest? Wheat, oats, barley, flax, potatoes, cattle, hogs, and dairy products. All are put on the free list or cut deep down, different from your tobacco duty, from your rice duty, and from your duty on the cotton goods of the southern factories.

Do you gentlemen on the other side of the Chamber think this is according to equity and fair play to the farmers of the Northwest who built up that great country, who built up the great cities of Chicago, Minneapolis, St. Paul, Omaha, Kansas City, and St. Louis? Are those farmers to be put on the blacklist and to be made the tariff goat for cheapening products to the consumers? Is there nothing else that you can cheapen under your gospel of cheapening except the products of the northwestern farmers?

It is this tariff discrimination that I am opposed to. You have not treated the northwestern farmers as you have treated the farmers in the other sections of the country—as the farmers of the South. You have not treated them as you have done the manufacturers. You have left a considerable duty on woolen manufactures, but the sheep and the wool you have scuttled; you have left it on the cotton manufactures; you have left it on steel manufactures. You have given them all some protective duty, but the northwestern farmer is left out in the cold, and that is why I can not favor this bill, although I have been a low-tariff protectionist all the days of my life.

I am sorry that I have to criticize the bill in this way. As I said a moment ago, there are many good things in the bill, many schedules in it that if they stood by themselves I would most heartily support and approve, but you have not only cut the farmer to the quick by putting his products on the free list and cutting the duty down, but what you have professed to give him in lieu of it is of little or no value whatsoever.

The Senator from Wyoming [Mr. WARREN] the other day called attention to the fact that even in one little thing you discriminate. The goods that you use for wrapping your cotton bale with are put on the free list, but the wheat sacks that the northern farmer has to use to put his oats and wheat in or his flax in you have put a duty on. But cotton bagging is sacred in this bill. It is a small matter, to be sure, but it shows a discrimination between the cotton and the wheat

Mr. SIMMONS. The Senator does not mean to say that we have put a duty on the material out of which wheat sacks

are made

Mr. NELSON. Not on cotton bags or sacks.
Mr. SIMMONS. Oh, no; not on the material out of which these bags are made.

Mr. NELSON. Yes; on the bags or sacks.
Mr. SIMMONS. The Senator is mistaken; they are on the
materials free list. There is a duty on the bags but not on the cloth.

Mr. NELSON. I mean the bags.
Mr. SIMMONS. Oh, the bags, but not on the material.
Mr. NELSON. That is what I mean, on the bags or sacks.

Mr. SIMMONS. The material for bagging cotton does not have to be made into bags. It is a material with which the cotton ginner covers the cotton bale. It simply has to be cut into shape. We have put the material with which we wrap cotton exactly upon a tariff parity with the material out of which the grain sacks are made. The materials for both purposes are placed on the free list in this bill.

Mr. NELSON. But the Senator knows that sacks are made for wheat and they are made out of cotton, at the cotton factories, and there is a duty, I think, of 10 per cent ad valorem. It is this discrimination which runs all through the bill that strikes me as being unfair and unjust, and that is the reason why I can not support the bill as I otherwise would have been glad

I am sorry to say that the Democratic Party have seen fit to frame a bili that in its outlines and in its scheme and effect will be the greatest discrimination that has ever been made against the northwestern part of the country, against the farmers of the North and Northwest. If at any time our northwestern farmers needed protection it is in these days when the cost of labor is higher and scarcer than ever and when we have such intense competition from the great Canadian northwest.

Now, there is another thing I will refer to in this connection. People who live in cities and work in factories and who practice their professions imagine that the farmer's profession is one of the most profitable in the world. My friends, I know whereof I speak. The only farmers in this country whose occupation you can in any sense call profitable are the small farmers, where the farmer happens to have the fortune to have a family of children big enough to help him, and where he and his children can do the work on the farm and are not obliged to hire any labor. In those cases they have a fair home, a comfortable home, and a good living. But if you look at their bank account you will find that they are unable to lay up any money from year to year. They have a fair living, ample food and clothing, and that is all.

Take the larger farmers who have to hire their labor. One year with another they make nothing at all. The only profit they realize out of their farms is in the rise in the value of the land. Think of it. My tenant wrote to me two weeks ago that it took \$50 a month and board and washing to get hands in the harvest field. Compare that with the wages you gentlemen pay down South for raising your corn and your cotton and your rice. Compare the wages we have to pay in our part of the country to raise our cereals and our crops with the wages that you have to pay. You have down South one advantage over us in that you have cheap labor, immensely cheaper than ours, and you have a labor, too, that is not subject to strikes. You do not have the vicissitudes to contend with that our people of the North have on the labor question.

You are entitled to it in a measure. I have no fault to find with it. With that labor there is a great burden entailed upon you. I realize it and I sympathize with you. But you must take into account that the labor you have in raising your cotton and your corn down South costs you about 25 to 30 per cent of what we have to pay in the North. And yet in the face of such labor conditions how can you find it in your heart—

Mr. SMITH of Georgia. Mr. President-

Mr. NELSON. How can you find it in your heart to make the northern farmer the object the sole burden of this gospel of the cheap cost of living? The VICE PRESIDENT. Does the Senator from Minnesota yield to the Senator from Georgia?

Mr. NELSON. Certainly.

Mr. SMITH of Georgia. I only wish to say to the Senator that by far the best, therefore the cheapest, labor we have in Georgia is the intelligent white farm labor of the State.

Mr. NELSON. But that works in your factories.
Mr. SMITH of Georgia. No; I mean on the farms. The best

and the most profitable farming is done by white men.

Mr. NELSON. Most of your labor is done by colored help. A large share of your white labor works in your cotton factories. Mr. SMITH of Georgia. No; the work of our white farmer is

most effective.

Mr. NELSON. I should like to see that in connection with free flour, free beef, free mutton, free pork, you had given men free cotton pants, free shirts, and free jackets. Surely the one goes as much to the cost of cheap living as the other. There would then be some consistency.

But I owe an apology for taking up so much time. It was not my purpose to take up any time in discussion on this bill. But after listening to the remarks of the Senator from Kansas [Mr. Bristow] upon the tobacco schedule the spirit came upon me and I could not refrain from saying what little I have said

upon this occasion. Mr. WILLIAMS. Mr. President, a great many so-called low-tariff Republicans in this body will have the same difficulty in explaining their conduct here which the Senator from Minnesota will have. They pretend that they want a reduction or a revision downward of the tariff, but they come here and they will vote to retain the Payne-Aldrich law, with all its iniquities, upon the statute books rather than vote for a reduction of the tariff which is not radical. And then they make all sorts of attacks upon the present bill without any very luminous meas-

ure of information concerning it.

For example, the Senator from Minnesota a moment ago said we had placed cotton bagging upon the free list, but we had not given the cloth for the western farmers' grain sacks or for the western farmers' wool sacks free to him. All he had to do was to look at the bill and see that he was mistaken. We have put the burlaps that are used for the western farmers' grain and for the western farmers' wool upon the free list, together with the trashy jute which is used for the southern farmers' cotton. Then when the Senator's attention was called to it he attempted to get out of it by saying that they did not take the material and sew it up into bags. No; and we do not take the southern cotton farmers' bagging and sew it around the cotton either. But we give the material out of which to make cotton bagging and the material out of which to make grain sacks and wool sacks free to both. That is one mistake.

The next mistake is the Senator says that the South has an advantage in its labor. I dare say there is not an intelligent man here who does not know that if we had down South in the cotton belt and all over a white man's country we would be to-day the paradise of the world, and that the greatest hindrance we have, the greatest handicap we have, is inefficient, uninitiated, ignorant labor, incapable of being trained as independent farmers. The negro does make a tolerably good plantation hand when driven and held up to his work. He has never thus far made a farmer. Prosperity in this world goes from the bottom up, not from the top down, and unless you have a thrifty, provident, intelligent, initiative labor you can never

hope to compare in prosperity with any country which has it.

The Senator said we have a cheaper labor down South. The Senator surely did not mean that. In proportion to the amount of labor actually performed I will hazard the remark that our labor cost is 50 per cent more than his, although his labor costs him 100 per cent more per diem per man. So much for that.

Then a little later on the Senator states how much cheaper we can raise corn, and yet the actual fact is that we buy corn from his part of the country, and from Illinois, Ohio, and Indiana, every year. Why? Because we can buy it cheaper than

we can raise it with our labor and our climate.

What is the next mistake? The Senator started off by saying that everybody knew that rice and tobacco were the great crops of the South. I might have expected that sort of an error from somebody else, but not from the Senator from Minnesota, who soldlered in the South, was captured in the South, and saw a great deal of it and its people. Of course the Senator knew that rice and tobacco are not the chief crops of the South, just as well as he knows anything in the world. He knows that cotton, corn, cattle, hides, hemp, and sugar are the chief agricultural products of the South, and he knows, or ought to know, that this bill puts every one of them on the free list—hemp in Kentucky, sugar in Louisiana. Cotton has been

on the free list all the time. Here we place cattle upon the free list, and some time ago we aided in placing hides there. We leave cotton there and we place these other products there, and that is not all. When you come to the other side of the South—its industrial life—its chief products for the factories are cotton and, in the mines, iron. We put iron ore and pig iron upon the free list, and we reduce the duties upon cotton goods very much.

Then the Senator makes a speech on the line of an assumption that the South is peculiarly interested in the manufacture of cotton goods. There is no intelligent Senator within the sound of my voice-and the Senator from Minnesota is one of the most intelligent of them all-who does not know that New England is just as much interested in cotton manufactures as the South, and in the number of dollars' worth of cotton fabrics turned out is very much more interested. Let us go on. Then the Senator asks us why it is when we are reducing the duty on barley that we do not reduce the duty on rice. then he complains about flax. There is not a bit of flax raised in this country that they make cloth out of that I know of. It is raised for the seed, and we have reduced the duty on flaxseed from 25 cents to 15 cents—that is, about 35 per cent. That is a rough calculation in my head. You can calculate it for yourselves later. Whereas we reduce the duty upon rice 50 per cent in this same bill. Rice is a negligible factor in the agricultural production of the South.

You complain of hogs being on the free list. Bless your heart, we raise hogs. You complain of cattle being there.

raise cattle.

Then he comes to talk about tobacco, and positively my reverend and gracious and good friend from Minnesota shoets across the aisle at the Senator from Kentucky the question: "Why do you not take the internal-revenue duty off tobacco?" And he would not vote for it for our lives if we offered to do it right now

Mr. NELSON. I would vote for it cheerfully on plug and smoking tobacco. In my part of the country it is a part of the

poor man's diet.

Mr. WILLIAMS. Then, if the Senator goes that far, I dare say he will find nobody else on that side of the Chamber to join him. He seems to be sui generis in that particular and in many other particulars. His sympathy with the common, plain people, who want to chew cheap tobacco, does not go so far as to give them cheap food.

Now, when you come to tobacco, it is not distinctively a southern product at all. It is grown in Pennsylvania, Maryland, Connecticut, Ohio, and Indiana. I do not know how much tobacco the North raises, and they raise the sort of tobacco that bears the highest duty and the highest internal-

revenue duty.

Mr. JAMES. It is raised in Ohio.

Mr. WILLIAMS. It is raised in nearly the whole country of the North, whereas the cotton States do not raise a bale of tobacco, all put together, I suppose.

Mr. SIMMONS. Will the Senator permit me to read him

the States in which tobacco is grown in the United States?

Mr. WILLIAMS. I do not care particularly, but I would just as soon the Senator would. However, everybody knows them except the Senator from Minnesota. [Laughter.] Put them in right now.

Mr. SIMMONS. The States are North Carolina, Virginia, Ohio, Tennessee, Wisconsin, Pennsylvania, Maryland, South Carolina, Connecticut, New York, Massachusetts—

Mr. LIPPITT. While the Senator is reading the list of States, will be read the amount which each State raises.

Mr. SIMMONS. I am having that figured up right now. I have not finished. The States are New York, Indiana, Massachusetts, West Virginia, Missouri, Illinois, Florida, Georgia, and Louisiana. I am having the figures made up. I have been running over them. I think that tobacco is about the best distributed product we raise in this country, Pennsylvania being one of the very largest tobacco-growing States of the Union.

Mr. WILLIAMS. And Connecticut raises tobacco, some of which is now selling, I believe, at seventy-odd cents a pound, the finest that is made anywhere, raising it under cheesecloth,

and all that, or did a few years ago.

Now, the Senator will admit-all Senators will admit-that as long as we have an internal-revenue duty upon an article it is necessary to have a countervailing import duty upon the same article at least to the same level, because if you do not do that you have a fiscal system which absolutely discriminates by law against your own producers of the article upon which the internal-revenue duty is laid.

The Senator might just as well talk about whisky being the internal-revenue tax that peculiarly a southern product because the best whisky is made bacco in the different States.

in Kentucky, but when you come down to the quantity that is made, without any regard to its quality, I expect Peoria, Ill., can show a good hand, and a good deal of the balance of the

There is not a line or page, properly considered, fairly condered, in this bill that is sectional. Nobody can make the sidered, in this bill that is sectional. people of the United States believe that when they go out to argue it after awhile. Take one other among the congeries of mistakes made by the Senator, if he meant it. I suppose he did from what he said. I understood him to say substantially that putting hides on the free list made the price of shoes go up. Now, if reducing the duty on hides could possibly make the price of shoes go up, it would be something like de-stroying the law of gravitation. When you take the raw material for a manufacture and take taxes off it the tendency is to make it cheaper. It may go up in spite of that fact, but you may be certain that it has not gone up as high as it would have gone up if that tax had continued to exist. When you cheapen the price of the raw material you necessarily cheapen the price of the finished product, unless some other factor entering into the equation makes the price of the finished product go up in spite of what you have done.

You could not get a 14-year-old boy to believe, outside of politics, that putting hides on the free list made shoes go up; and yet this is not the first time that I have heard that state-

ment.

Mr. President, I did not intend of all men to-day-I have been out in the cloak room quarreling all morning because we have been taking up so much time in the consideration of this bill—to take up any time, but the character of the Senator from Minnesota [Mr. Nelson] stands so high in this country with everybody who knows him, that these bare assertions of his had to be replied to, and I thought it was best to reply to them now.

One other word before I sit down to correct one other mis-ike. The Senator from Minnesota said that, though we put agricultural implements upon the free list, we made better and cheaper agricultural implements than the balance of the world, anyway, and that if they had always been upon the free list

there never would have been any competition.

A Daniel come to judgment!

I thank thee, Jew, for teaching me that word.

The Senator is exactly right; but notwithstanding that fact, the tariff wall enabled the manufacturers of agricultural implements to sell to the American consumer all the way from 10 to 50 per cent higher than they sold the same product in the Argentine Republic; and, passing right by the south shore of Great Britain, they sold them to her colonies in South Africa. So the Senator can not deny that putting them upon the free list will be a benefit to the American farmer.

Mr. HITCHCOCK. Mr. President, this is not the proper point

in the bill for me-

Mr. BRISTOW. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Kansas?

Mr. HITCHCOCK, I do.

Mr. BRISTOW. I should like to ask the Senator from North Carolina when he gives in the RECORD the names of the States where tobacco is produced also to give the amount produced in each State

Mr. SIMMONS. I could put it in right new, as I have the data here.

Mr. WILLIAMS. And put the value in.
Mr. BRISTOW. And also the value.
Mr. JAMES. And also, if the Senator—
The VICE PRESIDENT. In the interest of the reporters the Chair will observe that there should be some little order and method of procedure here. As the Chair once before remarked the reporters can not report a chorus.

Mr. JAMES. Mr. President

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Kentucky?

Mr. HITCHCOCK. I do.

I want to suggest to the Senator from North Carolina that while he is placing in the RECORD the amount of tobacco produced in each State, it would be well if he would show the amount of internal-revenue taxes that are paid by this product of the farmer in the South.

Mr. BRISTOW. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Kansas?

Mr. HITCHCOCK. I do.

Mr. BRISTOW. I would also like to have the RECORD show the internal-revenue tax that is paid on manufactures of to-

Mr. SIMMONS. I have not that data here; but I will state to the Senator that the tax is 8 cents a pound on plug tobacco. We raised the tax to that amount a few years ago at the in-stance of the former Senator from Indiana, Mr. Beveridge.

Mr. President, I have here-and I shall now put into the RECORD, as I might as well do it now as at any other time if the Senator from Nebraska will permit-the amount and value of

tobacco made in 1911 in each of the States

In Connecticut there were produced 27,625,000 pounds, valued at \$5,000,663; in Massachusetts, 9,224,000 pounds, valued at \$1,848,000; in Pennsylvania the product was 65,320,000 pounds, valued at \$6,205,000; in West Virginia, 11,250,000 pounds, valued at \$900,000; in Illinois, 750,000 pounds, valued at \$58,500; in Missouri, 4,800,000 pounds, valued at \$576,000; in South Carolina, 11,000,166 pounds, valued at \$1,388,000; in Wisconsin, 51,250,000 pounds, valued at \$5,125,000; in Indiana, 20,020,000 pounds, valued at \$1,561,000; in New York, 5,054,000 pounds, valued at \$525,000; in Tennessee, 62,370,000 pounds, valued at \$5,301,000; in Kentucky, 203,600,000 pounds, valued at \$23,377,000; in North Carolina, 99,400,000 pounds, valued at \$11,530,000; in Maryland, 19,101,000 pounds, valued at \$1,433,000; in Ohio, \$1,400,000 pounds, valued at \$6,186,000.

Mr. BRISTOW. The Senator has not read Virginia, I believe. Mr. SIMMONS. Virginia is the next. I had omitted that. Mr. SIMMONS. Virginia is the next. I had omitted that. Virginia produced 128,000,000 pounds of tobacco, valued at

Mr. HITCHCOCK. Mr. President, the discussion has developed the fact that there is a wide distribution in the production of tobacco. On a future occasion I propose to show that there is not a wide distribution in the manufacture of tobacco, but rather a tendency to monopoly. I shall not take time to-day to elaborate what I propose to show later on in the session when I urge my amendment for a graduated, progressive tax on the manufacture of tobacco, at which time I propose to discuss the matter that I had before the Democratic caucus.

I propose to discuss also the action of the Democratic caucus in putting restraint upon its members against voting according to their convictions upon my amendment upon the floor of the

I only desire now to call the attention of the Senate to the extent to which this widely diversified industry of tobacco growing is restrained and monopolized by a few great manufacturing concerns. For instance, four of the concerns into which the courts divided the great Tobacco Trust, now owned by the same stockholders, dominated by the same intellect, operating in close cooperation—those four concerns, as shown by the figures recently furnished the Senate by the Secretary of the Treasury, last year manufactured 713 per cent of all the tobacco in the United States, a monopoly greater even than it was at the time the decree of the Supreme Court purported to dissolve the trust.

Mr. BRISTOW. Mr. President-

Mr. HITCHCOCK. If the Senator will wait a minute I will

yield to him.

In the matter of small cigars, those figures show that the three trust concerns now manufacture 90 per cent of all the small cigars in the country; the same figures show that in the matter of cigarettes three concerns manufacture 85% per cent of all the cigarettes manufactured in this country; in short, the figures show that the monopoly, instead of being dissolved by the court, has been permitted to continue in four concerns, whose business has actually grown and whose profits have enormously increased.

A few days ago we all noticed in the press the death of Mr. Anthony N. Brady, and the world was surprised to learn that he was worth something like a hundred million dollars-a man so obscure in the world at large that his name was hardly known among men, and yet he died leaving a vast estate of a

hundred million dollars, as it is now estimated.

What are the facts? The facts are that a large portion of his wealth has been made in recent years in the manufacture of tobacco, by participating in the enormous profits of the trust.

Mr. BRISTOW. Mr. President—

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Kansas?

Mr. HITCHCOCK. I do.

Mr. BRISTOW. I want to inquire of the Senator if there has not been a dispute as to whether or not Mr. Brady was a

richer man than J. P. Morgan?
Mr. HITCHCOCK. It has been stated—and I am inclined to think that it has been conceded—that he died even richer than Mr. J. Pierpont Morgan; but the fact to which I desire at this moment to call attention of the Senate is that Mr. Brady was one of the defendants named in the court proceedings when the

that time his stock was found to have a certain value, and in less than two years, which since that time have elapsed, his fortune has been increased more than \$10,000,000 by the advance in the value of the stock, which has occurred since the decree of dissolution, thus showing that the dissolution was not genuine; thus showing that the monopoly still continues; thus showing that the profits instead of having been limited by competition have been multiplied by collusion.

The New York Times, from which I have a clipping upon my desk, shows that at the time of the dissolution ordered by the court Mr. Brady held 33,344 shares of the common stock of the American Tobacco Co. Those shares were worth \$400

each.

Under the decree of dissolution he was permitted to take shares in some 14 subsidiary companies, now controlled by the Lorillards or by Liggett & Myers or by the American Tobacco Co. The shares which he received in place of the shares of the American Tobacco Co., then worth \$400 each, are now worth \$700 each, an increase of \$10,000,000 in the market value of his holdings since the dissolution of the so-called trust. This does not represent all of his profit since the trust was dissolved into

four closely allied concerns.

I recite these facts at this time as a preamble to what I shall say on a future occasion in the Senate before debate on this bill is concluded. If the American people are in earnest in outlawing trusts-and I believe they are-and if the Senate is in earnest-and it ought to be in earnest-no rule of a caucus should restrain Senators from voting for a measure which will put a stop to this defiance of a judicial decree. My amendment, levying a progressive tax on the products of the Tobacco Trusts, will restore a condition of competition once more to the tobacco manufacturers who use the tobacco which the Senator from North Carolina says is raised in so many different States.

Mr. SIMMONS. Mr. President, I only want to say one further word about the tobacco tax. The highest tax imposed upon to-bacco is the tax upon wrapper tobacco. The average ad valorem rate in the present law and in this bill upon wrapper tobacco is 169.16 per cent. I want to say to the Senator from Kansas that outside of Florida and a little in Georgia—so little in Georgia that it is not mentioned in the list of States in the official document from which I read a little while ago-there is no wrapper tobacco, I believe, made in the South. There may possibly be a little made in South Carolina, but I think there is not. The high-priced wrapper tobacco upon which this duty of 169.16 per cent is placed is raised in other parts of the country, not in the South.

Filler tobacco bears an average ad valorem duty under the present law and in this bill of only 59.14 per cent, less than one-third of that imposed upon wrapper tobacco. Filler tobacco is the tobacco which we raise in North Carolina and in other parts of the South. We do not, as I have said, raise any wrapper tobacco in North Carolina and none in the South,

except as I have indicated.

Mr. BACON. Mr. President, I desire to say that by reference to the document from which the Senator from North Carolina has read, it will be observed that the amount produced in Florida is about twice that produced in Georgia, and I am told by the clerk who examined the figures that it is valued at some \$2,000,000 and that most of it is cultivated under canvas.

Mr. BRISTOW. Mr. President, the innocent remark I made that seems to have led to this discussion was that the farmer was very fortunate who could produce on his farm a luxury such as tobacco, for by so doing he was enabled to enjoy a protective duty of something like 200 per cent, while if he had to grow wheat and corn, as the great mass of farmers do, he

would have his products put upon the free list.

I do not think that this bill is a fair bill; I do - believe that it distributes its favors with equity. I think that an alleged tarff for revenue is not an honest tariff system. To my mind, there are but two systems that can stand proper analysis. One is free trade and the other is protection. You can not mix the two without discrimination. When you impose a tariff, whether it is alleged to be for revenue or for protection, if it is imposed upon the importation of an article which is produced in this country it serves as a protective duty, I do not care for what purpose it is alleged to be levied, and when you discriminate between articles that are produced in this country, put upon one a duty and leave the duty off of another, then you are discriminating in the protective favor which you are extending to the home producer of the article upon which the duty is levied. It makes no difference whatever for what purpose it is

alleged that the duty is levied, the result is just the same.

If you want a tariff for revenue, then impose it on articles that are not produced in the United States. You thus distribute trust was dissolved, when the court decreed it an outlaw. At the burden, according to the theory that is advocated here,

equally upon those who use it. That is an ideal revenue duty: but when you impose a duty for revenue and select an article from those that are produced in this country to be the recipient of such a duty, you are discriminating against some and favor-

ing others.

Mr. SIMMONS. Mr. President, one more word. It is very manifest that the character of tobacco imported into this country does not come much in competition with the like grade in this country, because it is not made here to any extent. The unit value of the wrapper tobacco imported into this country last year was \$1.11 a pound; the unit value of the filler tobacco imported into this country last year was 54 cents per pound. We do not raise any filler tobacco in this country of that price.

Mr. SMOOT. I have called the Senator's attention to paragraph 185 and asked him why the change on scrap tobacco was made, that being the only change in the whole schedule from the

present law

Mr. SIMMONS. I stated frankly to the Senator that I would make some inquiries as to that. I did not have my attention called to the fact that there was any change made in the House bill from the Payne-Aldrich law; but I see that a change has been made on scrap tobacco. I can not now tell the Senator why that change was made, but I have some idea as to the reason for it. I am not stating it as a fact, however, but only as a conjecture. It is a different quality altogether from the quality of tobacco that is taxed 55 cents a pound. Under the present law both scrap and tobacco which is in the whole leaf is taxed at 55 cents per pound. In this bill we continue the 55 cents upon the whole leaf and impose a duty of 35 cents a pound upon that which is scrap. I will also call the Senator's atten-

Mr. SMOOT. Paragraph 185 does not say "whole leaf to-

bacco," but "all other tobacco, manufactured or unmanufac-tured, not specially provided for in this section."

Mr. SIMMONS. Yes; but one is a scrap, though of the whole I call the Senator's attention to the fact that in all probability that was done because it was found there were practically no importations of scrap tobacco. The Senator will see from the bracket on page 161 that the importations of all tobacco unmanufactured-and that includes paragraph 185-last year into this country were only \$89,000 in value, while our production of that tobacco in 1910 was 984,000,000 pounds. I am not sure that I am right about it, but I am advised from some inquiries which I had made of a gentleman connected with the Ways and Means Committee that that was probably the reason why it was done. The duty was regarded as absolutely prohibitive; though that may not be the reason. If the Senator desires the paragraph to go over, I will look into it a little further.

Mr. SMOOT. Mr. President, I was cognizant of the figures Mr. SMOOI. Mr. President, I was cognizant of the figures which the Senator has quoted, but the whole schedule being the same as the present law, with this exception, and it not being a competitive schedule in any sense of the word, and so acknowledged, I did not see why that little change was made.

Mr. SIMMONS. I will state frankly to the Senator that I did not notice that it was made. I supposed in that respect the

present bill was identical in all particulars with the old law.

Mr. SMOOT. I call the Senator's attention to the hearings before the Ways and Means Committee of the House when he comes to consider this question. Mr. Young, in testifying before the House committee on these paragraphs 220 and 222—and, by the way, paragraph 185 of the present law is paragraph 222 of this bill—recommends certain changes in paragraph 220; he recommends certain changes in paragraph 221, but he recommends no change in paragraphs 222, 223, and 224. So I thought perhaps there was some mistake about it; and I ask the Senator to look into it. Mr. SIMMONS.

I ask that the Secretary proceed with the

reading of the bill.

The reading of the bill was resumed, and the Secretary read

paragraphs 186 and 187.

The next amendment of the Committee on Finance was, under the heading "Schedule G-Agricultural products and provisions," on page 55, to strike out paragraph 188, as follows:

188. Cattle, 10 per cent ad valorem.

Mr. GRONNA. Mr. President, before that amendment is adopted, I ask the attention of the Senate for a few moments. I realize that any amendment I may offer to this bill will not be accepted, but I am going to give the Senate the opportunity of voting upon some of the items in the agricultural schedule.

Mr. SMOOT. Mr. President, will the Senator yield to me for

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Utah?

Mr. GRONNA. Certainly. Mr. SMOOT. There are a number of Senators who are interested in this schedule who are not now in the Chamber and therefore do not know that it is under consideration. For that reason I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators an-

swered to their names:

Ashurst	Hughes	O'German	Simmons
Borah	Jackson	Overman	Smith, Ariz.
Brady	James	Owen	Smith, Ga.
Bristow	Jones	Page	Smith, Mich.
Bryan	Kenyon	Penrose	Smith, S. C.
Burton	Kern	Perkins	Smoot Smoot
Chamberlain	La Follette	Pittman	
Chilton	Lane	Poindexter	Sterling
Clark, Wyo.	Lea		Stone
Crawford	Lewis	Pomerene	Sutherland
Cummins		Reed	Swanson
	Lodge	Robinson	Thomas
Dillingham	McLean	Shafroth	Thompson
Gallinger	Martin, Va.	Sheppard	Townsend
Gronna	Martine, N. J.	Sherman	Walsh
Hitchcock	Nelson	Shields	Warren
Hollis	Norris	Shively	Williams

The VICE PRESIDENT. Sixty-four Senators have answered

to the roll call. A quorum of the Senate is present.

Mr. GRONNA. Mr. President, the Senator from North Carolina [Mr. SIMMONS] read the roll call to show that many of the Senators on this side had voted with the Senators on that side. I agree with the Senator from North Carolina. Many of the Senators on this side who are in favor of reasonable protection have voted with that side on certain paragraphs where the tariff has been reduced. But it is also true that amendments have been offered by Senators on this side of the Chamber proposing to reduce the tariff and the Senators on that side have voted against them. I do not want to take up the time of the Senate with naming the specific items. I could do so if I wished. But the RECORD shows for itself that when amendments have been offered by Senators on this side to place certain articles on the free list the Democratic Senators in solid phalanx have voted against them.

Let us be fair about showing the RECORD. The people of this country possess enough intelligence to know for themselves what has happened in this Chamber. They do not have to be told, either by me or by anyone else, what has transpired here.

It is with diffidence and with some fear that I enter upon the discussion of this schedule, knowing as I do, that I shall meet the opposition of many illustrious minds of the Senate. But I shall not attempt to make any statements which I can not prove to be facts.

I disagree with the policy that has been adopted in making this bill. Ever since I came to Congress, as is well known, I have favored a low tariff. When my own party was in power I voted for lower rates on certain items in certain schedules. I want to say emphatically that I am ready now to vote, as to articles that are controlled by a monopoly or trust, if not to place them upon the free list, at least, to place upon them a duty that will not enable the monopoly or trust to be unduly I mean by that to allow a duty only where it will benefit labor.

I do not intend to assume the responsibility of speaking for anyone but myself. There are in this bill items for which I could vote, and for which I have voted, but there are many items in the bill which I believe unfairly discriminate against

the agricultural class.

Are we to adopt a policy that will discriminate against those who produce what are called basic necessities? Must we protect only those who are engaged in producing luxuries? Are we to say to those who are engaged in producing what are known as basic necessities that they lack sufficient knowledge to go into the business of producing articles which are luxuries? what logic can you contend that you are going to produce revenue by simply levying a duty upon articles that are known to be mere luxuries? Is it not reasonable to suppose that the American people possess enough intelligence to engage in industries that produce luxuries, and thereby get protection? Is it not reasonable to suppose that no one is foolish enough to engage in the industries that are going to be discriminated against?

I have always believed, and I have so stated, in the policy of protection, but I have never believed it was necessary to give protection to an industry that is controlled by a trust or

monopoly.

I could enumerate a number of trusts in this country that I do not believe are entitled to any protection. They do not need any protection. They control the products, not only of this country but of foreign countries. As was well said by the dis-tinguished Senator from Minnesota [Mr. Nelson] when he re-

ferred to the monopoly which is manufacturing farm implements, is there a Senator on that side who will say to me or who will say to the Senate that he believes farm implements are going to be any cheaper by placing them on the free list?

Take the production of binders, controlled absolutely by one Eighty-seven per cent of the binders sold in the United States are manufactured by the International Harvester Trust; 87 per cent of the binders are being supplied by one I do not think anyone really believes that taking off the tariff of 15 per cent will in any way affect a monopoly of that kind. As I said a few days ago, a binder that was shown to cost at the factory fifty-six dollars and some cents carries a duty of 15 per cent, which would amount to about \$8, which would make the gross factory cost about \$64. That very article is sold in my part of the country at \$150. So I ask you, How are you going to remedy that by a tariff bill?

Mr. President, I am not going into a general discussion of the tariff. I am going to offer certain amendments to the bill, and with each one of the amendments I am going to give some facts.

The rates in the amendments which I propose to offer are not as high as the rates in the present law. Most of the rates in the amendments I propose to offer are about the same as those now imposed by the Canadian Government. The amendment which I offer to this paragraph provides for a duty of \$1.50 per head on cattle less than 1 year old; on all other cattle that are valued at more than \$14 per head, \$3 per head; if valued at more than \$14 per head, 20 per cent ad valorem.

That is lower than the Canadian rate. The Canadian rate is 25 per cent ad valorem. The Payne rate was \$2 in the first instance and \$3.75 in the second instance, with an ad valorem duty of 27½ per cent. The Dingley rate was the same as the Payne rate, and the Wilson rate was the same rate that I propose to offer to this paragraph, namely, 20 per cent.

I assume that I shall be met with the argument that this is a basic necessity. I admit that, Mr. President. I admit that beef is a basic necessity. But we have not only been able to supply our own markets, but we have exported to a considerable extent.

I suppose I will be asked, "Why, then, is it necessary to have protection if we export cattle?" During 1912 we imported

318,372 head of cattle, and their value amounted to \$4,805,574, which shows that they were cheap cattle. They were young cattle or stockers. We exported only 105,506 head, and yet they were worth 100 per cent more than the 318,000 which we imported. They were worth \$8,870,075.

There are in all countries for which statistics are available about 450,000,000 head of cattle. The United States, excluding Alaska and our island possessions, has about 60,000,000, or, to be accurate, 58,395,752. No one has a monopoly of this business in the United States, as I am going to show. Canada has 7,108,702 head of cattle; Mexico, 5,142,457; Cuba a little more than 3,000,000; Argentina more than 28,000,000; Brazil about Austria-Hungary more than 17,000,000; France nearly 15,000,000; Germany over 20,000,000; Italy more than 6,000,000; Russia, in Europe, 35,781,000; Russia, in Asia, a little more than 15,000,000. The United Kingdom has only about 12,000,000 head of cattle, British India has 114,000,000that includes buffalo calves-and Australia has more than

In the United States the 60,000,000 head of cattle are distributed as I shall state. I am going to name only the States where the raising of cattle is an important industry. I quote the figures from the Agricultural Yearbook for 1912, assuming that they are correct:

New York has 2,341,000; Pennsylvania, 1,557,000; Georgia, 1,069,000; Ohio, 1,683,000; Indiana, 1,320,000; Illinois, 2,235,000; Michigan, 1,471,000; Wisconsin, 2,639,000; Minnesota, 2,268,000; Iowa, 3,344,000; Missouri has a great number of cattle, 2,233,000; North Dakota, 714,000; South Dakota, 1,278,000; Nebraska, 2,509,000; Kansas, 2,476,000; Texas, 6,056,000; Oklahoma, 1,639,000; Montana has only 812,000; Wyoming, 539,000; Colorado, 1,093,000; New Mexico, 947,000; Arizona, 812,000; California, 1,955,000.

Mr. WARREN. Has the Senator the number of milch cows separate from the other cattle? If he has, I hope he will include it in his statement.

No. I will say I did not want to take up Mr. GRONNA. too much of the time of the Senate. I simply wanted to present, in round figures, the number of cattle as they are distributed all over the United States.

If the cattle industry were controlled by a monopoly,' I should be in favor of placing cattle on the free list. But the figures show that instead of the cattle being owned by a few men. the older States are more and more going into the business of raising cattle on a small scale. Since the public lands have been tle industry in that part of the country has decreased, and it is increasing in the Eastern States, and especially in the States of Iowa, Ohio, and New York. When I speak of men who raise cattle I mean farmers, because among the 10,000,000 farmers there are at least 7,000,000 farmers who raise a few head of cattle.

I admit that the price of beef is high at the present time. I admit that for the last few years the industry has been a paying one. But you are proposing now by this bill to deny any protection to the farmers who have engaged in this business and who have profited by it. You are throwing wide open the doors and permitting the country on the north, which has a tariff of 25 per cent ad valorem, to send her cattle in free, as well as permitting the country on the south, which has no tariff, to send her cattle in free. Not only that, but you are permitting every country in the world to come into our markets on the same basis as our own farmers.

Perhaps some of you who have not been engaged in the cattle industry believe that there is no labor connected with it. suppose there are on this floor men who know more about the industry than I do; but I believe I can say that there is as much labor connected with the industry of raising cattle as there is with the industry of manufacturing. Why, then, is not the farmer who raises cattle as much entitled to protection as the manufacturer? The farmer must employ labor as well as the manufacturer.

We hear a great deal said about "going back to the farm." You must do one of two things: You must either make it possible for the farmer to get for his products a price sufficient to pay him a profit or you must give him an opportunity to buy everything in the free market. Not only that, but you must not discriminate against him in the way of rates of interest. which is being done at the present time, and for which I do not altogether blame the Democratic Party,

The farmer must be placed on a basis where he can secure

cheaper money, secure his implements, and secure his labor at a lower price or you must permit him to get a price that will enable him to make a profit. If you do not, the enlightened American people are not going to engage in the industry of

It is true that farming is different from manufacturing. The farm is a home, and whether it is on a paying basis or not the farmer does not close down, as does the manufacturer. He stays on the farm until he is sold out by the sheriff. But the young men that are growing up, the young men who are receiving an education, are not going to be satisfied to live on the farm and receive pauper wages for their labor. They are entitled to as much consideration as any other class engaged in any other industry.

Mr. President, I do not wish to take up any more time on this particular paragraph. I offer the following amendment, and upon it I call for the yeas and nays.

The VICE PRESIDENT. The amendment submitted by the

Senator from North Dakota will be read.

The Secretary. Amend paragraph 188, page 55, so as to read: 188. Cattle, if less than 1 year old, \$1.50 per head; all other cattle if valued at not more than \$14 per head, \$3 per head; if valued at more than \$14 per head, 20 per cent ad valorem.

Mr. LANE. Mr. President, I wish to state that I do not know the conditions in the Senator's State, but out on the coast the cattle are gone from the range. There is bunch grass growing on the range as we have not had it before in 25 years.

I traveled with a buyer for a large firm who were buying cattle all over the Pacific coast last year. I traveled with him from the Rocky Mountains down to the coast through the State of Oregon and eastern Oregon, and he had been through Idaho. He was going over all that country buying cattle to drive to the Saskatchewan country. He was paying the ruling price that was asked of him by stockmen. He told me confidentially that the people in our part of the country were not alive to the situation; that the cattle were gone from off the ranges. I checked the statement up afterwards, and I found that they were gone. They are gone from off the ranges in Oregon, Idaho, Montana, in Wyoming, I'presume, and in Cali-We have used them up. They have been consumed. The increase of the herds has not kept pace with the population of the country. Good, fat steers are selling for nearly \$100 a head at this time in some sections of the country. The people can not afford longer to eat meat unless we obtain a source of cheaper supply for them. The poor man in a short time will be entirely unable to eat it or to have it on his table more than once a week. The Senator knows this to be true from his own experience; and if not, can prove it if he will go out into the markets of the city; the extravagant price he will have to pay taken up in the West, and free range has been denied, the cat- for meat will prove it. I found alfalfa hay in some sectionslast year's crop and the crop of the year before and a portion of that of the year even before that-piled up in the field, and it was not worth over \$3 or \$4 a ton, for the reason that there were no cattle to eat it.

We have got to go somewhere for our supply of meat. We will get no cattle from Canada. We must go, perhaps, to the Argentine Republic or to Mexico. I doubt if we can get them from Mexico at this time. But there are not enough cattle in this country now to meet the demands of the people.

Mr. BRISTOW. Mr. President-

Mr. LANE. That is my opinion.

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Kansas?

Mr. LANE. With a great deal of pleasure.

Mr. BRISTOW. Is it not a fact that there is a decline in the number of cattle not only in our own country but in other cattle-producing countries?

Mr. LANE. I presume so.

Mr. BRISTOW. And is not that because the cattlemen and the farmers have found that it does not pay to keep a cow for the calf; that when they go into the dairy business they find it does not pay to keep the calves, because the calves will consume more milk than they are worth? The result is that the range man can not profit by carrying cattle as he formerly did, receiving merely the increase as the profit for maintaining the herd. This is not the condition in our own country alone.

Then, if the Senator will permit me, if I am not taking too much of his time, the trouble is that when the herd is depleted it takes a long time to replenish a herd of cattle. The cattlebutchering business has been absorbed by a combination of They squeeze down the price for years until they drive the independent cattle grower out of business. He sells

I have in mind a gentleman in my own State who disposed very largely of his herd that he was keeping for the increase, because it did not pay. He, in fact, some years lost money, and he had to dispose of them. Knowing the power of the combination that controls the meat business of the world, he hesitates to go into a business which is domniated by a combination. So while probably if he had the cows now he could maintain them for the increase, he does not think that it is good business judgment to undertake to go out and buy cows at the price they command and undertake to raise a herd of cows, because of his experiences in the past.

For that reason it seems to me that we must in this country of ours devise some means by which we can encourage the pro-

duction of the calf for the sake of growing the steer.

Mr. LANE. Mr. President, I wish to say that the shortage has been due in a measure to the fact that the milk productbutter fat-has increased in value, and creameries have been established throughout farming communities, and the farmer has been able to make more by producing milk than by raising

The result is that in many sections the farmers have killed the calves as soon as they were born, knocking them in the head, rather than lose the milk they would consume if he raised them, and they have good reason for it. In some States I understand they have passed laws trying to prevent that, but the fact exists, and I am informed on good authority that unless some means of relief is obtained in this country, steers will be selling for \$100 a head all down the line for good average fat steers. There is an enormous profit at that price.

How much does the Senator want the people to pay for the

necessities of life? Does he want them to become vegetarians? If he does not he must open some way they can procure meat to eat. It will take years to overcome the condition which now

Mr. WARREN. May I ask the Senator, Is he going to increase the meat products if he lowers the price and makes farming unprofitable so that the farmer will not raise the cattle?

Mr. LANE. I think the farmer would make a good profit if he received from seventy-five to a hundred dollars a head for his steers. Meat is becoming a luxury now.

Mr. WARREN. If you reduce them to a price of \$30 and

Mr. LANE. My idea was that such a price would not pre-

vail again, not for many years to come.

Mr. WARREN. The situation is that the cattle in the world

are not increasing nearly as fast as the population.

Mr. LANE. That is the idea I intended to convey.

Mr. WARREN. The sheep in the world are not increasing nearly as fast as the population; and you can by admitting wool free, and so forth, render sheep raising so unprofitable in this country that we will produce only a small amount of the mutton for consumption. You can perhaps for a few years have an influx of cattle from other countries, rendering the farmer's price here so low that he goes out of business, and it will be a long, long time before he will be able to reorganize so as to raise enough to supply the American demand, and we would be utterly dependent, very soon, upon foreign countries.

I do not imagine that there is a surplus in this country or in the world all together of cattle large enough so that when we come to a point where we are dependent for our meat production entirely, or almost so, on foreign countries that we are

going to be well taken care of.

There is truth in what the Senator says about the increased use of cows for the milk product and destroying the calves, not so much by knocking them in the head, which, I think, occurs but seldom, but they are turned out at four to six weeks old for veal. The price of veal has been high enough, and the same with the price of lambs, too, of late years; so that the young of both cattle and sheep have been sold for meat much earlier in their existence, and consequently each has been of smaller weight than of the old times, and this has helped the decrease in numbers

Mr. CRAWFORD. Will the Senator permit me? Mr. WARREN. I am talking in the time of the Senator from Oregon.

Mr. CRAWFORD. If I may be permitted I should like to ask the Senator from Wyoming if it is not a fact that during the last 10 or 12 years, where labor has been employed and wages have been good, the consumption of beef per capita has increased very much throughout the country?

Mr. WARREN. Just in proportion, I think, as the wages for workmen and the compensation for energy all through the country has enabled all hands to freely buy meat, as, of course,

it is a favorite article of food.

Mr. CRAWFORD. If we should have a long period of depression in the country, so that people could not afford to eat so much meat, does not the Senator think that might enable us to increase the supply to be consumed?

Mr. WARREN. It would not. It would be a case of one sorrow feeding upon another. I remember at one time cattle were considered high and we had hard times. Most of the cattle raisers were called upon to pay their debts. They commenced shipping their cattle to market, and prices went down from \$40 to \$30 and from \$30 to \$20 and \$10 per head. It took just that many more cattle to pay the debts, and later followed a shortage and then finally higher prices again.

Mr. CRAWFORD. The answer of the Senator is discourag-I thought that possibly we might have some hope of increasing the supply by following the method of causing depression and reducing the consumption per capita, but if the Senator can give no hope in that direction it means that the question of the supply of the beef product is a very serious one, for which it is hard to find a solution.

Mr. WARREN. It is a serious one. The argument or assumption of the Senator that the Democrats or some few desire lower prices in order to bring prosperity is, I know, in a light vein on his part. If the price of beef is high and wages are also high, people can afford to eat beef and plenty of it. It is because the supply is not only good but general business is good. If we have prosperity in one line, we have prosperity in other lines. If we have adversity in several lines, it is liable to spread to all. But the meat product, especially beef, is a problem that we have to meet and solve as best we can because, as I said before, the people increase in numbers much faster than meat animals. And, furthermore, certainly when the people are prosperous and good returns are made from business, the consumption of meat increases rather than decreases.

Now, in the matter of dairy products, of our 60,000,000 cattle about 22,000,000 are milch cows. Of course a milch cow contributes but little to the beef product, because she is usually retained as a milker until advanced in age, and then she produces not a large amount or a first quality of beef.

We are to-day receiving beef from the Argentine Republic and elsewhere. We have right before us every day a sample of the workings of the market, because we are protected in some degree, but, nevertheless, the market here is open to these

foreign products that are coming in.

Mr. LANE. I wish to state in closing the conditions that exist under the present law. The man who sells butter fat to the creamery realizes a profit in some portions of our country of nearly \$100 a year per head for his cows, and he prefers that method of making money as being quicker than it would be to raise calves. To restock the ranges it will be necessary, I am informed by dealers in cattle, to import even the long-horn cattle stock from the South American countries.

Mr. WARREN. The Senator surely does not wish us to understand that there is \$100 net profit per annum to a cow.

Mr. LANE. I wish to make a statement that in certain sections of the country, out on the coast, the dairymen do claim to make that much profit—\$100 a head, net—if you please, for each dairy cow. They are high-grade, good cows, but they do

Mr. GRONNA. Mr. President-

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from North Dakota?

Mr. LANE. I yield. I am through, in fact. Mr. GRONNA. I wanted to ask the Senator from Oregon a question. It seems to me that the problem can be easily solved if the conditions are as the Senator from Oregon has stated them to be. If I understood him correctly, he stated that alfalfa hay sold for three or four dollars a ton in his State. Did I understand the Senator correctly?

Mr. LANE. I said in certain sections alfalfa hay was stacked up and could not be sold for a price to exceed three to four dol-

Mr. GRONNA. Then, Mr. President, I think anyone can easily solve that question, if that is true, because we can buy young cattle from Mexico and from other countries and produce our own beef. But certainly if alfalfa hay is worth only three or four dollars a ton, it seems to me that ought to solve the problem, if nothing else. If the Senator will permit me to say

Mr. LANE. Right in answer to that, if the Senator will allow me, I will say that was partly our object. The gentlemen up in that part of the country having the hay and no cattle to feed it to, we are trying to give them the opportunity to get some cattle,

to feed the hay to them, and get them on the market.

In reply to the Senator from Wyoming, I will say that per-haps the reason why the people out on the coast make more money out of the dairy cow than they do in Wyoming is due to the fact that the climate is better for that purpose, and it is a great deal better country in many ways.

Mr. WARREN. Will the Senator allow me a moment?

Mr. GRONNA. I want to ask just one question.
Mr. WARREN. I wish to make a reply to the proposition that somebody has made \$100 net off a cow, and that that is the price. I am willing to let that stand as the statement of the Senator from Oregon. But I think he will find that in most cases it takes a very great number of cows to get an average of that, or even a goodly proportion of that amount.

Now, alfalfa may be, as the Senator states, in some places in his State \$3 a ton. The last time I was in that State they were getting \$12 a ton for it and shipping it to Texas. It is a matter of transportation largely. Of course, where there are alfalfa fields far from railroads, and there is an overstock of alfalfa, I presume it may be two or three dollars a ton, but the price of

hay has been, generally speaking, very far above that.

Mr. LANE. In explanation of my statement I will say that it is a certain section of the John Day country which I was referring to, when I was speaking about alfalfa hay. All through that country it was piled up, with no cattle to feed it to. Of course, if they had had cattle it would have been worth more, but the ranges were bare of cattle.

In respect to the statement as to the dairy cows, it was near creameries, in certain favored sections. I wish it understood the entire community assured me that that was about the profit they made, from \$80 to \$100 a head on their cattle, using them for creamery purposes. I speak of that country, and it might be worth while to go down there and take a look at it yourselves. It is so much better than the country you live in. It is down in the Coquille Valley, away down on the coast. It is a beautiful country.

Mr. GRONNA. I wish to call the Senator's attention to the

fact that according to the handbook the unit of value of cattle imported in the year 1896 was \$6.89; for the year 1905, \$14.19; for the year 1910, \$13.94; and for the year 1912, \$14.20.

Mr. LANE. What was that? I did not hear the Senator. Mr. GRONNA. I am quoting the unit of value of cattle. Mr. LANE. A head?

Mr. GRONNA. A head. Of course that is the importation

Mr. LANE. They must have been very small cattle.

Mr. GRONNA. That is according to the figures of the tariff

Mr. LANE. \$13 a head?

Mr. GRONNA. \$14.20.

Mr. LANE. For a beef steer?

Mr. GRONNA. It does not say beef steer or anything else. It is per unit.

Mr. LANE. They could not buy many of them, I think, at

that price anywhere in the world.

Mr. SHIVELY. Mr. President, I think the Senator from North Dakota is entirely right about that. The import price for 1912 was \$14.20 and the export price for the same year was \$84.07.

Mr. GRONNA. Yes, Mr. President; I think I showed a few moments ago that we imported during 1912, 318,372 head of cattle, worth \$4,805,000, and exported 105,000 head, worth nearly \$9,000,000, showing that we imported young cattle, and we exported corn-fed cattle.

Mr. SHIVELY. Which was an exceedingly profitable busi-

Mr. GRONNA. Certainly; I do not deny that. That is the very reason that I am offering this amendment. farmers of this country to have the profit which they have enjoyed during the last few years.

Mr. SHIVELY. But you would subtract from that whatever your amendment calls for in the way of an import duty.

Mr. GRONNA. Mr. President, my amendment does not provide for a tariff as high as the present tariff.

Mr. SHIVELY. That is true. Mr. GRONNA. It is a great reduction. It is 5 per cent lower than the Canadian tariff.

Mr. SHIVELY. But, if the Senator please, his quarrel seems to be with this provision which puts cattle on the free list.

Mr. GRONNA. Yes; that is true.
Mr. WALSH. Mr. President, before the Senator takes his seat, permit me to remark that the figures quoted obviously disclose that the importations are of young feeding stock-

Mr. GRONNA. Yes; I so stated. Mr. WALSH. Brought into this country, fattened here, and then sent to the market.

Now I desire to ask the Senator, or inquire of anybody else, why we should burden that business with a tax? Why should the man in New Mexico, in Arizona, or in Montana who desires to go to Mexico for the purpose of buying feeders to bring them into this country to fatten for the market be burdened with a tax?

Mr. WILLIAMS. And make the cattle worth eight times as much as they were before.

Mr. WARREN. If the Senator will yield to me a moment right there, I will say that the cattle that are imported are not subsequently exported. The man who brings cattle in from Mexico has nothing that he can export. He exports only the prime top, the finished-fed steers, natives of Montana and of other States in the Union. The cattle brought in which are so much lower in value are, as the Senator from Indiana [Mr. SHIVELY] has said, young cattle, and, as a general thing, they are of very inferior quality.

Mr. WALSH. That is exactly in accordance with what I have suggested to the Senate, that a very inferior grade of cattle, a low-grade cattle, are brought in from Mexico to the cattle, are brought in from Mexico to the cattle, are brought in from the months. feeding States, and they are there fed and put upon the market. The probabilities are that very few of those cattle are exported; but they take the place of cattle that are exported and thus

supply the market.

Mr. President, before the Senate votes upon the amendment of the distinguished Senator from North Dakota [Mr. Gronna] think its attention might very preperly be called to some illuminating figures in relation to the cattle industry contained in the last report of the Secretary of Agriculture. that in 1907 there were in this country, outside of milch cattle, 51,506,000 head; in 1908, 50,073,000 head; in 1909, 49,379,000 head; in 1910, 47,279,000 head; in 1911, 39,679,000 head; in 1912, 37,260,000; and in 1913, 36,030,000 head, a decrease of 15,000,000 head in six years, or about 30 per cent.

In view of the fact that there has been this tremendous diminution in the number of cattle in this country, reflected in the enormous advance in the price of beef, I desire to inquire of the distinguished Senator from North Dakota, in view of those conditions and the further condition to which he has adverted, that the market is practically controlled by a trust which fixes prices, how he can think of imposing a duty upon cattle?

Mr. GRONNA. Mr. President, the Senator from Montana is correct in his statement that there has been a decrease in certain kinds of cattle, but he forgets to tell the Senate that we are now producing more milch cows.

Mr. WALSH. I have the figures.

Mr. GRONNA. The figures that I quoted, I want to say to the Senator from Montana, are taken from the same book he has in his hand, and I quoted them correctly. If the Senator

will permit me, the figures I quoted for the year 1912 were all -58,395,752. I say those figures are correct.

Mr. WALSH. I am able to give the figures as to milch cows as well as for beef cattle. In 1907 the number of milch cows was 20,908,000, and in 1913 we had lost 400,000, there remains ing 20,497,000 milch cows

Mr. GRONNA. No; the figures do not show anything of the kind; they do not show that we have lost so many cattle; they simply show that we have more milch cows and less of other kinds of cattle. They do not show that we have that many less, because we did have, according to the Secretary's figures, more than 58,000,000 head of cattle in 1912.

The VICE PRESIDENT. The question is on the amendment

reported by the committee.

Mr. GRONNA. Mr. President, I offered an amendment to

the amendment of the committee.

The VICE PRESIDENT. The Chair knows the Senator did, but the Chair has been ruling that the committee has the right first to perfect the text.

Mr. GRONNA. Very well; I ask for the yeas and nays on

the amendment.

The yeas and nays were ordered.

Mr. GALLINGER. Mr. President, as I understand, the question is on the committee amendment.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

Mr. GRONNA. I will withdraw my demand for the yeas and nays on the committee amendment.

SEVERAL SENATORS. Oh, no. Mr. WILLIAMS. Why not have a yea-and-nay vote on the Senator's amendment?

Mr. CLARK of Wyoming. Let us have the yeas and nays on

the committee amendment also.

Mr. GALLINGER. I suggest to the Senator from North Dakota that we have a yea-and-nay vote on the committee amendment.

Mr. GRONNA. Very well.

The Secretary proceeded to call the roll.

Mr. KERN (when his name was called). I transfer my pair with the Senator from Kentucky [Mr. Bradley] to the Senator

from Maryland [Mr. SMITH] and will vote. I vote "yea."
Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from New York [Mr. Root]. I transfer that pair to the junior Senator from Oklahoma [Mr. Gore] and vote. I vote "yea."
The roll call was concluded.

Mr. JAMES. I have a general pair with the junior Senator from Massachusetts [Mr. Weeks]. I transfer that pair to the junior Senator from Louisiana [Mr. Ransdell] and vote "yea."

I also desire to announce that my colleague [Mr. Bradley] is detained from the Senate by reason of illness. He has a general pair with the junior Senator from Indiana [Mr. Kern].

I will let this announcement stand for the day.

Mr. CHAMBERLAIN. I have a general pair with the junior
Senator from Pennsylvania [Mr. OLIVER]. I transfer that pair to the Senator from Arizona [Mr. ASHURST] and will vote. vea.

Mr. CLARKE of Arkansas (after having voted in the affirmative). I desire to inquire whether or not the junior Senator from Utah [Mr. SUTHERLAND] has voted?

The VICE PRESIDENT. The Chair is informed that that Senator has not voted.

Mr. CLARKE of Arkansas. Then I withdraw my vote, as I have a general pair with that Senator.

Mr. LODGE. I ask if the junior Senator from Georgia [Mr.

SMITH] has voted? The VICE PRESIDENT. The Chair is informed that he has

Mr. LODGE. I have a general pair with that Senator, which I transfer to the Senator from Maine [Mr. Burleigh], and will

vote "nav.

Mr. SMITH of Georgia entered the Chamber and voted.

Mr. LODGE. I see the junior Senator from Georgia [Mr. SMITH] has returned to the Chamber and voted. I therefore withdraw the announcement I made of the transfer of my pair with him, and will allow my vote to stand, which leaves the Senator from Maine [Mr. Burleigh] unpaired.

Mr. SAULSBURY. I have a pair with the junior Senator from Rhode Island [Mr. Colt]. I transfer that pair to the Senator from Arizona [Mr. SMITH] and will vote. I vote "yea." The result was announced-yeas 38, nays 31, as follows:

YEAS-38.

Chilton Hitchcock Hollis Hughes Bacon Lane Bryan Chamberlain

s s	Martin, Va. Martine, N. J. Myers O'Gorman Overman Owen Pittman	Pomerene Reed Robinson Saulsbury Shafroth Sheppard Shields	Shively Simmons Smith, Ga. Smith, S. C. Stone Swanson Thomas	Thompson Tillman Vardaman Walsh Williams

o t	Ashurst Bankhead Bradley Burleigh Burton Clarke, Ark.	Culberson du Pont Fall Fletcher Goff Gore Johnson	McCumber Newlands Oliver Ransdell Root Smith, Ariz. Smith, Md.	Smith, Mich. Stephenson Sutherland Weeks Works

So the amendment of the committee was agreed to.

The VICE PRESIDENT. The question recurs on the amendment offered by the Senator from North Dakota [Mr. GRONNA].

Mr. GRONNA. Mr. President, I want to state briefly that the bill, when it passed the House, provided for a duty of 10 per cent ad valorem on cattle. The Senate committee has placed cattle on the free list. My amendment provides for a duty of 20 per cent, a large reduction in the present rate. Canada has a tariff of 25 per cent on cattle; so that the amendment which I submit is less than the tariff levied by Canada.

Mr. SHIVELY. Let us have a vote, Mr. President. The VICE PRESIDENT. The question is on the amendment offered by the Senator from North Dakota [Mr. Gronna]. [Putting the question.] By the sound, the "noes" appear to have it.

Mr. GRONNA. I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). I have general pair with the junior Senator from Pennsylvania [Mr. OLIVER], which I transfer to the Senator from Arizona [Mr. Ashurst] and will vote. I vote "nay."

Mr. JAMES (when his name was called). I transfer my pair with the Senator from Massachusetts [Mr. Weeks] to the Senator from Louisiana [Mr. RANSDELL], and vote "nay."

Mr. KERN (when his name was called). I transfer my pair with the Senator from Kentucky [Mr. Bradley] to the Senator from Maryland [Mr. SMITH] and will vote. I vote "nay."

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. Colt]

to the Senator from Arizona [Mr. SMITH] and will vote. I vote "nav.

Mr. THOMAS (when his name was called). I transfer my pair with the Senator from New York [Mr. Root] to the junior Senator from Oklahoma [Mr. Gore] and will vote. I vote "nay."

The roll call was concluded.

Mr. CHAMBERLAIN (after having voted in the negative). The Senator from Arizona [Mr. Ashurst] having returned to the Chamber, I transfer my pair to the Senator from Maine [Mr. Johnson], and will allow my vote to stand.

Mr. REED. I desire to inquire whether the Senator from

Michigan [Mr. SMITH] is absent from the city?

Mr. TOWNSEND. I do not think he is, although I have not

seen him to-day.

Mr. REED. Under those conditions I will be at liberty to vote. I therefore vote "nay.

The result was announced-yeas 31, nays 39, as follows:

	YE	AS-31.

So Mr. Gronna's amendment was rejected.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, on page 55, line 23, to strike out all of paragraph 190, in the following words:

190. Sheep, 10 per cent ad valorem.

Mr. CATRON. I offer an amendment which I send to the

SHIVELY. The question is first on the committee amendment.

Mr. CATRON. I ask that my amendment be read.

The VICE PRESIDENT. The amendment will be stated. The Secretary. After the numerals "190," in lieu of the words proposed to be stricken out, the Senator from New Mexico proposes to insert:

Sheep under 1 year old, 50 cents per head; 1 year old or over, \$1

The VICE PRESIDENT. It seems to the Chair that this is an amendment to the committee amendment.

The question is on the amendment proposed by the Senator

from New Mexico to the amendment of the committee.

Mr. CATRON. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). announcing my pair with the junior Senator from Pennsylvania [Mr. OLIVER], I transfer that pair to the senior Senator from South Carolina [Mr. TILLMAN] and will vote. I vote nav.

Mr. KERN (when his name was called). I transfer my pair

with the Senator from Kentucky [Mr. Bradlex] to the Senator from Maryland [Mr. SMITH] and vote "nay."

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. Colt] to the Senator from Arizona [Mr. SMITH] and vote. I vote "nay.

Mr. THOMAS (when his name was called). I again transfer my pair with the Senator from New York [Mr. Root] to the Senator from Oklahoma [Mr. Gore] and vote "nay."

Mr. WARREN (when his name was called). I have a pair with the Senator from Florida [Mr. Fletcher]. I transfer that pair to the Senator from Maine [Mr. BURLEIGH] and vote

Crawford

Gore Lewis McCumber Newlands Root Smith, Ariz. Smith, Md. Smith, Mich. du Pont So Mr. Catron's amendment to the amendment of the committee was rejected.

The VICE PRESIDENT. The question recurs on the amendment of the committee to strike out the paragraph.

Mr. CATRON. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. GRONNA. Mr. President, I do not offer any amendment.

I had an amendment identically the same as the one presented by the Senator from New Mexico [Mr. CATRON]. But I wish to

call the attention of the Members of the Senate to the fact that we are not treating our sheep raisers as well as our neighbor to the north, Canada. Canada has a rate of 25 per cent ad valorem on her sheep. The present law, as we all know, is \$1.50 for sheep 1 year old and 75 cents per head for sheep less than a year old. The Wilson rate was 20 per cent. We have heard a great deal of complaint about the Wilson law, but that law did give the sheep raisers the benefit of a duty of 20 per cent ad valorem.

Mr. President, I shall not take up any more time of the Senate, but I ask to have printed a table showing the number of sheep in the different countries and in the different States. I ask unanimous consent to have it printed.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it will be printed.

The table referred to is as follows:

SHEEP.

Canadian rate, 25 per cent ad valorem.
Payne rate, 1 year old or over, \$1.50 per head; less than 1 year, of cents per head.
Dingley rate, same as Payne rate.
Wilson rate, 20 per cent ad valorem.
Imports 1912: Number, 23,588; value, \$157,257.
Revenue, \$20,356.50.

Exports 1912: Number, 157,263; value, \$628,985.

Number of sheep.

Mr. WALSH. Mr. President, I desire to invite the attention of the Senate to the fact that we are trying to treat our sheep raisers better than they treat their sheep raisers in Canada. Over there, when they want to come here to buy sheep of us to stock their farms, they are obliged to pay a heavy duty. One hundred and fifty thousand head of sheep went from the State of Montana into the Canadian Provinces to the north last year. They find it profitable there now to go into the sheep business,

but their Government levies a heavy burden or tax upon the people who desire to engage in that industry in that country.

We are endeavoring to lift that burden from those who desire to engage in the sheep industry in this country. If they can buy their sheep for the purpose of stocking their farms and ranges from abroad, we invite them to go there and got them. ranges from abroad, we invite them to go there and get them

and bring them here without any tax.

The VICE PRESIDENT. The Secretary will call the roll on

agreeing to the amendment of the committee.

The Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). I again announce my pair with the junior Senator from Pennsylvania [Mr. OLIVER] and withhold my vote.

Mr. JAMES (when his name was called). I transfer the pair I have with the Senator from Massachusetts [Mr. Weeks] to the Senator from Louisiana [Mr. RANSDELL] and vote "yea.

Mr. KERN (when his name was called). I transfer my pair

with the Senator from Kentucky [Mr. Bradley] to the Senator from Maryland [Mr. SMITH] and vote "yea."

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. Colt] to the senior Senator from Arizona [Mr. SMITH] and vote. I

vote "yea."

Mr. THOMAS (when his name was called). I transfer my pair with the senior Senator from New York [Mr. Root] to the Senator from Oklahoma [Mr. Gore] and vote "yea."

Mr. WARREN (when his name was called). Again transferring my pair with the Senator from Florida [Mr. Fletcher] to the Senator from Maine [Mr. Burleigh], I vote "nay."

The roll call was concluded.

Mr. CLAPP. The junior Senator from California [Mr. Works] is necessarily absent from the Chamber. I will let this statement stand for the remainder of the day.

The result was announced-yeas 38, nays 32, as follows:

YEAS-38.

So the amendment of the committee was agreed to.

The reading of the bill was resumed.

The next amendment was, in paragraph 191, on page 55, line 24, to strike out the word "other" before "live animals," so as to read:

191. All live animals not specially provided for in this section, 10 per cent ad valorem.

The amendment was agreed to.

The next amendment was, in paragraph 191, line 24, before the word "specially," to insert the word "otherwise," so as to read:

191. All live animals not otherwise specially provided for in this section, 10 per cent ad valorem.

Mr. CUMMINS. Mr. President, I rise to ask a question. should like to know what other live animals are ordinarily imported into the United States and that will be covered by this paragraph. I ask this simply that I may vote intelligently

upon the amendment.

Mr. WILLIAMS. This was intended to cover such animals as are imported into the United States that are not edible-

not fit for human food.

Mr. CUMMINS. There was some confusion in this part of

the Chamber, and I could not hear the Senator.

Mr. WILLIAMS. I said that generally speaking it covers such animals as are not fit for human food.

Mr. CUMMINS. I should like to know the names of some of them, because I do not know whether I want to admit them into the United States at this low duty or not.

Mr. WILLIAMS. It does tax some animals that are fit for human food in the way of game-bull moose, for example.

Mr. NELSON. Mr. President—

Mr. CUMMINS. I yield to the Senator from Minnesota.

Mr. NELSON. I presume, as I do not see it referred to elsewhere in the bill, that it must refer to swine.

Mr. WILLIAMS. Not specifying just what animals were

Mr. WILLIAMS. Not specifying just what animals were imported under the similar clause of the existing law, there were imported from Austra-Hungary \$8,000 worth in round numbers; from Belgium, \$7,000 worth in round numbers; from France, \$6,000 worth in round numbers. That is not including fowls. The language of the law of 1909 is "all other live animals not specially provided for in this section," the same as here.

Mr. CUMMINS. There is so much confusion I can not hear what the Senator from Mississippi is reading. It is not his fault at all, but there are so many talking in the neighborhood.

Mr. WILLIAMS. No; certainly it is not my fault.
Mr. CUMMINS. I want the names, not the amount or value. I have really no idea what animals are embraced in this paragraph that will probably come in at a duty of 10 per cent.

Mr. WILLIAMS. I can not tell the Senator, as I told him a moment ago, specifically what animals did come in, but under the same clause in the existing law there were imported of other animals, including fowls, from Austria-Hungary in 1912, \$8,000 worth in round numbers; from Belgium, \$7,000; France, \$6,000; Netherlands, \$180; Norway, \$198, and so on down the list. I suppose if somebody wanted to import a monkey he might have to pay 10 per cent on it, and also in order to import a bull moose or an English rabbit, or animals for circuses, although I believe circus animals are specially provided for in the way of being allowed to come in free.

Mr. WARREN. Will the Senator permit me? I presume this means such animals as farmers do not raise. I shall be sorry to find that they would be intended for the use of

farmers.

Mr. WILLIAMS. It does not mean that, because horses and mules are taxed under the same section.

Mr. WARREN. Where are horses and mules taxed? Mr. WILLIAMS. It does mean in general terms game animals and animals that are not fit for human food. It seems that as a rule farmers do not raise animals that are not fit for human food. I think there is a skunk farm in Illinois and a rattlesnake farm out in Colorado, but as a rule farmers do not raise animals that are not fit for human food.

Mr. CUMMINS. I put the specific question, then. I take it an imported dog would come under this paragraph.

Mr. WILLIAMS. I think so.

Mr. CUMMINS. And such other things as that, but is there any animal really valuable to humanity that will come in under this paragraph?

Mr. WILLIAMS. The Senator means valuable to humanity

Mr. WILLIAMS. The Senator means valuable to humanity in the sense of being valuable for food?

Mr. CUMMINS. Yes; for food. I will put it that way.

Mr. WILLIAMS. I do not think of any valuable for food at this moment. A dog might be very valuable to a man if he lives where he needed him.

Mr. CRAWFORD. Mr. President, I think there has been

meat of the Angora goat imported.

Mr. MARTINE of New Jersey. I think it was the bull

Mr. CRAWFORD. I am saying this seriously. I do not find the Angora goat in the free list. I do not find it specifically mentioned anywhere in the bill. Would that come in under this paragraph?

Mr. WILLIAMS. I do not know whether the Angora goat is fit to eat or not. I have never eaten any. If the gentleman will say that he is fit for human food, I would be willing to put him on the free list. I have tried to eat the common goat, but from my standpoint he is not fit to eat. I do not know about the Angora one.

Mr. CUMMINS. Mr. President, I have some familiarity with the bill, and I do not think that goats of any kind are specifically mentioned in the bill or in this section. Therefore I assume that any kind of goat would come in at 10 per cent.

Mr. WALSH. Mr. President—
The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Montana?

Mr. CUMMINS. I yield.
Mr. WALSH. I think the Senator must be in error about that. I think goats are covered by section 621 as well as swine, referred to by the distinguished Senator from Minnesota [Mr. Nelson].

Swine, cattle, sheep, and all other domestic live animals suitable for human food not otherwise provided for in this section.

Goats are unquestionably suited for human food.

If, however, you turn back to the paragraph in question, paragraph 191, it will be quite obvious that asses would fall under that section, if no other animals would.

Mr. CUMMINS. Then, Mr. President, it is hard for me to conceive what the animal is that would come in under this paragraph.

Mr. WALSH. I suggest to the Senator that asses would come in under that.

Mr. SMOOT. Mr. President, the two paragraphs taken together I think are perfectly plain. Paragraph 191 reads:

All live animals not otherwise specially provided for in this section, 10 per cent ad valorem.

Then, in the free list, paragraph 621 provides:

Swine, cattle, sheep, and all other domestic live animals suitable for human food not otherwise provided for in this section.

That applies to every domestic animal that is suitable for food. I suppose the makers of this bill intended that wild animals such as deer should be subject to a duty of 10 per cent under paragraph 191.

Mr. WILLIAMS. Mr. President, there is nothing peculiar to this provision, if the Senator will pardon me. It is in the Payne-Aldrich law, and there is no mystery about it, unless it is there.

Mr. SMOOT. I have not said that there was any mystery about it.

Mr. WILLIAMS. The rate is the only thing changed.

Now, if the Senator will pardon me one moment more-because I have the information—the value of these animals for the year ending June 30 was \$79,380, and the duties collected and covered into the Treasury amounted to \$15,876.15. Generally speaking, as I said in the beginning, they are such animals as are not domestic animals suitable for human food.

The VICE PRESIDENT. The question is on the amendment

proposed by the committee.

The amendment was agreed to.

Mr. SMOOT. On line 24, page 55, paragraph 191, there is an amendment to insert the word "otherwise."

The VICE PRESIDENT. That is the amendment which has

just been agreed to.

Mr. SMOOT. Mr. President, I simply want to call attention to that amendment before the matter is passed, and to say to the Senator having the schedule in charge, that the word "otherwise" is not needed in the law at all. If you simply say "all live animals not specially provided for in this section, you would be following the exact wording of the other provision, and there is no need of having the word "otherwise" in this paragraph.

Mr. WILLIAMS. We will not quarrel about that. thought that sounded a little better, and the Senator thinks it

does not; but I suppose it makes no difference.

The reading of the bill was resumed, and the Secretary read paragraph 192, as follows:

192. Barley, 15 cents per bushel of 48 pounds.

Mr. GRONNA. Mr. President, I shall not offer any amendment to this paragraph. I will say that the Committee on Finance has treated the farmer better in this paragraph and on this particular item than on other farm products. I believe, however, that the duty is too low. The present rate on barley is 30 cents per bushel; the Dingley rate was 30 cents per bushel; and the Wilson rate was 30 per cent ad valorem. This bill cuts the rate of duty in two, which means a loss of more than \$400,000 to the United States Government and a saving of the same amount to the Brewery Trust.

We imported in 1912, 2,768,471 bushels of barley of the value of \$1,929,214.50. It brought a revenue to the United States Government of \$830,542. We exported in 1912, 1,585,242 bushels,

worth \$1,267,999.

There are only a few States which the duty on this product ill affect. Those States are Wisconsin, which produced last will affect. year 24,843,000 bushels; Minnesota, which produced 42,018,000 bushels; Iowa, which produced 14,570,000 bushels; North Dakota, which produced 35,162,000 bushels; South Dakota, which produced 23,062,000 bushels; and California, which produced 41.670,000 bushels.

Barley is produced-this is from the data I have been able to obtain-in the following countries:

	Bushels.
United States	223, 824, 000
Canada	
Austria-Hungary	149, 120, 000
Denmark	22, 900, 000
France	50, 646, 000
Germany	159, 924, 000
Roumania	21, 295, 000
Russia in Europe	451, 861, 000
Russia in Asia	12, 263, 000
Spain	59, 994, 000
United Kingdom	60, 164, 000
Japanese Empire	90, 609, 000
Algeria	32, 887, 000

While I think the proposed rate of duty is low, Mr. President, I shall not offer any amendment to increase it. I fully realize that any amendment offered will be voted down.

Mr. BRISTOW. Mr. President, I should like to inquire of the Senator in charge of this schedule if he does not think that barley is a pretty good item for taxation for purposes of revenue? The brewers pay the revenue which is collected from the importation of barley; and if a tax of 175 per cent is maintained on tobacco as revenue taxation, why would it not be very good to maintain a high duty on barley for the purpose of col-

lecting revenue? Why cut it in two and relieve the brewers of that much of the burden of helping to maintain the Govern-

Mr. CLARK of Wyoming. There is no answer. Mr. BRISTOW. There is no answer. Well, I myself do not think there is any answer that can be made to it.

The reading of the bill was resumed, and the Secretary read

paragraphs 192, 193, and 194.

Mr. GRONNA. Mr. President, before we go to paragraph 195 I wish to move to insert a new paragraph. On page 56, after the word "pound," in line 5, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment proposed by the Senator from North Dakota will be stated.

The Secretary. On page 56, after the word "pound," in line 5, it is proposed to insert a new paragraph, as follows:

 $194\frac{1}{2}.$ Buckwheat, 15 cents per bushel of 48 pounds; buckwheat flour, 50 cents per hundred pounds.

Mr. GRONNA. Mr. President, while we in the West do not produce any buckwheat, it is produced in the Eastern States. I find that in the State of Maine in 1912 they produced 412,000 bushels; in Vermont they produced 240,000 bushels; in the great State of New York they produced 6,593,000 bushels; in New Jersey, 264,000 bushels; in Pennsylvania, 7,405,000 bushels; in Maryland, 210,000 bushels; in Virginia, 516,000 bushels; in West Virginia, 888,000 bushels; in North Carolina, 175,000 bushels; in Ohio, 410,000 bushels; in Michigan, 88,000 bushels; in Wisconsin, 289,000 bushels; in Minnesota, 126,000 bushels; and in Jone, 129,000 bushels; in Minnesota, 126,000 bushels; and in Iowa, 133,000 bushels.

Mr. President, the Canadian rate on buckwheat is 15 cents a bushel and on buckwheat flour 50 cents per hundred pounds. This bill places both buckwheat and buckwheat flour on the free list. The rates in the present law are 15 cents per bushel on buckwheat and on buckwheat flour 25 per cent ad The Dingley law provided for a duty of 15 cents per valorem. bushel on buckwheat and 20 per cent ad valorem on buckwheat The Wilson rates were 20 per cent ad valorem on both

buckwheat and buckwheat flour.

I offer this amendment, Mr. President, because I believe it will be for the benefit of the Eastern States. As I have said, buckwheat is not produced in the West to any great extent, but it is largely produced in the Eastern States, such as I have just named, Pennsylvania alone producing more than 7,000,000 bushels. I take it that the farmers of the great State of Pennsylvania would prefer to have a duty of 15 cents per bushel on their buckwheat rather than to have it placed on the

ree list. For that reason I have offered the amendment.
The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from North Dakota [Mr.

GRONNA].

Mr. CATRON. I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence, I withhold my vote. If permitted to vote, I should vote "nay."

Mr. JAMES (when his name was called). I transfer my pair with the Senator from Massachusetts [Mr. Weeks] to the Senator from Louisiana [Mr. RANSDELL] and will vote. I vote " nay."

Mr. KERN (when his name was called). I transfer my pair with the Senator from Kentucky [Mr. Bradley] to the Senator from Maryland [Mr. SMITH] and will vote. I vote "nay."

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. Colt] to the junior Senator from Arizona [Mr. SMITH] and vote. I vote "nav."

Mr. THOMAS (when his name was called). I transfer my pair with the Senator from New York [Mr. Root] to the Senator from Oklahoma [Mr. Gore] and will vote. I vote " nay.

Mr. WARREN (when his name was called). Transferring my pair with the Senator from Florida [Mr. Fletcher] to the Senator from Maine [Mr. Burleigh], I vote "yea."

YEAS-31.

Brady Brandegee Bristow Burton Catron Clapp Lodge McLean Nelson Norris Page Penrose Cummins Dillingham Gallinger Gronna Jackson Jones Clapp Clark, Wyo. Perkins Kenyon

La Follette Poindexter Sherman Smoot Sterling Thornton Townsend Warren

	NA	YS-39.	
Ashurst Bacon Bryan Chilton Hitchcock Hollis Hughes James Johnson Kern	Lane Lewis Martin, Va. Martine, N. J. Myers O'Gorman Overman Owen Pittman	Pomerene Reed Robinson Saulsbury Shafroth Sheppard Shields Shively Simmons Smith, Ga.	Smith, S. C. Stone Swanson Thomas Thompson Tillman Vardaman Walsh Williams
	NOT V	OTING-25.	
Bankhead Bradley Burleigh Chamberlain Clarke, Ark. Colt Culberson	du Pont Fall Fletcher Goff Gore Lippitt McCumber	Newlands Oliver Ransdell Root Smith, Ariz. Smith, Md. Smith, Mich.	Stephenson Sutherland Weeks Works

So Mr. Gronna's amendment was rejected.

Mr. GRONNA. Mr. President, before we proceed to paragraph 195 I wish to offer another amendment.

The VICE PRESIDENT. The Senator from North Dakota offers an amendment, which will be stated.

The Secretary. On page 56, after line 5, it is proposed to insert a new paragraph, as follows:

1941. Broom corn, \$3 per ton.

Mr. GRONNA. Mr. President, Canada, I am free to admit, has no tariff on broom corn. The rate under the present law is \$3 a ton. Under the Dingley law there was no duty on broom corn. The imports for 1912 were 1,341 tons, valued at \$157,969; and we collected from it a revenue of \$4,024. exported in 1912 3,320 tons, valued at \$461,110.

These figures show, Mr. President, that broom corn is a growing industry in this country. The production in 1909 was 78,959,958 pounds, valued at \$5,134,434. The States producing broom corn are California, which produced, in 1909, 614,250 pounds; Colorado, which produced 1,187,791 pounds; Illinois, which produced 19,309,425 pounds; Kansas, 8,768,853 pounds; Missouri, 1,774,536 pounds; New Mexico, 644,892 pounds; Oklabora, 42,741,795 pounds; and Toyas, 2,368,490 pounds homa, 42,741,725 pounds; and Texas, 2,368,490 pounds.

Mr. President, I believe there should be a duty on broom corn. It is not a basic necessity, and I can see no reason why there should not be a duty on it, because, I take it that it is only

basic necessities that must suffer in this bill.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from North Dakota [Mr.

The amendment was rejected.

The reading of the bill was resumed, and the Secretary read paragraph 195, on page 56, as follows:

195. Macaroni, vermicelli, and all similar preparations, 1 cent per

Mr. GRONNA. I offer an amendment, which I send to the

The VICE PRESIDENT. The amendment will be stated.

The Secretary. On page 56, after line 7, it is proposed to

 $195 \frac{1}{6}.$ Corn or maize, 5 cents per bushel of 56 pounds; corn meal, 30 cents per 100 pounds.

Mr. GRONNA. Mr. President, I do not wish to take up the time of the Senate to give it the figures on this subject.

Mr. STONE. Can the Senator tell us how much corn meal is produced in the United States now?

Mr. GRONNA. I can tell the Senator how much corn was produced in the State of Missouri and other States. I ask unanimous consent to have printed in the RECORD, to save time, the tables relating to corn, which I send to the desk.

The VICE PRESIDENT. Is there any objection? The Chair

hears none.

The matter referred to is as follows:

CORN AND CORN MEAL,

Canadian rates: Corn for distillation, 7½ cents per bushel; corn not for distillation, free; corn meal, 25 cents per barrel.

Payne rates: Corn, 15 cents per bushel; corn meal, 40 cents per 100

pounds.
Dingley rates: Corn, 15 cents per bushel of 56 pounds; corn meal, 20 cents per bushel of 48 pounds.
Wilson rates: Twenty per cent ad valorem on both corn and corn

meal.

Imports, 1912: Corn, 53,390 bushels; value, \$47,858; revenue, \$8,008.38. Corn meal, 6,718 pounds; value, \$216.67; revenue, \$24.91.

Exports, 1912: Corn, 40,038.795 bushels; value, \$28,957,450. Corn meal, 439,624 barrels; value, \$1,519.792.

Mr. WALSH. Mr. President, before a vote is taken upon the imposition of a duty upon corn, the exportation of which is greater than that of any other cereal produced in this country, will the distinguished Senator from North Dakota give us in brief the reasons why he thinks a duty ought to be put upon it?

Mr. GRONNA. The same reasons apply to corn that I have given for these other products. I know that we are raising a great deal of corn. The figures I have presented show that.

Mr. STONE. Will the Senator speak louder.

Mr. GRONNA. I show in this table the production in all the commercial countries of the world, and I show the production of corn in the different States of the United States. is a reason for a duty on corn and corn meal.

Mr. WALSH. I should like to inquire of the Senator whether he thinks the duty on corn increases the price of that cereal?

Mr. GRONNA. Mr. President, I have not so stated, because

we have produced more corn than we have consumed. We do not know that those conditions are going to continue. There are other countries that produce a great deal of corn. I suppose the Democrats hope this bill will be on the statute books for a long time, and I thought it was only fair to treat this product the same as other agricultural products.

Mr. SHIVELY. Before the vote is taken I only want to observe that according to the returns of the Government our ratio of exports of corn to the imports of corn for the fiscal year ending June 30, 1913, was as 54.33 bushels to 1 bushel, and in value as \$58.37 to \$1.

Mr. WILLIAMS. And the total is twenty-eight million six

hundred and some odd thousand dollars.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from North Dakota.

The amendment was rejected.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, in paragraph 196, page 56, line 8, after the word "Oats," to strike out "10" and insert "6"; and, in line 9, after the word pounds," to insert "and 33 cents per hundredweight on oatmeal and rolled oats, and 9 cents per hundredweight on oat ' so as to make the paragraph read:

196. Oats, 6 cents per bushel of 32 pounds, and 33 cents per hundredweight on oatmeal and rolled oats, and 9 cents per hundredweight on oat feed.

Mr. SMOOT. Mr. President, I should like to ask the Senator having this schedule of the bill in charge whether it is the intention to have a duty of 33 cents per hundred pounds on oatmeal and rolled oats, and 9 cents per hundred pounds on oat feed? Is that the intention of the committee?

Mr. SHIVELY. Precisely what the bill says

Mr. SMOOT. I asked the Senator having this schedule of the bill in charge.

Mr. WILLIAMS. Does the Senator ask why it was that we

worded the bill as we did?

Mr. SMOOT. No; whether it was the intention of the committee to provide a rate of duty of 33 cents per hundred pounds on oatmeal and rolled oats?

Mr. WILLIAMS. Per hundredweight, 112 pounds. Mr. SMOOT. That is what I wanted to find out. The Senator from Indiana says that it means exactly what it says, but it does not say that.

Mr. WILLIAMS. It does say per hundredweight. Mr. SMOOT. Yes; and a hundredweight, Mr. President,

Mr. WILLIAMS. A hundredweight is 112 pounds.

Mr. SMOOT (continuing). One hundred and twelve pounds instead of 100 pounds. It is introducing into the bill the term "hundredweight" instead of "pounds," as used in all the other paragraphs. So we are not placing a duty of 33 cents per hundred pounds on oatmeal and rolled oats.

The VICE PRESIDENT. The question is on agreeing to the

committee amendment.

The amendment was agreed to.

Mr. BRISTOW. I should like to inquire whether it was the intention to place upon oats a duty of 6 cents per bushel weighing 32 pounds, being equivalent to something over 18 cents per hundred pounds, while the duty on the feed is 9 cents per hundredweight? That is, the duty on the oats is twice as much as on the oat feed. Was that the intention, or is it a mistake? Was it intended to have the duty on oat feed 9 cents per bushel, an increase of 3 cents per bushel over the 6 cents for the oats in the unmanufactured state?

As it is now, the fault that was in the original bill is apparent here. The duty on oats is 6 cents per bushel of 32 pounds, which is more than 18 cents a hundred, while it is 9 cents per hundredweight on oat feed, which would be half of the duty on the oats before they are ground. Is not that an error?

Mr. WILLIAMS. Mr. President, when we put a duty upon oats our idea was to impose a duty which would be in keeping with it upon oatmeal and rolled oats and oat feed. The people who are in the milling business thought this was the corresponding figure to 6 cents per bushel on oats, to wit: 33 cents per hundredweight on oatmeal and rolled oats, and 9 cents per hundredweight on oat feed. It proceeded from the calculation of how much oatmeal or relled oats could be made out of a bushel of oats, and how much oat feed would be left. It may not be strictly correct, but that was the purpose of the amend-Three or four of the men who ought to possess technical knowledge, being engaged in the business, suggested that the figures were approximately correct.

Mr. BRISTOW. That may be true so far as oatmeal and rolled oats are concerned. That is 33 cents per hundred.

Mr. WILLIAMS. Per hundredweight.
Mr. BRISTOW. Per hundredweight; while on the oats it is a little over 18 cents per hundredweight. But when you get to oat feed, which I suppose is the ground oats for animal food, it is only 9 cents per hundredweight, while if the oats were not ground it would be over 18 cents per hundredweight.

Mr. WILLIAMS. Is the Senator asking me why we stated the duty at so much per bushel on the one and so much per

hundredweight on the other?

Mr. BRISTOW. The duty on the raw material would be over 18 cents under this language, while the corresponding duty on the manufactured product would be only 9 cents.

Mr. WILLIAMS. That is not a manufactured product. Mr. BRISTOW. Oat feed?

Mr. WILLIAMS. No; it is a by-product. Mr. BRISTOW. What is it? Mr. WILLIAMS. It is the stuff that was called "hulls" in the old law. It was suggested to me that if instead of using that language we used the words "oat feed" that would include the hulls and broken oats and anything else that was a by-product as we went along. What is the point sought to be made by the Senator?

Mr. BRISTOW. That may explain it. I wondered why you were putting so much less duty on oat feed, which I supposed was the ground oats that is fed to horses and live stock.

Mr. WILLIAMS. Oh, no; the Senator is mistaken about that. I did not understand him at first.

Mr. GRONNA. I offer an amendment to this paragraph, which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The Secretary. It is proposed to amend paragraph 196, page 56, by striking out all after the numerals and inserting:

Oats, 10 cents per bushel of 32 pounds, and 45 cents per hundred-eight on oatmeal and rolled oats, and 15 cents per hundredweight on

Mr. GRONNA. The duty of 6 cents per bushel on oats is, I believe, too low. I believe we should have at least as high a duty on American oats as there is on Canadian oats. The Canadian rate is 10 cents per bushel on oats, and 60 cents per hundred pounds on oatmeal and rolled oats. The present American rate is 15 cents per bushel, 1 cent per pound on oatmeal and rolled oats, and 10 cents per hundred pounds on oat hulls.

I wish to state to the Senator from Mississippi [Mr. WILLIAMS], with all due respect to him, that oat feed and oat hulls are two separate and distinct articles. Oat feed is an article that may be the by-product of oats, it may be the rough screenings from oats, but it is oats, just the same, or it is grain. The article known as oat hulls is composed of the outside hull of the kernel of the oats. I can state as a matter of fact that oat hulls is not the same as oat feed.

Mr. WILLIAMS. Very well. Does the Senator offer an

amendment?

Mr. GRONNA. I will certainly offer another amendment, when we get through with this one, providing that the language used shall be "oat hulls," because if the Senator wishes to protect oat hulls the phraseology should be changed. If, however, the Senator wishes to protect oat feed, the rate ought to be increased, as the Senator from Kansas [Mr. Bristow] has stated. A bushel of oats is 32 pounds, and 3 bushels of oats is 96 pounds. The rate proposed in the bill, 6 cents per bushel, will amount to more than 19 cents per hundred pounds.

So I say to the Senator that he is mistaken in assuming that oat feed is the same as oat hulls; and in order to make the duty a compensatory one it ought to be at least three times as

much as the rate on oats.

Mr. WILLIAMS. Has the Senator offered an amendment? Mr. GRONNA. My amendment is for a duty of 10 cents per bushel on oats, and I take it the Senator will not approve of that. The Wilson rate was 20 per cent ad valorem on oats, and 15 per cent ad valorem on oatmeal, and 10 per cent on oat hulls.

Why anybody wants a duty on oat hulls, I do not know. cording to the statements of oatmeal manufacturers, 1 bushel of oats will make about 18 pounds of oatmeal. We imported in 1912, 2,721,038 bushels of oats, of the value of \$1,053,609, which brought us a revenue of \$408,155.75. We imported oatmeal and rolled oats to the amount of 676,773 pounds, of the value of \$40,400, and we received from that source a revenue of bushels, of the value of \$1,135,635.

Mr. SHIVELY. Will the Senator restate his amendment?

The VICE PRESIDENT. The Secretary will again state the

The Secretary. It is proposed to strike out all of paragraph 196 as amended by the committee, and in lieu thereof to in-

196. Oats, 10 cents per bushel of 32 pounds, and 45 cents per hundredweight on oatmeal and rolled oats, and 15 cents per hundredweight on oat feed.

Mr. THORNTON. Mr. President, I should like to ask the Senator from North Dakota if he would not be willing to divide his amendment, so that we could vote separately on the proposition to make the duty on oats 10 cents per bushel without voting for the other duties which he proposes?

Mr. GRONNA. Yes; I shall be very glad to divide it. Mr. THORNTON. I say that because I wish to vote fcr a duty of 10 cents a bushel on oats, but I do not want to vote for

increasing the duty on the other articles named.

Mr. GRONNA. I will say to the Senater from Louisiana that I shall be very glad to agree to that division.

I do not wish to delay the Senate any longer on this paragraph; but I ask unanimous consent to have printed in connection with my remarks a table showing the production of oats in all the countries of the world for which statistics are available, which shows it to be about 4,500,000,000 bushels, and also gives the production of the different States in the United States.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and permission is granted.

The matter referred to is as follows:

Canadian rates: 10 cents per bushel on oats; 60 cents per hundred pounds on oatmeal and rolled oats.

Payne rates: 15 cents per bushel on oats; 1 cent per pound on oatmeal and rolled oats; 10 cents per hundred pounds on oat hulls.

Dingley rates, same as Payne rates.

Wilson rates: 20 per cent ad valorem on oats; 15 per cent ad valorem on oatmeal; 10 per cent on oat hulls.

According to statements of oatmeal manufacturers, 1 bushel of oats will make about 18 pounds of oatmeal.

Imports, 1912: Oats, 2,721.038 bushels; value, \$1,053,609; revenue, \$408,155.75. Oatmeal and rolled oats, 676,773 pounds; value, \$40,400; revenue, \$6.767.73. Oat hulls, 47,457,700 pounds; value, \$343,834; revenue, \$47,457.57.

Exports, 1912: 2,171,503 bushels; value, \$1,135,635.

Production of oats in 1912. Bushels.

Production of oats in 1912.	Bushels.
In all countries for which statistics are available	4, 585, 231, 000
United States	1, 418, 337, 000
Canada	361, 733, 000

Montana	22, 848, 000

Mr. WALSH. Before the Senator from North Dakota takes his seat I wish he would have the kindness to inform the Senate upon what basis he arrives at the conclusion that there should be a duty of 10 cents a bushel upon oats, and whether in his judgment that marks the difference in the cost of production in this country and abroad, and if it is greater than that, whether he establishes one rule applicable to agricultural products and another in regard to manufactured products.

Mr. JAMES and others. Let us vote.
The VICE PRESIDENT. The question is on the amendment offered by the Senator from North Dakota.

The amendment was rejected.

Mr. NORRIS. I should like to make an inquiry of the Senator from North Dakota. He promised the Senator from Louisiana that he would ask for a division.

Mr. GRONNA. I understood that the Senator from Louisiana would ask for a division on the question.

The VICE PRESIDENT. The Chair rules that the proposi-tion has once been voted upon by the Senate and a negative vote would have carried the proposition suggested by the Senator from North Dakota. It has been voted on once, and the Chair insists that the Senate can not keep on voting upon the same proposition. The reading will proceed.

Paragraph 197. Rice-The SECRETARY.

Mr. GALLINGER. Mr. President, I will call the attention of Senators on the other side to the fact that we have been sitting here for seven long and very tedious hours to-day.

Mr. SIMMONS. The bill can be laid aside.

EXECUTIVE SESSION.

Mr. BACON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After eight minutes spent in executive session the doors were reopened, and (at 6 o'clock and 10 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, August 13, 1913, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate August 12, 1913. POSTMASTERS.

ALABAMA.

W. P. Tartt to be postmaster at Livingston, Ala., in place of Emily R. Lawrence. Incumbent's commission expired February 27, 1912.

ARIZONA.

J. S. Campbell to be postmaster at Williams, Ariz., in place of F. W. Smith, removed.

W. O. Bartlett to be postmaster at Hamburg, Ark., in place of Benjamin W. Allen. Incumbent's commission expired Jan-

uary 28, 1913.

W. B. Kyle to be postmaster at McCrory, Ark., in place of C. B. Fakes. Incumbent's commission expired August 5, 1913.

T. O. Poole to be postmaster at De Queen, Ark., in place of Frank L. Mallory, resigned.

CALIFORNIA.

J. B. Laufman to be postmaster at Santa Paula, Cal., in place of Clarence Beckley. Incumbent's commission expired April 23, 1913

Frank Zimmerman to be postmaster at Monrovia, Cal., in place of C. H. Anson. Incumbent's commission expired January 20, 1913.

COLORADO.

Joseph W. Beery to be postmaster at Saguache, Colo., in place of John H. Williams, resigned.

A. J. Horan to be postmaster at Crested Butte, Colo., in place of David Sloan, resigned.

Henry Clay Monson, jr., to be postmaster at Steamboat Springs, Colo., in place of C. E. Baer. Incumbent's commission expired August 4, 1913.

Michael F. O'Day to be postmaster at Lafayette, Colo., in place of J. E. Simpson. Incumbent's commission expired August

CONNECTICUT.

Thomas J. Sullivan to be postmaster at Baltic, Conn., in place of Louis J. Fontaine, removed.

Sanford P. Darby to be postmaster at Vidalia, Ga., in place of Julius Peacock. Incumbent's commission expired February. 27, 1912.

Vivian L. Stanley to be postmaster at Dublin, Ga., in place of George B. Grier. Incumbent's commission expired February 1, 1913.

IDAHO.

P. C. O'Malley to be postmaster at Pocatello, Idaho, in place of Francis Ball, removed.

ILLINOIS.

James E. Brady to be postmaster at Cullom, Ill., in place of John .W. White, resigned.

M. D. Brubaker to be postmaster at Iuka, Ill., in place of N. S. Songer. Incumbent's commission expired May 13, 1913. James Carr to be postmaster at Scales Mound, Ill. Office

became presidential January 1, 1913.

B. R. Croxen to be postmaster at Peotone, Ill., in place of C. Adams. Incumbent's commission expired February 9,

Virgil J. Swarm to be postmaster at St. Elmo, Ill., in place of I. W. Arnold. Incumbent's commission expired January 11, 1913.

William M. Dooley to be postmaster at Highland Park, Ill., in place of A. W. Fletcher, resigned.

B. F. Moberley to be postmaster at Windsor, Ill., in place of M. M. Rodenberger, resigned.

Frank Stone to be postmaster at Shelbyville, Ill., in place of Harry M. Martin, resigned.

John W. Troy to be postmaster at Arthur, Ill., in place of C. H. Dehart. Incumbent's commission expired July 31, 1913.

INDIANA.

Lloyd W. Dunlap to be postmaster at Mentone, Ind. Office became presidential July 1, 1913.

John E. Dargan to be postmaster at Riceville, Iowa, in place of P. M. Mosher. Incumbent's commission expired January 26, 1913.

Owen Hourihan to be postmaster at Salem, Iowa. Office became presidential January 1, 1913.

J. G. Winter to be postmaster at Sloux Center, Iowa, in place of I. G. Winter, to correct name.

KANSAS.

Harvey C. Peterson to be postmaster at Eskridge, Kans., in place of Mark Palmer, resigned.

KENTUCKY.

P. C. Mayhugh to be postmaster at Eddyville, Ky., in place of Terry T. Hanberry, resigned.

E. T. Schmitt to be postmaster at Louisville, Ky., in place of Robert E. Woods, resigned.

MASSACHUSETTS.

Joseph E. Barnett to be postmaster at Easthampton, Mass., in place of L. W. Dower. Incumbent's commission expired February 11, 1913.

MICHIGAN.

E. T. Belding to be postmaster at Mancelona, Mich., in place

of C. L. Bailey, resigned.

Cornelius Cronin to be postmaster at Kalkaska, Mich., in place of E. B. Babcock, removed.

Michael W. Gibbons to be postmaster at Roscommon, Mich.,

in place of J. Burt Kiely, resigned.

George W. Parker to be postmaster at Le Roy, Mich. Office became presidential January 1, 1912.

MINNESOTA.

Milton L. Fredine to be postmaster at Maynard, Minn. Office

became presidential January 1, 1912. W. L. McGonagle to be postmaster at Royalton, Minn., in place of A. E. Joslin. Incumbent's commission expired Febru-

ary 23, 1911. MISSISSIPPI.

J. H. Robb to be postmaster at Greenville, Miss., in place of Louis Waldauer, removed.

MISSOURI.

C. B. Ellis to be postmaster at Vandalia, Mo., in place of Melissa Conway, resigned.

J. S. Walker to be postmaster at Marceline, Mo., in place of F. M. Wolfe. Incumbent's commission expired August 5, 1913.

NEBRASKA.

Andrew B. Andersen to be postmaster at Florence, Nebr. Office became presidential January 1, 1913.

J. E. Scott to be postmaster at Osmond, Nebr., in place of Roy

E. Thomas, resigned.

Orren Slote to be postmaster at Litchfield, Nebr., in place of W. Gibson. Incumbent's commission expired January 12,

Rainard B. Wahlquist to be postmaster at Hastings, Nebr., in place of Jacob Fisher. Incumbent's commission expired May 22, 1910.

NEW JERSEY.

Thomas C. Birtwhistle to be postmaster at Englewood, N. J., in place of C. D. Stainton. Incumbent's commission expired March 11, 1912.

Walter F. Clayton to be postmaster at Ocean Grove, N. J. in place of G. F. Rainear. Incumbent's commission expired July 23, 1913.

Lemuel H. Mathews to be postmaster at Barnegat, N. J., in place of R. G. Collins. Incumbent's commission expired July 23, 1913.

NEW MEXICO.

Walter P. Wilkinson to be postmaster at Santa Rita, N. Mex., in place of L. H. Bartlett, declined.

NEW YORK.

Anthony J. Beck to be postmaster at St. James, N. Y. Office became presidential July 1, 1913.

Clarence Fox to be postmaster at Cobleskill, N. Y., in place

of Le Roy Becker, removed.

Charles H. Huntting to be postmaster at Smithtown Branch, N. Y., in place of H. M. Brush. Incumbent's commission expired August 4, 1913.

Cornelius T. Seaman to be postmaster at Hewlett, N. Y. Office became presidential July 1, 1913.

NORTH CAROLINA.

R. P. Gardner to be postmaster at Mount Holly, N. C. Office became presidential January 1, 1912.

George W. Waters to be postmaster at Plymouth, N. C., in place of Ida A. Phelps. Incumbent's commission expired February 12, 1912.

NORTH DAKOTA.

J. W. Stambaugh to be postmaster at Carrington, N. Dak., in place of E. T. Halaas, removed.

OHIO.

Edwin E. Curran to be postmaster at New Straitsville, Ohio, in place of W. C. Hughes, resigned.

O. D. Kemper to be postmaster at Jefferson, Ohio, in place of H. J. Warner. Incumbent's commission expired August 4, 1913. James P. Stewart to be postmaster at Niles, Ohio, in place of W. R. Thomas. Incumbent's commission expired July 23, 1913.

OKLAHOMA.

J. L. Avey to be postmaster at Lindsay, Okla., in place of Robert A. Diggs. Incumbent's commission expired January 14,

PENNSYLVANIA.

James H. Alcorn to be postmaster at Waterford, Pa., in place of Frank A. Howe. Incumbent's commission expired January 13, 1913,

Harry W. Fee to be postmaster at Indiana, Pa., in place of James C. McGregor. Incumbent's commission expired March 29, 1913.

Albert H. Fritz to be postmaster at Quarryville, Pa., in place of Hugh W. Gilbert. Incumbent's commission expired February 9, 1913.

William H. Gruber to be postmaster at Palmerton, Pa., place of Walter M. Bray. Incumbent's commission expired February 20, 1913.

C. Steck Hill to be postmaster at Hughesville, Pa., in place of Cameron Boak. Incumbent's commission expired July 23,

Rush B. Miller to be postmaster at North Girard, Pa., in

place of Clayton F. Miller, resigned.

John Orth to be postmaster at Marietta, Pa., in place of C. Penrose Hipple. Incumbent's commission expired June 22,

Clayland M. Touchstone to be postmaster at Moores, Pa., in place of John C. Tullock. Incumbent's commission expired April 19, 1913.

Robert E. Urell to be postmaster at Mansfield, Pa., in place of Thomas H. Bailey, removed.

SOUTH DAKOTA.

John Debilzan to be postmaster at Andover, S. Dak., in place of Charles L. Smith, resigned.

Anton Fergen to be postmaster at Parkston, S. Dak., in place of Amos H. Davis. Incumbent's commission expired August 4, 1913.

Bert T. Reeve to be postmaster at Howard, S. Dak., in place of Boyd Wales. Incumbent's commission expired January 26, 1913.

G. L. Kirk to be postmaster at Platte, S. Dak., in place of L. T. Hoahlin, removed.

TENNESSEE.

W. F. Holland to be postmaster at Kingston, Tenn., in place of W. F. Littleton. Incumbent's commission expired July 3,

Emily Taylor St. John to be postmaster at Harriman, Tenn. in place of E. T. McKinney. Incumbent's commission expired July 3, 1913.

L. V. Holbert to be postmaster at Bremond, Tex., in place of H. Schmidt. - Incumbent's commission expired August 4, 1913. Edwin Hall Homan to be postmaster at Fort Bliss, Tex. Office became presidential January 1, 1913.

John W. Robbins to be postmaster at Clyde, Tex., in place of

Dave P. Rowland, resigned.

Charles M. Wallace to be postmaster at Llano, Tex., in place of Charles F. Darnall. Incumbent's commission expired January 14, 1913. VIRGINIA.

W. R. Rogers to be postmaster at Crewe, Va., in place of Richard B. Wilson. Incumbent's commission expired March 2, 1913.

WEST VIRGINIA.

S. M. Lambert to be postmaster at Berwind, W. Va., in place of C. A. Bailey, resigned.

Jacob L. Price to be postmaster at Smithfield, W. Va., in place of Lancey W. Dragoo. Incumbent's commission expired June 9, 1913.

WISCONSIN.

Henry W. Graser to be postmaster at Menomonee Falls, Wis., in place of C. F. Henrizi. Incumbent's commission expired February 22, 1910.

Franz Markus to be postmaster at Medford, Wis., in place of John W. Benn. Incumbent's commission expired January 26, 1913.

Frank Samson to be postmaster at Cameron, Wis., in place of C. E. Bartlett. Incumbent's commission expired January 12,

CONFIRMATIONS.

Executive nominations confirmed by the Scnate August 12, 1913. MINISTER.

James M. Sullivan to be envoy extraordinary and minister plenipotentiary to the Dominican Republic.

SECRETARIES OF LEGATIONS.

H. F. Arthur Schoenfeld to be secretary of the legation to Paraguay and Uruguay.

Richard E. Pennoyer to be secretary of the legation at Lima,

COLLECTOR OF CUSTOMS.

David C. Barrow, jr., to be collector of customs for the district of Georgia.

POSTMASTERS. MASSACHUSETTS.

Eben T. Hall, West Upton.

OHIO.

Louis C. Brown, Warren. George D. Dunathan, Findlay.

OREGON.

W. A. Richardson, Heppner.

HOUSE OF REPRESENTATIVES.

Tuesday, August 12, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

O Thou great Spirit, whose infinity touches us through the senses and thrills the heart with admiration and praise, bring us, we beseech Thee, into harmony with the eternal verities through a supreme love for Thee and our fellow men, for life is love and love is life. What shall I do to inherit eternal life? "Thou shalt love the Lord thy God with all thy heart and with all thy soul and with all thy strength and with all thy mind and thy neighbor as thyself."

In the beauty of the illies Christ was born across the sea, With a glory in His bosom that transfigures you and me.

Make us conscious of that transfiguration, O God our Father,

by living the Christ Spirit. Amen.

The Journal of the proceedings of Friday, August 8, was read and approved.

ELECTION OF COMMITTEE MEMBERS.

Mr. UNDERWOOD. Mr. Speaker, I move the election of the following gentlemen, whose names I send to the Clerk's desk,

to fill vacancies on committees.

The SPEAKER. The gentleman from Alabama moves the election of Members to fill vacancies on committees, and the Clerk will read.

The Clerk read as follows:

PERL D. DECKER, of Missouri, to be a member of the Committee on Interstate and Foreign Commerce, vice CLEMENT C. DICKINSON, of Missouri, resigned.

PETER G. TEN EYCK, of New York, to be a member of the Committee on Accounts, to fill vacancy now existing.

ALLAN B. WALSH, of New Jersey, to be a member of the Committee on Expenditures in the Department of Commerce, vice Edward W. Pou, of North Carolina, resigned.

Mr. UNDERWOOD. Mr. Speaker, I make these nominations at the instance of the Democratic caucus, and I now move the previous question.

The gentleman from Alabama moves the The SPEAKER. previous question.

The previous question was ordered.

The Members so nominated were elected.

SWEARING IN OF A MEMBER.

Mr. KINKEAD of New Jersey. Mr. Speaker, Mr. Archibald C. HART, a newly elected Member from the sixth district of New Jersey, is present, and would like to take the oath of office. [Applause.]

Mr. MANN. Mr. Speaker, the credentials have not been presented before the House.

The SPEAKER. The Chair is informed that there are no credentials here.

Mr. KINKEAD of New Jersey. Mr. Speaker, I would like to say to the gentleman from Illinois that there is no question about the election.

Mr. MANN. The gentleman from New Jersey can ask unanimous consent

Mr. KINKEAD of New Jersey. Mr. Speaker, I ask unanimous consent that Mr. Harr may be sworn in, notwithstanding his

credentials are not present.

The SPEAKER. The gentleman from New Jersey asks unanimous consent that Mr. HART may be sworn in, notwithstanding the credentials have not arrived. Is there objection?

There was no objection.

The oath of office was then administered to Mr. HART by the Speaker.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed joint resolution of the following title, in which the concurrence of the House of Representatives was requested:

S. J. Res. 64. Joint resolution authorizing the President of the United States to accept, in the name of the United States,

a bust of William Pitt, Lord Chatham.

ENROLLED JOINT RESOLUTION SIGNED.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolution of the following title, when the Speaker signed the

H. J. Res. 118. Joint resolution making appropriations for certain expenses incident to the first session of the Sixty-third Congress.

SENATE RESOLUTIONS REFERRED.

Under clause 2, Rule XXIV, Senate resolutions of the following titles were taken from the Speaker's table and referred to the appropriate committees as indicated below:

S. J. Res. 64. Joint resolution authorizing the President of the United States to accept, in the name of the United States, a bust of William Pitt, Lord Chatham; to the Committee on the Li-

brary.
S. Con. Res. 4. Concurrent resolution providing for the acceptance by the United States of the statue of Zachariah Chandler; to the Committee on the Library.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

A message, in writing, from the President of the United States was communicated to the House of Representatives by Mr. Latta, one of his secretaries, who also informed the House of Representatives that the President had approved and signed bill of the following title:

On August 11, 1913:

H. R. 6383. An act to amend section 19 of an act entitled "An act to increase the limit of cost of certain public buildings; to authorize the enlargement, extension, remodeling, or improvement of certain public buildings; to authorize the erection and completion of public buildings; to authorize the purchase of sites for public buildings, and for other purposes," approved March 4, 1913.

ENROLLED BILL PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States, for his approval, the following bill:

H. R. 6383. An act to amend section 19 of an act entitled "An act to increase the limit of cost of certain public buildings; to authorize the enlargement, extension, remodeling, or improvement of certain public buildings; to authorize the erection and completion of public buildings; to authorize the purchase of sites for public buildings, and for other purposes," approved March 4, 1913.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows: To Mr. Edwards of Georgia, for 10 days, on account of illness

in his family.

To Mr. McCox, indefinitely, for the purpose of attending the conference of the Interparliamentary Union at The Hague.

To Mr. SMITH of Maryland, for four days, beginning August 12, on account of important business.

To Mr. Stevens of Minnesota, for four weeks, on account of important business.

LEAVE TO PRINT.

Mr. TAGGART. Mr. Speaker, I ask unanimous consent to

have inserted in the Record a communication.

The SPEAKER. The gentleman from Kansas asks unanimous consent to extend his remarks in the Record by inserting

a communication. Is there objection?

Mr. FOSTER. Reserving the right to object, I would like to ask the gentleman if he intends to place it in the back part of the RECORD?

Mr. TAGGART. I can not say that I have any authority to select one part of the RECORD in place of another.

Mr. FOSTER. I think unless the gentleman agrees to that I shall object.

Mr. TAGGART. I am perfectly willing to have it placed in any part of the RECORD.

Mr. FOSTER. What is the nature of the communication?
Mr. TAGGART. I was about to state it. It is a communication from J. O. Flagg, a citizen of Kansas, who is thoroughly familiar with the Mexican situation, both from observation and experience in that country, and seems to be thoroughly in sympathy with the common people in Mexico. He is not a jingo and is not calling for war, but is presenting many facts that I think are of great value and which are very instructive.

Mr. ELDER. Mr. Speaker, I object.

The SPEAKER. The gentleman from Louisiana objects.

ADJOURNMENT UNTIL NEXT FRIDAY.

Mr. UNDERWOOD. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet on Fri-

The SPEAKER. The gentleman from Alabama asks unanimous consent that when the House adjourns to-day it adjourn to meet next Friday. Is there objection?

There was no objection.

Mr. UNDERWOOD. Mr. Speaker, I wish to say to the House that there is a Democratic caucus that will meet in this Hall this afternoon at 2 o'clock. I understand some gentlemen wish to make speeches this morning. I ask unanimous consent that when the hour of 1 o'clock and 45 minutes is reached the House shall stand adjourned.

The SPEAKER. The gentleman from Alabama asks unanimous consent that at 1 o'clock and 45 minutes p. m. the House

shall stand adjourned. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, may ask the gentleman whether it looks as if the currency bill is

likely to be reported to the House on Friday?

Mr. UNDERWOOD. Well, that is difficult to say. It is impossible to say how much debate there is likely to be in the caucus and I understand the gentleman from Virginia, who has the matter in charge, has no desire to cut off consideration of the bill in caucus. I do not think it is possible it could be reported before-certainly not before-Friday, and I think it is doubtful whether it can be reported by then.

Mr. MANN. Of course it could not be reported before Friday. If it should be reported Friday is the gentleman able to say when the House is likely to take it up for consideration?

Well, I have not consulted the gentle-Mr. UNDERWOOD. man from Virginia, but I presume if reported Friday or Saturday he will want to take it up Monday or Tuesday next, but I have not consulted with him and I do not know his wishes in

The SPEAKER. Is there objection to the request of the gentleman from Alabama? [After a pause.] The Chair hears

EXTENSION OF REMARKS.

Mr. J. I. NOLAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a circular letter signed by the 11 Members of the California delegation bearing upon the Hetch Hetchy bill now pending before the House. It is a very short letter.

The SPEAKER. The gentleman from California asks unanimous consent to extend his remarks in the RECORD by having printed a communication from the California delegation on the subject of the Hetch Hetchy bill. Is there objection?

Mr. FOSTER. Mr. Speaker, reserving the right to object, is it the intention of the gentleman to print it in the body of the proceedings or in the back of the RECORD, where these commu-Mr. J. I. NOLAN. I would like to have it in the RECORD.

Mr. FOSTER. Then I would have to object—

Mr. J. I. NOLAN. Let it go in the back of the RECORD; I will be satisfied.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. Speaker-Mr. MANN.

The SPEAKER. For what purpose does the gentleman rise? Mr. MANN. I desire to prefer a request for unanimous consent. On Friday my colleague, Mr. McKenzie, asked unanimous consent to extend his remarks in the Record by the insertion of a communication from Mr. Forgan in reference to bank-The gentleman from Arkansas [Mr. WINGO], ing and currency. under a misapprehension as to the contents of the article, objected, as I should have done had I been in his place with the have permission to extend his remarks in the Record in accordance with his request on Friday.

The SPEAKER. The gentleman from Illinois asks unanimous consent that his colleague have the privilege of extending his remarks in the RECORD according to the statement made by Mr. McKenzie at the previous meeting.

Mr. MURDOCK. Mr. Speaker, since the request was preferred by the gentleman from Illinois [Mr. McKenzie] I have

been given to understand that Mr. Forgan has issued a great many communications. Now, does the gentleman know whether that is true or not-communications dealing with this currency bill?

Mr. MANN. I do not know whether that is true or not. He issued one communication taking up the bill and giving consideration to it. That is the one the gentleman from Illinois now desires to have put in the RECORD. It will be inserted in the back of the Record, of course.

Mr. FOSTER. Mr. Speaker, reserving the right to object, I

would like to inquire if the Chair the other day, in referring to these insertions, intended that all these communications should go in the back of the RECORD? I desire to ask if that is the intention, so far as these papers to be printed are concerned?

Mr. BORLAND. Mr. Speaker—
The SPEAKER. For what purpose does the gentleman rise?
Mr. BORLAND. I rise for the purpose to reserve the right to object.

Mr. FOSTER. Mr. Speaker, just a moment, if the gentleman will indulge me. I desire to ask if it was the intention the other day when the Speaker said these communications, addresses, and so forth, would go into the back of the RECORD, if that is the future intention, so far as all these matters are concerned?

The SPEAKER. The Chair was informed at the close of the talk about that matter the other day that that was the way the

Public Printer arranged for now.

Mr. FOSTER. And that they would go through without any

Mr. MURDOCK. Now, Mr. Speaker, will the gentleman yield? If in the course of a man's remarks here on the floor he includes certain documents, of course in that event the documents are included in the speech proper, and they ought not to go to the rear of the RECORD.

Mr. FOSTER. And I think that is in line with what was

before the House at that particular time.

Mr. MURDOCK. Now, the inquiry of the gentleman from Illinois [Mr. Foster] is that where a request is made for an extension of remarks which are no part of a speech made here on the floor those remarks should go to the end of the RECORD. Mr. FOSTER. At the end of the RECORD.

Mr. MURDOCK. I have no objection to that.
Mr. BORLAND. Mr. Speaker, there is no doubt that this address of Mr. Forgan is by a man who knows something about financial matters, but if it contains anything of value there is no reason why the gentleman from Illinois [Mr. McKenzie], when he comes to the general debate on the currency bill, might not include it in his debate, or so much of it as is of value. There is no reason why the argument of Mr. Forgan on this subject should be printed in the Record any more than that of any other citizen of the United States who is not a Member of this House. I do not see any reason at all for making a request for unanimous consent to print an address of Mr. Forgan or any other citizen upon this public question to the exclusion of any other citizen whose ideas may be of equal value. I am going to object to this inclusion and to others without any particular personal bias against the man.

Mr. MANN. The gentleman did not object to other requests

already made this morning.

Mr. BORLAND. Which requests already made? Mr. MANN. Several of them.

Mr. BORLAND. The only request I have heard this morning was made by the gentleman from California [Mr. J. I. Nolan] for the insertion of a letter signed by every Member of the California delegation.

Mr. MANN. It was sent to every Member of the House. Mr. BORLAND. And a product of Members of this House.

Mr. MANN. That was not the only request, however.

The SPEAKER. Is there objection?

Mr. BORLAND. I object, Mr. Speaker.
Mr. WINGO. I hope the gentleman from Missouri [Mr. Borland] will withhold his objection for a moment, and I trust that he will not force it. The other day when I made the objection it was under a misapprehension of what the communication was. As I understand now, the article proposed to be put in the RECORD is a review of the pending currency bill same information. I now prefer the request that my colleague | by a man who knows something about the question. It is not lengthy. He confines himself to a discussion of principles and not, as I thought, to members of the committee. I trust the

gentleman will not object.

Mr. BORLAND. The gentleman from Arkansas [Mr. Wingo] misunderstands the object of my position. I know Mr. Forgan and of his importance in the financial world, and there is no question of the value of the article. The question is whether the Congressional Record should be filled at this time or at any other time by articles written by men who are not Members of this House and which are of no more value than the views of

As a general proposition, I think the gentleman is correct, and if he will agree to that general proposition, I

will be willing to do it.

Mr. BORLAND. It seems that this is a very good time at which to begin it.

Mr. WINGO. I do not think we should discriminate, however. Mr. BUCHANAN of Illinois. Will the gentleman yield?

Mr. FINLEY. Mr. Speaker—
The SPEAKER. For what purpose does the gentleman from South Carolina [Mr. FINLEY] rise?

Mr. FINLEY. I wish to ask the gentleman from Missouri

[Mr. Borland] to permit an interruption.

Mr. BORLAND. I yield. Mr. FINLEY. As I have understood the remarks pertaining to this address which it is proposed to insert, it occurs to me that it is a matter solely within the jurisdiction of the Joint Committee on Printing. I believe that it has been within the last few years that action was taken requiring speeches that were delayed—not handed to the printer the night of the day of delivery—to be printed in the back of the Record, and I take it that in a matter of this character, where the body of the article to be printed is no part of the speech, so to speak, it also falls within the jurisdiction of the Committee on Printing. I am not now a member of that committee, but I wish to give that as my opinion.

Mr. BORLAND. Now, Mr. Speaker, that question is exactly answered by what the gentleman from South Carolina [Mr. Finley] says. If this article is of sufficient value to be printed at public expense as a public document there is a way provided to make it a House document, printed at the public expense, with the consent of the Committee on Printing, and that is the way that these pamphlets, if they are of any value, ought to be printed. But they are not properly a part of the proceedings of this House which should be represented by the Congression

SIONAL RECORD.

Mr. FINLEY. Mr. Speaker, will the gentleman yield?
Mr. RAKER. Mr. Speaker—
The SPEAKER. To whom does the gentleman yield?
Mr. BORLAND. I yield to the gentleman from South Carolina [Mr. FINLEY]

Mr. FINLEY. I did not allude to the printing of public documents, but to the form of the RECORD.

Mr. BORLAND. Yes. Mr. FINLEY. Now, it will require action by the Joint Committee on Printing before the Public Printer would be com-

pelled to do this.

Mr. BORLAND. Mr. Speaker, I am pointing out the fact that the gentleman's remarks show that there is a way of preserving these documents in the form of public documents, if they are deemed by the committee and by the House to be of sufficient value to warrant that being done; but they are not properly a part of the Congressional Record.

Mr. MANN. Mr. Speaker, if the gentleman will yield, I would like to inquire what is that way?

Mr. BORLAND. By making it a document of the House, Mr. MANN. The Committee on Printing can not make it a document of the House. The gentleman is mistaken. There is no way of doing it except by the action of the House.

Mr. BORLAND. Yes; by the action of the House. Mr. MANN. Here is a proposition coming from the Committee on Banking and Currency, now before the House for consideration, and the gentleman referred to, Mr. Forgan, has views which we on our side desire to have printed, but because they do not happen to meet the views of the gentleman from Missouri [Mr. Borland] he objects.

Mr. BORLAND. No; I am not at all sure that they do not meet the views of "the gentleman from Missouri."

Mr. MANN. I am sure the gentleman would not agree with the views of the president of the First National Bank of Chi-

cago on any subject relating to banking and currency.

The SPEAKER. Is there objection?

Mr. BORLAND. Mr. Speaker, I object.

The SPEAKER. The gentleman from Missouri [Mr. Bor-LAND] objects

BUCHANAN of Illinois. Mr. Speaker, I would like to ask if the gentleman referred to has not already appeared before the Committee on Banking and Currency and there reviewed the question?

The SPEAKER. The gentleman from Missouri [Mr. Box-

LAND] has already objected.

THE GRAPE INDUSTRY OF CALIFORNIA.

Mr. RAKER. Mr. Speaker, I ask unanimous consent to have printed as a House document a brief and statement on the grape industry in California, which is vital to the interests of California. It was not considered in the tariff bill when it passed the House, and it is now upon the Senate bill, and involves an interest to the extent of over \$200,000,000 to our farmers and others interested in California; and to the end that each Member may fully understand the situation, I ask that this be printed as a House document. It will cover about 6 pages of the ordinary print of the RECORD.

The SPEAKER. The gentleman from California [Mr. RAKER]

asks unanimous consent to have printed as a House document a certain paper on the subject of the grape industry.

Mr. BORLAND. Mr. Speaker, reserving the right to object, has this matter been laid before the Joint Committee on Printing?

Mr. RAKER. It has not been. We could not get it before the Joint Committee on Printing. This relates to the tariff bill, which is up at this time. Mr. BORLAND. I object.

The SPEAKER. The gentleman from Missouri [Mr. Bor-LAND] objects.

PRICE OF UNITED STATES 2 PER CENT BONDS.

Mr. MONDELL. Mr. Speaker, I call up a privileged resolution, House resolution 219.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

House resolution 219.

Resolved, That the Secretary of the Treasury bc, and he is hereby, directed to transmit to the House of Representatives the facts in his possession on which he based the charge recently made by him that the recent decline in the price of United States 2 per cent bonds is due "almost wholly to what appears to be a campaign waged with every indication of concerted action on the part of a number of influential New York City banks to cause apprehension and uneasiness about these bonds in order to help them in their efforts to defeat the currency bill."

That the Secretary of the Treasury is also hereby directed to inform the House as to the facts on which he based his statement, as follows: "That nothing has occurred to impair the value of the 2 per cent bonds, but the amendment already adopted by the Banking and Currency Committee of the House enhances their intrinsic value," together with a copy of the amendment thus referred to by him.

Mr. UNDERWOOD. Mr. Speaker, I make the point of order that the gentleman can not call up this resolution for the reason that it is in the Committee on Ways and Means; and I make the second point of order that it is not a privileged resolution. It calls for an opinion and is not within the rule. But primarily the gentleman can not call it up, because it is not before the

House to be called up.

Mr. MONDELL. Mr. Speaker, this is a privileged resolution, and I made the usual request that the resolution be called I desire to make the motion that the Committee on Ways and Means be discharged from the further consideration of the

resolution and that it be considered at this time. Mr. UNDERWOOD. Mr. Speaker, I make the point of order against the motion that this is not a privileged resolution and not subject to the discharge of the committee.

The SPEAKER. What does the gentleman from Alabama

rest his point of order upon?

Mr. UNDERWOOD. Mr. Speaker, the resolution is based on a newspaper article printed by the Secretary of the Treasury. It does not purport to be an official action of the Secretary of the Treasury. It does not purport to relate to facts within the control of the Treasury Department. As a matter of fact, the basis of this investigation is the statement of an individual. It is true that individual happens to be the Secretary of the Treasury; but he has not made the statement as Secretary of the Treasury, and he has not made the statement that he has the facts as Secretary of the Treasury. It was entirely outside of his official duties that the statement was made, and this resolution calls practically for his opinion as an individual and not a statement of facts contained in the records of the Treasury Department.

Mr. MONDELL. Mr. Speaker, the rule on this subject is very clear, and the resolution clearly comes within the rule. I

call the attention of the Speaker to page 409 of the Rules of the House, paragraph 5:

All resolutions of inquiry addressed to the heads of executive de-

The SPEAKER. What is the gentleman reading from? Mr. MONDELL. I am reading from Rule XXII, paragraph 5 section 834, of the Manual:

All resolutions of inquiry addressed to the heads of executive de-ertments shall be reported to the House within one week after presen-

This resolution was introduced on the 1st day of August. More than a week has therefore elapsed since the resolution was presented. That it is privileged is beyond all question, in my opinion. It calls for facts. The rule says that resolutions of inquiry—that is, resolutions calling for facts—are privileged. It in no wise calls for an opinion. It is true that an opinion has been expressed. The gentleman from Alabama [Mr. Underwood] says it has been expressed by an individual, not in his official capacity. I do not care to discuss that question because I feel it is immaterial in any event. There has been a statement made. It happens that it has been made by the Secretary of the Treasury. No one denies the fact that the Secretary did issue a statement, some portions of which are set forth verbatim in the resolution. We now call for the facts on which the Secretary bases the statement. In other words, the Secretary has said that a certain condition exists and that a certain state of facts exists. What is that state of facts? What are the facts to which the Secretary refers?

Mr. BARTLETT. May I interrupt the gentleman to ask him a question?

Mr. MONDELL. I am glad to yield to the gentleman. Mr. BARTLETT. This statement to which the gentleman refers is supposed to have been made by the Secretary of the Treasury in some newspaper, not an official act of his com-municated to the House or to Congress?

Mr. MONDELL. I will say to my friend that it is not denied that the Secretary, as the Secretary, gave out the statement.

Mr. BARTLETT. An interview.

Mr. MONDELL. Well, it is called a statement. I assume that it was given out by the Secretary in typewritten form. No one has denied or questioned that it was given out.

Mr. BARTLETT. It is not a statement to Congress in his

official capacity, conveying information to the House or to the

Mr. MONDELL. The gentleman can not raise the question as to whether the facts are of any interest.

Mr. BARTLETT. I am not raising that question. Mr. MONDELL. That question might be raised with regard to a great variety of facts which we have the right to call for. I assume that the facts are of interest, else I should not have called for them in the resolution. I think the gentleman from Georgia will scarcely deny that the facts are of interest at any time-facts relating to the bonds and credit of the Government, facts relating to propositions of legislation. They are impor-tant at any time. They are peculiarly important at this time, when the House, on the recommendation of the President of the United States, acting in accordance with his official duty, is proceeding to the consideration of the very questions here involved.

The gentleman can not properly raise the question as to the value or relevancy of the facts, but if he does raise that question, it is easily met by the statement that no one will attempt to controvert that these facts are of importance at any time to the Congress, and they are of peculiar and paramount and commanding importance at this stage of the legislative proceedings.

Mr. MURDOCK. Will the gentleman yield? Does not the

gentleman think that if, in his resolution of inquiry to the Secretary of the Treasury, he had asked whether the Secretary had given out such an interview, that that would have been a privileged matter?

Mr. MONDELL. I think beyond question it would. Mr. MURDOCK. If the gentleman had asked the Secretary of the Treasury the simple question whether 2 percents had declined, that would have been privileged, and it seems to me that when the gentleman merely asks for the facts upon which the utterance is made, that is privileged.

Mr. MONDELL. There is no question about it, and I thank the gentleman for illuminating the matter in that way.

Mr. TOWNER. Will the gentleman yield?

Mr. MONDELL. Certainly.

Mr. TOWNER. Would it make any difference whether, if this account was what occurred, if it was the statement of the Secretary of the Treasury himself, or was the statement of another and third person with regard to facts which were within the knowledge of the Secretary of the Treasury as to your right to have this inquiry prosecuted?

Mr. MONDELL. It would have made no difference at all; that is clear and patent to everybody. No matter if some one else had made the statement of facts within the knowledge of the Secretary. There can be no question, however, as to these facts being in the knowledge of the Secretary, at least, that they should have been within the knowledge of the Secretary before he made the statement.

Mr. Speaker, Speakers have been inclined to rule liberally in regard to the privilege of the House in asking for information. A narrow construction of the rule is certain to place the House in a position where it will be denied facts of importance, facts necessary in its consideration of public questions, and I feel confident that the present Speaker will not give such a narrow construction to the rule as is suggested by the gentleman from Alabama.

Mr. MANN. Mr. Speaker, a resolution, in order to be privileged, must be a resolution of inquiry asking for facts. It has been frequently held, as the Speaker well knows, that any resolution asking for information, is a privileged resolu-A resolution asking for an opinion is not a privileged resolution, although it is quite common for department officials to give their opinion when a resolution asking for facts is addressed to them.

Now, what does this resolution do? Does it ask for an opinion or does it ask for facts? The resolution expressly states that the Secretary of the Treasury is directed to transmit to the House the facts in his possession on which he based the charge recently made by him; and again, that the Secretary is directed to inform the House as to facts on which he based his statement as follows. If the Secretary of the Treasury did not make this statement he can easily reply to the resolution by so stating.

The gentleman from Alabama says that if he made the statement he did not make it officially. The Secretary of the Treasury is an official, and can make no statement relating to the conduct of his department of the finances of the country that is not official. [Applause on the Republican side.] He can not separate himself from his office, and if he has information, it makes no difference how it came to him, the Congress is entitled to the information and the House is entitled to ask him for the facts.

The Secretary of the Treasury a few days ago made a statement, as recited in this resolution, that there was a concerted action on the part of the members of the influential New York City banks to cause apprehension and uneasiness about the 2 per cent bonds in order to help them in their efforts to defeat the currency bill. That is an exceedingly important statement. It charges a conspiracy on the part of banks who owe their foundation and existence to the laws of the country. charge be true, we ought to have the information before we pass a currency bill, and if the Secretary of the Treasury did not have facts on which he based his charge he ought to refire from office. [Applause on the Republican side.]

This is not the only resolution on this subject which has been introduced. The gentleman from Kansas introduced a resolution asking for investigation of this subject, which was referred to the Committee on Rules. Under the rules of the House you can not move to discharge the Committee on Rules from the consideration of a resolution, and I understand that the Secretary of the Treasury has sent for and talked with the members of the Committee on Rules on the majority side of the House, with the exception of the chairman, and urged that that resolution for an inquiry be not agreed to or reported favorably. If the Secretary of the Treasury can to-day make a statement involving collusion on the part of national banks of the country without giving the Congress the information upon which he bases his facts, we have come to a pretty pass. I am somewhat surprised that the gentleman from Alabama should be afraid to have these facts come before the House. If the Secretary of the Treasury has information upon which he based the charge, the majority side of the House ought to be the one to insist upon the information being made public, and not leave it to the minority to introduce a resolution. [Applause on the Republican side.] The resolution is privileged; it calls for information; it desires facts, if facts be in the possession of the Secretary of the Treasury, facts which ought to be made public if they exist; and there ought to be an apology if the charge was baseless, as I suspect.

Mr. FITZGERALD. Mr. Speaker, the remarks of the gentle-man from Illinois [Mr. Mann] on behalf of the minority discloses that it is not seeking facts; it is simply trying to muddy up the waters. This resolution has been drawn in such a way that it is quite apparent that the minority is not after information, but is after something as is characterized as "facts." resolution is ingeniously drawn-

Mr. MANN. Well drawn.

Mr. FITZGERALD (continuing). It does not ask for information, but it uses the word "facts" in the hope that some one might be deluded into the belief that the resolution is privileged under the rules. Those who are familiar with the capacity of the gentleman from Illinois to build up a case that has the appearance of being good, but when analyzed is quite faulty, are aware of the reason that the resolution is in this Mr. Speaker, it is not necessary to answer the suggestion of the gentleman from Illinois that the Secretary of the Treasury should retire from office. Every one knows how anxious that side of the House is that every one in this administration shall retire from office. [Applause on the Democratic side. I Many of us on this side would be quite happy if many of the hold-over incompetent Republicans should more speedily retire from office. [Applause on the Democratic side.] It would improve in many respects the efficiency of the adminis-tration. This resolution purports to call on the Secretary of the Treasury "for facts in his possession on which to base the charge recently made by him that the recent decline in the price of United States 2 per cent bonds is due almost wholly to what appears to be a campaign waged with every indication of concerted action on the part of a number of influential New York City banks to cause apprehension and uneasiness about these bonds in order to help them in their efforts to defeat the currency bill." I might say that on the face of it is appears to be an expression of opinion and not to be based upon any substantial information that might be characterized by the gentleman from Illinois as "facts." Mr. Speaker, in volume—

Mr. MANN. Will the gentleman yield?

Mr. FITZGERALD. I do.

Mr. MANN. I did not quite catch what the gentleman said, but I understood him to say that statement was not based upon facts and hence facts could not be furnished.

Mr. FITZGERALD. I did not say that, because, as I did not make the statement, I do not know enough of the underlying reasons for the statement-enough to speak in behalf of anyone who made it, if it ever were made, but it appears to have been couched very carefully so as not to mislead innocent gentlemen like the gentleman from Illinois into the belief that a conclusive case existed at some place against some one as to the situation indicated in the quoted language.

Mr. MANN. The gentleman is very close to the Secretary of the Treasury, and again intimates that the language of the Secretary of the Treasury shows on its face that it was not

based upon facts.

Mr. FITZGERALD. I do not refer to the language of the Secretary of the Treasury; I have no information that any such language was ever uttered by the Secretary of the Treasury Mr. MANN. Well, the language which is purported to have

Mr. FITZGERALD. But the language is "almost wholly to what appears to be a campaign waged with every indication of concerted action," and it is sufficiently cautious in its construction not to alarm even the timid gentleman from Illinois. But, Mr. Speaker, in paragraph 1873, volume 3, Hinds' Precedents, appears the following authority:

dents, appears the following authority:

On January 18, 1906, Mr. Oscar W. Gillespie, of Texas, claimed the floor for a privileged motion in order to move to discharge the Committee on Interstate and Foreign Commerce from the further consideration of the following resolution, which had been referred to that committee more than a week previously:

"Resolved, That the Attorney General of the United States be, and he is hereby, requested to forthwith report to the House of Representatives, for its information, whether there exists at this time, or heretofore within the last 12 months there has existed, a combination or arrangement between the Pennsylvania Railroad Co., the Pennsylvania Co., the Norfolk & Western Railway Co., the Baltimore & Ohio Railroad Co., the Philadelphia, Baltimore & Washingfon Railroad Co., and the Northern Central Railway Co., and the Chesapeake & Ohio Railway Co., or any two or more of said railroad companies, in violation of the act passed July 2, 1890, and entitled 'An act to protect trade and commerce against unlawful restraints and monopolies,' or acts amendatory thereof; and the said Attorney General is also requested to report to this House all the facts upon which he bases his conclusion."

Which is the same as asking for all the facts upon which is based the statements purporting to have been made by the Sec-

retary of the Treasury.

Mr. PAYNE, of New York, made the point of order that the resolution was not privileged because it called for an opinion of the Attorney General as well as for the facts, and after debate, Mr. Speaker Cannon, in a decision of which I shall quote only the last sentence or two, said:

While it is in the power, the Chair apprehends, for the House by resolution to ask an opinion of the head of a department, it occurs to the Chair that such a resolution would not be privileged and would not

come within the rule that is now in vogue. But whatever the ruling of the Chair might be, were it not for the concluding line or lines of the resolution, it is perfectly patent to the Chair that what is desired by the resolution is not the facts alone, if at all, but the conclusion or opinion of the Attorney General. Therefore, the Chair sustains the opinion of the Attorney General.

It is very clear that the gentleman is not seeking the facts alone in this case, but the opinion or the conclusion of the Secretary of the Treasury upon which the statement purporting to have been made by him might have been based. Under this decision it seems to be quite clear that, calling for the con-clusion or the opinion of the Secretary of the Treasury in addition to any facts that may be requested, the resolution is not

privileged within the rules.

Mr. MONDELL. Mr. Speaker, I have examined the precedent that the gentleman from New York [Mr. Fitzgerald] refers to, with a good deal of care. The resolution referred to is essentially dissimilar from the resolution now before the House, and the Chair sustained the point of order in that case on the proposition that in his opinion it "is not the facts alone, if at all, but the conclusion or opinion of the Attorney General that is sought." If the Chair was justified in that case to hold as he did, and I am rather inclined to think he was, that opinion does not apply to this case.

Mr. FITZGERALD. Has the gentleman any doubts about

Mr. MONDELL. I have some little doubt about it. It was rather close then.

Mr. FITZGERALD. Did not the gentleman at the time vote to lay on the table the appeal from the decision of the Chair?

Mr. MONDELL. However that may be, the question then raised is not involved in the resolution before the House at all, In that case the Chair said that, in his opinion, it was the opinion and the judgment of the officer that was sought and not the facts, and he was probably justified in so holding.

Mr. FITZGERALD. But if the gentleman will read the reso-

lution he will find that it provided:

And also to report to the House all the facts upon which he bases his decision.

The Chair held it was not the facts, but that it was his opinion that was required.

Mr. MONDELL. Calling for facts and an opinion at the same time, of course, under the rule, took the resolution out of the privileged class, no matter how many facts were called for.

Mr. MANN. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. MANN. The gentleman will note that the resolution which the gentleman from New York [Mr. Fitzgerald] has cited does not call for the facts at all. It calls for the facts upon which the Attorney General bases his conclusion, an entirely different proposition. And the conclusion was one asked for in the resolution.

Mr. MONDELL. That is what I desire to emphasize, namely, that what the resolution asked for, in the first instance, was a

conclusion, not a fact or set of facts.

Mr. FITZGERALD. It was not. It was the facts. Mr. MONDELL. The word "facts" was used in o was used in one place, but what was asked for was a conclusion, an opinion, of the Attorney General as to whether a certain condition existed. And then, in addition to that, which took the resolution out of the privileged class, there was a call for facts on which the opinion was founded. But that portion of the resolution in no wise saved the resolution from the fact that it called for an opinion in the first instance.

Mr. FITZGERALD. Yes; but if the gentleman had examined this opinion he would find that the Speaker based his decision not upon the part of the resolution where it calls for a conclusion, but upon that clause which asks for the facts; not upon

the early part.

Mr. MONDELL. I have read a portion of the decision of the Chair upon which he founded his judgment that, in his opinion, what was asked for was an opinion and conclusion. And clearly that was what was sought, because the resolution starts out by calling upon the Attorney General to inform the House whether a certain railway combination existed. That is altogether a question of opinion.

Now, Mr. Speaker, this resolution asks for no expression of opinion. There has been an expression of opinion; there has been a statement. Certain people have been charged with a crime, the crime of conspiracy, punishable by fine and imprisonment—the crime of conspiring against the credit of the United

States.

The SPEAKER. The gentleman from Wyoming is not con-

fining himself to the point of order.

Mr. MONDELL. And it is to be assumed—at least I have assumed, and I hope not violently—that the Secretary of the Treasury had the facts upon which he based that grave charge.

Further than that the Secretary informed an anxious and expectant country, which had long been listening to the somewhat conflicting and noisy echoes emanating from the secret chamber of the Committee on Banking and Currency, that he had information that amid that turmoil and confusion and conflicting in the secret characteristic forms. flict of views there had come an agreement relative to an amendment that was certain to fix and to maintain the value of Federal 2 per cent bonds. We ought to have that informa-

The Democratic side goes into secret caucus this afternoon for the purpose of considering these questions. I do not know that they are seeking information, but they at least ought to have it. All the resolution calls for is a statement of fact of the information upon which the Secretary of the Treasury has charged certain individuals with conspiring against the national credit; information upon which the Secretary of the Treasury has notified the country that a certain amendment has been adopted by the committee, an amendment relative to which we have no information at all. Such information would be no doubt gladly received by those who own Government bonds.

The resolution is clearly within the rule. It is clearly a resolution of inquiry for facts. It does not ask for an opinion. The opinion has already been given.

Mr. UNDERWOOD rose.

The SPEAKER. The gentleman from Alabama [Mr. Under-

wood] is recognized.

Mr. UNDERWOOD. Mr. Speaker, I think the resolution itself clearly demonstrates, though it purports to call for facts, that it is not the intention to call for facts but for an opinion.

Now, it goes without saying, and I suppose there is no con-troversy about it, that if any portion of a resolution is subject to a point of order the whole resolution is so subject. The concluding paragraph reads as follows:

That the Secretary of the Treasury is also hereby directed to inform the House as to the facts on which he based his statement, as follows:

Now, here is the statement:

That nothing had occurred to impair the value of the 2 per cent bonds, but the amendment already adopted by the Banking and Cur-rency Committee of the House enhances their intrinsic value.

Now, he is asked to state the facts on which he bases an opinion. He states it as an opinion. He evidently can have no facts on which to base it, because he says:

Nothing has occurred to impair the value of the 2 per cent bonds.

Now, that shows evidently that he has no facts, because he says "nothing has occurred." Therefore there is nothing in the way of facts in the Treasury Department on which to make that statement.

The conclusion of the statement is that an amendment to a bill pending in this House has enhanced the value of those bonds. Now, has he got the facts in reference to that amendment in the Treasury? Not at all. The facts in reference to that amendment are in a committee of this House. They are reported, they are contained in a bill that has already been introduced into the House, and they are not facts in his possession.

He does not contend that there are any facts there. He made his statement as a matter of opinion on two questions. One is that there is nothing that has occurred to reduce the value of these bonds, and the second is that a bill introduced into this House, or an amendment to a bill introduced in this House, has enhanced the value of those bonds.

Now, if both of these propositions are not opinions expressed by the Secretary of the Treasury, or by Mr. McAdoo-and I can not see how they can be construed otherwise-then, if you are inquiring, what difference does it make whether the gentleman says that he wants facts in reference to an opinion or that he wants an argument in reference to an opinion? There can be no facts because there is nothing but an opinion stated in this section of the resolution.

Mr. MANN. Mr. Speaker, will the gentleman yield?

Mr. UNDERWOOD. I will.

Mr. MANN. Does not his statement, credited to the Secretary of the Treasury, say that an amendment has already been adopted by the Banking and Currency Committee of the House?

That is a positive statement, credited to the Secretary.

Mr. UNDERWOOD. But that is not a fact—if it is a fact which is in the possession of the Secretary of the Treasury.

Mr. MANN. How could he make the statement if it is not

in his possession? He states it as a fact. It may be a round-about way for us on the minority side to ascertain what has been adopted, but the statement is there made that an amendment has been adopted.

Mr. UNDERWOOD. If the gentleman will examine the records of the House he will find the bill. He does not have to go outside of this House to find the bill.

Mr. MANN. That is not in the House. Here is the statement that an amendment to a bill has been agreed to.

Mr. UNDERWOOD. But that bill as amended has been cinted since that time. The amendment is contained in a printed since that time. The amendment is cont printed bill that is within the custody of this House.

Mr. MANN. I do not know whether that amendment has been printed or not. I never have seen any amendment printed that covers the case; but he makes a statement of fact, that a certain amendment has been agreed to, and gives it to the

Mr. FITZGERALD. That only expresses an opinion.
Mr. UNDERWOOD. I will say to the gentleman that the question involved is not whether the House or the committee have agreed to an amendment, but the question involved is a statement of the Secretary of the Treasury as to what effect it will have on these bonds if they have agreed to it. Now, the facts are not disputed.

Mr. MANN. This resolution does not ask for his opinion as to what effect it will have on the bonds, but for the facts on

which he bases his statement.

Mr. UNDERWOOD. His statement was an opinion.

Mr. MANN. I do not know. It is not put in the form of an opinion. It is the statement of a positive fact.

Mr. UNDERWOOD. Why, no; it is not. It is absolutely in the form of an opinion. He says nothing has occurred to impair the value of these 2 per cent bonds. Now, can he have any facts with reference to "nothing"?

Mr. MANN. Why, certainly.

Mr. UNDERWOOD. On the other hand he says:

But the amendment already adopted by the Banking and Currency Committee of the House enhances their intrinsic value.

Now, the only fact in the case

Mr. MANN. Is the question of the amendment.

Mr. UNDERWOOD. Is a fact in possession of the House. Mr. MANN. Oh, it is not in the possession of the House.

That is what we are trying to get into the possession of the House. The only fact is the fact of the amendment.

Mr. UNDERWOOD. If it will relieve the gentleman I will

furnish him with a copy of the bill containing the amendment, if he can not find it himself in the records of the House.

Mr. MANN. The gentleman can not find it in the records of

the House, because it does not exist in the records of the House.

Mr. UNDERWOOD. The gentleman from Virginia introduced a bill containing this amendment, and that is in the records of the House.

Mr. MANN. Oh, but the gentleman is mistaken. This amendment was not in the bill introduced by the gentleman from Virginia, and this is a statement that an amendment to that bill had been agreed to by the Committee on Banking and

Currency Mr. UNDERWOOD. If it has been done, it has been done in the Banking and Currency Committee, and that side of the House is represented on that Banking and Currency Committee-

SEVERAL MEMBERS (on the Republican side). Oh, no. Mr. MANN. If the gentleman will permit, the Secretary of the Treasury says he has certain information in his hands. Have we not the right to ask for that information? We say that he has not the information. The Committee on Banking and Currency up to that time had not had a meeting.

Mr. STAFFORD. They have not yet.
Mr. FITZGERALD. If you say he has not got the informa-

tion, what do you mean by asking him to furnish it?

Mr. MANN. We mean to make him backwater on it. says he has the information. When the department says it has information, we have a right to ask for it.

Mr. FITZGERALD. You have not the right to make anybody

backwater. [Laughter.]

Mr. UNDERWOOD. I say this resolution clearly, although it says it calls for facts, really calls for an opinion about an opinion that has already been expressed, and nothing more.

But I want to say this further, Mr. Speaker, the gentleman from Illinois [Mr. Mann] says that it is the duty of this side of the House to disclose these facts in reference to this charge. I want to say as to the first provision of this resolution, if there has been any conspiracy on the part of the banks of this country, we ought not to interfere with the ends of justice by calling on the Government to disclose the Government case at this time. Now, it is customary for a resolution of this kind to contain the words that the information is called for "if not incompatible with the public interest."

I have no doubt the gentleman from Illinois has objected, and his side of the House have repeatedly objected, to resolutions coming from this side of the House, when the gentleman's side were in control, on the ground that those resolutions did not contain the words that the information should be furnished "if not incompatible with the public interest.

Mr. MANN. If the gentleman will yield, I will state that I never made that objection to any resolution at any time during my service in this House.

Mr. UNDERWOOD. That objection has frequently been

made on the gentleman's side of the House.

Mr. MANN. I think it never came from our side of the

House, because it is not customary to insert the words.

Mr. UNDERWOOD. I know it is. I recall one occasion when the gentleman from New York [Mr. PAYNE] made that objection, and I can show by the RECORD that the gentleman's side of the House have repeatedly, while they were in control, objected to passing resolutions that would call for facts from the Government when those resolutions did not contain the words "if not incompatible with the public interest."

I refer the gentleman to Hinds' Precedents, in which he cites Those precedents were prepared by a gentleman those cases. who is now a distinguished Member of this House and who was at that time a distinguished parliamentary clerk, appointed by the Republican administration. These precedents show that it is customary and usual and proper to insert the words "if not incompatible with the public interest," and that is right.

Is it proper for this House, if a serious charge has been made, to call on the administration of the Government directly and demand of the administration that it shall disclose the facts in reference to a serious proposition, whether it is incompatible

with public interest or not?

Mr. MONDELL. Will the gentleman yield?

Mr. UNDERWOOD. Yes.

Mr. MONDELL. Will the gentleman withdraw his point of order if the resolution is amended by making it a request in-stead of a direction and adding the words "not incompatible with the public interest"?

Mr. UNDERWOOD. I think the words ought to have been

Mr. MONDELL. Will the gentleman agree to the resolution if that is done?

Mr. UNDERWOOD. No.

Mr. MONDELL. Then why discuss it?

Mr. UNDERWOOD. I think this resolution, even if the Speaker rules against me, ought not to be adopted. object to the resolution because it is not a matter of privilege, because I say you are inquiring about opinions and you are not inquiring as to statements of facts made by Mr. McAdoo that has any relation to conditions in the Treasury Department. They are outside of the Treasury Department. They lie within the demain of this House, and we can not go into inquiry in this House as to matters that are not of concern to the Government. This proposition in reference to the value of these bonds relates to an amendment offered in the Banking and Currency Committee in this House. Mr. McAdoo's statement in reference to it is a statement of an individual and is not the statement of the Secretary of the Treasury.

The SPEAKER. The Chair is ready to rule.

Mr. MONDELL. The Chair has been very patient, but will

the Speaker hear me for two minutes more?

The SPEAKER. If the gentleman will confine himself to the point of order the Chair will hear him for two minutes.

Mr. MONDELL. Mr. Speaker, I will endeavor to do so. Replying first to the last suggestion of the gentleman from Alabama that it might be incompatible with the public interest for the Secretary of the Treasury to furnish this information. I am confident that if the Secretary made a reply of that kind to the House no one would be inclined to carry the matter further. I suggested to the gentleman I was willing to depart from the usual practice of the House in order to please him, and provide that this be made a request instead of a direction, and still the gentleman is not satisfied.

Now, the only argument, Mr. Speaker—and this is the last statement I care to make in regard to the matter—the only argument made by the gentleman from New York and the gentleman from Alabama is in the nature of confession and avoid-The gentlemen confess on behalf of the Secretary

Mr. FITZGERALD. Oh, no.

Mr. MONDELL. That his statement carries with it the idea that the Secretary had no facts upon which to base his charge against American citizens of the commission of a crime.

Mr. FITZGERALD. Mr. Speaker-

Mr. MONDELL (continuing). That he had no facts upon which to base his statement, that he was simply talking for effect and from hearsay, that he, the Secretary of the Treasury, representing the administration, was libeling American citizens, accusing them of crime without facts upon which to base his

statements. And the gentleman from Alabama emphasized the fact that the language of the Secretary conveyed the idea that the Secretary really had no information, no facts upon which to base his charge, that he was just giving a curbstone opinion, charging people with crime and in regard to the action of a great committee in this House, and therefore it was not fair to the Secretary to ask him if he had the facts, which all honest men and all believers in good government assume that he should have before, from his high and lofty position of influence, he charges American citizens with a conspiracy which is a [Applause on the Republican side.]

Mr. FITZGERALD. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. FITZGERALD. I want to disclaim any intention to speak on behalf of the Secretary of the Treasury. The gentleman from Wyoming, however, has made a statement, and for my own information I desire to ask the gentleman if he will explain to the House what crime has been charged in this alleged statement by the Secretary of the Treasury. I am not sufficiently acquainted with the penal statutes of the United States, and I will be glad to have the gentleman point it out.

Mr. MONDELL. If I had a little time, I could point to the particular section of the statute which provides for the punishment of conspiracy. There is no question about this being a charge of conspiracy. There is a provision in the penal stat-

utes punishing conspiracy.

Mr. FITZGERALD. But conspiracy to be a crime must be conspiracy to do an act that is unlawful.

Mr. MONDELL. It is the crime of conspiracy against the credit of the United States that is charged.

Mr. FITZGERALD. That has never been defined as a crime,

Mr. MONDELL. That is what is charged.

Mr. FITZGERALD. But that is not a crime. It is not contained in the revision of the Penal Code made by the Repub-

lican Congress three years ago.

Mr. MONDELL. Well, Mr. Speaker, if it pleases the gentleman from New York to argue that conspiracy against the Government and its credit is not a crime, I have no disposition to argue that matter with him. That does not in any way affect the matter before us. The Secretary has stated that a certain condition exists, and we have asked for the facts on which he bases that statement-

Mr. FITZGERALD. The gentleman's leader says he knows

that he has not any such facts.

Mr. MONDELL. I have not said that I do not know.

Mr. FITZGERALD. He does not want the facts. He wants him to withdraw the statement.

Mr. MONDELL. I want the facts. I know nothing about the matter. I want information.

Mr. MANN. I based my statement on the statement of the gentleman from New York that the Secretary of the Treasury did not have any facts upon which to base his statement. [Applause.] The gentleman ought to know, as he is pretty close

to the Secretary of the Treasury.

Mr. MONDELL. The gentleman from New York and the gentleman from Alabama-and particularly the gentleman from Alabama—have based their entire argument practically on the

proposition that the Secretary has no facts-

Mr. FITZGERALD. Oh, no-

Mr. MONDELL. But is going around the country charging people with crime.

Mr. KINKEAD of New Jersey. Mr. Speaker-

The SPEAKER. For what purpose does the gentleman from ew Jersey rise?

Mr. KINKEAD of New Jersey. To ask the Speaker how much of the two minutes allowed to the gentleman from Wyo-

ming remains? [Laughter,]
Mr. MONDELL. Mr. Speaker, I feel that I am trespassing
upon the good nature of the Speaker and the House, but I want
to suggest just this, a statement which I should have made if I had not been interrupted by the gentleman from New York: That I am confident the Speaker will not split hairs when this House asks for information—calls for facts touching questions important in their bearing on legislation now before the country. Mr. MANN. Mr. Speaker, just one word, if the Speaker will

allow me.

The SPEAKER. The gentleman from Illinois. Mr. MANN. As to the form of this resolution, the statement was made in the House the other day in reference to a resolu-tion that the usual form was to insert "if not incompatible with the public interest." That statement has been reiterated by the gentleman from Alabama [Mr. Underwood] this morning. That is not my understanding of the practice of the House. In a resolution of inquiry addressed to the President of the United States it was customary, where the resolution was a request, to

insert "if not incompatible with the public interest." That is the form of inquiry due to the chief officer of the Government, but heads of departments are often officials created by Congress, and it has been held that Congress has the right to ask a head of a department to transmit information in his possession to either branch of the Congress, and the general rule has been to make it a matter of direction and leave out the words "if not incompatible with the public interest"; and in the Senate, where resolutions have been prepared in the form of a request "if not incompatible with the public interest" to a head of a department, those resolutions have been frequently amended by striking out the word "request" and inserting the word "direct" and striking out the words "if not incompatible with the public interest." My recollection is that in matters dealing with the Secretary of State relating to foreign affairs it is still quite customary and proper to insert the language "if not incompatible with the public interest," but that is not the usual form of resolution, nor will the gentleman from Alabama find that that is either in the text of the resolution in Hinds' Precedents or in the resolutions themselves which are quoted in Hinds' Precedents, and not in the resolution referred to this morning by the gentleman from New York [Mr. Fitz-GERALD] in his argument.

Mr. NORTON. Mr. Speaker, the point of order raised in this

case is that the resolution is not privileged, and the gentleman from New York [Mr. FITZGERALD] cites a precedent that I believe, instead of being a precedent that would warrant the Speaker in holding this not to be a privileged resolution, would, on the other hand, clearly require the Speaker to hold that this is a privileged resolution. The case cited by the gentleman from New York [Mr. FITZGERALD] is that of the point of order raised in the House on January 18, 1906, against the consideration of the following resolution, introduced by Mr. Gillespie, of Texas:

Resolved, That the Attorney General of the United States be, and he is hereby, requested to forthwith report to the House of Representatives for its information whether there exists at this time, or heretofore within the last 12 months there has existed, a combination or arrangement between the Pennsylvania Railroad Co., the Pennsylvania Co., the Norfolk & Western Railway Co., the Baltimore & Ohio Railroad Co., the Philadelphia, Baltimore & Washington Railroad Co., and the Northern Central Railway Co., and the Chesapeake & Ohio Railway Co., or any two or more of said railroad companies, in violation of the act passed July 2, 1890, and entitled "An act to protect trade and commerce against unlawful restraints and monopolies," or acts amendatory thereof; and the said Attorney General is also requested to report to this House all the facts upon which he bases his conclusion.

Now, clearly, in that resolution the main thing called for is an opinion from the Attorney General, and Speaker Cannon at that time, in ruling on the resolution, said as follows:

that time, in ruling on the resolution, said as follows:

The House undoubtedly has power to call for facts. And under the rule, where a resolution privileged within the meaning of the rule is referred to a committee and is not reported within a certain time, it is in order to move to discharge the committee and bring the resolution before the House for consideration. But that rule applies to a rosolution calling for facts and information. Now, the query the Chair puts to the gentleman is, Does the concluding lines in these words, "and the facts upon which he bases his conclusion," show that what is practically asked for is the conclusion or opinion of the Attorney General or the head of the Department of Justice, and does not that destroy, under the rule, the privileged character of the resolution?

* * In reading the resolution without the last line the Chair might, perhaps, have a doubt as to whether it were a resolution of inquiry asking for facts or one asking for an opinion. Now, the Chair is perfectly clear that, under the precedents, if the resolution is to be made privileged, it must be a resolution of inquiry as to facts existing—something in esse. It seems to the Chair that a resolution asking an opinion from the head of a department would not be privileged. While it is in the power, the Chair apprehends, for the House by resolution to ask an opinion of the head of a department, it occurs to the Chair that such a resolution would not be privileged and would not come within the rule that is now invoked. But whatever the ruling of the Chair might be, were it not for the concluding line or lines of the resolution is not the facts alone, if at all, but the conclusion or opinion of the Attorney General. Therefore the Chair sustains the point of order. opinion of the point of order.

From this resolution now before the House it seems to me it can not be patent to the Speaker or to any reasonable person that the resolution calls for any opinion from the Secretary of the Treasury. There is nothing on the face of the resolution to show that it is anything but the facts which are demanded in this case, and there should have been facts in esse before any charge should have been made by the Secretary of the Treasury, as is alleged to have been made in this case, and as is generally understood by the whole country to have been made. No one denies that these charges have been made, and, such being the case, this House has a right to have the honorable Secretary of the Treasury present to the House the facts, if there were any facts, on which he made his grave, serious, and far-reaching

indictment against the New York City banks.

Mr. SAUNDERS: Mr. Speaker, a resolution of inquiry addressed to the head of an executive department is privileged, Hinds' Precedents.

provided it calls for facts, but this does not mean that every demand for facts, without regard to the character or quality of the facts, falls within this privileged class. The same distinction must be made in this connection, as exists in the case of papers which may be called for when they are public and official. Inasmuch as the facts in the possession of departments are chiefly in the form of papers the rule relating to the papers that may be required of a department would seem to be decisive as to the character of the facts that may be directed to be furnished on the demand of the House. Everything that the head of a department may say or do is not of an official character. Every paper in his possession is not of necessity a public paper. It is the right of the House at all times to know all that officially takes place in any of the departments of Government, subject to certain well-established exceptions. Hence as a general proposition the head of a department may be required to communicate official facts and information as distinguished from private and unofficial papers, motions, views, reasons, and pinions. (3 Hinds, sec. 1894.)
In refusing the request of the Senate for the transmission of

certain papers, President Cleveland very strongly repelled the claim that these papers were official and therefore proper to These papers might with perfect propriety be be demanded. styled facts.

In another connection it has been stated that Congress has the right to know the contents of the public papers and records in the public offices of the country. (3 Hinds, sec. 1894.) But the right to know the contents of the public papers in the public offices, is the limit of our power, and the very terms in which this right is stated clearly negatives the contention that facts may be required of a department without regard to the character or quality of those facts.

In 1837 a committee of the House discussing the power of the House to call for papers, and the kind of papers subject to its demand, concluded that the call for papers ought to be limited to such as are already made, and on file in the departments. They further held that a call for papers not constituting a part of the public documents was unreasonable, and should not be sustained. As a necessary part of this holding the committee was agreed that all papers real or supposed, private in their character, and not coming within the denomination of public papers on file, could not be required of a department. 1738.)

If a department, or the head of a department has any dealings of an official character with an individual, or body of individuals, or if in the discharge of the duties fixed by law, it collects information, or is made the repository of information, it is clear that this body can call for the facts. The House may even investigate a controversy between the head of a department and another public official, provided this controversy is over a public matter. In 1824 the House investigated such a controversy between the minister to Mexico and the Secretary of the Treasury. But if this controversy had related to private concerns the House would have been without jurisdiction. These precedents and distinctions, establish the dividing line between the facts that may and may not be demanded, and if the facts are not the subject of demand, the resolution calling for them is not privileged. It is perfectly clear therefore upon principle and in conformity with the precedents, that in order for the pending resolution to be privileged it must not only be a reso-lution of inquiry as to existing facts, but these facts must be of a character to entitle the House to demand them. If the facts, or the papers, and no distinction can be made between facts, and papers in this connection, are private, then they may not be demanded. In other words the mere fact that the things called for, are denominated facts, is not sufficient to support the demand.

Like the papers that may be the subject of demand, these facts must be of a public character, and in the official possession of a public functionary. He must hold them, and control them in that capacity. They must be secured by him, or lodged with him, or in his department in an official way, and by reason of their public character or quality. If it is apparent on the face of the resolution that the facts called for do not respond to these tests, that if they exist at all, they are of necessity private in their character, then the right to demand them does not exist, and a resolution calling for them is not privileged. Looking to the precedents it will be noted that none of them call for

private papers, or facts.

I will call the attention of the Chair to the resolution on page 174 of volume 3 of Hinds' Precedents.

Section 1872, page 174, volume 3, of

This resolution is as follows:

Resolved, That the Secretary of the Interior be, and he is hereby, requested to furnish to Congress a report on the progress of the investigation of the black sands of the Pacific slope, authority for which was included in that section of the sundry civil act approved March 3, 1905, which provided for the preparation of the report on the mineral resources of the United States, and for his opinion as to whether or not this investigation should be continued.

It will be noted that the facts called for are in no sense private. The investigation referred to was authorized by law and any facts secured by the head of the department in the course of the investigation were acquired in the discharge of official duty and as a public functionary. In short the facts were collected pursuant to the authority of an act of Congress, and the House was plainly entitled to demand them.

For the present I will skip section 1873 and call the attention

of the Chair to section 1874.

The SPEAKER. The Chair would like to ask the gentleman a question. Subdivision 5 of Rule XXII reads as follows:

All resolutions of inquiry addressed to the heads of executive departments shall be reported to the House within one week after presenta-

It says "All resolutions of inquiry." How does the gentleman

get rid of that?

Mr. SAUNDERS. I was not aware that the week had expired. But that is immaterial. The resolutions referred to are as a matter of course such resolutions of inquiry as call for facts or papers that the House is entitled to demand. I have endeavored to show that if the House is not entitled to these facts, or papers, the right to make the motion to discharge does This right exists only when the committee refuses, not exist. or declines to report a resolution calling for facts, proper to be demanded.

The SPEAKER. The gentleman will proceed.

Mr. SAUNDERS. Section 1874 gives a resolution that was offered by Mr. Oscar W. Gillespie, of Texas. By this resolution the Postmaster General was directed to furnish to the House at his earliest convenience a comparative statement showing the cost to the Government of the transportation of the mails per ton per mile. The facts called for were of a public character, and proper to be furnished by a department which had jurisdiction of the subject matter.

Looking to the resolution discussed by the gentleman from North Dakota [Mr. Norren], and which is found in Hinds section 1873, it will be noted that the information called for, is

also of a public character.

The Attorney General was asked to give the facts, if any in his possession, relating to a combination between certain railreads in violation of an act of Congress against unlawful restraints and monopolies. If such a combination existed, it was an unlawful combination. If it was perfectly competent for the Attorney General to make inquiry in his official capacity into the existence of such a combination and all the facts that he collected in the course of that inquiry were of a public character, and clearly proper to be given up on the demand of the House. The Speaker ruled that the resolution so far as it called for The Speaker ruled that the resolution so far as it called for these facts was in order, but was out of order on other grounds. He was clearly right. I maintain Mr. Speaker that the pending resolution shows on its face that the statement of the Secretary of the Treasury relating to the activities of certain parties in New York touching the 2 per cent bonds, was purely a private declaration, the expression of his opinion, or belief that with sinister purpose, they were seeking to depress certain securities of the United States.

If this judgment or opinion so given out was a private opinion relating to the action of individuals who had not come into any official relations with the department, then the House is not entitled to demand any private information on which that individual opinion, or conclusion is based. The Secretary in his capacity as an individual may have the most ample information to justify his conclusion, or opinion, but we are not in a position to demand that information, or the papers and letters which afford it, unless they are of a public character, and part of a public file. I freely concede that if there are any public docu-ments relating to the alleged activities of these New York parties in the matter of the 2 per cent bonds now on file, or proper to be filed in the Secretary's office, we have the right to demand them. But I deny our right to call for facts when it so clearly appears from the recitals of the resolution that the declaration of the Secretary was the expression of a personal opinion founded on private information, and not an official statement proceeding from facts of record of a public character. Should a resolution be introduced calling for any public facts of record in the Secretary's office relating to the alleged movement in New York City to depress the 2 per cent bonds of the United States, then such a resolution would be privileged. But

I submit, for the reasons given, that the point of order to the

pending resolution should be sustained.

Mr. POU. Mr. Speaker, there is just one statement that has been made by the leader of the minority [Mr. Mann] which I am not willing to let go unchallenged. The gentleman from Illinois made the statement that the Secretary of the Treasury had sent for the majority members of the Committee on Rules, except one, the chairman, and had protested against the passage of this resolution.

Mr. MANN. I beg the gentleman's pardon; I did not men-

tion this resolution.

Mr. POU. Then I have misunderstood the gentleman.

Mr. MANN. I said he protested against the passage of the Neeley resolution. Is not my statement true?

Mr. POU. It is not. Mr. MANN. Has not the Secretary of the Treasury discussed that matter with the Democratic members of the Committee on Rules?

I think perhaps he may have.

Mr. MANN. Does not the gentleman know? Mr. POU. The statement which the gentleman made was that the Secretary of the Treasury had sent for the majority members of the Committee on Rules and protested against the passage of the Neeley resolution.

Mr. MANN. Yes, sir. Mr. POU. That statement is absolutely incorrect so far as I am concerned, and I am informed is incorrect as to other gentlemen also.

Mr. MANN. Has not the gentleman discussed the matter with the Secretary of the Treasury himself?

Mr. POU. I have.

Mr. MANN. And has not the Secretary of the Treasury ex-

pressed the desire that the resolution be not passed?

Mr. POU. I do not know. He has made no such statement to me. I will state that so far as the Secretary is concerned, he expressed no fear whatever of having this resolution passed. His attitude was exactly the contrary. The contrary opinion was expressed. But there are reasons why members of the Committee on Rules did not see fit to report this resolution. The Secretary of the Treasury has merely expressed an opinion about a matter, and you are now asking for another expression of opinion, and you state on your own side that all you are expecting to do in this matter is to make the Secretary "back water."

Mr. MANN. But did not the Secretary of the Treasury discuss the Neeley resolution with the Democratic members of the Committee on Rules, except Mr. HENRY, the chairman?

Mr. POU. I do not know whether he discussed it with other

I can only speak for myself. gentlemen.

Mr. FOSTER. Mr. Speaker, I desire to state for my colleague from Illinois [Mr. MANN] that I have not seen the Secretary of the Treasury or had any talk with him in reference to the resolution of inquiry.

Mr. REILLY of Connecticut. Mr. Speaker, I make a point of order that the gentleman from North Carolina, [Mr. Pou] and the gentleman from Illinois [Mr. MANN] are not discussing

the pending point of order.

The SPEAKER. The gentleman from Connecticut [Mr. Reilly] makes a point of order, and his point of order is sus-The Chair is ready to rule on the point of order sub-

mitted by the gentleman from Alabama [Mr. Underwood].

The practice in regard to a resolution of this kind is this, that it is in order if it calls for facts only or information only. It does not make any difference which one of the two words is used. But it is out of order if it calls for an opinion or an investigation. If part of the resolution is bad, it is all bad.

Now, let us see where we are. This resolution has two propositions in it. The first reads:

Resolved, That the Secretary of the Treasury be, and he is hereby, directed to transmit to the House of Representatives the facts in his possession on which he based the charge recently made by him that the recent decline in the price of United States 2 per cent bonds is due "almost wholly to what appears to be a campaign waged with every indication of concerted action on the part of a number of influential New York City banks to cause apprehension and uneasiness about these bonds in order to help them in their efforts to defeat the currency bill."

That is proposition No. 1. Proposition No. 2 is as follows:

That the Secretary of the Treasury is also hereby directed to inform the House as to the facts on which he based his statement, as follows: "That nothing has occurred to impair the value of the 2 per cent bonds, but the amendment already adopted by the Banking and Currency Committee of the House enhances their intrinsic value," together with a copy of the amendment thus referred to by him.

as asking for facts and not asking for an opinion? It may be true that the gentleman from Wyoming [Mr. MONDELL] was doing exactly what sundry gentlemen have charged him with doing, namely, fishing for an opinion under the guise of asking for facts. That may be true. It probably is. [Laughter.] But the Chair has nothing to do with that. Whoever drew that resolution, if he had that idea in mind, was a very skillful

The precedent which has been called to the attention of the Chair (Hinds' Precedents, vol. 3, sec. 1873) that on January 18, 1906, Mr. Oscar W. Gillespie, of Texas, claimed the floor for a privileged motion in order to move to discharge the Committee on Interstate and Foreign Commerce from the further consideration of the following resolution, which had been referred to that committee more than a week previously:

referred to that committee more than a week previously:

Resolved, That the Attorney General of the United States be, and he is hereby, requested to forthwith report to the House of Representatives, for its information, whether there exists at this time, or heretofore within the last 12 months there has existed, a combination or arrangement between the Pennsylvavnia Railroad Co., the Pennsylvavnia Co., the Norfolk & Western Railway Co., the Baltimore & Ohio Railroad Co., the Philadelphia, Baltimore & Washington Railroad Co., and the Northern Central Railway Co., and the Chesapeake & Ohio Railway Co., or any two or more of said railroad companies, in violation of the act passed July 2, 1890, and entitled "An act to protect trade and commerce against unlawful restraints and monopolies," or acts amendatory thereof, and the said Attorney General is also requested to report to this House all the facts upon which he bases his conclusion.

That resolution divided itself into two parts, the first and The latter and longer part asking expressly for an opinion. shorter part of it was:

And the said Attorney General is also requested to report to this House all the facts upon which he bases his conclusion.

Now, Speaker Cannon held, practically, that the latter and shorter clause would have been in order if it had been presented by itself, but that the first and longer proposition was not in order, because it called for an opinion, and he was clearly right in so ruling; and because that part of the resolution was not in order it vitlated the whole thing.

The text of Mr. Speaker Cannon's ruling is as follows:

The text of Mr. Speaker Cannon's ruling is as follows:

The House undoubtedly has power to call for facts. And under the rule, where a resolution privileged within the meaning of the rule is referred to a committee and is not reported within a certain time, it is in order to move to discharge the committee and bring the resolution before the House for consideration. But that rule applies to a resolution calling for facts and information. Now, the query the Chair put to the gentleman is, Does not the concluding lines in these words, "and the facts upen which he bases his conclusions," show that what is practically asked for is the conclusion or opinion of the Attorney General or the head of the Department of Justice, and does not that destroy, under the rule, the privileged character of the resolution?

* * In reading the resolution without the last line the Chair might perhaps have a doubt as to whether it were a resolution of inquiry asking for facts or one asking for an opinion. Now, the Chair is perfectly clear that, under the precedents, if the resolution is to be made privileged, it must be a resolution of inquiry as to facts existing—something in esse. It seems to the Chair that a resolution asking an opinion from the head of a department would not be privileged. While it is in the power, the Chair apprehends, for the House by resolution to ask an opinion of the head of a department, it occurs to the Chair that such a resolution would not be privileged and would not come within the rule that is now invoked. But whatever the ruling of the Chair that such a resolution would not be privileged and would not come within the rule that is now invoked. But whatever the ruling of the Chair that such a resolution would not be forced the Chair that what is desired by the resolution is not the facts alone, if at all, but the conclusion or opinion of the Attorney General. Therefore the Chair sustains the point of order.

It may be that the Secretary of the Treasury used the lan. opinion of the point of order.

It may be that the Secretary of the Treasury used the lan-guage quoted here. The Chair does not know, and it is none of his business to inquire. The Secretary may not have had any facts whatever as to the second proposition. The Chair does not pronounce an opinion whether he had or had not any facts on which to base the statement-

That nothing has occurred to impair the value of the 2 per cent bonds, but the amendment already adopted by the Banking and Cur-rency Committee of the House enhances their intrinsic value.

The Chair does not agree with the gentleman from Illinois [Mr. Mann] that the Secretary of the Treasury always speaks as Secretary of the Treasury, or that the President can not speak in any other way except as President of the United States, or that none of us can express a private opinion. But if the Chair undertook to make up his own mind about the question whether the Secretary of the Treasury had facts on which to base an opinion, on every occasion, he would have to go on an exploring expedition to find out what the Secretary or anybody else was talking about.

On its face this resolution simply inquires for facts and nothing else, and the Chair is constrained to overrule the point of

order made by the gentleman from Alabama.

All that the Chair is required to pass on is this: Is this resolution in proper form and language in the light of the rules, practices, and precedents of the House? The Chair thinks it is, because on its face it simply calls for facts—merely that and nothing more. Therefore the Chair is constrained to overrule

the point of order made by the gentleman from Alabama [Mr. UNDERWOOD].

Mr. UNDERWOOD. Mr. Speaker, I understand the first motion before the House is to discharge the committee.

The SPEAKER. Yes.

Mr. UNDERWOOD. And that is not debatable.

The SPEAKER. That is not debatable. The hour fixed by the unanimous-consent agreement for adjournment is about to

Mr. UNDERWOOD. I understand that the motion to discharge the committee is not debatable.

Mr. MANN. Does the gentleman desire to have that motion put before we adjourn?

Mr. UNDERWOOD. Yes; I do. We might as well dispose of this proposition.

Mr. MANN. I shall ask for the yeas and nays.

Mr. UNDERWOOD. I think we had better take the vote to-day, and dispose of this resolution. I ask unanimous consent to set aside the order that the House adjourn at a quarter

before 2 o'clock.

The SPEAKER. The gentleman from Alabama [Mr. UNDERwood] asks unanimous consent to set aside the order previously made by unanimous consent that the House adjourn at 1 o'clock and 45 minutes p. m. Is there objection?

There was no objection.

The SPEAKER. The question is, Shall the Committee on Ways and Means be discharged from the further consideration of this resolution?

The question being taken, the Speaker announced that the noes appeared to have it.

Mr. MANN. I ask for the yeas and nays.

The year and nays were ordered, 41 Members seconding the demand, and 131 Members opposing the demand.

The SPEAKER. More than one-fifth—a sufficient number—and the yeas and nays are ordered.

The question was taken; and there were—yeas 55, nays 212, answered "present" 3, not voting 160, as follows:

                          RESIGNATIONS FROM COMMITTEES.
          The SPEAKER laid before the House the resignation of
       PERL D. DECKER from the Committee on the Public Lands, the
       Committee on Mines and Mining, and the Committee on Expenditures in the Department of Agriculture, which was accepted.
          The SPEAKER also laid before the House the resignation of
        PETER G. TEN EYCK from the Committee on Expenditures in the
       Department of Justice, which was accepted.
          SECOND INTERNATIONAL OPIUM CONFERENCE (S. DOC. NO. 157).
         The SPEAKER laid before the House the following message
       from the President of the United States, which was ordered
       printed and referred to the Committee on Foreign Affairs.
          The Clerk read as follows:
       To the Senate and House of Representatives:
          I transmit herewith a communication from the Secretary of
       State, accompanied with a report prepared by Mr. Hamilton
        Wright on behalf of the American delegates to the Second In-
       ternational Opium Conference, which met at The Hague on the
       1st of July last and adjourned on the 9th of the same month.
         The first opium conference assembled at The Hague on
       December 1, 1911, and adjourned on January 23, 1912. The
       convention formulated by this conference has since been signed
       by all of the Latin-American States and by a great majority of
       those of Europe, and all but three of the States that have
       signed have already agreed to proceed to the deposit of ratifi-
          The results of the conferences should be regarded by the
       Government and people of the United States with great satis-
                  An international convention imposing the obligation
       to enact legislation strictly to confine the trade in opium and
       allied narcotics to medical purposes has been signed by all but
       10 nations of the world, and there is reason to believe that by the
       end of the present year, through the action of the recent con-
       ference, all the nations of the world will have become signa-
```

to carry out the stipulations of the convention on the part of the United States. Such legislation has recently passed the House of Representatives without a dissenting vote, and I car-nestly urge that this measure, to the adoption of which this Government is now pledged, be enacted as soon as possible dur-

It remains for the Congress to pass the necessary legislation

WOODROW WILSON.

ing the present session of the Congress.

tories of the agreement.

THE WHITE HOUSE, August 9, 1913.

ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 20 minutes p. m.) the House, under its previous order, adjourned to meet on Friday, August 15, 1913, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, a letter from the Secretary of the Treasury, transmitting a letter from the Postmaster General in reference to obtaining permission of Congress for the use of the bequest made by Dr. C. F. McDonald for the improvement of the postal money-order system (H. Doc. No. 189), was taken from the Speaker's table, referred to the Committee on Appropriations, and ordered to be printed.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 4670) granting a pension to Lewis A. Coffman, and the same was referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials

were introduced and severally referred as follows:

By Mr. MURRAY of Massachusetts: A bill (H. R. 7373) to provide for admission of volunteer soldiers and sailors who served in the United States Army or Navy in the War with Spain or the Philippine insurrection, and who are afflicted with tuberculosis, to the United States Public Health Service Sanatorium at Fort Stanton N. Mex.: to the Committee on Intertorium at Fort Stanton, N. Mex.; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 7374) to pension widow and minor chil-

dren of any officer or enlisted man who served in the War with Spain or the Philippine insurrection; to the Committee on Pen-

sions.

Also, a bill (H. R. 7375) to prevent the desecration of the flag

Also, a bill (H. R. 7376) to provide for preference relating to appointments in the civil service by giving preference to certain ex soldiers, sailors, and marines; to the Committee on Reform in the Civil Service.

By Mr. SCULLY: A bill (H. R. 7377) extending to the port of Perth Amboy, N. J., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement; to the Committee on Ways and Means.

By Mr. ALEXANDER: A bill (H. R. 7378) granting pensions to the teamsters who served the Government of the United States in the War with Mexico, and for other purposes; to the

Committee on Pensions.

Also, a bill (H. R. 7379) to extend the provisions of the pension acts of June 27, 1890, and of February 6, 1907, to the Enrolled Missouri Militia and other militia organizations of the State of Missouri that cooperated with the military or naval forces of the United States in suppressing the War of the Rebellion; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7380) to amend sections 4400 and 4488 of the Revised Statutes of the United States, relating to the inspection of steam vessels; to the Committee on the Merchant

Marine and Fisheries.

Also, a bill (H. R. 7381) authorizing the Secretary of War to furnish two condemned bronze or brass cannon or fieldpieces and cannon balls to the city of Princeton, in the State of Missouri; to the Committee on Military Affairs.

Also, a bill (H. R. 7382) authorizing the Secretary of War to furnish two condemned brass or bronze cannon or fieldpieces and cannon balls to the city of Hamilton, in the State of Mis-

souri; to the Committee on Military Affairs.

Also, a bill (H. R. 7383) to correct the military record of the officers and enlisted men of the Enrolled Missouri Militia and all other militia organizations of the State of Missouri that cooperated with the military forces of the United States in suppressing the War of the Rebellion; to the Committee on Military Affairs.

By Mr. SHARP: A bill (H. R. 7384) to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, an Italian subject; to the Committee on Foreign

By Mr. MURRAY of Massachusetts: A bill (H. R. 7385) authorizing the admission of ex-soldiers and ex-sallors of the War with Spain to the temporary Home for ex-Union Soldiers and

Sailors in the District of Columbia; to the Committee on Military Affairs

By Mr. WALLIN (by request): A bill (H. R. 7386) to provide for the national reserve association of the United States; to the Committee on Banking and Currency.

By Mr. HOBSON: A bill (H. R. 7387) to encourage and systematize good-road development in and between the several States and to equalize the burdens thereof; to the Committee on Roads.

By Mr. SINNOTT: A bill (H. R. 7388) to increase the limit of cost for the erection and completion of the United States post-office building at Pendleton, Oreg.; to the Committee on

Public Buildings and Grounds.

By Mr. CARLIN: A bill (H. R. 7389) to increase the compensation of certain employees of the Government Hospital for the Insane, Department of the Interior; to the Committee on the District of Columbia.

Also (by request), a bill (H. R. 7390) to reimburse E. E. Court for moneys expended in the prosecution of charges before the Navy Department against certain officials therein; to the

Committee on Appropriations.

By Mr. SPARKMAN: A bill (H. R. 7391) to provide for a site and public building at Fort Meade, Fla.; to the Committee on Public Buildings and Grounds.

By Mr. HARDY: Resolution (H. Res. 226) placing clerks to certain committees on the annual roll; to the Committee on

Accounts.

By Mr. LEWIS of Maryland: Resolution (H. Res. 227) requesting the Postmaster General to extend the parcel-post classification so as to include books; to the Committee on the Post Office and Post Roads.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 7392) granting an increase of pension to Elam M. Odell; to the Committee on Invalid Pen-

Also, a bill (H. R. 7393) granting an increase of pension to Edmund P. Miller; to the Committee on Invalid Pensions.

By Mr. ALEXANDER: A bill (H. R. 7394) granting an in-

crease of pension to Levi M. Sims; to the Committee on Invalid

Also, a bill (H. R. 7395) granting an increase of pension to John Q. Hickman; to the Committee on Invalid Pensions.

John Q. Hickman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7396) granting an increase of pension to Thomas C. De Witt; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7397) granting an increase of pension to Arthur D. Graham; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7398) granting an increase of pension to James Hopper; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7399) granting an increase of pension to Levi Slinger; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7400) granting an increase of pension to Archibald Miller; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7401) granting an increase of pension to David N. Foster; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7402) granting an increase of pension to

Henry M. White; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7403) granting an increase of pension to

William Bayne; to the Committee on Invalid Pensions

Also, a bill (H. R. 7404) granting an increase of pension to Thomas Brewer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7405) granting a pension to Miles Fuller; to the Committee on Invalid Pensions.

Also, a bill $(H.\ R.\ 7406)$ granting a pension to Jonas Cook; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7407) granting a pension to William Wilson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7408) granting a pension to Evander Agee; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7409) granting a pension to Wilburn

Munkers; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7410) granting a pension to Ambrose Giseburt; to the Committee on Invalid Pensions. Also, a bill (H. R. 7411) granting a pension to James A.

Sloan; to the Committee on Invalid Pensions. Also, a bill (H. R. 7412) granting a pension to Jeremiah R.

Whitsell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7413) granting a pension to John N. Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7414) granting a pension to Thomas T. Pratt; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7415) granting a pension to C. H. Roberts; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7416) granting a pension to James R. Thornton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7417) granting a pension to John W. Hart; to the Committee on Pensions.

Also, a bill (H. R. 7418) granting a pension to Rebecca Schofield; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7419) granting a pension to Elizabeth Morrison and her heirs; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7420) granting a pension to Elizabeth Morrison; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7421) granting a pension to Catharine J. Thomas; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7422) granting a pension to Sabina Pierce; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7423) granting a pension to Martha J. Jackson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7424) granting a pension to Elizabeth Ballew; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7425) granting a pension to Lucy R. Woodward; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7426) granting a pension to Mary A. Hooper; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7427) granting a pension to Phillip Gentry;

to the Committee on Invalid Pensions.

Also, a bill (H. R. 7428) granting a pension to John E. Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7429) for the relief of the trustees of the Christian Church at Missouri City, Clay County, Mo.; to the Committee on War Claims.

Also, a bill (H. R. 7430) for the relief of the heirs of John G. W. Brooks; to the Committee on War Claims

Also, a bill (H. R. 7431) for the relief of William Roney; to the Committee on War Claims.

Also, a bill (H. R. 7432) for the relief of Henry Benson; to the Committee on Military Affairs.

Also, a bill (H. R. 7433) for the relief of Jesse Lee; to the

Committee on Military Affairs.

Also, a bill (H. R. 7434) for the relief of William M. Critten;

to the Committee on Military Affairs.

Also, a bill (H. R. 7435) for the relief of Robert Griffin; to the Committee on Military Affairs.

Also, a bill (H. R. 7436) for the relief of Christopher L.

Smith; to the Committee on Military Affairs.

Also, a bill (H. R. 7437) for the relief of John Benson; to the

Committee on Military Affairs.

Also, a bill (H. R. 7438) for the relief of James B. Norman;

to the Committee on Military Affairs.

Also, a bill (H. R. 7439) for the relief of Vincent Rust; to the

Committee on Military Affairs. Also, a bill (H. R. 7440) to correct the military record of

Harrison R. Crecelius; to the Committee on Military Affairs.

Also, a bill (H. R. 7441) to correct the military record of

Anderson Creason; to the Committee on Military Affairs. Also, a bill (H. R. 7442) to correct the military record of John B. Hutchings; to the Committee on Military Affairs.

By Mr. ALLEN: A bill (H. R. 7443) granting a pension to Peter D. Smith; to the Committee on Pensions.

By Mr. AUSTIN: A bill (H. R. 7444) granting an increase of pension to John W. Cates; to the Committee on Invalid Pensions.

By Mr. FESS: A bill (H. R. 7445) granting an increase of pension to John Black; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7446) granting an increase of pension to

Simon Beachler; to the Committee on Invalid Pensions, By Mr. FORDNEY: A bill (H. R. 7447) granting a pension

to Bert D. Kilburn; to the Committee on Pensions.

By Mr. GORMAN: A bill (H. R. 7448) granting a pension to

Patrick Dunleavy; to the Committee on Invalid Pensions. By Mr. HAMLIN: A bill (H. R. 7449) for the relief of Harriett A. Randle, John W. Randle, and James C. Randle, heirs at law of Spencer C. Randle, deceased; to the Committee on War

By Mr. KONOP: A bill (H. R. 7450) granting a pension to Charles Arpin; to the Committee on Pensions.

Also, a bill (H. R. 7451) granting a pension to Kathryn

Reed; to the Committee on Pensions. Also, a bill (H. R. 7452) granting a pension to William L.

Lehman; to the Committee on Invalid Pensions. Also, a bill (H, R. 7453) granting an increase of pension to August Krause; to the Committee on Invalid Pensions.

By Mr. MORRISON: A bill (H. R. 7454) granting an increase of pension to Mary K. Dunn; to the Committee on Invalid Pen-

By Mr. MOSS of West Virginia: A bill (H. R. 7455) granting an increase of pension to William T. Marshall; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7456) granting an increase of pension to Francis Mosena; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7457) granting an increase of pension to Nathan Wright; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7458) granting an increase of pension to Samuel L. Somerville; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7459) granting an increase of pension to Daniel Wiley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7460) granting an increase of pension to William Hall; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7461) granting a pension to Mary M. Duffy; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7462) granting a pension to Theophilus Nuzum; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7463) granting a pension to Hillary B. Griggs; to the Committee on Invalid Pensions.

By Mr. PALMER: A bill (H. R. 7464) granting an increase of pension to Mrs. George H. Young; to the Committee on Invalid Pensions.

By Mr. SINNOTT: A bill (H. R. 7465) granting a pension to William H. Townsend; to the Committee on Pensions.

By Mr. TAGGART: A bill (H. R. 7466) granting an increase of pension to George E. Hatfield; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7467) to place the name of Charles L. Mc-Clung upon the unlimited retired list of officers of the United States Navy; to the Committee on Naval Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petition of the Carriage Builders' National Association, protesting against any change in the ownership or management of the national forests; to the Committee on Agriculture.

By Mr. DALE: Petition of the Lightning Letter Opening Co., Rochester, N. Y., favoring the passage of a 1-cent letter-postage rate; to the Committee on the Post Office and Post Roads.

By Mr. DYER: Petition of the Shapleigh Hardware Co., St. Louis, Mo., protesting against the change in the parcel-post rules; to the Committee on the Post Office and Post Roads.

Also, petition of the Sealzo-Fiorita Fruit Co., the Milligan Fruit Co., and 11 others, protesting against the proposed taxation on bananas; to the Committee on Ways and Means.

By Mr. FITZGERALD: Petition of the Brotherhood of Locomotive Firemen and Enginemen, favoring the present locomotive boiler inspection law; to the Committee on Interstate and Foreign Commerce.

Also, petition of the New York Zoological Society, New York, favoring the passage of legislation preventing the importation of plumes, skins, feathers, etc., of wild birds for commercial use; to the Committee on Ways and Means.

Also, petition of the Interstate Cotton Seed Crushers' Association, Chicago, Ill., protesting against the present tax on colored oleomargarine; to the Committee on Ways and Means.

Also, petition of the Brotherhood of Locomotive Firemen and Enginemen, Peoria, Ill., favoring the passage of Senate bill 4, for improving the living condition of the seamen of the merchant marine; to the Committee on the Merchant Marine and Fisheries.

Also, petition of the Brotherhood of Locomotive Firemen and Enginemen, Peoria, Ill., favoring the passage of legislation for the restriction of immigration; to the Committee on Immigration and Naturalization.

Also, petition of the Interstate Cotton Seed Crushers' Association, protesting against a duty on cottonseed oil; to the Committee on Ways and Means.

By Mr. FRANCIS: Petition of the employees of the Phillips Sheet & Tin Plate Co., of Steubenville, Ohio, and Clarksburg, W. Va., urging law and order in the town of Weirton, W. Va.;

to the Committee on Labor.

By Mr. LEVY: Petition of the Order of Railway Conductors of America at Cedar Rapids, Iowa, protesting against a workmen's compensation law; to the Committee or the Judiciary

Also, petition of the Lightning Letter Opener Co., of Rochester, N. Y., favoring 1-cent letter postage; to the Committee on the Post Office and Post Roads.

Also, petition of the city and county of San Francisco, Cal., protesting against the diversion of waters from lands requiring irrigation; to the Committee on Irrigation of Arid Lands.

Also, petition of the San Francisco Life Insurance Co., of San Francisco, Cal., protesting against any tax upon mutual life insurance funds in the income-tax bill; to the Committee on Ways and Means.

Also, petition of the Allied Printing Trades Council of the

State of New York, protesting against any reduction of the duty on printed matter; to the Committee on Ways and Means.

By Mr. LONERGAN: Petition of the German-American Alliance, Hartford, Conn., protesting against a customs duty on books printed in the German language; to the Committee on Ways and Means.

By Mr. REHLLY of Connecticut: Petition of Mrs. C. Louise White, of Greenwich, Conn., favoring an amendment giving the franchise to women; to the Committee on the Judiciary.

Also, petition of the German-American Alliance, of Hartford, Conn., protesting against a duty on books printed in the German language; to the Committee on Ways and Means.

Also, petition of the General Pomona Grange, No. 1, Patrons of Husbandry, of Connecticut, urging retention of the administrative features of the parcel-post law; to the Committee on the Post Office and Post Roads.

SENATE.

WEDNESDAY, August 13, 1913.

The Senate met at 11 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. The Vice President being absent, the President pro tempore took the chair.

The Journal of yesterday's proceedings was read and approved. PETITIONS.

Mr. PERKINS presented petitions signed by sundry citizens of Anaheim, Buena Park, Artesia, and Los Alamitos, all in the State of California, praying for the adoption of the proposed tariff referendum, which were referred to the Committee on Finance.

He also presented petitions signed by sundry citizens of California, praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which were referred to the Committee on Woman Suffrage.

Mr. NORRIS presented a petition of sundry soldiers, residents of Stratton, Nebr., praying for the adoption of an amendment to the pension laws providing for the monthly payment of pensions, which was referred to the Committee on Pensions.

He also presented a petition of the Platte Valley Official Trans-Continental Route Association at Fremont, Nebr., praying that an appropriation be made for the construction of a transcontinental highway, which was referred to the Committee on Agriculture and Forestry.

Mr. O'GORMAN presented petitions signed by sundry citizens of the State of New York, praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which were referred to the Committee on Woman Suf-

Mr. HUGHES presented a petition signed by sundry citizens of the State of New Jersey, praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was referred to the Committee on Woman

HEIRS OF ANGELO ALBANO.

Mr. LODGE. I am directed by the Committee on Foreign Relations, to which was referred the amendment submitted by myself on July 22, proposing to appropriate \$6,000 to pay the heirs of Angelo Albano, in accordance with the recommendations of the President contained in his message of June 26, 1913, to report it favorably with the recommendation of the committee. I move that the amendment be referred to the Committee on Appropriations and printed.

The motion was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. PENROSE (by request):
A bill (S. 2980) for the relief of Amy M. Sorsby; to the Committee on Foreign Relations.

By Mr. BRANDEGEE:

A bill (S. 2981) for the relief of Edward W. Whitaker; to the Committee on Military Affairs.

By Mr. JONES:

A bill (S. 2982) granting a pension to Delia E. Wall; to the Committee on Pensions.

By Mr. BURTON: A bill (S. 2983) granting an increase of pension to Daniel Peyton; to the Committee on Pensions.

By Mr. SMITH of Maryland:

A bill (S. 2984) to authorize the Secretary of the Treasury to sell part of the Federal building site in Annapolis, Md.; and A bill (S. 2985) for the purchase of a site and erection of a Federal building at Crisfield, Md.; to the Committee on Public Buildings and Grounds.

A bill (S. 2986) to regulate the licensing, registration, and operation of motor vehicles in the District of Columbia, and for other purposes;

A bill (S. 2987) to amend section 932 of the Code of Law for the District of Columbia;

A bill (S. 2988) relating to insurance companies in the District of Columbia;

A bill (S. 2989) to provide for the regulation and incorporation of insurance companies and to regulate the transaction of insurance business in the District of Columbia; and

A bill (S. 2990) for the regulation and control of fraternal benefit societies in the District of Columbia; to the Committee on the District of Columbia.

By Mr. JACKSON:

A bill (S. 2991) granting a pension to James Bell; to the Committee on Pensions.

By Mr. SAULSBURY: A bill (S. 2992) to increase the salary of the Vice President of the United States; to the Committee on Privileges and Elections.

By Mr. SHERMAN: A bill (S. 2003) for the relief of Jacob Barger; to the Committee on Military Affairs.

AMENDMENT TO THE TARIFF BILL.

Mr. BORAH. I submit an amendment to be proposed to the tariff bill, and ask that it be referred to the Committee on Finance.

Mr. PENROSE. The amendment should lie on the table. Mr. BORAH. Well, let it be printed and lie on the table.

The PRESIDENT pro tempore. To be printed and lie on the table is the usual order.

Mr. BORAH. Very well.
The PRESIDENT pro tempore. The proposed amendment will be printed and lie on the table.

AGRICULTURAL AND VOCATIONAL SCHOOLS AND AGRICULTURAL CREDITS (S. DOC. NO. 164).

Mr. JONES. Mr. President, I desire to say that our State is taking a great deal of interest in the agricultural and industrial movement in connection with public schools. At Waterville, a small town in a farming locality, they are not waiting for Government aid, but are following out a plan of their own under which they are consolidating their districts and providing for the building of a school, and arrangements are being made by which they will get control of land that they may use in their school work.

I have here a letter from one of the men who is very much interested in this matter to one of the officials connected with the office of public education in our State giving an account of what they are doing there and their plans. The letter contains many very valuable and practical suggestions. I know the gentleman who wrote the letter, and he is a very practical man, and I know that the suggestions contained in this letter if considered and followed will be of very great service in connection with this work.

I also have a letter from the same gentleman addressed to one of the professors of our agricultural college at Pullman with reference to the matter of agricultural credits, and telling how these conditions are taken care of and have been taken care of in that part of the community for a great many years. It also contains some extremely valuable suggestions along the lines of this important matter.

I ask that the letter of Prof. Thomason, connected with our State department of education, addressed to Mr. Rogers and his reply thereto, and also a letter from Mr. Rogers to the professor of the department of economics, Pullman College, Washington, may be printed in the RECORD and also as a public document.

The PRESIDENT pro tempore. The Senator from Washington asks unanimous consent that the document referred to by him may be printed in the RECORD and also as a public docu-ment. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

STATE OF WASHINGTON,
DEPARTMENT OF EDUCATION,
OFFICE OF THE SUPERINTENDENT OF PUBLIC INSTRUCTION.

Hon. A. L. Rogers, Waterville, Wash. MY DEAR MR. ROGERS: In my report to the State bankers' associa-tion in Bellingham August 7 I would like to refer to your great work in Waterville by way of illustration of the ultimate end and aim of the agricultural and industrial movement in the public schools. Would you, therefore, dictate me a letter outlining the Rogers-Wiley Waterville vision as you showed it to me last month? I should feel honored to receive such a letter from you in the near future.

Very truly, yours,

CALVIN C. THOMASON, Field Contest Organizer.

WATERVILLE, WASH., July 18, 1913.

Mr. Calvin C. Thomason, State Field Contest Organizer, Olympia, Wash.

Mr. Calvin C. Thomason, "Brite Contest Organizer, Olympia, Wash.

Dean Siz: Your letter of the 12th Instant received. Regarding the Dean Siz: Your letter of the 12th Instant received. Regarding the westing are endeavoring to introduce into the community the best and most up-to-date information of a helpful kind which there is the strength of the community of the strength of the third of the strength of the stre

wheat land, with a \$10,000 outilt of machinery and horses, to imp mmoditately into diversified farming. His evolution into changed conditions must be slow. He must feel his way or he will go broke. We propose that our consolidated community school shall solve these problems and prove what is the best practice before he is forced to go the state of the propose of t

FARM CREDITS.

WATERVILLE, WASH., April 19, 1913.

Prof. L. I. Brislawn, Department of Economics, Pullman College, Pullman, Wash.

Pullman College, Pullman, Wash.

Dear Professor: Your letter of recent date received. I have been dead dog-tired every night for the past week, having planted some 200 trees; hence delay in answering your letter. I have filled out the inclosed questions to the best of my ability, and according to the manner in which agricultural credits have been handled in this section. The system has been changing year by year since the pioneer days of 25 years ago; land values are becoming more settled; the possibilities of safe farming are becoming more definite, and therefore interest rates are gradually getting lower as the speculative conditions disappear. This is, at present, a one-crop wheat-producing country; one-half the land is summer fallowed each year; consequently there is but one pay day each year, and the farmer gets his credits on that basis. The whole system is inefficient and uneconomic. Very few of them have made much money outside of the raise in values of their land. They are all farming on too big a scale. Under the present system they are destructive as hell in their methods. They are going into debt, buying more land, gas traction engines, and 10-bottom plows. No

rotation or diversification of crops—just wheat, wheat, wheat; simply mining the soils and selling the surface of their farms. The greatest trouble with the average farmer—he is getting too much credit, and the bankers and merchants are due some consideration and also some condemnation in taking long chances in their desire to help the farmer and develop the country—even though they do it with the idea of making a profit. One great trouble is the American farmer is not an agriculturist but a speculator in lands; he values the soil to exploit it, and not for its true producing qualities. I need no better proof of this assertion than statistics from the Middle and New England States, where you can buy farms for less than the cost of improvements on them. I know plenty of men of wealth who would be glad to make farm loans at 6 per cent on 25 or 50 years' time under the amortization plan of retiring the principal and interest, but men with capital hesitate in taking chances on the ignorant, shiftless, and speculative methods of the average American farmer; the land would be worn out before the mortgage became due.

There is an immutable law in loaning money—the greater the risk the ligher the rate—and whenever the American farmer qualifies himself and his conditions the same as the German and the French farmer has done, he will get just as good accommodations, but not until then. Under the laws of compensation most everyone gets what is coming to him. The rich man gets his ice in the summer and the poor man gets his ice in the winter, but they all get ice. A bunch of farmers came into my office the other day kicking on the rates of interest. I informed them that not one of them was a genuine farmer; they were simply speculators; they demanded loans up to almost the actual value of the land, based on their earning capacity; they expected to scratch around on the surface of the ground to make expenses and no improvements, hoping and expecting that some sucker would come along in a year or two and give them twice what

town to buy his supplies. The silo will make a dairy country out of eastern Washington and double the values and producing qualities of the land. Some of the farmers are waking up to this fact and more will follow later on.

Long-time loans secured by mortgages on land should not be made except for the purchase price or permanent improvements on same. The farmers of this section can at all times get any reasonable amount on their lands on three or five years' time at 8 per cent, with a privilege of paying \$100 or any multiple thereof on the principal at any interest-payment period, and all papers generally come due in the fail, after harvest, for their convenience. So much for long-time credits.

Our bankers have always handled the farmers' short-time loans, and every deserving man has had all he required, and the rates have always been in keeping with the risk; for example, if Bill Jones wanted \$200 June 1 to pay for his spring work, he gave his note, due December 1, at 12 per cent. On September 1 if he wanted \$400 to carry him through harvest, he gave his note, due December 1, at 12 per cent. He got what he wanted when he wanted it—all he needed—and he virtually only pays 4 per cent per annum for his accommodations.

Since the first of the year our banks have reduced the interest rate to 10 per cent on short-time loans.

I have been in the general merchandisc business for over a quarter of a century and I know the eastern Washington farmer just as though I had been through him with a candle. I have let him get into debt and furnished the brains to get him out of debt, and for the past three years we have gone into practically a cash business. We did this as much for the sake of the farmer as for our own. If you would sit down with the average farmer in the spring and figure out the actual amount necessary to carry him development of the amount would be invested in things he never intended to spend it for, and he would be just as inconsiderate in paying it back promptly when due as he was in spending it, and t

money, and no changes in the laws will ever help him to get it otherwise. It is true that the farmer's paper is slow, awfully slow, sometimes. He can find more foolish excuses for not paying when due, such as the bottom fell out of the well, the chimney fell off the roof, or the bull jumped over the moon. In the meantime you have intermittent periods of night sweats through the fear that the bank examiner will slip around and catch you with an overstock of musty papers (a large part of which possibly he has already hinted you had better place in the morgue, in other words, charge off to profit and loss account), but by gathering an increased stock of patience, much solicitation and prayer, you drift along until you strike a bumper crop, and in the end you generally get your money. One of the best and most prominent responsible farmers in this section bought an automobile and stood me off two years on a \$450 grocery bill, and so it goes. But, take it all in all, the farmer is as good a risk as the merchant, artisan, and other classes, and is entitled to as good a rate as anyone. There is a new day coming for the agriculturist, his sons and daughters are awakening to the call of the efficient and scientific side of his work. The whole system is being made over. He will in time have a better appreciation of credits and will make better use of them when he gets them, but it is up to him as an individual to make good, and thereby establish a community standard for general lower rates and wider extended credits, and I would further remark that the farming classes should pick the mote out of their own eyes and study the scientific and efficient side of their geat calling before they criticize too deeply the business and professions of other classes.

Please excuse this hurried jumble of facts. The question of rural credits is worthy of much serious consideration.

A. L. Rocens.

CALLING OF THE ROLL.

The PRESIDENT pro tempore. The morning business is closed.

Mr. SMOOT. I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Sanator from Utah suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Fletcher	Myers	Smith, Md.
Bacon	Gallinger	Nelson	Smith, Mich.
Borah	Gronna	Norris	Smith, S. C.
Brady	Hollis	O'Gorman	Smoot
Brandegee	Hughes	Page	Sterling
Bristow	Jackson	Penrose	Stone
Bryan	James	Perkins	Sutherland
Burton	Jones	Pittman	Thomas
Catron	Kenyon	Robinson	Thompson
Chamberlain	Kern	Saulsbury	Thornton
Chilton	La Follette	Shafroth	Tillman
Clapp	Lane	Sheppard	Townsend
Clarke, Ark.	Lea	Sherman	Vardaman
Crawford	Lodge	Simmons	Williams
Dillingham	McLean	Smith, Ariz.	
Fall	Martine, N. J.	Smith, Ga.	14 ha leden
m. 10-10			

Mr. O'GORMAN. I desire to announce that the junior Senator from Ohio [Mr. Pomerene] is temporarily absent on official business

Mr. GRONNA. I wish to announce that my colleague [Mr. McCumber] is necessarily absent, due to illness in his family, and that he is paired with the Senator from Nevada [Mr. NEW-LANDS]

Mr. CLAPP. I wish to state that the junior Senator from California [Mr. Works] is necessarily absent. I will let this statement stand for the various roll calls to-day.

Mr. SHEPPARD. My colleague [Mr. Culberson] is neces-

sarily absent. He is paired with the Senator from Delaware [Mr. Du Pont]. I will let this announcement stand for the day.

Mr. THORNTON. I desire to announce the necessary absence of the Senator from Alabama [Mr. Bankhead], and also that he is paired with the junior Senator from West Virginia [Mr. Goff]. I ask that this announcement may stand for the day.

Mr. GALLINGER. I desire to state that the junior Senator from Maine [Mr. Burleigh] is absent on account of sickness.

Mr. SMOOT. I desire to announce that the junior Senator from Wisconsin [Mr. Stephenson] and the senior Senator from Delaware [Mr. DU PONT] are detained from the Senate on account of illness.

Mr. JONES. I desire to announce that my colleague [Mr. POINDEXTER] is necessarily detained from the Chamber.

The PRESIDENT pro tempore. Sixty-two Senators have answered to their names. A quorum of the Senate is present.

GOVERNMENT PROPERTY IN FOREIGN CAPITALS (S. DOC. NO. 163).

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was read and, with the accompanying papers, ordered to lie on the table and to be printed.

To the Scnate:

I transmit herewith a report from the Secretary of State, submitting copies of the dispatches received from the diplomatic officers of the United States, to whom were addressed instructions prepared with a view to carry out the resolution of the Senate of the United States dated February 18 last, requesting the Secretary of State, "through the diplomatic and consular officers of the Government, to ascertain the system of

taxing Government property in the several capitals of the leading countries of the world, a full and complete report on the subject to be transmitted to the Senate at the earliest practicable day."

WOODROW WILSON.

THE WHITE HOUSE, August 13, 1913.

INTERNATIONAL CONGRESS ON BILLS OF EXCHANGE (S. DOC. NO. 162).

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was read and, with the accompanying papers, ordered to lie on the table and to be printed:

To the Senate and the House of Representatives:

I transmit herewith a report by the Secretary of State covering the report of the American delegate to the International Congress on Bills of Exchange, which was held at The Hague in the summer of 1912, and at which the United States was represented by the authority of Congress.

WOODROW WILSON.

THE WHITE HOUSE, August 13, 1913.

THE TARIFF.

Mr. SIMMONS. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

The PRESIDENT pro tempore. The Secretary will proceed

with the reading of the next paragraph.

The Secretary resumed the reading of the bill at paragraph

197, page 56, line 11.

The next amendment of the Committee on Finance was, in paragraph 197, page 56, line 15, before the word "cent," to strike out "\{\frac{1}{3}\" and Insert "\{\frac{1}{4}\" so as to make the paragraph

197. Rice, cleaned, 1 cent per pound; uncleaned rice, or rice free of the outer hull and still having the inner cuticle on, § of 1 cent per pound; rice flour, and rice meal, and rice broken which will pass through a No. 12 sleve of a kind prescribed by the Secretary of the Treasury, ½ cent per pound; paddy, or rice having the outer hull on, § of 1 cent per pound.

Mr. BRISTOW. I should like to inquire upon what theory the reduction in the duty on rice is made from 2 cents a pound to 1 cent a pound.

The PRESIDENT pro tempore. To whom does the Senator

address his inquiry?

Mr. BRISTOW. The Senator in charge of the bill or anyone

who has that information.

Mr. WILLIAMS. Mr. President, that is rather a queer question accompanied by no motion of any sort. But the duty on rice was reduced 50 per cent. It was the hothouse cultivation of the Republican tariff, and we concluded that we could get a revenue from it by a reduction of 50 per cent and at the same time that that reduction would not destroy the industry. This cut of 50 per cent was made by the House, and the Senate committee coincided with the House's action, except in one respect. The Senator will notice that the House put broken rice and rice flour and rice meal passing through a No. 12 sieve at one-eighth of a cent per pound and the Senate committee raised that rate to one-fourth of a cent a pound. The reason of that was that rice meal or rice flour or broken rice is used only for brewing purposes. It is used in making beer. It is not a finished product, as some Senators might imagine from the name of it. It is a by-product of the rice.

It is used for this purpose, and the evidence convinced us that the great German rice mills had an immense amount of it on hand all the time. In Germany that Government, more careful of the health of the people than ours has been, forbids the brewers to use rice in beer at all. They are compelled, therefore, to export this by-product, and these people said that it would be brought here and absolutely destroy the home market for broken rice or rice flour or rice meal, and that, so far as our natural objection to that as Democrats was concerned, to wit, that the increase of the duty would make the price of the product higher to the consumer, it did not operate in this particular case, because neither a barrel of beer nor a glass of beer would sell for any more or any less; and we thought it quite a convenient way of collecting revenue from the brewers of the country by advancing it from one-eighth to one-fourth.

In the balance of our provision, as regards rice as used for human food, we reduced it to the very lowest possible point that we could. We did not put it upon the free list because, although a food product, we did not regard it as a basic food product for the American people with their habits of life.

Mr. BRISTOW. I see, as the Senator has explained, that the duty of one-fourth of a cent a pound on that quality of the product of rice or that product which is used by brewers is maintained at the same rate that it was in the Payne-Aldrich law, at one-fourth of a cent a pound.

Mr. WILLIAMS. You mean the broken rice?
Mr. BRISTOW. Yes.
Mr. WILLIAMS. Yes; it is maintained at the same rate, because it is entirely paid by the brewers and will not fall upon the consumer.

Mr. BRISTOW. I asked the question yesterday why the same rate should not be maintained on barley that the Payne-

Aldrich law maintained on barley used by the brewers.

Mr. WILLIAMS. We did not maintain the Payne rate on barley for the same reason that we did not maintain the Payne rate upon rice. We thought it would stand the reduction, in the first place, and we did not regard it as a basic article of human food, and therefore did not put it upon the free list.

Mr. PENROSE. Mr. President, it may be that one reason was that barley is raised in the North and rice in the South.

Mr. WILLIAMS. I do not believe that the Senator from Pennsylvania believes that that was the reason.

Mr. PENROSE. Mr. President, I was very much shocked to hear the Senator from Mississippi just now make a protection

argument. Mr. WILLIAMS. The Senator from Mississippi did not make

any protection argument. Mr. PENROSE. He said it would be disastrous to this product if unlimited foreign competition were permitted. He is the last Senator on this floor I would expect to hear such an argument from. I was astounded. The stenographer's notes will recite what the Senator said, that while he admitted that it was un-Democratic doctrine yet the fact that the tax was imposed upon the brewers made a kind of spotted protection in this instance legitimate. The Senator's language is there.

Mr. WILLIAMS. The Senator from Pennsylvania now and

then becomes facetious. He does not mean that.

Mr. PENROSE. I mean— Mr. WILLIAMS. Does the Senator from Pennsylvania mean

that this committee was guided by the fact-

Mr. PENROSE. I mean that the Senator from Mississippi deliberately informed the Senate that this by-product, as he called it, if admitted without any restraint or restriction into the United States would seriously curtail the market for the home product, and that therefore, although the doctrine was un-Democratic, yet as the tax happened to fall upon the brewers, he thought that perhaps a little incidental protection for the product of Louisiana, Texas, Georgia, and the two Carolinas might perhaps be legitimate in this instance.

Mr. WILLIAMS. Mr. President, if the Senator wishes to take that as his construction of what I said, of course, I can not help it; but what I said is there to be read by all men with intelligence enough to read, and I stand by just precisely what I did say, which was this: That we thought that we could get a splendid revenue from this article-an increased revenuewithout taxing the consumer. I said that; I did not say that that violated Democratic doctrine. I said, as against the argument which might be made that it would violate Democratic

doctrine, that that was the answer.

Mr. PENROSE. I hope the notes will be allowed to stand as they were taken down, and the Senator will be greatly sur-

mr. BRISTOW. Mr. President, I inquired yesterday, as the Senator from Mississippi will remember, why it was that the duty on barley was reduced from 30 cents a bushel to 15 cents a bushel, and I made the statement that barley was used by the brewers.

me brewers. The brewers are the purchasers of barley.
Mr. WILLIAMS. The difference, Mr. President, is that broken rice meal is used by the brewers alone, and barley is

used for very many other purposes besides brewing.

Mr. BRISTOW. The amount used for other purposes is prac-

tically negligible.

Mr. WILLIAMS. Barley is used a good deal for human food, and it is used a good deal for stock food as well, but we reduced the duty because we thought that it was a fair reduction in comparison with the reductions made in the balance of the

bill, and it removed that much tax.

Besides that, the Senator from Pennsylvania [Mr. Penrose] seems to think that when I say that an industry can stand a reduction I am making an admission or a concession to protectionism. I am not doing that; but there are a great many industries in this country which have been highly hothoused and as to which everybody knows that if we reduce the duty as low

as we would want to do we would put some of them out of The President of the United States in the campaign and the Democratic Party in its platform have said that they did not want to destroy legitimate industries. We reduced the duty on barley as low as we thought we ought to and left it at

the point where we thought it ought to be left.

Mr. BRISTOW. If the Senator from Mississippi will examine carefully the uses to which barley is put, he will find that practically all of it is used in brewing. There is some that is used, of course, but a negligible quantity, for other purposes than brewing. The duties, according to the handbook, that will be collected on barley as a result of this reduction will be \$300,000 per annum. I do not see just how the handbook author gets at that amount, because we collected last year \$830,000 of revenue from imported barley. That, of course, was paid largely by the brewers along the Canadian border; and according to the handbook we are to take off \$530,000 of revenue which has been paid. I do not think that it would make a glass of beer or a bottle of beer to those who desire to use it-and too many of our countrymen use it-cost any more, and the Government would be more than a half million dollars out, according to the figures here.

It seems to me that the same principle ought to have been applied to barley as is applied to the products of rice that are used by the brewers. I do not object to increasing the duty over the House rate from one-eighth to one-fourth. I think it is all right to do that. I think the reasons assigned by the Senator from Mississippi [Mr. WILLIAMS] entirely justify that

change in the bill.

If the Senator, as I understood him to say that he had, had examined carefully the rice industry in our country-and I think it is a very important one; I can not agree with him that it is a hothouse industry—he would find the handbook here shows that we produced of rice for 1910—the 1912 figures not being given-626,000,000 pounds.

Mr. WILLIAMS. I have all that before me.

Mr. BRISTOW. And that we imported 25,000,000 pounds for the same year. Now, where we produce 626,000,000 pounds

Mr. SIMMONS. Mr. President, the Senator from Kansas is wrong about that.

The PRESIDENT pro tempore. Does the Senator from Kansas yield to the Senator from North Carolina?

Mr. BRISTOW. I do. If I am wrong, I should be glad to be

corrected.

Mr. SIMMONS. The total importations last year, as shown in the last bracket of the handbook, were 216,000,000 pounds; while the total exportation was what the Senator gave, 626,-000,000 pounds.

Mr. BRISTOW. My attention was diverted for a moment. From what bracket does the Senator from North Carolina

Mr. SIMMONS. The last bracket. That is the total of the paragraph.

Mr. BRISTOW. That includes the importations of all of

Mr. SIMMONS. But the Senator from Kansas gave the total production, which is the same as that in the last bracket.

Mr. BRISTOW. Yes. Mr. SIMMONS. And the 626,000,000 pounds in the last bracket include everything. So the Senator from Kansas ought

to include the total importations in that bracket.

Mr. BRISTOW. If I am wrong in this, the Senator will correct me. I inferred that the production of rice and the different articles that are made from rice was from our own rice, but from what the Senator now says, I infer that rice is imported and then transformed into some of these other products. Is that correct?

Mr. SIMMONS. I am not able to answer that, but the total production, including rice flour and rice, is as the Senator gave it, 626,000,000 pounds. The total importations, including all articles in these brackets, amount to 216,000,000 pounds.

Mr. BRISTOW. If we have imported rice and then it has been manufactured into these other products, that, of course, would make the comparison which I made not an accurate one, but the handbook does not give the production of rice cleaned; it only gives the total production of the articles named in the

Mr. WILLIAMS. Mr. President, if the Senator will pardon me a moment, if he will turn to the fourth bracket he will find that there were importations of rice flour, rice meal, and broken rice which will pass through a No. 12 wire sieve, of 116,500,000 pounds in round numbers. Then, if he will turn to the total paragraph, summing up, he will find that the total importations of rice were 181,775,000 pounds, in round numbers, from which I do not think that an industry which is producing, in round

he will ascertain, by deducting one from the other, that the importations of cleaned rice, free rice, and paddy rice with the hull on, all put together, amounted to 64,500,000 pounds, in round numbers. The Senator can ascertain that by the simple process of subtracting one from the other. From that the Senator will learn that most of the rice imported into this country

was rice flour, rice meal, and broken rice for brewing purposes.

Mr. BRISTOW. But still—

Mr. WILLIAMS. And upon that we have kept the duty for the purpose of getting as large a revenue as possible with as

little burden as possible to the general consumer.

Mr. BRISTOW. As I said before, I approve that increase from one-eighth of a cent to one-fourth of a cent per pound for the purpose the Senator has stated. I think it is all right; I have no controversy on that point, but I think the Senator from North Carolina must be in error when he questions the accuracy of the figures here and my interpretation of what they mean. It seems to be that the production of 626,000,000 pounds given in Table 5 is the total production of rice in the United States.

Mr. WILLIAMS. Mr. President, if the Senator will stop and think for a moment he will see that there is no domestic production of broken rice or rice flour or rice meal in the proper sense. Our production is of the rice, and, then, as we render the rice edible in the mill these other things are by-products; so that the report refers to the amount of rice raised in the United States-in other words, rice in the hull.

Mr. BRISTOW. That is exactly my interpretation of the

figures.

Mr. WILLIAMS. Precisely.

Mr. BRISTOW. It was questioned by the Senator from North Carolina. My friend here the Senator from North Dakota [Mr. Gronna] has handed me a statement of the production of rice in the year 1911. It shows a production of 662,000,-000 pounds, which practically confirms the figures given in the handbook, being a few million pounds less; so that I think the Senator from North Carolina [Mr. SIMMONS] must conclude that the interpretation placed upon the importations as indicated in the table here by the Senator from Mississippi [Mr. WILLIAMS] and myself is correct.

Mr. SIMMONS. Mr. President, if the Senator will pardon me, I have here the official statement for the year 1911, which shows that the domestic production of cleaned rice-and it does not give the figures except for cleaned rice-amounted in that year to 637,000,000 pounds. It shows in the same year that the importations of cleaned rice amounted to 76,655,000 pounds, and of broken rice to 132,000,000 pounds, or a total of 208,000,000

Mr. BRISTOW. The junior Senator from North Dakota [Mr. GRONNA] informs me that the figures handed to me by were taken from the Agricultural Yearbook for the year 1911, and they give the total production at 662,000,000 pounds.

Mr. WILLIAMS. To what year is the Senator referring? Mr. BRISTOW. I was reading from a statement handed me

by the Senator from North Dakota, which says

Mr. WILLIAMS. I asked for what year. Mr. BRISTOW. For 1911. Mr. WILLIAMS. Well, the Senator from North Carolina was quoting from the figures for 1910.

Mr. BRISTOW. Yes. Mr. WILLIAMS. That accounts for the variation, without

further discussion.

Mr. SIMMONS. The handbook gives the figures for 1910, and I quoted a little while ago the figures for 1911.

Mr. BRISTOW. Well, there is no material difference in the figures-

Mr. SIMMONS. No; there is not.
Mr. BRISTOW. Which indicates that the production of rice for 1911 was more than for 1910 and more than for 1905, thus showing that it has been a growing and developing industry.

Mr. WILLIAMS. If the Senator will pardon me, the statistical record of the progress of the United States, the so-called Statistical Abstract, gives the production for 1911, which was what the Senator from North Carolina quoted. Now, from what is the Senator from Kansas quoting?

Mr. BRISTOW. I am quoting from a statement prepared by the Senator from North Dakota [Mr. GRONNA], taken from the

Agricultural Yearbook.

Mr. WILLIAMS. Ah, that merely demonstrates that the Census Bureau and the Agricultural Department differ.

Mr. BRISTOW. They differ; yes.

Mr. WILLIAMS. That is all. Nobody can tell which is right or wrong. Suppose we go on to the next paragraph.

Mr. BRISTOW. It is not a very material difference, of course.

numbers, 650,000,000 pounds of food a year, when our importations are from 17,000,000 pounds to 25,000,000 pounds, less than one twenty-sixth of the amount of our domestic production, can be properly described as "a hothouse industry." I think it is a legitimate industry. I believe that a duty which protects the development of an industry like that is justified. I believe that reductions in such a duty ought to be made when they can be made safely without impairing the prosperity or the proper development of the industry.

Mr. WILLIAMS. We thought so, too, and reduced the rate 50 per cent for that reason. We seem not to be differing with

one another at all; we are just arguing.

Mr. BRISTOW. I am very glad to know that; but I rose for the purpose of ascertaining, if I could, the reason for such reduction. As I was going to say awhile ago, if the authors of the bill from a careful investigation of the industry have concluded that a duty of 2 cents a pound can be reduced to 1 cent a pound with safety and without impairing the success of the industry or its prosperity or its proper development, I think it is a very proper reduction to make. I have not looked into it with a view of determining whether or not 1 cent a pound is sufficient and whether a reduction of 50 per cent is too much or whether it is not enough.

Mr. WILLIAMS. The Senator will find, if he will look at the figures, that we exported nearly a million dollars worth of

rice in 1912.

Mr. BRISTOW. Yes. Mr. BORAH. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Kansas yield to the Senator from Idaho?

Mr. BRISTOW. Certainly.
Mr. BORAH. The Senator from Kansas stated that he rose to find out why this reduction was made. Has the Senator

ascertained the reason?

Mr. BRISTOW. Well, yes; I think so. As I understand, the Senator from Mississippi says the reduction was made because the committee concluded that it could be made with safety to the industry

Mr. BORAH. But that the industry would still be protected by this duty.

Mr. WILLIAMS. And also by the reduction we would collect a very good revenue, and perhaps an increased revenue by in-creasing the importations.

Mr. BORAH. In other words, it is what is called a "revenue producer," but is in fact protection.

Mr. SMOOT. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Kansas yield to the Senator from Utah?

Mr. BRISTOW, 1-26.

Mr. BRISTOW. I do.

Mr. SMOOT. I want to say, in answer to the statement made by the Senator from Mississippi that this is a hothouse cultivation under a Republican tariff or system, that he must remember that under the Wilson bill, when the Democrats had the making of the tariff, they put a rate on cleaned rice of 11 cents a pound.

Mr. BRISTOW. I have no objection to the duty or to the paragraph as it is framed. As I said in the beginning, I rose for the purpose of finding the basis upon which the reduction was made; and if the committee, from its examination, is right in assuming that such a reduction can be made with safety, I think it is a proper one to make. So I accept the statement

of the Senator from Mississippi upon that subject.

I desire to say further that I believe that the Government has been thoroughly justified in imposing a duty upon imported rice for the purpose of developing the production of rice in our own country. I think the results which have come from such duties in developing the rice fields in Texas, in Louisiana, and in other portions of the southern section of the country have justified such a policy. I believe that such a policy should be maintained at a point as high as is necessary to preserve what we have and further encourage the growth of the industry;

but if the duty of 1 cent a pound is sufficient, I am satisfied.

Mr. WILLIAMS. Has the Senate amendment been voted

upon? The PRESIDENT pro tempore. It has not. The Senator

from Kansas has the floor. Mr. BRISTOW. Before taking my seat I ask that there may be printed in the RECORD a statement prepared by the Senator from North Dakota [Mr. GRONNA] in regard to the production of rice in the various countries. It contains a great deal of valuable statistical information.

The PRESIDENT pro tempore. Unless there is objection, that order will be made.

The matter referred to is as follows:

RICE.

Canadian rates: Rice, uncleaned and unhulled or paddy, free; rice, cleaned, 75 cents per 100 pounds; rice flour, 1 cent per pound.

Imports 1912.	Pounds.	Value.	Revenue.
Cleaned rice. Rice, uncleaned. Rice, paddy. Rice flour and meal.	17, 146, 551	\$634,446	\$342, 930, 52
	47, 546, 974	1,568,906	594, 337, 18
	490, 519	14,558	3, 678, 89
	116, 556, 683	1,967,276	291, 391, 82

Exports, 1912: Rice, 26,797,535 pounds, value \$851,402; rice bran, meal, and polish, 12,649,036 pounds, value \$118,985; rice hulls, value \$181,229.

Production of rice in 1911.

Brazil (1910)

Production in principal rice-growing States in 1912.

Bushels.

200, 000 11, 812, 000 9, 429, 000 3, 405, 000

Mr. SIMMONS. I wish to state that in 1909 there were only 610,125 acres in rice in this country. The Louisiana and Texas plantations had 555,104 acres of this, while the South Atlantic States of Virginia, North Carolina, South Carolina, Georgia, and Florida had an acreage in 1909 of only 27,000.

Mr. THORNTON. I wish to say that in Louisiana-and I understand the same is true all through Arkansas—the increase is becoming very marked. I know that in Louisiana there has been completed, just this year, a canal for irrigation purposes, without which we can not raise rice, at a cost of \$1,000,000. the capital for which, by the way, has been furnished entirely in the State of Pennsylvania. They have put in this year about 10,000 acres more; but when that canal is finished, which will be within a year or two, it will add at least 100,000 acres to the production of rice in Louisiana.

The PRESIDENT pro tempore. The question is on agreeing

to the amendment of the committee to paragraph 197.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 56, line 18, to strike out all of paragraph 198, in the following words:

198. Wheat, 10 cents per bushel.

Mr. GRONNA. Mr. President, on July 23 I offered an amendment to this paragraph. The product with which the paragraph deals is one upon which there has been a great deal of dis-

I realize that there is a difference of opinion as to whether or not the duty on wheat is of any benefit to the producer. I want to call attention to the fact, however, that when the reciprocity treaty was pending before this body we found almost unanimous opposition to it in the State which in part I have the honor to represent. The opposition was so strong, so pronounced, that the legislature of the State passed resolutions condemning that agreement, which provided for the placing of agricultural products on the free list. Not only that, but there has been testimony on the subject given to the Finance Committee of the Senate by delegations from North Dakota, South Dakota, and Minnesota. The delegation from my State was selected at a mass meeting where everybody interested participated. It was not a partisan meeting. Men from the different political parties were selected to go to Washington and enter their protest against that agreement. They were selected for their fitness, and not because of their affiliations with any political party. There were selected men who were known as Progressives and men who were known as "standpat" Republicans.

The members of the Finance Committee will remember that Mr. N. G. Larimore, one of the most honored citizens of my State, always a Democrat, appeared before the committee and entered his protest. Senators who were members of the Finance Committee at that time will remember the splendid arguments made by Hon. Treadwell Twitchell, Joseph M. Devine, and R. T. Kingman. Those three men are all farmers. The testimony of those men stands uncontradicted before the Senate. It was to the effect that on an average for at least four or five years the American farmer had been benefited to the extent of about 11 cents a bushel by the imposition of a tariff duty on wheat.

I have not heard anyone make the argument that when we produce more wheat than we can consume we expect to be greatly benefited by the tariff duty, because then, to a certain extent, the price of our product will be fixed by the world's price. But I make the statement-and I have made it on former occasions—that during the years when consumption has equaled or nearly equaled production the farmer has benefited by the

tariff duty on wheat.

I have been criticized for a statement which I was supposed to have made on the floor of the Senate only a few days ago, that the farmers of my State would have lost \$15,000,000 on wheat during the last year if this bill had been in effect. Mr. President, I have made no such statement. The Record speaks for itself; and to be sure that I do not misquote the RECORD, I will read what I stated. I read from page 2977 of the Con-GRESSIONAL RECORD under date of August 1:

Perhaps Senators on that side will deny that they have any grievance against the farmer, but I call your attention to the fact that in my State alone, where in 1912 we raised more than 143,000,000 bushels of wheat, with short crops in foreign countries, under the provisions of this bill our farmers would lose in a single year more than \$15,000,

My attention has been called to a quotation of the price of wheat at Winnipeg, based upon a given grade and the prices at Minneapolis and Duluth for the same-named grade, but the facts are that the Winnipeg grade is a higher standard grade, as I shall show later on.

When I made some observations on the agricultural schedule a few days ago, I said I did not wish to go into that phase of the matter and discuss it at length. I had some new matters that I wished to present to the Senate to show that, with one or two exceptions, every commercial country in the world which produces within her own borders a sufficient amount of foodstuffs for her own consumption protects that industry as well as she protects her manufacturing industries.

I deny that the American farmer has received less for his wheat during the year 1912 or 1913 than the Canadian farmer. and when I make that statement I propose to follow it with

proof.

I wish to call the attention of the Senate first to what was said in a speech made by a distinguished Member of the House from the State of Minnesota on Thursday, April 24, 1913. He

Gentlemen, we may disagree upon tariff rates; we may disagree upon tariff theories—you may be for protection, you may be for free trade, you may be for a tariff for revenue—but there ought to be no disagreement among us upon the proposition that, whatever rates are adopted, there should be no discrimination against any class of our people or against any section of our country. [Applause.]

I read further on from the same gentleman's speech, and I believe he is an authority on this question:

There were imported 2,684,381 bushels in 1912-

That is, of wheat-

and the Treasury of this country was enriched by tariff duties assessed thereon to the amount of \$352,245.46, more than a third of a million. During the same period from flour imported into this country we received in duties \$166,444.52.

I still quote:

I still quote:

Mr. Chairman, in view of this situation we did not care to deprive the Treasury of revenue. We purposed to make a deep cut anyhow. Wheat was not put upon the free list, but retained upon the dutiable list with a duty of 10 cents a bushel, a cut of 60 per cent in the rate. We believed that if flour were placed upon the free list he miliers, who are now able to sell \$50,000,000 worth of their products in other countries, would be able to protect themselves here at home from foreign competition; but in order, as we thought, to silence any charge that we were indifferent to the welfare of the flour makers, we introduced in this bill two provisions favorable to the miliers of the United States; first, the provision that wheat flour coming into this country from any country that imposed a duty upon American flour; so the reduction on wheat is from the age upon American flour; Germany has a duty upon American flour; Germany has a duty upon American flour; Germany has a duty upon American flour, Rearly all of the European countries save England have duties on American flour, and wheat flour coming from any of those countries into the United States will pay a tariff rate of 10 per cent. But certain gentlemen say: "Do not you know that just the moment this bill becomes a law Canada, through her Governor General or some other official who has the power, with one stroke of the pen will strike out the duty now

imposed on American flour, so that Canadian flour may come into the United States?" No, Mr. Chairman, we do not know it, nor does anyone else know it, but those acquainted with the history of recent tariff enactments have good reason to believe that Canada will do nothing of

Mr. President, I have quoted from a speech made by a distinguished Member of the House and a member of the Committee on Ways and Means of the House, the Hon. WINFIELD S. HAMMOND, from the State of Minnesota. I indorse most of what Mr. Hammond has said. I disagree with him as to the so-called countervailing duty.

Wheat, which was in paragraph 198, has been transferred to pages 155 and 156, and it is now paragraph 646. It has been placed on the free list with a proviso for a countervailing duty.

If it so happens that Canada does not take advantage of the American market for her wheat, it will not be because the Canadian farmer does not want it. We know that the Cana-dian farmer has for years looked with hungry eyes upon the American market. So I say if Canada does not accept the invitation that we have extended to her, and which you extend in this bill, it will simply be because Canada believes in a protective system and wants to protect her manufacturing industries and fears the competition of the American miller.

Before I leave the provision for a countervailing duty I wish to ask the Senator from Mississippi [Mr. Williams] for infor-mation as to the proviso in paragraph 646, on page 155 of the bill. The paragraph places wheat, wheat flour, semolina, and other products of wheat on the free list, with a proviso which

reads as follows:

Provided, That wheat shall be subject to a duty of 10 cents per bushel, that wheat flour shall be subject to a duty of 45 cents per barrel of 196 pounds, and semolina and other products of wheat 10 per cent ad valorem when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty on wheat or wheat flour or semolina, or any other product of wheat, imported from the United States.

What I would like to know from the Senator from Mississippi is this. I am sure he has given it a great deal of attention. My opinion is that Canada can permit the admission of wheat free and still retain a duty on flour.

Mr. WILLIAMS. If so, that was not our intention, and I will explain to the Senator why I think that his construction is

wrong.

Mr. GRONNA. I should like to hear the Senator on that

Mr. WILLIAMS. These are the words:

Mr. Williams. These are the words:
646. Wheat, wheat flour, semolina, and other wheat products: Provided, That wheat shall be subject to a duty of 10 cents per bushel, that wheat flour shall be subject to a duty of 45 cents per barrel of 196 pounds, and semolina and other products of wheat 10 per cent ad valorem when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty on wheat or wheat flour or semolina or any other product of wheat imported from the United States.

So if they impose a duty on either one of them they can not take advantage of the countervailing duty. It is a disjunctive

and not a conjunctive clear through.

Mr. GRONNA. I thank the Senator for the information. I am glad to know that if wheat is to be admitted free the products of wheat will also have to be admitted free; that one can not be admitted free without the other.

Mr. WILLIAMS. In other words, as long as they charge a duty upon our flour or on our wheat, either one, this proviso applies, or it applies if they charge a duty upon any product of

wheat at all.

Mr. GRONNA. It has been my belief that Canada would take advantage of this provision and place her wheat and products

of wheat on the free list.

I hope that I am mistaken in that belief, but at any rate it seems to me that it is not a wise policy for a great Government like ours to leave it to any foreign country to decide what the tariff rates or what the policy shall be in our country.

Agriculture; Bulletin 73 of the United States Department of Agriculture, entitled "The Cost of Producing Minnesota Farm Products"; the Census and Statistics Monthly, of Ottawa, Canada, for March 12, 1912; and Bulletin 27 of the United States Department of Agriculture, on Wheat Production in Argentina.

In addition to this, I had the benefit of all the data which the Tariff Board gathered upon this subject when it was in existence, and my conclusions are based upon the computations made by an expert formerly in the employ of the Tariff Board and recommended to me by the chairman of the Tariff Board

as especially proficient and reliable in every way.

It should be stated, Mr. President, in this connection that the cost of production can not be ascertained with as great accuracy for agricultural products as it can be ascertained for manufactured products, because, as is well known, the bookkeeping methods of the farm are not always accurate, and in some cases estimates have to be relied upon.

Mr. WILLIAMS. And the weather conditions change from time to time.

Mr. LA FOLLETTE. That is true. The cost of production will vary with different years; but the data which I have cover a period that ought to give approximately reliable results.

For my own part I want to advocate the same measure of protection for agriculture, where it will protect all, that I advocate for manufactures. I do not want to go much beyond that, Mr. President, although I would feel justified in not urging the logic of the difference in the cost of production between this and competing countries for agricultural products to the same degree as I would for manufactured products. In maintaining the protective tariff system, through all the years that have passed upon the broad grounds of public policy, the farmer has been compelled to bear a disproportionate share of the burden of protection. He is now coming to a period when there is some prospect that he will secure a direct benefit from protection on his staple Now that there is this prospect, it is not just to him that these direct benefits should be taken away; and in making computations of the effect of the tariff upon the farmer's produce I feel justified in being, as I say, somewhat more liberal in his case than in the case of other lines of production that have long enjoyed direct tariff benefits.

To make this as brief as I can, Mr. President, I will simply give the summaries of my tables and, perhaps, later, if I pursue my present intention, I may discuss the whole agricultural schedule and go more fully into the cost of production, not only as to wheat but as to other products.

An examination into the costs of wheat production reveals a higher cost per bushel in one section of this country than in the competing section in Canada. The north central section west of the Mississippi River produces wheat at a cost per bushel of a little over 60 cents. That wheat competes directly with the wheat produced particularly in the Manitoba region. The cost of production of wheat in the Manitoba region is a fraction over 54 cents per bushel, so that there is a difference in the cost of production in those two sections that lie almost side by side of approximately 6 cents per bushel.

Mr. SIMMONS. Mr. President, will the Senator permit me to make an inquiry for information?

Mr. LA FOLLETTE Certainly.

Mr. SIMMONS. I desire to inquire if in the Senator's estimate of cost in this country and in the Manitoba region of Canada account is taken of the difference in the value of the land in the two sections? Does that enter as an element at all in this calculation?

Mr. LA FOLLETTE. It does, Mr. President. I will give the items which have been noted in the table which I have before me. Commercial fertilizer is not taken into considera-tion except in the North Atlantic States of this country and in Nova Scotia. The preparation of the land, seed, seeding and planting, cultivation, harvesting, thrashing, the wear and tear of the implements, and land rental or interest are all taken into consideration. Land rental or interest would cover the question raised by the Senator from North Carolina.

Mr. President, according to the result of this investigation there is no wheat-producing section of this country that needs to be apprehensive of competition from Canada if a duty of 6 cents a bushel is levied on wheat. Indeed, as shown by this investigation, the cost of wheat production generally in this country is practically upon a level with the cost of wheat production generally in Canada. Competition with Argentina must, of course, be considered. The average cost of production there is approximately 52 cents per bushel. I have not at my command the transportation charge, which would afford some protection against Argentina wheat, but it is perfectly clear that if you are to give the farmer a fair competitive market, according to the interpretation of that term as I understand it to have been used here. you would allow a protection of substantially 6 cents a bushel. In the interests of all that great producing section which is given over almost entirely to wheat production, and which is brought directly into competition with the wheat production of the part of Canada to which I have referred, a duty of 6 cents

per bushel should be provided in this bill.

Mr. BORAH. Mr. President, I did not catch the cost of production in Argentina which the Senator gave.

Mr. LA FOLLETTE. Fifty-one and a fraction cents per bushel—nearly 52 cents. They produce wheat for nearly 10 cents a bushel less they are preduced in this country.

while I am on my feet, Mr. President, I am going to say just a word on the duties fixed on oats and on barley. The results of the investigation which I have caused to be made, based upon the same data and worked out by the same competent expert, show that the duty fixed on oats in the Senate bill measures almost exactly the difference in the cost of production between this country and Canada. The duty placed upon barley is relatively higher than the duty placed upon oats. A duty of 10 cents a bushel on barley would measure the difference in the cost of production to the farmers of that section of our country which requires a protection upon barley production; that is, the old Northwest section, taking in the Dakotas, Minnesota, and Wisconsin. That large area of barley production, according to the investigations which I have made, requires a protection of about 10 cents a bushel to measure the difference in the cost of production; so that the duty imposed on barley by this bill is, I believe, amply protective to the farmers of that section.

The duty imposed upon oats measures exactly the difference in the cost of production; and in like manner I sincerely hope that those who are responsible for the framing of this tariff bill will feel that they can in the case of wheat impose a duty of, say, 6 cents per bushel. When it comes to the consumer of bread, I do not think that by any process of reasoning or calculation such a duty will be found to have added a fraction to the cost of the loaf or of the sack of flour, and I do think that such changes will make the agricultural schedule on cereals harmonize. You will then have adjusted the duties on those three great products so that they will be on a competitive basis, and you will have removed a just cause for complaint as to this

Mr. STERLING. Mr. President, before the Senator from Wisconsin takes his seat, I should like to ask him if his estimate necessarily takes into consideration the greater production per acre on the new great wheat-growing lands in Canada?

Mr. LA FOLLETTE. Yes, sir; that is all taken into consideration. I can give the figures of the average production for those different countries, if it would be interesting to the Sen-

ator to have them.

Mr. STERLING. I would like to ask the Senator the further question: Does his estimate take into consideration the different conditions in regard to the acquisition of land in Canada in the great wheat-growing region and the conditions in the Dakotas, for example, and in Montana?

Mr. LA FOLLETTE. That is all covered under the item of land rentals and interest, and, if I understand the question of

the Senator, is a substantial part of the calculation.

Mr. STERLING. The Senator from Wisconsin will understand, I think, that lands which are devoted to wheat growing are more cheaply acquired in Canada than they can be in this country at the present time.

Mr. LA FOLLETTE. I understand that; and that would be included. I think, in the allowance made for investments.

Mr. STERLING. Further, may I ask the Senator if in his estimate the same course was pursued in regard to the production of barley, oats, and flax, as was applied in regard to the production of wheat, and were the varying conditions between the two sections, this country and Canada, taken into consideration?

Mr. LA FOLLETTE. The statistics relating to the cost of production that I have referred to in what I have said have been worked out in the same way, and I should be perfectly willing to submit the tables and have them printed; and I expect to do so later.

Mr. STERLING. Yes; I hope the Senator may.

Mr. LA FOLLETTE. I will say, however, that I have not referred to the difference in the cost of producing flax, and I have not before me at this moment the data covering that

Mr. BRISTOW. Let me inquire how many years this calculation covers?

Mr. LA FOLLETTE. It varies some. In some cases, for instance, in Lyon County, Minn., it covers the period of from 1902 to 1907. In the case of Canada they are for 1911; but some data which had been accumulated by the Tariff Board that

are not noted here were consulted. I should say that the calculations probably cover a period of several years.

Mr. BRISTOW. That would be very important, as the Sena-

tor will understand, because the weather and the conditions that obtain during the cropping season have a very great influ-

ence on the cost of producing a crop. Mr. LA FOLLETTE. That would have a very great influence in localities, but when you cover the production of a great group of States, when you take in the production of Canada, especially in the great Manitoba section, the variable weather conditions in localities balance and offset each other and are not so

Mr. BRISTOW. Take the cost of producing corn. year, for instance, in the States of Kansas, Missouri, Nebraska, and Oklahoma, because of weather conditions, it will be very much greater than it was last year.

Mr. LA FOLLETTE. Oh, yes; there is a section there which is at present suffering from a severe drought.

Mr. STERLING. From the investigation made by the Senator, is he able to state the average yield per acre in Canada as

compared with the average yield in the Dakotas?
Mr. LA FOLLETTE. Yes, sir. The average yield of wheat per acre for 1909 on the farms in the United States covered by the investigation of the Department of Agriculture was 17.2 bushels; for the North Atlantic States, 20.7 bushels; for the North Central west of the Mississippi River, 15.8 bushels; 12.59 bushels for Lyon County, Minn., where statistics seem to have been ascertained for a period of years and reported in one of the bulletins of the Agricultural Department; 22 bushels per acre for the whole country of Canada as against 17.2 bushels for wheat production on the farms covered by the Agricultural Department's investigation. For the Nova Scotia wheat-producing district the yield was 21 bushels per acre; for the Manitoba wheatproducing district it was 21 bushels per acre; for Argentina in 1902 and 1903 it was 15.98 bushels per acre.

Mr. BORAH. Mr. President—
The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LA FOLLETTE. I do.

Mr. BORAH. Do I understand that the statistics of the Senator from Wisconsin show the average production of wheat throughout the United States to be 17 bushels per acre?

Mr. LA FOLLETTE. Yes, sir; they do.

Mr. BORAH. May I ask from what source those statistics

Mr. LA FOLLETTE. From the Crop Reporter of the United States Department of Agriculture and is the yield per acre reported by the same agents who gathered the cost figures I

Mr. BORAH. The reason why I asked the question was that I have seen it repeatedly stated—I remember one statement in particular—that the average yield of wheat throughout the United States now is a little over 14 bushels per acre.

Mr. LA FOLLETTE. Yes; but this is in fact the average yield for the particular farms covered by the special investiga-

tion of the Department of Agriculture.

Mr. BORAH. May I ask if the Senator has the average yield per acre of European countries in the production of wheat?

Mr. LA FOLLETTE. No. This investigation covers only

Canada, Argentina, and the United States.

Mr. CRAWFORD. Mr. President, if the Senator will permit me there, did the Senator use the figures that were reported by the Tariff Board in regard to the production per acre? Mr. LA FOLLETTE. Those figures were in the possession

of the experts who were doing this work for me, and were taken

into account.

Mr. CRAWFORD. I find from some figures which I used in investigating this question once before, and in which I quoted from page 94 of the Tariff Board report, that according to that report the average yield of spring wheat per acre in 1910 in the United States was 11.7 bushels. That was spring wheat, as I say. In Canada, for spring wheat, it was 15.53 bushels. In the case of winter wheat, in the United States the average yield per acre was 15.8 bushels, and in Canada 23.49 bushels. That is found on page 94 of the Tariff Board's report.

Mr. LA FOLLETTE. I have not the winter wheat and the

spring wheat separated here; nor have I the report for the same year that the Senator produces.

Mr. CRAWFORD. This is 1910. Mr. BRANDEGEE. Do the figures that the Senator from Wisconsin has just given, stating that they come from the Crop Reporter, come from the Crop Reporter of 1912, or what is the latest number?
Mr. LA FOLLETTE. Nineteen hundred and eleven.

Mr. SMOOT. Mr. President-

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Utah?

Mr. LA FOLLETTE. I do.

Mr. LA FOLLETTE. I do.

Mr. SMOOT. In looking at the Statistical Abstract of the United States as to the yield per acre of wheat in the United States, I find that in 1908 it was 14 bushels; in 1909, 15.8 bushels; in 1910, 13.9 bushels; in 1911, 12.5 bushels; and in 1912, 15.9 bushels. That is as the abstract gives the figures.

Mr. GRONNA. Mr. President, I shall occupy the time of the Senate for only a few minutes further. I wish to thank the Senator from Wisconsin for the valuable information he has furnished the Senate. As I said a few moments are I shall.

furnished the Senate. As I said a few moments ago, I shall modify my amendment in accordance with the figures which the Senator from Wisconsin has stated to represent the difference between the cost of production in foreign countries and in the United States.

I said a few moments ago that I would furnish the Senate with some information in regard to the present prices of wheat in the United States and in Canada, but I have drifted away from that. I feel that I ought to present the information I

have for the benefit of the Senate.

I thought I knew, or was reasonably sure, that the Canadian farmer received no more for his wheat, quality against quality, than the American farmer. Of course we know that Canada had a surplus of wheat, for she raised about 200,000,000 bushels in 1912, and having only about 8,000,000 population she can not possibly consume over 50,000,000 bushels, or one-quarter of the crop. So it is obvious that three-fourths of the crop must be exported. It is true that with a crop of 730,000,000 bushels in the United States we are this year exporting wheat, more wheat than we have exported for a number of years.

Referring again to the price, I want to read a letter from a gentleman who deals in bonded wheat, Canadian wheat. He has a small elevator near the boundary line at a place called Sarles, N. Dak. The name of this man is George McLean. He says:

N. Dak. The name of this man is George McLean. He says:

I suppose they will refer to the Canadian markets, which will show, if anything, a higher price than ours during the last year; but it is not true that the Canadian farmer gets a higher price for his wheat than the American farmer. Last season I handled a lot of Canadian wheat in bond. It was graded at Duluth by a Canadian inspector. Without looking my books over, I would judge that 10 per cent of it graded No. 3, none higher; 40 per cent No. 4, and the balance a lower grade, which I feel sure would average from 15 to 18 cents lower than the same wheat sold for on this side.

This letter is from a gentleman who lives in an American town where American wheat is sold, but, of course, he buys

exclusively Canadian wheat.

I wrote a letter to a firm in Duluth on this subject. I do not like to give the names of concerns engaged in the business, I feel that perhaps I should do so, because otherwise it might be thought that the letter was anonymous. I wrote a letter to McCabe Bros., grain merchants, Duluth, Minn., and I have their reply under date of August 6, 1913. The letter savs:

I have their reply under date of August 6, 1913. The letter says:

We have your favor of August 4, which reached us to-day, and note your inquiry in regard to the Winnipeg quoted prices on wheat being higher than Minneapolis and Duluth for almost a year. We note what you say about Canada not having produced sufficient 1 and 2 northern wheat last year to meet their home requirements.

In reply would state we handled last season quite a large percentage of 2 northern wheat and some 1 northern, but our receipts were largely 2 and 3 northern wheat, with a fair amount of No. 4. We sold quite a large amount of this wheat during the months of March and April to be delivered in Duluth or Superior with the opening of navigation. We sold the 2 northern wheat on the basis of about 2½ cents under the quoted price of Winnipeg May wheat. The 3 northern we sold largely at 6 cents under the quoted price of Winnipeg May wheat.

We give you this information so as to help you to understand the situation. The contract grade in Winnipeg is 1 northern wheat; 2 northern applies on contract at 3 cents discount and 3 northern at 8 cents discount. No other of the lower grades apply on contract except so specified, but the rules of the Winnipeg exchange make the difference that 2 and 3 northern apply on future contracts. You can see by the differences than what the contract prices were calling for, especially on the 3 northern.

The real cause of the Winnipeg prices being above the American prices—that is, above the Minneapolis and Duluth prices—is that the Canadian grades are a higher standard than the Minnesota grades. The Canadian 2 northern would largely pass without any question as the Minnesota 1 northern, and quite a percentage of the Canadian 3 northern would pass as the Minnesota 1 northern. The foreign buyers take the Canadian 3 northern in preference, but not at very much of a premium; so this largely explains why the Winnipeg prices are above Minneapolis and Duluth prices, their standard of grades being considerably higher th

largely the cause of manipulation, only the higher grades applying on open contracts. The present prices for spot wheat in Winnipeg, we consider, is largely a question of manipulation, as we believe it is above an export basis; but, as stated, throughout the shipping season the Canadian wheat would sell at fair premiums over the Minnesota

the Canadian wheat would sell at lair premiums over the animal grades for export.

We hope we have made the matter quite plain to you, and if you desire any further information please write us, and we will be glad to go further into the question, as the situation does change from year to year and shows different conditions to confront.

I knew that Canada produced a sufficient amount of No. 1 wheat to supply at least her own market, but I wrote my letter in order to bring the answer which I received.

That shows, quality considered, that the Winnipeg or Canadian farmer has not received a higher price for his wheat than the American farmer. The Minnesota grade is made by a board of inspectors appointed by the governor of that State.

The grades are not made or fixed arbitrarily by any board of trade, as is being done in Winnipeg.

Referring again to the reciprocity treaty, I want to say that the men who appeared here before the Finance Committee presented what I think were facts which showed conclusively that in certain years, when consumption equaled or nearly equaled production, the American farmer had received some benefit from the duty on wheat. The Senator from Mississippi [Mr. WII.-LIAMS] was then a member of that committee, as he is now, and I think he will bear me out in my statement. As I said, we had a delegation from our State consisting of Joseph M. Devine, Treadwell Twitchell, R. T. Kingman, ex-Gov. Searles, and Mr. N. G. Larimore. Minnesota sent a delegation here, one of whom was Mr. P. V. Collins, who, while he is the publisher of a newspaper, is also a farmer, and is, I believe, well qualified to speak for the farmers. He testified to practically the same thing that the North Dakota farmers testified to. Col. Wilkinson, a man of excellent ability, who for many years was chief counsel for the Great Northern Road and who is now a farmer, appeared before the committee, and his testimony was, in substance, that if that agreement should go into effect the farmers of the two Dakotas and Minnesota would lose in a single year \$40,000,000. Those who know Col. Wilkinson will not say he is apt to make any rash statements.

I make these observations simply to show that what I have stated in the Senate has been based upon an honest belief, and not for the purpose of manufacturing anything either for home consumption or to mislead anybody in this country. I may be mistaken in my conclusions, but I am sincere in my belief that it will be a mistake to adopt an industrial policy that will place the basic necessities of life, the articles of food, upon the free

list.

I have said on this floor on former occasions-and I think perhaps the Senator from Mississippi and I agree on that more so than many of the other Senators in this body—that I do not so than many of the other Senators in this body—that I do not believe we can maintain a half-hearted policy. If we are going to have free trade in certain industries, I believe the ultimate result will be that we must extend free trade to all the industries of this country. The duty which has been levied upon barley in the pending bill, I am free to admit, is a protective duty. It gives the farmer a protection to the extent of 15 cents per bushel. The same is true with regard to flax, but most of the articles produced on the farm are placed on the free list.

The industrial conditions are such that this country can not hope to succeed on the half-hearted policy of half free trade

and half protection.

Mr. President, I have taken more of the time of the Senate than I expected to do, but before I take my seat I wish to ask unanimous consent to have published in the RECORD in connection with my remarks a table which treats on the question of

The PRESIDING OFFICER (Mr. ASHURST in the chair). The Senator from North Dakota asks unanimous consent to print as a part of his remarks a certain table on wheat. Is there objection? There being no objection, it is so ordered.

The matter referred to is as follows:

WHEAT.

Canadian rates: Wheat, 12 cents per bushel; wheat flour, 60 cents change rates: Wheat, 12 cents per bushel; wheat flour, 60 cents per barrel.

Payne rates: Wheat, 25 cents per bushel; wheat flour and semolina,
Dingley rates: Same as Payne rates.

Wilson rates: Wheat, 20 per cent ad valorem; flour, 20 per cent

Mr. WALSH. Mr. President, in the course of some remarks which I had the honor to address to the Senate a few days since I was interrogated by my esteemed friend the senior Senator from South Dakota [Mr. Crawford] in relation to the significance of certain figures which he quoted, said to have come from the report of the Tariff Board, showing a disparity during the year 1910 between the prices of wheat and barley in the Province of Saskatchewan and in the State of Montana, the advantage being in favor of the Canadian Province.

The inquiry was quite aside from the line of argument which I was then pursuing. I have not since had an opportunity to examine the figures. I made inquiry at the document room, and was informed that no report had been made by the Tariff Board upon the agricultural schedule. The Senator, however, has been kind enough this morning to call my attention to the source of his figures. I shall probably address myself to them a little later on.

I take this opportunity, however, Mr. President, of saying that no just deduction, as a matter of course, can be drawn from any disparity that may exist between prices in this country and a Canadian Province in any one single year, because in every famine year—that is to say, in every year in which the production in our country falls below the normal—there will obviously be an advantage in favor of our producers. So it signifies nothing, even though in price the disparity did exist on the occasion referred to.

Much of error follows from arguments based upon statistics applicable to a single year. Thus you will observe, if you go back a year or two, that there was a deficiency in our production of oats, and there was consequently a very large importaiton from the Canadian Provinces. Every year in which you find the importation to have been great, on turning to the record of production you will find that it was low here.

This matter received some consideration in the course of the debate upon the reciprocity question from the junior Senator from the State of Michigan [Mr. Townsend]. I shall take the liberty, with the permission of the Senate, to read in this connection from a speech delivered by him in the Senate on the 27th day of June, 1911. He was combating the idea that the farmer would lose anything whatever by the free introduction of wheat from Canada to this country, and he was meeting just such figures as have been offered by the esteemed Senator from South Dakota [Mr. Crawford] and the distinguished Senator from North Dakota [Mr. GRONNA], to whom the Senate has been listening. He said:

During the last 19 years wheat has fluctuated in price in Canada and in the United States. In 1890, 1891, 1897, 1899, 1902, 1903, 1904, 1905, 1906, 1907, and 1909 wheat was higher in the United States than it was in Winnipeg. In some of those years the difference was negligible. During the years 1892, 1893, 1894, 1895, 1896, 1900, 1901, and 1908 wheat was higher in Winnipeg than it was in Chicago. This shows that during 11 of the last 19 years wheat averaged higher in the United States than it did in Canada, and during 8 of those 19 years it averaged lower in the United States than in Canada. Now, if we apply the standard heretofore mentioned and say that the United States farmer would have lost on his wheat during the designated 11 years when wheat was higher in the United States than it was in Canada, if the United States tariff had been removed, shall we not be obliged to apply the same doctrine, per contra, and assert with equal certainty that he would have gained during the 8 years when wheat was higher in Canada than it was in the United States if the Canadian tariff had been removed?

The senior Senator from North Dakota [Mr. McCumerel] in-

The senior Senator from North Dakota [Mr. McCumber] invited the attention of the Senate some time since to the fact that for the last year or two wheat has ruled higher in this country than in Winnipeg. I, on my part, invited attention to the fact that for the last three or four months the ruling prices have been very considerably higher in Winnipeg than they have been in Minneapolis, Duluth, or Chicago.

But, Mr. President, there is another consideration in connec-

tion with this matter to which we may very properly devote our attention. It is asserted quite confidently by gentlemen now and then that whenever the tariff is removed, the price being assumed to be lower in Canada than in this country, our prices must necessarily fall to the Canadian level. That, as a matter of course, no one will care to assert who gives serious consideration to the question at all.

If you take two vessels, the one of very great capacity and the other of very inferior capacity, the level in the latter being the higher, and allow the water to flow freely from the one into the other through a pipe connecting them, who will assert that the level in the vessel of greater capacity will ascend to the original level of the one of lesser capacity? As a matter of course, the ascent in the one case and the descent in the other will be proportioned generally inversely to the relative capacity of the two vessels.

So, Mr. President, the production in this country being vastly greater in all cereals than that of Canada, even though a reduction would ensue, it would not by any means reach the level of the lower Canadian price, assuming it to be lower generally.

That idea was very forcibly and trenchantly expressed in the course of some debate by the senior Senator from the State of Ohio [Mr. Burrow], whose words I take the liberty to quote as they are found in the report of the debate on the 5th day of July, 1911. He said:

July, 1911. He said:

One fallacy which has received strong support in the debates upon this proposition is the claim that when prices are lower in a contiguous country free interchange will result in a fall to the same level of prices in the larger country across the boundary line. But quite to the contrary, in such cases there is an inevitable tendency toward an average of prices determined by the relative supply in the two countries. Take, for example, the case of wheat. The production in Canada for the year 1910 was 150,000,000 bushels; the United States produced 737,000,000 bushels, or very nearly five times as much. The aggregate production of the two countries is an essential part of the world's supply, nearly one-third of the world's entire production. The removal of the barriers between the two countries must mean a like scale of prices in the two countries. If the Canadian price is lower, it will rise very nearly in the inverse proportion which it bears to the total product of the two countries—five-sixths in the United States and one-sixth in Canada. That is, if wheat is 12 cents higher in the United States than in Canada, her price will be lowered only one-sixth, or 2 cents.

Evectly the same idea Mr. President was likewise expressed.

Exactly the same idea, Mr. President, was likewise expressed by the distinguished Senator from Michigan [Mr. Townsend], whose words I had the honor a while ago to quote, in the following language:

But, Mr. President, the opponents of this measure base their prophecies of disaster to the farmers upon the proposition that Canadian prices are lower than United States prices, and wheat is the overworked item of illustration. Now, I can see no good reason for arguing that because prices are higher in one country than they are in another therefore the country of higher prices will be injured by a removal of dutles. Some have also contended as though it was the business of the Government to insure selling prices. When before did the advocates of protection ever publicly announce that a tariff was inaugurated to increase prices? When infant industries which ought to have been established in this country were seeking to establish themselves it was the policy of the Republican Party to afford protection against the stronger and

better organized institutions abroad, and under those circumstances the Government was properly generous, but when such industries here have become established, then no one has intelligently urged that a duty should be retained for protection except in cases where, by reason of higher wages paid and other greater legitimate expenses incurred, the cost of production to our producers was materially greater than the cost to our competitors, and I at least have always had in mind that this system would induce competition among our producers which would eventually cheapen products to the consumer. And it has done so.

In other words, I have believed, and I still believe, that we should protect those, and only those, of our home industries which should exist here in which the legitimate cost of production is materially greater than it is with their competitors, and then only to the extent of the difference in such cost, and this means that cost and not selling price is the basis for fixing tariffs.

Likewise, Mr. President, the very distinguished and able

Likewise, Mr. President, the very distinguished and able senior Senator from the State of Iowa [Mr. Cummins], whose discussion of these matters is always illuminating, said in the course of the same debate that there was something about the breadstuffs of a country which forbade that the prices of such should be raised by the imposition of any duty. For accuracy I quote his language. On the 28th of June, 1911, he said:

Mr. President, I differentiate very sharply between what will probably happen and what ought to happen, but I think it is probably true that there is something that clusters around the foodstuffs of a country which precludes raising their price materially by means of a tariff.

Although I was unfortunate in not hearing all the remarks made this morning by the distinguished Senator from the State of Wisconsin [Mr. La Follette], I gathered from him that he entertains exactly the same idea, and that although he is in favor of the imposition of a duty of 6 cents a bushel upon wheat, it is not in the hope or expectation that it will elevate the price to the farmer, but rather that it is in the nature of what has been sometimes called a sentimental tariff, which would disarm opposition which might otherwise be engendered against the bill.

Therefore, Mr. President, it does not seem to me to follow at all, because there should be some disparity between the prices of cereals in this country and in Canada, that a tariff is necessary or that it will do the farmer one iota of good.

Mr. CLAPP. Mr. President, the remarks of the Senator from Montana [Mr. Walsh], who has just resumed his seat, will form the text for some remarks that I desire to make upon the subject of tariff revision.

I shall not at this time discuss the pending bill at any length. The situation in which we find ourselves with reference to the subject of wheat suggests to my mind that it may be proper to say something on this floor which may go to the country at large and possibly have some effect, because it is one of the striking peculiarities of this situation that almost every Senator who has addressed the Senate upon this tariff bill has practically admitted that nothing he could say would have any effect upon the bill itself. That is either an admission of the inability of the Senators to frame an argument which will command respect or it is an admission of a condition that makes a farce of debate, no matter how thoroughly equipped the debaters may be upon the subject under consideration. It is about that in connection with this very wheat schedule that I propose to say something this afternoon.

First, it is important to consider the character of legislation which is the subject of the discussion. There was a time in this country when there were three views upon the tariff. One was of a protective tariff, the other was free trade, and the other was the theory of a tariff for revenue. Primarily and early in the history of the controversy in this country the expression "a tariff for revenue" was used with reference to a duty upon those things which the country did not produce and consequently the tariff could afford no protection to it. A duty upon tea or coffee would be a strict revenue tariff.

Sir, in view of all that has been said as to a protective duty being a burden, there perhaps was some justification for the original idea of a revenue tariff, because under a strict revenue tariff placed upon those articles which were not produced here no one derived a benefit from that duty save the Government, and while it brought in by indirection revenues more likely to be squandered with a lavish hand than those revenues brought directly from the pockets of the taxpayers, it perhaps was justifiable.

In the course of time that great body of our people who denounced protection discovered that the protective policy in some form had got to be recognized in this country, and so there was a shifting from the original theory of a tariff for revenue upon noncompetitive articles to the placing of a revenue tariff upon competitive articles with incidental protection.

Sir, I have no hesitation in saying that that is a system absolutely indefensible, absolutely vicious, and for this reason: Every man, whether he be Republican, Progressive, or Democrat, must admit that to-day under the trust condition of this country, differing from what it was when there was competition in the country, a duty placed upon competitive articles is carried into the articles produced behind the protective wall. That being true, then, under that theory, a revenue tax is a tax where the Government gets \$1 and some private individual under the protection of the tax itself gets somewhere from \$5 to \$10. The estimates upon that subject, of course, differ.

Mr. SHIVELY. Mr. President—
The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Indiana?

Mr. CLAPP. Certainly, Mr. SHIVELY. Does not that characterize only in an ex-

aggerated degree any purely protective duty?

Mr. CLAPP. It does, sir; and that is the very point I am coming to, that either you must justify protection as a separate, direct, economic proposition or you must reject it in toto.

Mr. President, I will illustrate what I am saying of the

iniquity of a revenue tariff covering articles of competition, and from now on, that I may not have to repeat, where I speak of a revenue tariff I shall speak of the modern idea of a revenue

tariff placed upon competitive articles.

Last summer, I think it was, the gentleman who was conducting Mr. Taft's campaign issued a statement to the people of the country in which he showed the total amount of tariff revenue received at the customhouses of the Nation. I do not just recall the figures. It seems to me it was about \$500,000,000, which, divided by the accepted population of the country, left something like \$7 or \$8 to each individual; and he closed that statement with the suggestion, "Is there any patriotic citizen who would object to contributing seven or eight dollars a year toward the unparalleled prosperity of the United States?

Every Republican, every Progressive, and every Democrat ridiculed the idea that a man in this day and age could force upon the American people a belief that the only tax they bore by reason of a protective tariff was the tax paid at the customhouses. His statement was attacked from one end of this country to the other, and especially by our Democratic friends, and justly attacked. It was, sir, almost an insult to the intelligence of the American people to try to make an American citizen to-day believe that his only contribution under the protective tariff upon competitive articles, and they must be competitive if they are protected, is the little paltry sum that is collected at the customhouses.

Four years ago, I think it was, sitting here in my seat, I listened to an argument from the lips of the senior Senator from Georgia [Mr. Bacon], in which he went on and gave the figures to show the vast sum that private individuals and corporations collected from the people through a protective tariff as against the small sum that the Government received from the

protective tariff at the customhouse.

Now, that being true, Mr. President, it does seem to me that unless you recognize protection as a basic principle it is absolutely indefensible to tax the American people under a system where the Government gets only about one dollar from every six or seven dollars; and I commend the sentiment of the Senator from North Dakota [Mr. GRONNA] that sooner or later we have got to accept one horn or the other of this dilemma.

Mr. WILLIAMS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Mississippi?

Mr. CLAPP. With pleasure.

Mr. WILLIAMS. Does not the Senator from Minnesota recognize the fact that it must be later, and materially later? In other words, does not the Senator from Minnesota recognize, as a man of common sense, that although every line of what he has said is right, and although it is absolutely indefensible to have a tax system under which a part of the profits of the tax goes into the private pockets of individuals, nevertheless, having found a false and artificial condition to be amended and to be cured, no man of common sense would undertake to cure and amend it over night? In other words, if a man lived in an old house, a bad one, and wanted a new house, he would not blow up the old house with dynamite regardless of the inhabitants in it, but would, little by little, build a new house in place of the old one.

Mr. CLAPP. Yes; but while he is doing that-Mr. WILLIAMS. Now, one word more.

Mr. CLAPP. I will wait.

Mr. WILLIAMS. Does not the Senator recognize that even if the fight must ultimately come between free trade and protection, or protectionalism as I prefer to call it, that fight can not come right now, and that it is absolutely impossible to have a logical principle running through a bill which is an amendment of the present existing heterogeneous fiscal laws of the United States.

There is one more thought to be added to that. The Senator is very right in saying that a purely free-trade bill is a bill to lay import duties only upon noncompetitive articles; that a purely protectionist bill is a bill that puts duties only upon competitive articles, and that everything between those two is neither the one nor the other, whatever else it may be; and he is perfectly right in saying that in the early history of this country when we were a few little undeveloped States on the Atlantic coast there was a possibility of raising revenue by putting duties entirely upon noncompetitive articles, but to-day, stretching, as we do, from the Arctic nearly down to the Tropics, with California added, and Florida and all the balance of this great country from the Atlantic to the Pacific coast, we could not, to save our lives, find enough articles that were noncompetitive upon which to raise the amount of money that the Government needed. There is nothing that is noncompetitive with something we grow or make except the products of the Tropics, not even of the semi-Tropics, and perhaps a few furs from the far

Mr. CLAPP. The Senator has saved me considerable time, because the next step in my argument was to demonstrate that everyone to-day recognizes the necessity under one guise or another for a protective tariff. But before reaching that I want to take up the Senator's illustration of the house. the man ought to remain until he has another, but he ought not to take the old house as something that he can put before his neighbors as a necessity for help from them to build a new house when he is abundantly able to build a new house.

My objection to cloaking yourself behind the revenue-tariff proposition is that the man who stands out boldly for a protective tariff stands in the open, and if he goes too high, he can justly be condemned as sustaining a monopoly, while the man who is in the twilight zone of tariff for revenue may consciously or unconsciously—and I do not charge that it is all consciously done—but he may, he is prone, to insist upon duties that he otherwise would not insist upon if it were not that he is behind the shield of tariff for revenue.

There is something in the whole system of tariff itself that makes men cowards and which tends to dishonesty; and there is no phase, in my judgment, of the tariff situation that is so apt to produce that condition of mentality as for a man to shelter himself behind the shield of tariff for revenue. The man who stands for tariff protection stands out where you can attack him and attack his motive if he goes too high, but the man who stands for tariff for revenue, whether his motive be good or bad, his motive is beyond the reach of attack.

Mr. President, returning to what I said of the remarks of the Senator from Mississippi to-day, whether you call it tariff for revenue, protection, or whatever you call it, I think every man concedes that, for the time being at least, tariff bills must be framed with reference to their effect as protection, as de-clared in the Democratic national platform, "so framed as not to disturb business." There could be but one conclusion drawn from that declaration, and that was, call it what you may, the tariff would be so framed that it would not strike down an industry that could not stand without it.

It goes without saying-and certainly no Democrat will controvert the statement-that without any declaration whatever they stood against raising a duty where it was unnecessary to raise it. If that statement is correct, and I believe it is, it can be shown from the declarations of Democratic Senators; it can be shown by the very question which the Senator from Mississippi asked me; it can be shown by the Democratic If that statement is correct, then I submit, Mr. President, that it follows by the sledge-hammer logic of sequence that a tariff bill should be framed in a spirit of justice to all sections of this country. We have become so large, our interests are so numerous, our climatic productive conditions are so varied, that any bill framed in a spirit of justice and fairness must be framed with reference to the interests of the entire I do not believe any man will dispute that proposition.

The next proposition I make goes directly to the fundamentals of democracy, not only as a principle, but also as voiced by the party which has that name. Mr. President, no matter how good I may be, no matter how kindly disposed I may be, in that association called government the only way that you can get your just recognition is to have a voice in that equation.

That is fundamental, and no man can get away from it; it is democracy as a principle, and it is democracy as a political declaration.

This being true, I undertake to say, sir, that the system which has prevailed in the past-and surely no man can charge me with partisanship to-day, for I stood by this same desk and denounced this same system four years ago-the system which has prevailed and does prevail to-day is undemocratic considered from the standpoint of the principle of government or the attitude and declarations of a political party.

Mr. President, no matter how good or how pure the motives of the Senator from Maine [Mr. Johnson] may be, in order that the State of Wyoming shall have her fair distribution in the benefits of the association of government it must be admitted that Wyoming must have representation in that distribution. It is no reflection upon the Senator from Maine; it is based upon the eternal principle that, in the inherent weakness of human nature, the only way that men can have their rights is to be clothed with power in the distribution of the benefits of the association from which the rights are derived.

If that be true-and I do not believe any Senator here will gainsay it-let us take and analyze the genesis of a tariff bill, whether it be the Payne-Aldrich bill or the pending bill. party makes a declaration. The Republican Party in 1908 declared in favor of a tariff that should measure the difference in the cost of production between this country and abroad.

WILLIAMS. Plus a profit.

Mr. CLAPP. Plus a reasonable profit, which meant absolutely nothing, because both men, if they remain in business, must somewhere secure a reasonable profit. Why that was put there the Lord in his infinite wisdom only knows, for if there ever was an absolutely meaningless expression it would be in an economic discussion to say that each person must be entitled to a reasonable profit. Men will not continue long in business without it

Mr. SHIVELY. Mr. President, was not that declaration in favor of a reasonable profit plus all the costs of the difference between production at home and abroad the real substance of

that plank of the Republican platform?

Mr. CLAPP. Well, that is just what I am going to discuss, that the American people never clothed former Senator Aldrich nor any two or three Senators with the authority to say what that plank was. They sent a number of men to this Chamber to interpret that plank. That plank was adopted; it was the voice of a great political party. We come into the Senate Chamvoice of a great political party. We come into the Senate Clber here with a proposed tariff bill, and what do we find? find the chairman of the appropriate committee-who in that instance was a Republican chairman and in this instance a Democratic chairman—gathers a few of "the faithful" about him, who finally agree practically on a tariff bill. Then he must have a majority of the majority side of the committee, and he must give something here and there to get that.

Mr. SHIVELY. Mr. President—

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Indiana?

Mr. CLAPP. Certainly.
Mr. SHIVELY. Who does the Senator from Minnesota mean when he says "a few of the faithful"? That is a very vital point in the discussion.

Mr. WILLIAMS. We submitted this bill to all the faithful in

caucus.

Mr. CLAPP. Oh, I will get to the submission, and I will describe the bloody encounter there the night their own caucus was held, when I looked in vain for an ambulance corps. I mean a faithful few" one of two conditions, either those who are bound so closely to the chairman as to be coordinated with him in sympathy, or those who in their environment may be forced to a coordination of sympathy and purpose with the chairman. The chairman gets this handful, with here and there a sacrifice of something to some individual; he finally gets a majority of the majority, consisting, perhaps, of six or seven Senators, and, lo and behold, the party has spoken! The party pledge as interpreted by five or six men must be kept at every hazard. Of course, getting this majority of the majority brings the majority side into line, and from that time on there is no more question; to cross a "t" or to dot an "i" is party

Then a caucus is sometimes held. Four years ago the grip of Senator Aldrich upon this organization was such that he did not even tender us the compliment and farce of a caucus, having sufficient power in the committee to make that dominating as a party measure; but sometimes caucuses are held.
Mr. SMOOT. We never held caucuses.

Mr. CLAPP. Well, there has not been a caucus, I think, among the Republicans for-some time. I would not attend a cut-and-dried caucus of any party. Much as I prize my seat in this body, I will never consent to sacrifice the convictions, the purposes, and the interests of my constituents by putting my neck into the yoke of a cut-and-dried caucus; and I am not going to discuss other kinds of caucuses, because there are no other kinds of caucuses.

A caucus is held, and then the caucus must stand by the committee. The committee started with just a bare majority of made and grow. The trouble is that we ought not to regard

a majority, declaring a party policy, carrying the caucus with them until the bill comes into the Senate, and from that time

on no man must raise his voice against it.

I have heard a great deal about the awful, sanguinary struggles that take place in some of these caucuses. I have seen no evidences in canes, crutches, or other implements used by disabled individuals in getting about; I have seen no signs of disfigurement that would seem to follow in the wake of such a

fight as I have sometimes heard detailed.

Mr. President, the fight that two or three men make against a cut-and-dried party caucus reminds me of an incident that occurred when I was a boy. We had a man in our town, one of the last of that type of giants who in the days of the keelboats were so plentiful in the Middle West, a great, powerful man, so powerful that when one day a man tried to shoot him with a rifle he took the rifle away from him, naturally grabbed it by the muzzle, and actually swung it about a live oak that stood near and bent the rifle barrel. The old man had a boy about 12 years old. The boy's name was Dan. One morning Dan came to school, and I noticed that he had evidently put in a sort of hard night. I asked him what the matter was. He said, "You ought to have been down to the house last night. The old man and I had the goldarndest fight you ever saw in your life"—a 12-year-old boy fighting a giant who could whip a rifle barrel about an oak tree! I am reminded of that when I hear of these fights that are made in caucuses.

Mr. President, here is what I am coming to, that it is undemocratic in principle and politically. By this process you not only absolutely eliminate from all consideration in this bill the representatives of those States who are not of your own party, but you practically disfranchise the representatives of your own party. In framing a bill affecting the interests of 90,000,000 people, under a theory of government, coordinated and worshiped by the Democratic Party, which gives to each State its two Senators, the Senators from these States are

disfranchised.

Four years ago the great State of Iowa, a Republican State, had no more voice in framing the Payne-Aldrich tariff bill than had the State of Alabama, and less than had the State of North Carolina, because under a condition of disinclination to wear yokes which then existed among certain gentlemen on this side it was necessary sometimes for the Republican leader to get some votes outside the camp to sustain the party measure. The Democratic Party has not found itself put to that stress as yet;

but I want at this point to refer to another matter.

During the consideration of the Payne-Aldrich bill certain Senators who were in the Republican Party made up their minds that neither Mr. Aldrich nor the President nor any other coterie of men were the party; that the party was that mass of the electorate stretching from one ocean to the other, and that they should be heard through their representatives in the equation out of which a tariff bill for 90,000,000 people should come. They labeled us by various designations; but what I was going to remark was that at that time there was a tendency on the part of some of our good Democratic friends to eulogize that character of heroism which would warrant and sustain men in running counter to the dictates of a few political party leaders. It occurred to me then that that would be something that would come home to roost some day, because, in the passage of that bill, in the iniquities of that bill, which while we were fighting the trusts of this country, contained a proposition to tax, corporations for the privilege of being corpora-tions, and then exempted the worst form of corporations, the trusts and holding companies, anyone could see then that, unless that body of men of which the then chairman of the Finance Committee was a type, could be presented to the American people as disassociated from the Republican Party, the Democratic Party in four years would revise the tariff. That was the logical sequence, and those to-day who regret and deplore the fact that the interests of this country are menaced by a Democratic revision have only to thank the men who, with ruthless hands, drove a bill through the Senate and through Congress which caused the American people to revolt.

As I anticipated al! that four years ago, it was easy to see then that, if there came a Democratic majority, some of our Democratic friends who had so applauded this particular phase of heroism that results in defying party leadership, might be very seriously embarrassed in their own situation; and I am afraid before the completion of this bill, when we get to a provision which I am yet to discuss, we are likely to meet that

embarrassment.

Mr. President, of course we have parties; we are bound to have parties. Men who believe along a general broad line of opinion coordinate themselves together, and thus parties are

party as a master nor as a fetish; parties should be one of the instrumentalities of free government and not one of the weapons with which every fundamental principle of free government may

be defeated in defeating representation.

I speak of representation; and we hear a great deal said today about representative government. There never was and there never will be such a thing in this country as representative government per se; that is, it always comes second; it comes as a sequence. Representative government did not give birth to democracy, so far as our people have progressed along the lines of democracy, but in their moving along the line of democracy representation came as an incident; in other words, 90,000,000 of people can not meet in this or any other assembly and frame or pass a tariff bill; they must send representatives, not that representation is at the basis of the theory of government, for it is a mere incident to the theory of free government and democracy. So, when I use the terms "deprived of representation" and "defeating representative government" I employ them in that sense.

Recognizing, then, that the tariff must under any phase that you may choose to name it, for the present at least, recognize the principle of protection-

Mr. WILLIAMS. Oh, no.
Mr. CLAPP. Well, "involve protection," if the Senator quarrels with the use of the term "recognize."
Mr. WILLIAMS. That is a great deal better.

Mr. CLAPP. The Senator will agree with me, however, that in the involved protection there ought to be an effort to make it just and fair to all sections and to all the people.

Mr. WILLIAMS. Mr. President-

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Mississippi?

Certainly.

Mr. WILLIAMS. I think the Senator has used the right word. Any tariff bill must necessarily, confronted with the conditions with which we are now confronted, involve a certain degree of protection, and whether you call it protection for itself or protection incidentally makes no difference. But I do not like to talk about distributing benefits; I would prefer to say burdens.

Mr. CLAPP. The benefits and the burdens should be fairly distributed.

Mr. WILLIAMS. One moment. Our duty, from our standpoint, is to make it involve just as little protection as we can. The Senator a moment ago exposed, with a power of analysis that is admirable, the viciousness of protectionism, in that for every dollar that it gives to the people in the aggregate in their Treasury by taxing the people individually it gives another dollar, or, perhaps, many more dollars, to some other individual by taxing the rest of the people individually for a special benefit

Mr. CLAPP. Somewhere between five and ten dollars. Mr. WILLIAMS. Whatever it is depends upon the particular

rate and the particular product.

Mr. CLAPP. Yes; on the rate and the article.

Mr. WILLIAMS. The Senator has exposed that which is the cardinal, fundamental vice of the whole system; and yet it seems to me that he is about to draw the inference that, when there is less of the vice of protectionism in one bill as compared with another, the bill with the least vice in it is the most vicious because it is the least logical. That, I confess, I do not understand.

Mr. CLAPP. I have not reached that point, have I?

Mr. WILLIAMS. No; but the reason I said that was this: The Senator has said that a bill that was drawn up upon purely protective ideas could be defended and that a bill which involved items of protection without being drawn on the protective principle could not be defended, or, so I understood him to say, in substance

Mr. CLAPP. I did not say so. I did not say that a bill drawn up on purely protective lines could be defended, although for the present it would have to be borne with. What I said was that when a man stood for protection, if he would not be fair, you could attack his motives, while you could not get at the motives of the man who shields himself behind a tariff for revenue.

Mr. WILLIAMS. What led me to that conclusion was this: I understood the Senator to say that the only two kinds of tariff bills that could be defended were a bill drawn upon free-trade lines taxing noncompetitive articles and a bill drawn upon protective lines for the purpose of protection.

Mr. CLAPP. Yes; dealing with the fundamentals. Mr. WILLIAMS. The Senator says that a bill drawn upon protective lines for the purposes of protection can be defended, whereas a bill drawn for the purpose of getting as far as pos-

sible away from protective lines, whose protection, as nearly as you can make it, confronted with the actual conditions, is purely incidental, can not be defended.

Oh, Mr. President, I did not say it could not be defended; I said the vice of it is that if you plant yourself upon the proposition that it is for revenue, ignoring protection, you are taxing the people millions for the thousands the Government receives, and that there is a temptation all the time to shield oneself behind the claim of tariff for revenue.

Mr. WILLIAMS. If that is all the Senator means, I agree with him about that. I, for one, have never said, and will not say, that this bill or any bill that we could draw up now-and everybody knows that I could not help saying that in ordinary frankness—that neither this bill nor any bill that we could draw up now should übernacht, as the Germans say, overnight, undertake to rush down a waterfall from one level to another; no bill could possibly be drawn up so as not to involve any protection at all. Therefore, I have never said, and do not propose to say, that this bill is clear through, from beginning to end, a tariff for revenue only. All I have said is that it goes as far in that direction as we dare to go without-being confronted as we are with actual conditions-destroying men who have been put by the Government in a position where they must be ruined or else gradually permitted to come down. If a man is a hundred feet high, you can go up and let him down gradually, but if you go up and thereby pitch him down you will kill him

Mr. CLAPP. Nobody is contending for pitching him down. Mr. BORAH. Mr. President—

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Idaho?

Mr. CLAPP. I yield to the Senator from Idaho.

Mr. BORAH. If the Senator from Mississippi is entirely logical in his statement, it was the deliberate design, as I understand, of the framers of this bill to kill the wool industry.

Mr. WILLIAMS. Now, Mr. President, I think the Senator from Minnesota [Mr. CLAPP] and I have been having a rather candid heart-to-heart talk. I do not think the Senator from Idaho [Mr. Borah] has contributed any light to it in that sense.

Mr. BORAH. Perhaps not. Mr. WILLIAMS. The Senator from Idaho assumes in that statement that we believe that this bill will kill the wool producer. We do not believe that. One of the very first things that we have to do when we begin to lower a tariff which is upon a highly artificial level is to put the raw materials of industry, which are the necessities of industry, like the necessities of life, at the lowest possible rate not to destroy industrially the people engaged in it. We have thought, and I think and sincerely believe, that we will not destroy any industry in this country by putting wool upon the free list, although I frankly confess that we will reduce to a considerable extent the profits of the woolgrower, because, if we did not reduce those profits, we would not lower the price of wool.

Mr. CLAPP. Mr. President-

Mr. WILLIAMS. I beg the Senator's pardon-just one more second, because I must answer this.

Mr. CLAPP. Then the Senator must answer you. That is

the trouble.

Mr. WILLIAMS. So that the Senator's assumption, as far as wool is concerned, is not an assumption that is accepted by It may be that putting some product upon the free list in this bill will destroy the industry. If that be true, then as to that particular product we have simply traveled too fast and too quickly. I do not say every paragraph in the bill is perfect.

Mr. BORAH. Mr. President-

Mr. CLAPP. Mr. President, I have no objection at all to being interrupted by inquiries or even by an incidental suggestion that may throw light upon the matter I am discuss-I believe in debate instead of these high-school graduating exercises in the Senate. At the same time I do not care to have all the other matters discussed. If the Senator simply wishes to ask a question or to make a suggestion, I will yield.

Mr. BORAH. No; I simply thought I would direct the attention of the Senator from Mississippi to the sugar schedule, upon which he expressed himself a year or two ago, and see if that was a candid presentation of the principles of this bill.

Mr. CLAPP. I know one Senator who, I fear, is perhaps overloaded on sugar. We will reach him in a little while, and that will relieve the Senator from Mississippi.

Mr. WARREN. Mr. President, will the Senator from Minnesota allow me to ask the Senator from Mississippi one question?

The PRESIDENT pro tempore. Does the Senator from Minnesota yield to the Senator from Wyoming?

Mr. CLAPP. Is it in harmony with the subject of this argu-

Mr. WARREN, Entirely so?

Very well.

Mr. WARREN. A moment ago the Senator referred to the wool industry. I ask the Senator in all fairness, along the line of his argument about not pitching a man from the top to the bottom, if it would not be far safer and far more friendly to a deserving industry not to take a highly protected industry and throw it to the bottom, as has been done in the case of wool? Why not leave it, as the House started to leave it, at some point between the present tariff and free wool?

I want to say just one word further. The Democratic Party would have been entirely within its platform and its indorse-ment of bills of which it has heretofore approved had its members here fixed the rates of this bill at some point between the

present tariff and free wool.

The Senator says he does not believe the passage of this bill will destroy the industry. There are a great many people who believe it will, and perhaps among them are those who have had as much experience in the business as the Senator has had. But surely it would be safer, it would be less sectional, and, if I may say so, less partisan and less occupational, if the Senator had treated the industry of woolgrowing like the others. He wishes to have the wearer of clothes procure cheaper clothing. Why not divide it, and let the farmer have a little of the protection incidental to a revenue tariff, instead of the manufacturer having it all?

Mr. WILLIAMS. The Senator is asking a question which it

will require a speech of half an hour to answer, and the Senator knows it. Of course I can not take that out of the time of

the Senator from Minnesota.

Mr. CLAPP. Mr. President, I will answer it. Mr. WARREN. I will ask the Senator from Mississippi to answer it at some other time, then.

Mr. WILLIAMS. Yes; I will, in the course of time.

Mr. CLAPP. I will answer the question for the Senator from Wyoming. If a tariff bill should come into the Senate and the party lash on each side were withheld, we could get a bill with a fair equation that would represent all sections of the country. It is the system that gave us the Payne-Aldrich bill, with all its abominations. It is the system that is giving us this bill, with whatever abominations it may have. It is the system I am discussing. Abolish the system and you will have fair leg-

The Senator from Montana stood in his place the other day and proclaimed that this bill had been framed in the interest of all the country. Did all the country commission the Senator from Montana to frame a bill in the interest of all the country? No. Under our form of government-and we will stand up to the last man in defense of it-this country was divided into sections, in order that Senators from other States might enter into the benign purposes of any one Senator who wanted to give

the country a tariff bill fair to all.

In saying this to the Senator from Montana, believe me, my remarks are not personal. The people of the country no more commissioned you than they commissioned the Senator from Rhode Island, Mr. Aldrich, four years ago to say to 90,000,000 people what they should have and to say to millions of voters what their party pledge meant. That is the system I am attacking here. It is unrepublican, undemocratic, and violates the cardinal system upon which free government is founded, as I have said before, namely, that if you are to have your rights in an equation with me the only way you can be sure of your rights is to have a voice in the making of the equation.

But Senators say, "Oh, we never would get anywhere." have been now years and years in getting somewhere, and where are we to-day? It would take longer, of course, to frame a tariff bill if it should come in here, and Senators, free from the tyranny of party and the tyranny of caucus, were at liberty to vote as they saw fit. But when you got such a bill no man could stand on the floor and say that you had overridden the desire and the representation of a State. It would be an equation, and that kind of a bill would last a few years. I am very fearful that this one will not. There is not wisdom enough in any little handful of men—I care not who the men are—to frame a tariff bill to adjust the relations of 90,000,000 people and avoid those unconscious and unintentional conditions that will result in a revolt against it. That was the trouble with the Payne-Aldrich tariff bill four years ago; it was this arbitrary, dictatorial spirit that undertook to ride down and ignore the rights of the people in this broad equation.

It has been said that the men who fought that bill fought it in order that they might be before the American footlights. Did Jonathan P. Dolliver, known from one ocean to the other, have to incur the risk and the political danger of facing the opposition of an administration to gain a view from the American northern border have stood shoulder to shoulder in the years

people? Did his colleague have to do it? Did that man from Kansas, who years ago earned the encomiums of the Nation in unearthing fraud in the Post Office Department, have to fight a President and a coterie of political leaders in order that the public might know of him? Did that man from Wisconsin, battling through the years in his own State until he built there a condition that makes Wisconsin the Mecca for students from all over the world who want to study government, who has raised his voice from ocean to ocean in the great fight for civic righteousness, have to defy a President and a handful of now discredited political leaders in order that he, too, might occupy and get his share of the public vision?

No, Mr. President; it was a fight not for party supremacy, but a fight for service-service for the few on the one hand and service for the many on the other. It discredits the intelli-gence of the man who forced that bill through the Senate four years ago to say that he did not know what he was doing and why he was doing it. He knew well his purpose; and it was not a mere fight for party leadership. It was a fight for service, and that phase of the service won in that contest; and the American people rebuked it at the polls, as every man who knew anything of the American people knew they would do

when the opportunity came.

My Democratic friends, do not flatter yourselves that you are the choice in your administration here of the American people. I do not say it to detract from the great credit that is due your leader in the White House—a man whom I honor and respect; a man whom I was glad to see your party nominate under conditions that for four years had insured to the American people a victory for the Democratic Party unless those who fought this battle four years ago could discredit the false leadership of the Republican Party. I speak, then, in no spirit of reflection when I say that he is not the choice of the American people as expressed by their ballots. I believe to-day he has the love and confidence of the great rank and file of the American people. I want to take this occasion to say that I do not share in any effort, here or elsewhere, to embarrass him in his present delicate situation. While I would put a stop to Presidents dictating to Senators as to what shall go into bills, I would leave the President alone to deal with the delicate situation in which he finds himself to-day. I believe he will deal with it satisfactorily. I believe he will find a solution for the problem, for he has shown wisdom and circumspection in his high office. So when I say he is not the choice at the ballot box of the American people I mean no reflection upon him.

What did the American people say at the ballot box last They said they did not want and would not stand for a tariff measure framed in the spirit of service to interests, a tariff measure which, while it would place a tax upon corporations for the privilege of being corporations, would exempt the most vicious form of corporation, namely, a trust or holding company. It was a protest against that bill. It was a protest

against the method in which that bill was passed.

I think there is a great deal of force in the story I once heard of the man who was to employ a coachman, and as the applicants came one after another he told them that in going from his office to his house he had to go by a steep precipice; and he asked one after the other: "How near do you think you could go to that precipice and not go over?" Finally one of the applicants said, "I don't know, but I will try to keep as far from the precipice as I can."

The tariff condition to-day is the product of a hundred or more years. You say there is not time to give it such consideration as I have suggested, and yet you go into certain schedules here without knowing whether or not your action will bring disaster upon those who are interested in those schedules.

I think it would have been infinitely wiser and safer to have gone moderately in this bill and to have bided your time. Just as surely as this bill goes too far, just as surely as disaster comes, whether it is logically and fairly attributable to the bill or not, the Democratic Party will be charged with it, and the pendulum will swing back again, and those of us who believe in a decent, fair, moderate tariff will have gained nothing by all this work. It would have been safer, I think, to have gone moderately, step by step; to have taken one moderate step and then another. Instead of seeing how near one could drive to the precipice, it would have been better to see how far he could keep from the precipice and yet serve the employment that he was entering into.

That brings me to the subject of wheat. I regret that the Democratic Party has seen fit to treat this subject as it has. shall not quote any figures. Any man who lives upon the northern border knows that the Canadian farmer can raise wheat cheaper than the American farmer. Those farmers along the gone by; they have borne their share of the burden, and now it seems to me unfair and unjust to treat them in the manner in which this bill treats them. If they were given a reduction, and experience showed that they could stand that or perhaps stand more, there would be time enough to make further reductions. The work of the American Nation is not going to be completed by you and me. There are others that will come here and take our places. It is the problem of the years. Unless we get away from this vicious system and get to another system that I want to discuss in a moment, the tariff will be the problem of the years. We are always too prone to think that now and our relation to now is the ultima Thule of human achievement.

I remember an incident that once occurred in this Chamber that will illustrate that thought. When Charles Sumner entered this Chamber, 11 years before the Civil War broke out, it is said that he was met by Thomas Benton with the patronizing remark: "Young man, you have come too late. The great questions are settled. The great men are passing away." To one who had been a central figure in that long and terrible struggle it may have seemed, as it did to Benton, as though the questions were settled, as though the great men were passing away. But 11 years from that day this country was buried in civil strife, and in the din of that awful war Thomas Benton was almost forgotten; but Charles Sumner will live, because he stood by a fundamental.

So we need not worry ourselves with the thought that what has not been done now can never be done, and I do hope yet, notwithstanding this ironclad rule of caucus domination, that the men in charge of this bill will see their way clear to let into this equation the representation and the views of hee who come from the section of the country affected and know something more of its needs. You were not commissioned to speak for them any more than I was commissioned to come here and speak for Mississippi. The theory upon which we proceed is that, no matter how good either of us may be, whatever there is to flow from this association of government, to be fairly distributed, must be the result of consideration from both Mississippi and Minnesota.

Now I am going to take up another phase of this subject. Some years ago in this country there grew up a feeling that railroad companies were charging too high rates. As the country became more densely populated and traffic became more dense and profitable, the people thought there should be a reduction of rates, and so the agitation went on. You can not imagine a more complex question than the adjustment of the thousands of railroad rates in this country. Why, this tariff bill, with all its items and all the relations which one item bears to another, is a plain proposition by the side of that interminable mass of transportation rates and the relations which they bear to one another. Yet the American people found a very wise and safe and practical way of solving that problem.

Of course under the Constitution Congress can not delegate any authority, so Congress could not delegate to a commission the power to fix rates. To avoid that objection growing out of the Constitution Congress passed a law creating a commission and declaring a rule for the rate, and saying in advance to the commission, "What you find to be the rate we declare to be the legal rate," subject, of course, to judicial restraint.

Under that system this complicated, intricate matter of

Under that system this complicated, intricate matter of regulating railroad rates, making due allowance for the imperfections and inherent weakness of human nature, has worked out very well. To-day if there is a difference of opinion as to what the rate from Spokane to St. Paul should be upon an article, instead of the whole country being torn up and thrown into a hysteria from a general revision of rates, the Interstate Commerce Commission takes that rate and deals with it.

The question of tariff rates is very analogous to that of railroad rates in two or three particulars. In the first place, neither of them ought to be a political question. I admit that if you draw a line of demarcation between free trade and protection, you then make a line of demarcation between political parties. But so long as you plant yourself upon a position where you have to admit to-day that in framing this bill it is just a question of fairness and justice to all, I say there is no political question left. Republicans of high standing and recognized leadership during the pendency of this bill have moved time and again to put things on the free list. No man to-day would want to be called a free trader with reference to the immediate application of free trade; and yet men charge one another across the aisle with being free traders.

Mr. President, my idea of the difference between a free trader and a protectionist is that it is about the same as the difference between a statesman and a demagogue. If you have ever noticed, the man who is doing the talking is always the

statesman. So, too, the man who for the time being is making the charge is always the protectionist. Under these conditions it is absurd to try to make the tariff

Under these conditions it is absurd to try to make the tariff a political issue where there is no great line of demarcation; where all agree that whether you call it an incident, whether you call it involved, or whether you call it a recognition, there must be protection. Protection—call it a burden if you will—should be equally and fairly distributed. I repeat, under these conditions it is absurd to try to make the tariff to-day a political issue. Think of political parties facing one another, like gladiators in the arena, over the question of whether the duty on a given amount of oxalic acid shall be 1 cent or 1½ cents.

So I say that the tariff, like the matter of railroad rates, is not fairly, and ought not to be, a political question. It is like the matter of railroad rates in another respect, and that is in the intricate, delicate character of the work not only of adjusting a rate with reference to the value of that rate, but with reference to its relation to other rates. So if there was any reason on earth for turning that matter over to a railroad commission, the same reason exists to-day for turning over the tariff to a tariff commission. I do not mean, by a tariff commission, a politically emasculated body authorized to act as the body servant of a President. I mean a commission clothed with power, under the direction of Congress; Congress prescribing the rule; the commission authorized, like the Interstate Commerce Commission, to find the rate. I undertake to say that there is not a single legal proposition involved in that kind of a commission that has not been already involved in the Interstate Commerce Commission.

But some man says that would not do because the tariff unlike railroad rates, deals with the question of revenue. Mr. President, that objection is met in almost every tariff bill of late years. We put in these tariff bills a provision that if any other country discriminates against us, the President, upon ascertaining that fact, shall make his proclamation; and then, not by virtue of his authority, but by the voice of the law, instanter and automatically, the maximum rate goes into effect, and the question of revenue is not considered from one end to the other of that proposition. So we have passed that; we have crossed that river.

It does seem to me that sooner or later the American people are going to put a stop to the present system of revising the tariff, and have a commission clothed with power similar to that of the Interstate Commerce Commission. Then, if the man who was importing wool thought the duty was too high, or if the man who was raising wool thought the duty was too low, instead of tying up the country, and instead of its being threatened with business disaster, the commission would deal with the question as the Interstate Commerce Commission to-day deals with the question of the rate from St. Paul to Spokane without throwing the transportation of the country into a storm of hysteria.

Of course I can understand why some Republicans are opposed to it. I can understand why some Democrats are opposed to it—those who, going to the extreme of the limitations of the present time with reference to ultimate free trade, should say, "We care nothing; it is a question of revenue in the last analysis." But why those who profess to believe in protection, and who believe in protection in a fair and equitable manner, should oppose or hang back against the establishment of such a tariff commission I confess I never have been able to understand.

In a free government, of course, every little while we have to project ourselves into an unexplored zone, and I could understand that men would hesitate about traversing a zone through which no traveler had gone. But when we have before us and before the American people the example of the Interstate Commerce Commission working out so admirably, I am unable to understand why the people do not rise up in their majesty and might and force Congress to adopt the same system with reference to the tariff.

It is proposed, in connection with this bill, to leave this matter in a measure to the people. The Senator from New Hampshire [Mr. Gallinger] has offered an amendment to the effect that when this bill is perfected it shall stand until after the election of 1914, to the end that the American people may have an opportunity to adopt or reject the bill, as they see fit, through the election of men who are in favor of or hostile to the bill as they stand as candidates at that election. I am heartily in favor of that. For years I have believed that the American people should be equipped with an instrument by which they can cure the sins of omission or commission of their servants. I would go a step further than the Senator from New Hampshire. I would provide a way by which the people

could demand this referendum without asking any odds of Congress. I would not only equip them with the power to pass upon the question, but I would equip them with the power to

take up the question if they saw fit.

I do not know what will be the fate of that amendment. Of course, unless the committee shall abate its absolute and autocratic authority, no amendments can be adopted or added to the bill. But I do hope the amendment will be adopted and that the American people will have an opportunity to pass upon this bill. I am inclined to think that if that opportunity were afforded they would sustain the bill. There are some things in it that the people have been wanting to get for some years. They have been wanting the income tax. They have been wanting the exemption in the corporation tax removed from trust and holding companies. This bill gives the income tax and

removes that exemption.

In that broad equation you would then get what the people wanted and what they had intended. They voted last year, a portion of them for Mr. Wilson, a portion of them for Mr. Roosevelt, and a portion of them for Mr. Taft. It may be considered that the Taft platform was regarded by the American people as more ultraprotection than the platform upon which Mr. Roosevelt ran. But the platform upon which he ran and the declaration of the Democratic platform that these duties should be revised without disturbing the interests of this country was an assurance to the American people that it would be revised. Whether you call it in the spirit of protection or involving protection, it matters not. The verdict of the American people was in sustaining the industries of this country so far as the tariff is essential to their maintenance and their continued existence.

I do hope, Mr. President, that when that amendment is reached it will receive sufficient votes to pass it. It has been said often, you know, that you could not leave these things to the people—that they can not understand these things. It is not the understanding of all these schedules, with their relation to one another, that is involved. The question involved is whether in its broad equation this bill will be a fair revision of the tariff and a revision that, in the language of the Democratic platform, will not disturb the established business of the

In conclusion, Mr. President, I want to say simply this: I realize that these views are far in advance of the average view upon this question. I realize that for years we have been working along lines in advance of the rank and file of the thought of this country; but I say in no spirit of sarcasm, in no spirit of irony, I have lived to see the day when it is proposed that the American people shall have a voice in their legislation by leaving it, somewhat through indirection of course in the election of representatives, but still leaving it, to the American people to say whether a tariff bill shall become a law or not.

Mr. President, while I believe there are men urging that on who are not sincere, while I believe that there are men who would revolt at the very thought of a referendum urging this measure, I believe in the absolute sincerity of the Senator from New Hampshire, who proposes to present this amendment at the proper time, and I do hall it as an omen of progress if we advance that far, when it is now proposed by great, strong, genuine, sincere men to submit a measure like this to the approval or rejection of the American people.

Mr. SHIVELY. Mr. President, as wheat is one of the great staples of American agriculture, it is natural that much of the controversy over the agricultural schedule should revolve around this paragraph. The duty on wheat illustrates in a peculiar sense the futility of the rates heretofore carried in the agricultural schedules of a long series of tariffs. I rise only to place in the Record a few statistics bearing on this schedule. Before doing so I deem it pertinent to note that the senior Senator from Wisconsin [Mr. La Follette] agrees that the rate of 6 cents per bushel on oats, carried in the bill, as reported by the Finance Committee, is right; that he contends that the reduction of the duty on barley should be to 10 cents instead of to 15 cents per bushel, as carried in the bill, from that of 30 cents in the present law; that the reduction on wheat should be to 6 cents per bushel instead of the proposed 10 cents countervalling duty in the pending bill, and that in his judgment even this 6 cents per bushel is economically necessary only because of production and market conditions in four States of the Union. What the senior Senator from Wisconsin has said about what would be a suitable duty on barley recalls the question, coupled with a suggestion about brewers, asked on yesterday by the senior Senator from Kansas [Mr. Bristow], why the duty on barley is reduced from 30 to 15 cents per bushel. The reduction on barley is less than the average reduction in this schedule, and no answer was

necessary when, for the want of which, the Senator from Kansas

exclaimed, "No answer!"

Notice should also be taken of the fact that when a few days ago the junior Senator from North Dakota was making his speech lamenting what he was pleased to regard as the gloomy prospect of the northwestern wheat raiser because of Canadian competition, No. 1 Northern wheat was actually selling at Winnipeg, Canada, at 95 cents per bushel, while No. 1 Northern wheat was selling at Minneapolis at from 87 to 884 cents per bushel. This fact only suggests how little the tariff and how much other considerations enter into the price of wheat.

Mr. President, there is wide difference of view in this Chamber as to the design and effect of the duties in the present law and past tariff acts in reference to agricultural products. As to the vast majority of its staples, agriculture has been, and still is, an export industry. In confirmation of this I invite attention to the official statistics of our foreign trade in certain productions of agriculture. For the fiscal year ended June 30, 1913, our exports of wheat were 91,602,974 bushels, while our imports were only 797,528 bushels, or nearly 115 bushels of export to 1 bushel of import. In value, our export of wheat was \$89,036,428 to \$559,559 of import, or over \$159 of export to \$1 of import.

Our exports of flour for the same period were 11,394,805 barrels as against imports of 107,558 barrels, or over 106 barrels of export to 1 barrel of import. In value, our export of flour was \$53,171,537 as against an import of \$453,681, or \$117 of export to \$1 of import. In value of wheat and flour combined, our export was \$143,207,965 as against an import of \$1,013,240, or

an export of \$141 to \$1 of import.

For the same period our exports of corn were 49,064,967 bushels, while our imports were 903,062 bushels, or over 54 bushels of export to 1 of import. In value, our export of corn was \$28,800,544 as against an import of \$491,079, or over \$58

of export to \$1 of import.

Now I come to the question of barley, about which the senior Senator from Kansas [Mr. Bristow] manifests so much curiosity. For the fiscal year ended June 30, 1913, our exports of osity. For the listal year cluted some 30, 1935, our exports of barley were 17,536,703 bushels, while our imports for the same period were 6,244 bushels, or exports of a fraction over 2,824 bushels to 1 of imports. In value, our export was \$11,411,819 as against an import of \$2,913, or over \$3,927 of export to \$1 of

Of oats, our exports were 33,759,177 bushels. Our imports were 723,899 bushels. The ratio of exports to imports was over 46 to 1. In value, the export was \$13,206,247, while the import was \$289.064, or over \$45 of export to \$1 of import.

Mr. BRISTOW. Mr. President-

The PRESIDING OFFICER (Mr. HITCHCOCK in the chair). Does the Senator from Indiana yield to the Senator from

Mr. SHIVELY. Certainly. Mr. BRISTOW. I am not certain that I understood just what the Senator said in regard to the importations of barley. Would it bother him to repeat the statistics he gave us on that item? Mr. SHIVELY. The statistics of importation of barley which

I have submitted were for the fiscal year ended June 30, 1913, and the amount of the importation is 6,244 bushels.

Mr. BRISTOW. Of course the Senator must be mistaken, because in 1912 the importations were 2,768,474 bushels. There was not any such falling off as that; that is, according to these figures here.

Mr. SHIVELY. No; the Senator is not mistaken. If the Senator will review the statistics of barley for the last 10 years, he will find that no product of agriculture exhibits such a wide variation in exports and imports from year to year as barley.

Mr. BRISTOW. Not only did we import in 1912, according to this handbook, 2,768,474 bushels, but the estimate is that we

will import next year under this bill 2,000,000 bushels.

Mr. WILLIAMS. Mr. President, if the Senator from Indiana will pardon me, the Senator from Kansas has quoted the statistics at two and three-quarter millions, in round numbers, for the year 1912, and he has quoted them correctly. If he will turn to the year 1910, he will see there were not 4,000 bushels imported; there were 3,989 bushels imported. If he will turn to 1905, the number of bushels imported was 79,000. hundred and twelve was the most exceptional year in the history of barley production that the country ever saw, by all the evidence before the subcommittee. It will be noticed that the importations furnished by the Senator from Indiana are nearly twice as much as the importations for 1910.

Mr. SHIVELY. It is palpable from the statistics lying on the desk in front of the Senator from Kansas that wide variation in quantity of export and import from year to year characterizes the trade in barley. The fact is shown by the

handbook to which he has just appealed. I affirm that the figures I have given are official and correct, and that there is nothing strange or exceptional about them save as the actual

trade in this article makes them so.

Having disposed of barley, I only add to this phase of the subject under discussion that even the export of eggs was 20,409,390 dozen as against an import of 1,367,223 dozen, or a ratio of export to import of 15 to 1; that the export of butter to import was in the ratio of 3 to 1 both in pounds and value, and the export of cotton over import in the ratio of \$23.70 to \$1.

Mr. GALLINGER. Mr. President—
The PRESIDING OFFICER. Does the Senator from Indiana vield to the Senator from New Hampshire?

Mr. SHIVELY. I do.

Mr. GALLINGER. If my reading has been correct, I have noticed that our Democratic friends have been insisting for a long time that we ought to increase our foreign trade. Does not the Senator think we are doing pretty well in the exportation of those articles and that we ought not to be embarrassed?

Mr. SHIVELY. The Senator unquestionably thinks we are doing pretty well under a system where all the efforts of Government have been directed against foreign trade. We have acquired a goodly volume of foreign trade, and in spite of obstructive tariffs. It is evidence of the high determination of mankind to trade that we have any trade at all with foreign countries.

Mr. GALLINGER. We have exportations amounting to over \$2,000,000,000. We had last year \$2,300,000,000. Mr. SHIVELY. That is true.

Mr. GALLINGER. The world has never known anything

Mr. SHIVELY. And all in spite of, and not by reason of, obstructive tariffs. Certainly a tariff confessedly obstructive and prohibitive in design as to hundreds of articles can not conduce

to expansion of our foreign trade.

Mr. GALLINGER. I will ask the Senator a further question. In changing the duty on the articles that he mentions, what is the purpose? Is it to permit the product of some other country to come in more freely than it does now?

Mr. SHIVELY. Mr. President— Mr. SMITH of South Carelina. Will the Senator from Indiana allow me to state to the Senator from New Hampshire

Mr. SHIVELY. If the statement relates to the particular

question now pending, I yield.

Mr. SMITH of South Carolina. It is in relation to this direct question. He says that we had an exportation of \$2,000,000,000, which is correct; \$600,000,000 of that, or over one-quarter of it, came from one article that never has had a tariff

Mr. GALLINGER. We understand that. We know it does not need any tariff and has not needed any tariff in the history of the country; but it will possibly at some future time need a tariff, and if it does, the Senator from South Carolina will be

here insisting that a duty ought to be put on it.

Mr. SMITH of South Carolina. If the Senator from Indiana will allow me, according to the figures the Senator from Indiana has quoted, it stands no less in need of protection than wheat, because you are exporting the same proportion of wheat that you do of the article to which I refer. Therefore I do not see that it requires any more protection than does cotton.

Mr. GALLINGER. The Senator is leading me from the ques-

Mr. GALLINGER. The Senator is leading me from the question I propounded. The question was, and I asked it in good faith, inasmuch as we are exporting more of these products than we are importing. Why should we call a halt? Exporting our products is extending foreign trade, and why should we legislate so as to invite foreign countries to send more of those products into our country?

Mr. SHIVELY. When the official statistics show an over-whelming excess of exports over imports, where is the invitation and how does increase or decrease of duty on these articles call

Mr. GALLINGER. Will the Senator explain to me, then, what it does? What does changing the rate accomplish?

Mr. SHIVELY. The change of rates runs all through this bill. We propose to reduce customhouse taxation and release commerce from the burdensome duties of the present law. That the duties on agricultural products are empty and inoperative for any beneficial purpose to the farmer is no reason why they should not be reduced. They have availed the farmer nothing, and in a revision of the tariff downward duties use-less for purposes of either protection or revenue should go down with those which are effective to oppress the consumer.

Mr. GALLINGER. But the Senator has not—

Mr. SHIVELY. Now, what does the Senator propose to do? He has been voting for increases over the rates in the schedules

thus far considered. Is he voting to increase or to reduce to

the American farmer the prices on what he must buy?
Mr. GALLINGER. No, Mr. President; I have no more idea that the passage of this bill will reduce prices to anybody than I have that the sun will rise at midnight.

Mr. SHIVELY. Then, on the Senator's own theory, why does he not support these amendments?

Mr. GALLINGER. Because I think they are all wrong.
Mr. SHIVELY. But things that can work no effect can not
work a wrong. Just what is the wrong that the Senator has in mind?

Mr. GALLINGER. It is for the Senator to show the effect

they will have. He has not undertaken to do that.

Mr. SHIVELY. Oh, Mr. President, I shall do that, though I arose only for the purpose of incorporating at this point in arises only for the purpose of the control of the record the official export and import statistics of certain agricultural staples, which tell their own story and are themselves an answer to the Senator. But before submitting to the temptation to answer the Senator more at length, and because cotton has become the subject of some colloquy, I note the additional fact that the value of our exports of cotton was \$547,-357,195 as against an import of \$22,987,318.

Mr. WILLIAMS. I want to ask the Senator is not the ratio of exports to imports, so far as cotton is concerned, very much less than it is so far as wheat and a great many of the other of these articles are concerned, it being 23 to 1 for cotton?

Mr. SHIVELY. In wheat for the year ended June 30, 1913,

the ratio was \$159 of exports to \$1 of imports.

Mr. WILLIAMS. I asked that question because the Senator from New Hampshire [Mr. Gallinger] has just stated that the time would come some day when cotton would need protection, and already the figures show that the ratio of export to import is only 23 to 1 on cotton, while on wheat it is 159 to 1. So if the time has come for one it has come for both.

Mr. SHIVELY. Mr. President, I have quoted these statistics as obviously bearing on the question of the value to the farmer of the so-called protective rates on his products. To say that the farmer is protected simply because he is given a high rate of duty on a given product is to mock him with idle words. Certain industries are incapable of protection by any rates of duty devisable by the wit of man. Where the industry is export in character and there is no combination at home to absorb the duty by charging higher prices at home than are received for the surplus sent abroad the duty is worthless to the pro-ducer of the article. The situation and environment of the industry determine whether any rate of duty can be effective. The mere incorporation of a rate in the statute settles nothing. Hundreds of the rates in the present law are empty and inoperative, except to supply texts for political debate. Such precisely is the great body of the rates in the agricultural schedule of the act of 1909.

It is such rates as these that are just now the subject of so much solicitude among certain Senators on the other side of the Chamber. They protest against what they pretend is a discrimination against the farmer. It is an inherent and inseparable quality of the so-called protective principle in customhouse taxation that it can not operate equally on all industries, occupations, professions, or equally on all sections of the country. One of the early statesmen, either Jefferson or Madison, predicted that the first effect of the protective principle would be to sectionalize the country, and that the second effect would be to classify society. It did both. It engendered and pro-jected the sectional spirit on the country and has precipitated the class spirit over society. So marked is this that nearly every speech made against the pending bill appeals to the sectional spirit or class spirit or both. The sectionalism or class-ism is not in the pending bill, but in a tariff system which we propose to revise and reform. In the very nature of the system the farmer is a victim and not a beneficiary.

Mr. SMITH of South Carolina. Mr. President— The PRESIDING OFFICER (Mr. Robinson in the chair). Does the Senator from Indiana yield to the Senator from South

Mr. SHIVELY. I do.

Mr. SMITH of South Carolina. If the Senator from Indiana will allow me, I desire to call his attention to the distinction between agricultural products which, by virtue of their large surplus, are exported, wherefore the producer of the product enjoys no benefit from protection, and industries where there is a possibility of organization, such as we have in some of our trusts, which export as much as the domestic consumption and yet, by virtue of the tariff and their organization, are able to charge the American people a higher price for the domestic product than that for which they sell to the foreigner. I want to call his attention to that distinction.

Mr. SHIVELY. Yes, Mr. President; the Senator is right. The question of the effect of the tariff on the farmer is not concluded by percentages, specifics, and ad valorems scattered through the agricultural schedule. There is no potency in the statute for the production of wealth. The statute changes no natural condition of production. It does not operate on the farm or in factory or mine. Where operative at all, it operates in the spaces between production and consumption, called the market, and then only to transfer without compensation through inflated prices the property of the consumer to the protected producer.

It is not mere academic theorizing to say that the thing we call wealth is a social, not a political, product; that wealth is produced by brawn of muscle, skill of hand, and vigil of brain not by acts of Congress; that industrial prosperity is born of the energy and genius of man applied to the bounties of nature, not of the cunning and craft of man applied to the powers of government. The power to tax is the power to take, not the power to make. The power to tax is the power to transfer, not the power to produce. Government has no independent reserve fund of property out of which to insure profits. It can not assure profits to one American industry without assuring losses to other American industries. Every operative protective duty is a special privilege. Government has no reserve fund of power out of which to grant a special privilege. It can grant the special privilege only out of the body of common rights. Did so-called protection operate equally on all industries and occupations, the interests back of it would drop it as a thing of no advantage. It can create beneficiaries only as it creates vic-

Now, in this scheme of wealth by statute and prosperity by taxation where does the farmer come in? Through our whole history, and as to his principal staples, the farmer has been selling below European prices and buying above European Through all this time he has been making his sales of the great staples of the farm in competition with the agriculture of the whole world, and for two generations he has been compelled to make his purchases at inflated prices in domestic markets dominated by trusts and monopolies hatched into life, nourished into strength, and fostered into wealth, power, and influence under the shelter of high tariff walls.

Mr. BRISTOW. Mr. President—
The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from Kansas?

Mr. SHIVELY. I do. Mr. BRISTOW. May I ask the Senator why he does not put the products of such conspiracies and combinations on the free list in this bill?

Mr. SHIVELY. Mr. President, it is reassuring to observe that the Senator from Kansas is exercised with some vicarious grief in behalf of the American people because of the trade conspiracies and combinations which have been hatched and nourished under the tariff acts of 1883, 1890, 1897, and 1909. We have done the very thing about which he inquires. It is easy enough for the Senator to dip in here and there to find an item to which to attach a quibble. It is an easy rôle to be a mere objector and obstructionist. I appeal from these jimmere objector and obstructionist. I appeal from these jim-crack tactics to the free list in this bill and to the general reductions in the dutiable schedules on all things except luxuries which mark the bill from the first line to the last.

Mr. BRISTOW. So that is the reason why the Senator favors putting wool on the free list and everything made from wool on the dutiable list? That is why he puts the product of the market gardener on the free list and the products of the factories on the dutiable list?

Mr. SHIVELY. There is not a duty on any factory product, except here and there a rare luxury, the weight of which the consumer can well bear, that is not either entirely removed or substantially reduced. The Senator refers to wool. There are more farmers who do not raise wool than do raise wool. But of what service has the duty been to the wool raiser? To take the Senator and those who agree with him seriously one would conclude that if the duty is kept at its present point long enough fine long wool would grow on the rail fences of the country. With the present duty on wool the number of sheep in the country decreased nearly 10,000,000 head within the last 10 years, and in Indiana decreased 400,000 within the same period. If the tariff is to be credited as a potential factor in wool, then at this rate of decrease of sheep how long would the present rate of duty have to be maintained until there would be no sheep at all? The Senator will find nothing in the economic history of the tariff to sustain his position with reference to agricultural

Mr. BRISTOW. Mr. President—
The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from Kansas?

Mr. SHIVELY. I do. Mr. BRISTOW. The Senator from Indiana was making a very forceful argument from his point of view, alleging that the farmer has been compelled to sell his products in a free market and purchase his supplies in a protected market controlled by trusts and combinations. The remedy for that in the bill which the Senator has aided in preparing is to put the farmer's products on the free list and maintain a duty on the yery manufactured products which the farmer has been buying. I ask the Senator why he did not favor removing the duty off the trustcontrolled products as well as off the products of the farm?

Mr. SHIVELY. It may be news to the Senator, though I hardly

think so, that we are taking care of that side of the question in the only way by which it is possible for the farmer to realize any relief by a revision of the tariff. This bill takes the duty from and carries to the free list twenty times a larger number of articles purchased for use on the farm than any tariff act in the entire history of our fiscal legislation. As to the great body of these articles, a trust control has been charged. The bill removes the shelter of the tariff from these trusts. never had a shelter under the tariff, and the pretense that the reduction or removal of these empty duties on his products is prejudicial to him can only deceive the man who prefers to be deceived. The difficulty with the Senator is that he is too busy chasing phantom mischiefs through these schedules to see the real and substantial remedies which they carry.

Our total agricultural exports last year amounted in value to over \$1,000,000,000. This meant American agricultural labor and capital in competition with the whole world. There is no agricultural trust to limit production, produce scarcity, put up prices to artificial levels against the domestic consumer, or to maintain such prices at home and unload surplus at low prices abroad. Think you one bushel of wheat from the American farm would have gone abroad had it been offered a higher market at home? Was it not because of the higher price offered abroad last year that 91,000,000 bushels of American wheat went bringing wheat from high prices to low prices?

Mr. NORRIS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Indiana

yield to the Senator from Nebraska?

Mr. SHIVELY. I do.

Mr. NORRIS. I should like to inquire of the Senator if he thinks the tariff on rice helps the farmer who produces rice?

The Senator propounds his question in the

Mr. SHIVELY. The Senator propounds his question in the usual spirit of those who see in the taxing power of the Government only an agency to serve some private interest

Mr. NORRIS. I am not asking about my belief; I am asking

for information.

Mr. SHIVELY. In that case, I answer that rice is a revenue article. Its importation produces a substantial income to the Government. The revenue is needed. Even at that, we reduced the duty on rice 50 per cent. The Senator will hardly expect us to raise sufficient revenue for the Government and put all articles on the free list at the same time.

Mr. NORRIS. I will ask the Senator this question: Then _ why did he not treat the wheat farmer the same as the rice farmer and cut the tariff on wheat in two, the same as he did

Mr. SHIVELY. The bill expressly provides for a duty of 10 cents a bushel on wheat as against any country that maintains a duty against wheat or any of the products of wheat exported from this country.

Mr. WILLIAMS. If the Senator from Indiana will pardon me just a second-

Mr. SHIVELY. Certainly. Mr. WILLIAMS. As pertinent to the inquiry of the Senator from Nebraska, there was derived from rice in the year 1912 a revenue to the Government of nearly a million and a quarter dollars, in round numbers.

Mr. NORRIS. Of revenue?

Mr. WILLIAMS. In round numbers, a revenue of a million

and a quarter dollars.

Mr. NORRIS. Now, I want to repeat to the Senator from Indiana the question which I asked originally. I should like to get his judgment as to why the farmer who raises rice should not be treated the same as the farmer who raises wheat?

Mr. SHIVELY. The farmer who raises rice has the duty on his product decreased.

Mr. NORRIS. And the farmer who raises wheat has lost his

Mr. SHIVELY. The farmer who raises rice has lost 50 per cent of his duty. If the farmer who raises wheat lost all his duty on wheat he would lose practically nothing. Even the Senator from Wisconsin [Mr. La Follette], as a protectionist, concedes that a duty in excess of 6 cents is unnecessary, and that even this is desirable only because of conditions in four of the Northwestern States

Mr. NORRIS. Let me repeat my question: Does the Senator think the duty of 1 cent a pound on rice that he has retained in this bill helps at all the farmer who raises rice?

The imports of rice are far in excess of its export. With this state of the trade, the duty on rice would naturally give the domestic market the incidental advantage that attends a duty where there is actual import competition. Whether the farmer would realize on the duty depends on what

influences control in the domestic market.

Mr. NORRIS. I understand that. We are discussing now an amendment that practically puts wheat on the free list. I understand what the Senator refers to, or I think I do-the countervailing clause. I understand that is in the bill. But if it is proper to put that on wheat, why do you not put it on rice? Why make a difference between the wheat farmer and the rice

Mr. SHIVELY. That question might be asked in regard to every other paragraph in this bill. Rice is a revenue article. Wheat produces no revenue, or only a negligible quantity. This bill contemplates raising revenue to meet the fiscal necessities of government. The Senator again approaches the subject only from the standpoint of taxation for private profit, while the task was on the authors of this bill to provide for duties with reference to public revenue.

Mr. NORRIS. If I understand the Senator, his theory is that the tariff on wheat does not do any good to the farmer who

produces wheat. Is that the Senator's view?

Mr. SHIVELY. That is just what is shown by the official statistics which I have submitted, and to place which in the RECORD I expected to occupy the time of the Senate only a few

Mr. NORRIS. Then, does the taking off of the tariff on wheat

help the consumer at all?

Mr. SHIVELY. The same statistics show that as to wheat it The fact is that the great body of the duties in would not. the agricultural schedule of the present act and many of those in the same schedule of the pending bill are inconsequential.

Mr. NORRIS. The Senator is very frank.

There is no special frankness about it. The Mr. SHIVELY. facts are manifest. With rare exceptions, the duties in the present law on agricultural products are empty duties. They have been and are mere sentimental duties. They are scarcely even statistical duties. They are ineffective and inoperative. They serve no purpose of either revenue or protection. They are the barren stuff which you have been offering the farmer in exchange for his support of duties in other schedules which are used to despoil him of the natural rewards of his toil.

Mr. NORRIS. The Senator does not contend, does he, that those who favor a tariff on wheat are insincere? He does not contend that they are arguing something that they do not them-

selves believe, does he?

Mr. SHIVELY. Oh, I do not pretend to sit in judgment on the sincerity of Senators or conjecture about their mental reservations on the tariff. Sincerity is as potent to advance a bad cause as to promote a good one. My contention goes to the economic worthlessness of so-called protection as applied to American agriculture

Mr. NORRIS. If the Senator's theory is true, it has no effect one way or the other; and if that be true, if it does not hurt anybody, why not permit the men who are raising wheat and who believe it is of benefit and are sincere in their belief to

have a tariff?

Mr. SHIVELY. That a duty is worthless to the farmer does not mean that it is harmless, nor is the vice of a false system relieved by the sincerity of its advocates. There are millions of farmers in the United States who not only believe but who know that these duties are humbug duties. There are others know that these duties are humbug duties. who blindly accept these barren rates at their face value and are hoodwinked, cheated, and deceived by them into the support of rates in the other schedules which victimize the farmer on nearly everything he purchases for his farm or his household.

Mr. SMOOT. Mr. President—

The PRESIDING OFFICER. Does the Senator from Indi-

ana yield to the Senator from Utah?

Mr. SHIVELY. I do. Mr. SMOOT. I understand the Senator to say that the duty of 1 cent a pound on cleaned rice did have an effect upon the rice in this country, and that it was a benefit to the rice grower. Did I correctly understand the Senator?

Mr. SHIVELY. So we are back to rice. If there were substantial exports of rice and slight or no import, and no domestic combination to raise and maintain the domestic price above the export price, then the duty would be an empty thing. On do not pretend to say. But if the Senator says it will not, can

the other hand, if there be little or no export and conditions prevail in the domestic market by which the duty can be absorbed, the duty will affect the price.

Mr. SMOOT. I was going to call the Senator's attention to the fact that there were nearly \$1,000,000 worth of rice exported in the year 1912. I also wish to call his attention to the fact that the importation of cleaned rice in the year 1910 was a little over 25,000,000 pounds, while that year we produced in this country 624,000,000 pounds of rice. So the duty of 2 cents per pound was collected upon this 25,000,000 pounds, and the same rate of tax, of course, under the Senator's argument must apply to the 625,000,000 pounds that was produced in this country. In other words, the tax that was paid upon the importation of 25,000,000 pounds went into the Treasury of the United States, but the American people paid that same rate of tax upon the 624,000,000 pounds produced in the Southern States.

I simply wish to state that for every pound of cleaned rice imported into this country there were produced in this country 24 pounds. I am not objecting to the duty upon rice. I believe it is necessary to protect that industry in this country from the cheap labor of China and Java and the different coun-

tries which raise rice.

Mr. SHIVELY. What were the figures of exportation recited

by the Senator?

Mr. SMOOT. Nine hundred and seventy thousand three hundred and eighty-seven dollars were the figures I quoted to the Senator. At the same time I think it is necessary that there should be a duty levied upon rice. I do not see one particle of difference in principle whether it be rice or whether it be wheat; the same principle should apply to both. I believe the question that was asked by the Senator from Nebraska [Mr. Norms] was a proper one, and I think it ought to have been answered as the Senator from Mississippi answered it this manifest that it is any that the dust that has been placed upon morning-that is to say, that the duty that has been placed upon rice in the past has been sufficient to allow the growth of rice in this country, and they could not take it all off at once without injury to the industry, and therefore they decided to take off 50 per cent.

Mr. SHIVELY. Does the Senator from Utah object to that? Mr. SMOOT. Nobody has objected to it, and no one would object if you had applied the same principle to wheat. But you did not apply it to wheat. You took it all off. You did not apply it to wool; you placed it on the free list. You did not apply it to sugar, because you say that in three years sugar

must be free.

Mr. SHIVELY. The views of the Senator and myself as to the principle that should prevail in customhouse taxation are too far apart to conflict. He sees no difference between a duty on an article that is overwhelmingly export and produces no revenue and a duty on an article that is import and does produce revenue. He magnifies the taxing power as an agency for private profit and minimizes it as an agency for the only purpose for which the taxing power is conferred on government. He seems to regard industry as the child of taxation. He seems to view our farms as statutory farms, our factories as statutory factories, our mills and mines as statutory enterprises, and industries generally as produced and maintained by the yeas and nays of Congress

Mr. SMOOT. Right there I should like to ask the Senator a question, so that I may know whether or not I correctly understand him as to the word he has used—"statutory." Does the Senator believe that with free sugar-and if the bill becomes a law and is placed upon the statute books it will be a statutory law-the sugar industry in Louisiana can live? Is it possible

for that industry to live under free sugar?

Mr. SHIVELY. Mr. President, I am not in the sugar industry and am not swift to prophesy on the subject. The Senator's theory of tariff making for private purposes requires every Member of Congress to know as much about everybody's business as everybody knows about his own business. That the beet-sugar industry will not only survive but will grow in strength and magnitude I have no doubt. Whether the canesugar industry can survive the removal of the tariff, I do not know. I hope it may become self-supporting. I do know that the country has conjured with protection on cane sugar for 125 years. Alexander Hamilton made sugar one of the subjects of discussion in his report, but Hamilton had the candor and frankness to plant protection squarely on the ground of subsidy out of the natural profits of other industries. He even said that a direct bounty had an advantage over protection, as it tends less to produce scarcity. Natural conditions are favorable to beet-sugar production, and the energy that started it will carry it forward. Cane-sugar production has far greater natural obhe tell us how long would it be necessary to continue to subsidize it out of the self-sustaining enterprises of the country to place it where it would no longer be necessary to prop it up by Federal taxation?

Mr. WILLIAMS. Before the Senator goes on-

The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from Mississippi?

Mr. SHIVELY. I do. Mr. WILLIAMS. Senators have been trying to draw a contrast between what we have done with wheat and what we have done with rice. I want to remind the Senate that while we have reduced the duty on wheat 25 cents per bushel we have reduced the duty on rice 56 cents per bushel. What good does it do to get up here and talk about putting one thing upon the free list and leaving another upon the dutiable list? The duty upon wheat was 25 cents per bushel, and we took it off. We could not take off but 25 cents. That is all we did take off. The duty on rice was 2 cents a pound, and we reduced it to 1 cent a pound; and it takes 56 pounds of it to make a bushel. We reduced the duty on rice more than we reduced the duty on

Mr. NORRIS. Nobody has claimed that you took off more than there was to take.

Mr. SMOOT. Mr. President-

The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from Utah?

Mr. SHIVELY. I do. Mr. SMOOT. The Senator from Mississippi said that we have reduced the duty on rice 56 cents a bushel, and have reduced the duty on wheat only 25 cents a bushel. Twenty-five cents a bushel was all the duty that was on wheat. You have taken 100 per cent of the duty off and placed it on the free list, whereas there was a duty of 2 cents a pound on rice, which is \$1.12 a bushel, and you have simply reduced that 50 per cent, making it 56 cents a bushel, or a little over two and one-fifth times what the duty is on wheat under the present law.

Mr. WILLIAMS. Mr. President, this percentage argument re-

minds me of the man who once sent a telegram saying that the Republican vote in Yazoo County had increased 200 per cent. There had been only 2 Republican votes one year, and the next year, I believe, there were 6. Your percentage every now and

then is nonsense.

Mr. SMOOT. I notice that all through the bill, when our friends refer to the bill, they say what the percentages of decreases are. They want the country to understand that there is a great decrease in all the rates, and they are stated in per-

Mr. SHIVELY. I am curious to hear the question the Sena-

tor has in mind.

Mr. SMOOT. I was not going to ask a question just now. was simply going to answer the statement that the Senator made. But I shall not take the time of the Senator any fur-

ther upon that question.

I simply wanted to ask the Senator this question in the beginning in relation to sugar: If it took an act of Congress by levying a rate of duty upon sugar to maintain that industry in this country, then that would be called a "statutory industry," such as I understood the Senator was referring to. The Senator from Mississippi upon the floor of the Senate has acknowledged that in his opinion, with free sugar, the Louisiana people can not produce sugar as against the balance of the world, and therefore it will destroy that industry. What I was asking the Senator was whether he thought it proper to pass a law to protect any industry of that kind or whether it should be allowed to vanish entirely.

The Senator asked me how long I would levy tribute upon the other industries of this country to make up for what the people pay for the increased price of sugar on account of the rate of duty imposed upon it. That is too long a question for me to

go into now, Mr. President. Mr. SHIVELY. I fear so.

Mr. SMOOT. I am not going to take the Senator's time for that. But it is a fact and can be demonstrated that through the local production of sugar the American people have not lost any money, but have gained; and if that industry is destroyed in this country, I want to say to the Senator now and to the good people of America, that the American people will ultimately pay for it.

Mr. SHIVELY. To assume that to withdraw the tax is to destroy the industry is to assume that the industry lives by the tax. It is to assume that it is not an industry at all, but a public charge to be supported by the tax. We can raise figs, lemons, oranges, pineapples, and bananas right here in the District of Columbia. All that is required is that the Govern-

ment hold the consumer while the producer collects from him high enough prices to pay for the hothousing and whatever else may be necessary to create the soil and climate suitable for the production of these fruits. The venture would be operated along lines of greatest resistance and represent only unmixed waste of both capital and labor, but the Senator would still call it an industry and prophesy disaster should the Government lift its hand from the consumer. I am not contending that the sugar industry is in this category, but this is the category in which the Senator places the sugar industry.

Mr. CUMMINS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from Iowa?

Mr. SHIVELY. I do.
Mr. CUMMINS. I did not intend to interrupt the Senator until he had finished his answer to the Senator from Utah.

Mr. SHIVELY. I was not answering a question, but was noting the logical consequence of the contention of the Senator

from Utah on sugar. I yield to the Senator.

Mr. CUMMINS. To bring the matter back to wheat, the present duty on wheat is 25 cents a bushel, very much higher than the doctrine of protection requires or justifies. have been substantially no importations under it because it is prohibitive. My question is, Does the Senator believe that with wheat on the free list there will be importations of wheat into the United States:

Mr. SHIVELY. If the Senator means whether through the course of years wheat will be imported, it is manifest that that will depend on the conditions of demand and supply at home

Mr. CUMMINS. I can well understand that; but my question was, practically no importations having taken place under the general conditions of production and consumption, whether, in the opinion of the Senator, with wheat on the free list, there would be any considerable quantity coming into the United States from other countries? My doubt was whether the Senator was not depending too much upon the statistics of the trade that has risen under the present practically prohibitive duty. It can hardly be said, because under a duty of 25 cents a bushel there were no importations, that there would be no importations

if the duty were entirely removed.

Mr. SHIVELY. I submit that the Senator assigns to the present duty on wheat a force and effect that it has never exerted and, because of conditions independent of the duty, could not exert. It was not the duty on wheat, but the export character of our domestic wheat production, that excluded wheat. Wheat did not enter this country in substantial quantity for the same reason that it did not enter the other surplus wheat-producing countries of the world. These countries sent their surplus to other markets and not here, because their wheat commanded a higher price there than here, just as our surplus went to other markets for the higher price paid there. not our tariff, but the higher price paid in western Europe that prevented foreign wheat coming here. The same cause that drew our surplus there precluded foreign surplus coming here. With whole wheat and wheat in flour in the value of over \$143,000,000 going out, it is impossible to conceive of any considerable quantity coming in, tariff or no tariff. The force of the statistics of export and import is to emphasize the fact that for any purpose of value to the farmer the duty on wheat is a

nullity.

Mr. SHERMAN. Mr. President—
The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from Illinois?

Mr. SHIVELY. Yes, sir. Mr. SHERMAN. I wish I wish to ask the Senator a question. Is he able to say that free listing wheat will increase or decrease

the price of either wheat or flour in the United States?

Mr. SHIVELY. Whether wheat or flour may rise or fall I do not prophesy, but whether either does one or the other will not be because of the presence or absence of tariff on it. the present circumstances of production, consumption, and trade in these products, their prices are world prices and not Washington prices. As to wheat and flour, the tariff is having no effect in this country on the relation of supply to demand.

Mr. SHERMAN. Let me follow that, now, by another query.

Yesterday December wheat was quoted in Chicago at 85½ cents. It was quoted in New York at 93 cents. If wheat were free listed to-morrow morning, does the Senator think it would affect the price of wheat either in North Dakota or at either of the points named?

Mr. SHIVELY. Under present conditions, certainly not. Mr. SHERMAN. That answers it. I am seeking for in That answers it. I am seeking for information. If it would not affect the price, how would it affect

Mr. SHIVELY. I have not contended that the removal of the duty would under present conditions affect the cost of bread. On the contrary, I have characterized these duties as empty and inoperative. That other influences besides fariffs may op-erate in the spaces between production and consumption, I know as well as does the Senator.

Mr. SHERMAN. I have the desired information that I asked for. I am now seeking for further information. What will be

accomplished by free listing wheat?

Mr. SHIVELY. Wheat is not free listed, but is subject to a countervailing duty. But wheat on the free list would prove once for all to the last doubting farmer that the duty on wheat is one of the husk and humbug duties on his products with which it has been sought through all these years to secure his vote for other duties in the general scheme which have robbed The great body of the farmers know it now. delusion remains on the subject would be dissolved.

Mr. SHERMAN. Does the Senator regard the duty on corn

in like manner?

Mr. SHIVELY. Certainly; quite as worthless. Mr. SHERMAN. I wish to ask the Senator if he knows what the movement of corn was the six working days of last week from Argentina? If he does not, I will state that it was over 7,000,000 bushels from Argentina alone, and that the freight from Buenos Aires is about 111 cents-short of 12 cents.

Mr. SHIVELY. Our exports of corn of over 40,000,000 bushels last year to imports of 903,000 bushels in round numbers answers all that suggestion. The article is distinctly export, and the figures of Argentina export do not affect the fact.

Mr. WILLIAMS. Will the Senator pardon me while I ask

the Senator from Illinois a question?

Mr. SHIVELY. Certainly.
Mr. WILLIAMS. What were the figures given a moment ago as the amount of corn exported from the Argentina to the United States?

Mr. SHERMAN. Seven million bushels.

In one week?

Mr. WILLIAMS. Mr. SHERMAN. Yes.

Mr. WILLIAMS. There must be something very remarkable

Mr. SHERMAN. I am not saying to the Senator that it came here, I am not saying that all of it came here. I do not know the part that came here. That was the movement out of the

Mr. WILLIAMS. Oh, you mean that Argentina exported to

the world that much?

Mr. SHERMAN. Yes. Mr. WILLIAMS. Wh What in the name of common sense has that to do with this question? It has nothing to do with it.

Mr. SHERMAN. It certainly has; and I asked it with the avowed purpose of connecting it with the remark made by the Senator from Indiana-without the duty how much of it would come here under the bill? If corn is free listed, how much of that would come here; would it increase the quantity? And the Senator has not yet answered except that it might come in increased volume

Mr. WILLIAMS. I beg pardon of both Senators. I misunderstood the statement. I understood the Senator to state that 7,000,000 bushels were imported here in one week. I was marvelously astonished and wanted to get further information.

Mr. SHERMAN. I will say to the Senator from Mississippi that it was simply the movement from that part.

Mr. SHIVELY. Certainly; Argentina's exports are corn, wheat, beef, and other agricultural products. Her exports of corn go in large part to the same countries to which our export is sent. In the presence of vast exports of wheat and corn into the world's market, imports in large volume at the same time are They go abroad because of the higher price there. The stream is outward, not inward. No market is oversupplied that pays the higher price nor undersupplied that pays the lower price. It seems difficult for the Senator from Illinois to interpret the significance of our export and import trade. It is impossible to conceive of cargoes of export and import of articles of like kind and quality passing one another in opposite directions. If the price were higher here, the article would remain here. There would be no export. If the price were higher abroad, the corresponding article would not come here. There would be no import.

Mr. CLAPP. Mr. President-

The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from Minnesota?

Mr. SHIVELY. Certainly.

Mr. CLAPP. When the Senator started to make his statement was engaged in writing. I ask, is the Senator speaking of wheat?

Mr. SHIVELY. I am speaking of corn now, because the Senator from Illinois became curious about the matter of corn

and called my attention to it.

Mr. CLAPP. I want to remind the Senator that while we call a subject generally wheat, there is a vast difference in its relation to home consumption and foreign exportation, between the wheat that is raised in certain sections of the country and the wheat that is raised in other sections of the country. The fact wheat that is raised in other sections of the country. The fact that a soft wheat may be exported is no evidence that the

that a soft wheat may be exported is no evidence that the hard wheat of our section can be exported. While we call all wheat, one is a subject of export, the other is a subject of import.

Mr. SHIVELY. That there are different grades of wheat is true. That there may be heavier exportation of some grades than of others is true. But the broad, plain fact that, all told, last year our imports of wheat of all kinds were only 797,528 bushels as against an exportation of 91,602,974 bushels of wheat of all kinds, or 1 bushel of import to 114 bushels of export, shows the dominating influence of the export market as the pricing agency in the domestic market.

Mr. CLAPP. I can not let that statement go unchallenged. We raise in the northern tier of States and out in the Northwest one character of wheat and they raise in Canada practically the

same kind of wheat.

Now, the fact that we export a different kind of wheat from the States farther south has no relation to the fact as to the wheat that we raise in our States. It will meet in competition without any duty the importation of similar wheat from Canada; and that is what we complain of.

Mr. SHIVELY. Why, within the last year and by to-day's quotations the price of northern No. 1 is higher at Winnipeg than at Minneapolis, higher on the Canadian side of the line than on the United States side of the line. This accounts for the trifling importations as compared to exportations. At other times the prices may be reversed; but at all times the exports from this country are vastly in excess of imports.

Mr. CLAPP. We have in fact several grades in the North-

Mr. CLAPP. We have in fact several grades in the Northwest. Canada fixes her own grades. The fact that a certain west. Canada fixes her own grades. The fact that a certain grade was higher in Winnipeg than another grade was in St. Paul, Minneapolis, or Duluth proves nothing. What we are contending for in this struggle is that we raise a particular kind of wheat, and that same kind of wheat may be differently graded in Canada; but whatever you call the grade it makes the same product as our grade.

Mr. WILLIAMS. Mr. President, if the Senator from Indiana will pardon me, does the Senator from Minnesota mean to say that none of that grade of wheat is exported from the United

States?

Mr. CLAPP. Very little; so little that in 1911, when they were trying to force free Canadian wheat upon us, we were unable to obtain the freight rates on our kind of wheat from Minneapolis and Duluth to Liverpool.

Mr. WILLIAMS. When the Senator says that none of that sort of wheat is exported, does he mean that none of it is exported in the shape of wheat and that none of it is exported in the shape of flour either?

Mr. CLAPP. I mean in wheat.

Mr. WILLIAMS. My understanding is that that is correct; that it is nearly all turned into flour and exported in that shape.

Mr. CLAPP. Exactly.

Mr. WILLIAMS. And when exported in the shape of flour it meets with competition in Argentina as well as in England and elsewhere. Now, to say that wheat is not exported just simply because it is not exported in the raw would mislead. If it is turned into the finished product, flour, and then exported it is still exported.

Mr. CLAPP. If the Senator from Indiana will pardon our somewhat incidental discussion here-

Mr. SHIVELY. I indulge the Senator, but I want myself to close in a few minutes. It was not my purpose to speak at length.

Mr. CLAPP. I will be very brief. The fact that while our wheat is not exported and can not be exported to Liverpool because of the difference in the price between our wheat and the other wheat of this country, and while in a broad generic sense all flour may be the same, nevertheless we get the benefit of the difference in the price of the wheat, so long as there is that difference in the price, between Liverpool and Duluth, which precludes shipping or exporting our wheat through Duluth to Liverpool. That is just the trouble. If we could have a voice in this matter, if this matter could be considered from the

viewpoint of our section, I believe it would result in a different ultimate condition of this tariff.

Mr. GRONNA. Mr. President-

The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from North Dakota?

Mr. SHIVELY, Yes. Mr. GRONNA. The Senator from Indiana has referred to the quotation of the price of wheat in two places in his speech this afternoon. Will the Senator from Indiana state of his own knowledge that the Canadian wheat sold at a higher price than

the American wheat, quality considered?

Mr. SHIVELY. Mr. President, so far as my personal knowledge is concerned, the wheat on this side of the line may have been better than the wheat on the Canadian side, or the wheat on the Canadian side may have been superior to the wheat on this side. But when I see grades given precisely the same name on both sides of the line and quotations for both sides made and published on the grades so named I infer that the likeness of description in grade means substantial likeness in quality. But my contention goes to the general aspect of wheat production and trade in relation to the tariff. Wheat is sown some place on this earth every day of the year. Wheat is reaped some place on this earth every day of the year. When the farmers of our Northern States are around their firesides in midwinter the farmers of the Argentine Republic are reaping their ripened harvest. Later the farmers on the table-lands of India are gathering their harvest. At another time the farmers in the valley of the Nile are gathering their harvest, and at still another time the farmers on the plains of Russia are gathering their harvest. The surplus wheat from all these fields is poured into the great market of western Europe in open competition with the surplus wheat from the fields of the United States. From that great surplus market the price ranges on a downward incline plane back past the American farm. To the level of prices thus fixed the farmer brings his wheat. He stands between two markets, neither of which he controls. He makes his sales at prices fixed by others. He makes his purchases at prices fixed by others. As to his great staples, he makes his sales unassisted by tariffs and in open, constant competition with the whole world. He makes his purchases at combination prices written to artificial levels behind the shelter of tariffs which are potent to plunder him, but ineffective to protect him. By the exactions to which he is subjected on his purchases the natural gains of his labor and sacrifices are sponged away from him into splendid fortunes to those in whose interest the tariff was written.

Mr. GRONNA. Mr. President-

The PRESIDING OFFICER. Does the Senator from Indiana yield further to the Senator from North Dakota?

Mr. SHIVELY. Yes. Mr. GRONNA. The Senator from Indiana has stated that we are exporting wheat from the United States. from Indiana and I do not disagree on that. Now, I ask the Senator from Indiana if Canada does not also produce a surplus of wheat, and where does that surplus go? If Canada has a surplus of wheat, why does that surplus coming from Canada bring a higher price than does the surplus coming from the United States unless prices are based upon grades fixed arbitrarily, fixed in one place differently from the other?

Mr. SHIVELY. Of course, northwestern Canada is export in the matter of wheat, as is the United States.

Mr. GRONNA. They raise nearly 200,000,000 bushels. Mr. SHIVELY. Both countries export wheat. Much of the exports of both countries reach precisely the same market. The price of both is there fixed by the same competition, and the matter of grading, though material to the merchant, is not material to the tariff question.

Mr. GRONNA. Oh, it is very material. Mr. SHIVELY. Both countries being Both countries being exporters to the same market, the price descends backward to the farms of each.

Mr. GRONNA. The Senator and I agree on one proposition, namely, that the United States and Canada both export wheat. As the Senator knows-he has the figures there-Canada produced last year about 200,000,000 bushels of wheat. With a population of about 8,000,000 it must necessarily export 150,-000,000 bushels. Now, my query to the Senator from Indiana is this: Unless there is a difference in the standard of grades, will the Senator from Indiana give the Senate the information why wheat exported from Canada brings a higher price than wheat exported from the United States? That is a very important question.

Mr. SHIVELY. If grades of the same name sell at different prices in the same market it would indicate a difference in standards of grades. If the Canadian wheat is the superior in

market, though somebody should give the lower quality the same name

Mr. GRONNA. Mr. President, if the Senator will permit me, I stated to the Senate this morning—and I submitted proof in connection with that statement based upon actual business transactions by men who are engaged in the business—that the Canadian grades were of a higher standard; that all the No. 2 northern Canadian wheat would pass for Minnesota No. 1 northern, and that a great portion of the No. 3 northern Canadian wheat was as good in quality as No. 1 Minnesota wheat. The difference in price, I will say to the Senator, is, on contract, 6

cents on the No. 2 and 8 cents on No. 3.

Mr. SHIVELY. What was the Senator's question?

Mr. GRONNA. I asked the Senator a question, but it seemed the Senator did not wish to answer it, and the Senator asked me, if I understood him correctly, what my contention was. I am trying to tell the Senator what my contention is. Canadian No. 2 northern and No. 3 northern as graded arbitrarily, I will say, by a board of trade as against the grades established by the inspectors of the State of Minnesota under a State law, will come up in quality to the No. 1 northern grade of the Minnesota grain.

Mr. SHIVELY. There are surpluses in both countries. These surpluses are exported. We can not by legislation change the quality of wheat raised in North Dakota nor of that raised in Canada.

Mr. GRONNA. But the Senator from Indiana will admit, I assume, that the transactions are not done upon samples of wheat. The business is done upon certificates.

Mr. SHIVELY. I think that is true. But these differentiations and refinements on standards and grades do not meet the main question. That we exported alone in whole wheat and wheat in flour more than two-thirds as much wheat as Canada produced in the same period and over one hundred and forty times as much as we imported are the material and important facts touching the usefulness or uselessness of a tariff on wheat to the farmers of the country.

Mr. STERLING. Mr. President, I should like to ask the Senator a question before he takes his seat. He has referred to the tariff on agricultural products, and particularly on wheat, as being imposed for sentimental or political purposes. I want to call the Senator's attention to a table, for which I am indebted to the senior Senator from North Dakota [Mr. Mc-CUMBER] in his admirable speech delivered in the opening of

It appears that on the 6th day of April, 1912, the following prices were paid for wheat at different points in North Dakota and in Canada, these several points in Canada and North Dakota being from 1 to 5 miles apart, and in one instance the sales were at a town on a line running between North Dakota and Canada:

The price of wheat in Pembina was 95 cents; in Emerson, near by, 86 cents; in Neche it was 95 cents; and in Gretna, near by in Canada, it was 86 cents; and so on through a dozen points on either side of the line, the difference being about 11

cents per bushel on that day.

I turn to another table, with reference to barley. It sold on the same day, April 6, 1912, at Pembina at 90 cents, and across the line at Emerson it sold at 60 cents; at Neche the price was 90 cents, that being in the United States, while across the line in Gretna it was 50 cents, and so on down, the price running in Canada all the way from 45 to 60 cents, and in the United States all the way from 87 to 90 cents.

Mr. MARTINE of New Jersey. Were all those for the same

grades of wheat?

Mr. STERLING. Let me ask the Senator from Indiana if that difference in price is all husks to the American farmer? must be taken for granted that this wheat raised there in the same neighborhood was practically of the same grade.

Mr. MARTINE of New Jersey. That is not a safe assump-

Mr. SHIVELY. The Senator is swift to take everything for granted necessary to make a case. The senior Senator from North Dakota, after quoting those figures for 1912, admitted that wheat is ruling higher the present season on the Canadian side than on this side of the line. The tariff was not changed. There is to-day, as there is every year, an even wider range of prices in the United States than in Canada. There is a far wider difference of prices on wheat in different parts of this country than any difference shown to exist at the Canadian line. As well attribute the difference in price between Fargo and New York City to the tariff as to ascribe all the eccentricities of the wheat market in Northwestern Canada to the tariff. The tariff, like an impassable mountain range, may facilitate a buying control on one side of the line and temporarily depress quality of course it would bring the higher price in the same the price, but the surplus from both sides in form of wheat or four goes to the same market and, quality for quality, brings the same price. The difference in price, of which the Senator speaks, is not husk and humbug, but the notion that this difference is produced by the tariff or that the tariff is an enriching influence to the American farmer is husk and humbug.

Mr. President, I have consumed far more time than I intended. This has been due to interruptions, though of this I do not complain. In this time I have discussed the tariff as it affects the farmer on his selling side and indicated how little part or lot he has in the tariff as a beneficiary. In his buying markets he has been the constant victim of its exactions. the course of colloguy several Senators have inquired why we have not placed articles which the farmer must buy on the free list. I have said that in this respect the bill answers for itself. But with the indulgence of the Senate I add that, among other articles, we have taken from the dutiable schedules and placed on the free list the plow, the harrow, and the cultivator; the wagon, the thrashing machine, and the clover huller; the horserake, the baler, and the stacker; the cotton gin, the shredder, and the traction engine; the nail, the spike, and the horseshoe; the barbed wire, the harness, and the lumber; the grain drill, the mower, and the harvester; the boots, shoes, sewing ma-chines, and bagging cloth; and have reduced the duty on every other useful article that the farmer purchases for his farm or his household.

Mr. JAMES. If the Senator will permit me, I should like to put in the Record some figures in reply to the argument of the junior Senator from South Dakota [Mr. Sterling] as to the difference in the price of wheat right across the line in Canada and the United States by which he undertakes to create the impression that the tariff causes the difference in price. The report of the census shows that in 1912, on December 1, the price of wheat on the farm in Indiana was 93 cents, in Illinois 88 cents, in Michigan 96 cents, and in Wisconsin 83 cents. The Senator might take some of the time of the Senate and explain to us what caused the difference in the price of wheat from 5 to 15 cents a bushel on the same day of the same year in States lying side by side with each other and under the same tariff rate.

Mr. BORAH. Mr. President, the Senator from Wisconsin [Mr. La Follette] gave to the Senate this morning some figures showing the difference in the cost of production here and abroad of some of the products in which we are interested just now; and, with his usual accuracy, he has demonstrated that there is a difference in the cost of production here and abroad as to some of the agricultural products. So we might, if we chose, rest our argument on that principle. But to my mind there is a broader question involved in the discussion than that of the difference in the cost of production here and abroad, so far as agricultural products are concerned.

It has been argued to the American producer and the American farmer for a great many years that there should be built up here in this country a permanent home market. While at the time the discussion began it was not demonstrable that it was of any peculiar or exceptional benefit to him at that time, yet when there should have been established a home market which would be steady and near him he would in the end come to enjoy the benefit of having that home market at hand. That discussion continued through a long number of years, especially upon the part of the party to which I belong.

As was said by the Senator from Wisconsin this morning, there came a time when the American farmer began to enjoy the home market. As that time approached it was noticeable in this country that there was a disposition upon the part of all parties to turn over that home market to some one other than the American farmer, or at least to make him compete for it. As soon as it was discovered that in all probability this home market was proving of some value and of some benefit to the American farmer, our friends in the East began to say among themselves: "We should like to purchase our agricultural products from Canada. We can go over into Canada; it lies closer to some of us; the transportation is shorter in some instances. In any event, if we have the vast agricultural fields of Canada competing with the agricultural interests of the United States, it stands to reason we will get our agricultural products cheaper than we do now." So there grew up in this country within the last few years this idea of reciprocity with Canada as to farm products.

What was the basic principle upon which the proposition of reciprocity with Canada was based? How and why was it argued that we should enter into this relationship with Canada? It was argued throughout the country where it had most effect that it would inevitably give the American consumer cheaper products; that it would benefit the people in the towns and cities; and that by reason of throwing into the American mar-

ket the agricultural products from the great fields of Canada it must necessarily follow that the American consumer would get the benefit of it.

Of course the consumer could not get the benefit of a cheaper price unless the price were reduced; and a reduction of the price must necessarily affect the price which the American farmer was to receive for his product.

The argument which was made in the Senate two years ago, on both sides of the Chamber, was based upon that propositionthat free trade between these countries would give us cheaper farm products, and thereby necessarily compel the American farmer to sell in a cheaper market. Does any one contend that that was not the theory upon which reciprocity was urged? Some of us opposed the measure at that time for the reason that we believed it would have the effect of reducing the price of farm products, although we did not believe that the reduction of price to the farmer would necessarily reach the consumer, for the reason that it would be taken up by meat and flour combines, as proved literally true in the case of free hides. Everyone knows we placed hides on the free list to get cheaper leather goods, but that instead of leather goods going down they went up. The reciprocity measure nevertheless passed this body, passed the other body, and became, so far as we were concerned, a law. Fortunately, it was afterwards defeated through no efforts of ours.

This bill carries out precisely the same policy that was embodied in the reciprocity treaty, and I assume for the same purpose and for the same reason. I must say, however, that there is no inconsistency between the position which our Democratic friends assume and their former teachings, because they have advocated, whether they have been willing to put it in effect or not, free trade from the beginning. There certainly was an inconsistency so far as the party to which I belong was concerned. But if our Democratic friends had treated in this bill the farmer as they have treated others we would have no right to complain. But they are not willing to apply free trade except to the producer.

If the home market does not belong to the American farmer; if, so long as we have agricultural land in this country sufficient to feed 200,000,000 people, the home market does not belong to those who are prepared and ready to furnish it when the prices are such as to induce them to go into the business, then there is nothing in the doctrine of protection.

If protection is not a system, whole and entire, a policy universal in its effect and application, diversifying industries, giving men different avocations and walks in life, through and by means of which we develop citizenship, then it is a proposition that can not be defended on any ground at all.

So the moment the Republican Party brought into Congress the doctrine of reciprocity, or free trade for the producer of a protection for the manufacturer, that moment it presented an argument against protection which could not be answered. The first time the American people got an opportunity to deal with the subject, while it may be "sentimental," it may be "fanciful," the American farmer repudlated the doctrine that he should be compelled to sell in a free-trade market and buy in a protected market. He administered his rebuke to us, and he will administer his rebuke to you.

We have had some difficulties in our party for the last few years, and some of those difficulties have been so personal in their nature that we have overlooked some of the others which were economic and were superinduced by reason of a change in policy. But one of the reasons why the Republican Party met such disaster in the last campaign was the fact that the most loyal constituency a party ever had—the American farmer—had been betrayed, and he resented it. We will either get right on this question and stay right, or we will stay whipped—not by a party which does the same thing, but by some party big enough and broad enough and brave enough to treat all our people alike.

I have heard considerable discussion in this Chamber at this session of the disposition of the present incumbent of the White House to enforce his ideas with reference to this tariff bill, a subject which I am not about to discuss. I only want to say that I do not get very much comfort out of these criticisms, for if the Republican Senators in this Chamber had voted according to their convictions when the reciprocity bill was passed, in my judgment, there would not have been 10 votes in favor of it on this side of the Chamber. It was a disaster; it was a treacherous betrayal of as loyal a constituency as a great party ever had. I denounced then and I denounce now.

We have precisely the same thing in this bill. While it does not impeach the Democratic Party with the inconsistency with which the reciprocity bill impeached us, it will have, in our judgment, precisely the same effect. The discrimination in this

bill against the American agriculturist I think must be apparent even to the supporters of the measure. It is true that they argue that there is no discrimination because of the fact, as said by the Senator from Indiana, that the farmers are not benefited now. But if we be right, if the American farmer be right in his belief that the present law does benefit him, then I think no Senator upon that side of the Chamber would contend that this bill itself is not aggressively discriminatory against the American producer and against the American farmer.

A leading London paper said a short time ago:

The new tariff justifies the wisdom of the Canadian people in refusing to bargain away their economic independence at the instance of President Wilson's predecessor. A large portion of what was offered to the Dominion on condition of becoming an adjunct of the United States is now presented to her for nothing.

All people who have interpreted it from the outside have considered the bill as carrying within itself the same discriminatory features against the American producer that the reciprocity

My able friend from Montana said awhile ago that the duty upon these farm products was a "mental duty"—a felicitous phrase, and one which I have no doubt represents the conviction of the Senator from Montana. But let me ask this question: If it is a mere mental duty, affording the American farmer merely some sentimental pleasure if indeed it does not protect him in any way whatever, pray tell me what possible benefit will be derived by the American consumer by reason of taking the duty off of agricultural products?

We know that it has been argued, interviews have been given, speeches have been made, that one of the objects and purposes of this bill was to reduce the cost of living. I have many of them here upon my desk, and I think I may say that I have read no less than 20 articles and speeches to the effect that the cost of living would be reduced to some extent by reason of

taking the duty off these agricultural products.

Of course, if it be true that this duty is a mere mental duty, then the arguments which have been made that taking it off would reduce the cost of living are mere mental gymnastics. The one must follow the other, because if it does not injure the American farmer it must necessarily be that it will not benefit the American consumer. So I say that there is a broader question involved in this discussion than the mere question of the difference in the cost of production at home and abroad.

Mr. President, almost every civilized nation has experimented at some time or other with the building up of its purely commercial interests at the expense or through the neglect of its agricultural interests. Every nation which has done so has suffered-its social and economic conditions have become involved and weakened, its standard of citizenship has deteriorated, and distress has been the ultimate result. The agricultural interests are generally at a great disadvantage in such a contest. They have not the means nor the time generally for a close and effective organization, they have not the access to the instrumentalities through which public opinion may be formed, and they are generally, so far as numbers are concerned, inadequately represented at the council table where measures are framed or in the halls of legislation where they are enacted into laws. One has been indifferent indeed to passing events for the last 20 years who has not observed the dominancy of the purely commercial interests in legislation and administration and the setting in of the movement in this country which at certain periods has been started in other countries.

This bill before us is the most pronounced step in that direction yet taken. It is unwise, to my way of thinking, in many of its features as to all interests, but as to the agricultural interests it is not only unwise but harsh and condemnatory. That interest which is free of combines and monopoly, that interest in which competition still prevails in its fullest scope, that interest which is just now coming to its own in the realization of fair compensation and fair prices is to be made more and more the hewers of wood and drawers of water for all other

I want therefore to survey briefly some historic facts, for we are only repeating history. We are only doing, without half the reason or justification, what other people equally presumptuous and equally shortsighted, equally subservient to false theories, and coupling blind to the description of the state of the sta ries, and equally blind to the true principles of national strength have done. I do not want to torment inconstant hearts by recalling the advice of discarded deities, but I remember as I speak of it that Jefferson said:

The agricultural capacities of our country constitute its distinguishing feature, and the adapting our policy and pursuits to that is more likely to make us a numerous and happy people than the mimicry of an Amsterdam, a Hamburg or a city of London.

And again he said in 1817:
The history of the last 20 years has been a significant lesson for us all to depend for necessaries upon ourselves alone.

A nation with countless thousands of acres of agricultural lands capable of producing almost everything through its various climates which comes to the table in the way of necessaries, a nation thus equipped ought to adopt those policies which will encourage and protect, foster and build up its agricultural interests. We ought to give strength to our citizenship, breadth and wholesomeness to our civilization, health and permanency to our social order, and economic soundness to our industrial life by encouraging men to leave the centers of population and go to the farms by preparing in a distinct and settled and positive way to live off of our own acres, out of our own gardens, and from our own farms.

The American market belongs to the American farmer. Any policy which takes that market away from him or compels him to compete with others for it under such conditions as to embarrass or discourage is unwise both as a question of economics and a question of government. It is a policy which was con-demned by Washington, by Jefferson, Madison, Monroe, and Jackson, by Lincoln, McKinley, and Roosevelt. It is a policy which has been condemned not only from the lips of wise and devoted public servants, but it has been condemned by experience, and its unwisdom, its folly, are written in unmistakable terms over more than one page where we find recorded the fatuous efforts of men to adopt it.

Mr. President, as I said a moment ago, we have in this country sufficient agricultural land to feed 200,000,000 people. We have vast areas of abandoned and unoccupied farms. the great State of New York, the Empire State of the Union. There are large areas of land in that State which have become vacant and unoccupied. The people have moved into the cities. They have left agricultural pursuits, diminished the field of

production, and increased the field of consumption.

That is true with reference to a great many of the Eastern We are now engaged in every way which ingenuity has been able so far to suggest in different schemes by which to invite people to go to the farms, by which to turn the immigration from the cities back to the agricultural region. It is a matter which is engaging the attention of the best thinkers and the greatest publicists of our Nation how to take from these congested centers, where American citizenship is being degraded and broken down by a condition of affairs and environment which they can not conquer, and turn people to the American farms, to the agricultural regions.

So long as we place a discriminatory statute upon the statute books which has the effect of lessening the incentive to agriculture and of stimulating the incentive to manufacture, that condition will go on and all the theorists and party policies and organizations for country life will have pursued their work in

vain.

I am not going to take much of your time to go back in ancient history. I know that the Senate would be impatient to go into these matters, but I do want to call attention very briefly to two or three instances which, it seems to me, throw some light upon the question that we have got to take care of our agricultural interests in order to maintain and take care of our citizenship and our civilization.

Early in the Roman history Rome concluded, through her Emperors, to rely upon foreign nations for their food. Tacitus,

speaking of this matter, said:

Formerly their armies in their distant provinces were provisioned from fertile Italy, but now they had preferred to exploit Africa and Egypt, and the lives of the Roman people were given up to the chances of the winds and the waves.

In other words, at this time Rome began to purchase her agricultural products exclusively of those two nations, where they could be produced so much cheaper, upon the theory that it was best to purchase where you could purchase cheaper. The result of that is known to all the writers of Roman history. It had the effect of causing the abandonment of all-the great agricultural fields of the Roman Empire.

The historian Treitschke, writing upon that subject later,

said:

Old industries also require protection against foreign competition. In this respect Italy teaches us a valuable lesson. If protective tariffs against Asiatic and African breadstuffs had been introduced in time the old Italian peasantry would have been preserved and the social conditions would have remained healthy. But Roman traders could import cheap grain from Africa without hindrance and the rural industries decayed, the rural population disappeared, and the Campagna which surrounds the capital became a vast desert.

The landowners and workmen of Italy left the agricultural fields of Italy, crowded into the cities of Italy, and became a mob living upon the products of foreign nations, and for all time measuring the degradation and fall of that illustrious citizenship. Mixed up with and an inseparable element of the disintegrating forces of the Roman nation was the decay of her

Mr. President, in 1842 Peel presented his famous budget to Parliament. He announced that in the end it would enable him to reduce duties, and the final result was free trade for England. It was said that the English people were entitled to a free market basket, and therefore the agricultural interests were put in competition with the agriculture of the world. The producers of England were placed in open and free competition with the producers of all countries. It is interesting to note the debate which took place at this time. It was clearly demonstrated by facts and figures that there was no place from which agricultural products could come and compete with the agriculturists of England. It was said that France could not furnish any wheat and that the people of the United States had need of more than they were producing, and that in any event the freight charges were an absolute protection, and merchants and business men demonstrated with their usual accuracy that the agriculturists of England need not suffer because of the great freight charges.

The effect of this policy, however, was altogether different from that which it had been figured. The depression in agriculture was immediate, lasting, and ruinous. Business distress and business demoralization, so far as the agricultural interests were concerned, were universal. It is now a fact of which the English historians take notice that the suffering and poverty

among the farmers of England was startling.

I am not going to stop to argue to-day whether free trade for England, situated as England was, was a good thing for her or not. I only want to show from the history of the agricultural interest of England that from the day and hour that the freetrade policy was inaugurated the story of the agricultural industry in England is as sad and tragic as is anywhere to be found in the history of the world. I can give it to you better in

figures than I can in words.

In 1866 England had in cultivation in wheat 3,126,431 acres. To-day she has in cultivation in wheat 1,804,045 acres. Wales had in 1866, 113,862 acres of wheat; to-day 38,487 acres. In the vast wheat fields, under the very shadow of the great manufacturing interests of England, where freight rates and transportation and all these questions work to the benefit of the agriculturists, they have passed from the wheat field to the truck patch and from the truck patch to pasturing, and to-day the hunter and his hounds pursue the game in almost the center of the great industrial interests of England.

In 1866 of barley they had an acreage of 1,877,887 acres; to-day they have an acreage of 1,337,513 acres.

Of rye, 50,570 acres in 1866; 39,962 acres now.
Of beans, 492,586 acres; to-day 299,846 acres.
Of peas in 1866, 314,206 acres, and but 166,182 acres now.

In 1866 the acreage of potatoes was 311,151 acres; to-day it is 402,505 acres; in this instance an increase.
In cabbage in 1866, 159,539 acres; to-day 139,513 acres.

In carrots, 15,598 acres in 1866; to-day 10,441 acres Mr. LODGE. Perhaps the Senator has not the figures, but I take it there was more decline between the repeal and 1866. In 1846, the date of Sir Robert Peel's repeal of the corn law, there was more land in wheat than there was in 1866.

Mr. BORAH. I think that is true, Mr. President. I had to take some period over which to measure. I took the period and figures as I found them tabulated by English writers on the

subject.

Mr. LODGE. Certainly.

Mr. BORAH. But the entire table in regard to this matter will be found in Prof. Prothero's book on English farming, in the appendix.

But in addition to the figures, Mr. President, I want to read briefly some of the extracts which may be had from public men and impartial historians of that country, showing the decline in the agricultural interests of that country from 1846 to the present time.

February 19, 1850, Mr. Disraeli, in the House of Commons, after a petition had been presented showing the distress of the

agricultural interests of that country, said:

We have to-night to inquire what is the best course to remove, if possible, certainly to mitigate, that unprecedented depression to which the petitioners have referred. We believe that that distress has been occasioned by recent legislative enactments—

To wit, the anticorn statute-

by the recent repeal of the laws which regulated the importation of foreign agricultural products.

In the same speech he calls attention to the fact that the cultivators of the soil for the last few years had realized nothing whatever from their lands. In the same speech he again says, speaking of the agricultural interests:

Their distresses are now seyere. You can not allevlate those distresses by referring, as some of the noble lord's colleagues have done, to the otherwise rampant prosperity of universal England. It has been truly

said that it has been impossible to exaggerate the agitation which prevails out of doors with respect to this agricultural suffering.

On March 28, 1879, the same distinguished speaker said:

No one, I think, can deny that the depression of the agricultural interests is excessive. Though I can recall several periods of suffering, none of them have ever equaled the present in its intenseness. Let us consider what may be the principal causes of this distress. * * * The remarkable feature of the present agricultural depression is this—that the agricultural interest is suffering from a succession of bad harvests, and that these bad harvests are accompanied for the first time by extremely low prices.

Prior to that time, when the aricultural interests were depressed by reason of bad crops, they had at least been able to realize a fair price for their products, but at this time they were unable to realize a fair price by reason of the fact that the market had been taken away from them, or was being taken

away from them.

away from them.

That is a remarkable circumstance which has never before occurred, a circumstance which has never before been encountered. In old days, when we had a bad harvest we had also the somewhat dismal compensation of higher prices. That is not the condition of the present. On the contrary the harvests are bad and the prices are lower. That is a new feature that requires consideration, There can be no doubt that the diminution of the public wealth by the amount of £80,000,000 suffered by one class begins to affect the general wealth of the country and is one of the sources of the depression not only of agriculture, but also of commerce and trade. No candid mind could deny that this is one of the reasons for that depression. Nor is it open to doubt that foreign competition has exercised a most injurious influence on the agricultural interests of the country. The country, however, was perfectly warned that, if we made a great revolution in our industrial system and put an end to the policy of protection, such would be one of the consequences which would accrue. * * Agriculture just now is producing much less than it did before. Nearly a million acres have gone out of cereal cultivation, and it is suffering from foreign competition, which, even in its own home market, it has unsuccessfully to encounter. to encounter.

So, beginning, Mr. President, with 1851, only a short time after the repeal of the corn laws, after free trade was established, was the inception of the agricultural suffering among the agri-

cultural interests of England.

There has never been a year, so far as my investigation has permitted me to go, in which there has not been an increase and accentuating of that suffering and that depression, and to-day Lloyd-George is striving with all the ingenuity within him to work some kind of relief to the agriculturists of England.

Mr. Walpole, in his History of England, volume 4, page 378,

said:

It was calculated by a competent statistician, Mr. Giffin, that the average price of agricultural products was one-third lower in 1877-1879 than in 1867-1860. Every class connected with agriculture was suddenly confronted with severe distress.

Again, he says:

In every year from 1869 to 1879 about a hundred thousand fewer acres were sown with wheat in the United Kingdom and some 1,500,000 more acres were sown with wheat in the United States.

Again, he says:

Universal distress was again increasing the rolls of criminals in the country.

Mr. Paul in his history of England says:

There was, however, one class of workers

He had been speaking of the general prosperity of Englandwho had nothing to spare for luxuries and too little even to provide themselves with the bare necessities of life. The agricultural laborers in 1872, though not nominally slaves, were unable by their utmost exertions to obtain on an average more than 12 shillings a week.

Molesworth in his history devotes a chapter to the distress of the agricultural interests from 1850 on.

In one of the land commissioners' reports of the royal com-

mission, dated about 1804, it was said:

The acreage abandoned in despair is steadily increasing, and in a few years, unless some change takes place, whole parishes will be out of cultivation. Farmhouses, farm buildings, laborers, cottages are becoming ruins, and all this within easy distance of London. The most congested districts in Ireland afford no more alarming spectacle.

The evidence before the royal commission in 1897 disclosed an increasing spread of the disaster and distress. Farms were gradually being abandoned, drainage neglected, mortgages being

foreclosed, and that condition still continues.

Mr. President, you can not measure that condition of affairs by any question of the slight rise in the price of food, even if such were true, as to the other citizens of the country, although, in my opinion, it would not be true. It is not the price of farm products which makes the high cost of living, but the combinations which control the American market place. In this great Republic, which has such a large agricultural area, it stands to reason that we should produce that which we are to consume. If we had a limited area, if the congested centers were not overoccupied, if the healthy condition of American citizenship could be maintained, there might be some argument which would convince me in the handling of these statistics and in the questions of supposed increased prices. But anything which makes the farm idle or would leave the great agricultural fields unoccupied would be a menace to our citizenship and our institutions which

it would be difficult, in my judgment, for human language to

measure or portray.

Mr. WARREN. Mr. President, may I ask the Senator a question?

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Wyoming.

Mr. BORAH. Yes, sir. Mr. WARREN. I hold in my hand a telegram received to-day from London as to the cost of living there. I do not know whether or not the Senator has it there?

Mr. BORAH. I have not. Mr. WARREN. It is in a

It is in a few words. May I read it?

Yes, sir. Mr. BORAH.

Mr. WARREN. The item is in to-day's Washington Times, and reads:

COST OF LIVING UP IN BRITAIN 14 PER CENT.

LONDON, August 13.

Striking figures showing the increased cost of living are contained in a voluminous report issued by the British Board of Trade, according to which present prices are the highest in 25 years.

Retail prices of food have risen 14 per cent since 1900, while wages

have increased only 3 per cent.

Prices of almost all foodstuffs, except tea and sugar, have risen, the
greatest increases being in bacon, 32 per cent, and potatoes, 46 per cent.

People have been able to meet the advances only by reducing con-

This, I thought, would be apropos of the very able argument the Senator from Idaho has been advancing as to farming or the lack of farming in Great Britain.

Mr. LIPPITT. Mr. President, will the Senator from Idaho

yield to me a moment?

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Rhode Island?

Mr. BORAH. I do. Mr. LIPPITT. I desire to ask the Senator from Wyoming

to what nation those figures apply?

Mr. WARREN. The telegram is from Great Britain-London, England-and, of course, as the Senator from Rhode Island will understand, a matter of 3 per cent increase in wages upon the basis that wages rest in England would not correspond with an advance of 3 per cent in wages in this country, but would be much less in dollars and cents.

Mr. CHAMBERLAIN. Mr. President, may I interrupt the

Senator from Idaho?

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Oregon?

Mr. BORAH. I do. Mr. CHAMBERLAIN. I understand all those commodities in Great Britain are on the free list. If that be true, I can not understand how farm products could be increased in value under the theory that the Senator from Idaho is now expound-

Mr. WARREN. If the Senator from Idaho will allow me just a moment to answer that, I will say that it is perfectly plain that if you make the occupation of farming so unprofitable that farmers will leave their land uncultivated, as the Senator from Idaho has well protrayed in Great Britain, the natural result of that in time must be higher prices and a higher cost of

Mr. CHAMBERLAIN. May I interrupt the Senator from

Idaho just once more? Mr. BORAH. Yes, sir.

Mr. CHAMBERLAIN. As I understand it, the distinguished Senator from Idaho is discussing what might be the tendency of the pending bill, which places a great many agricultural products on the free list. As to the abandoned farms of which the Senator from Idaho has been speaking, that has all occurred under the highest protective tariff we have ever had.

Mr. WARREN. The Senator from Idaho was also speaking

of abandoned farms in Great Britain because of the free impor-

tation of farm products into that country.

Mr. CHAMBERLAIN. In New York and in New England also the Senator has spoken of farms being abandoned.

Mr. BORAH. Mr. President, the Senator from Oregon [Mr. CHAMBERLAIN] is correct. I did speak of that fact, and it is a fact; but what I said was and what I repeat, and as was suggested by the Senator from Wisconsin [Mr. LA FOLLETTE] this morning, the American farmer is approaching the time when it is demonstrable that he can receive some benefits from this system. From 1870 to 1890 there was thrown under cultivation in this country, by reason of the occupancy of the great Mississippi Valley, an agricultural region almost equal to that of Canada. By reason of the spread of the agricultural interests and by reason of the occupancy of so much of that land, the production of agricultural products was such that everyone knows that the prices, as we say, went to pieces. The farmer burned his corn and his hay rotted in the stack. Now the

American farmer is coming back for the first time in 30 or 40 years. During the last 10 years his prices have been going up where he could receive a reasonable compensation for his services.

Just as that condition of affairs is happening, when this system may be so distributed that he may share its benefits, the selfishness of mankind, always predominant, proposes to put him again in competition with an area equal to that of the great Mississippi Valley when it was put under agricultural dominion. Everyone knows that the agriculturist in this country has suffered; that he has not shared either in legislation or otherwise; but the sad part of it is not only that he has not shared, but there seems to be a determination now that he shall not share. As the time approaches when the great home market is to furnish him adequate compensation for his labor the long season through he is put in competition with Canada and Argentina.

If there is an industry in this bill with a duty or no duty which peculiarly threatens its destruction, it is an agricultural industry; if there is an industry here above which is suspended the Damocles sword of an experiment, it is an agricultural industry. The beet-sugar grower, the cane-sugar grower, the sheep raiser, and the general farmer, and those things which are attached to the farm, representing the great producing and agricultural interests of this county—it is their products which are put upon the free list.

But, Mr. President, before I take final leave of the subject I

want to quote a little further from English history

Mr. Prothero, in his standard work on English farming, says: Mr. Prothero, in his standard work on English farming, says: Since 1862 the tide of agricultural prosperity had ceased to flow; after 1874 it turned and rapidly ebbed. A period of depression began, which, with some fluctuations in severity, continued throughout the rest of the reign of Queen Victoria and beyond. * * * Farming suffered from the same causes as every other home industry. In addition, it had its own special difficulties. The collapse of British trade checked the growth of the consuming power at home at the same time that a series of inclement seasons followed by an overwhelming increase of foreign competition paralyzed the efforts of farmers. * * In 1875-76 the increasing volumes of imports prevented prices from rising to compensate deficiencies in the yield of corn. * * At the moment when English farmers were already enfeebled by their loss of capital they were met by a staggering blow from foreign competition. They were fighting against low prices as well as adverse seasons.

Speaking of the report of the Duke of Richmond's commission upon the subject of agriculture, the same authority says:

upon the subject of agriculture, the same authority says:

The report of the commission established beyond possibility of question the existence of severe and acute distress, and attributed its prevalence primarily to inclement seasons, secondarily to foreign competition.

* * The worst was by no means over. On the contrary, the pressure of foreign competition gradually extended to other branches of agriculture. The momentum of a great industry in any given direction can not be arrested in a day; still less can it be diverted toward another goal without a considerable expenditure of time and money.

* * But as time went on the stress told more and more heavily. Manufacturing populations seemed to seek food markets everywhere except at home. Enterprise gradually weakened; landlords lost their ability to help, farmers their recuperative power. Prolonged depression checked costly improvements. Drainage was practically discontinued. Both owners and occupiers were engaged in the task of making both ends meet on vanishing incomes. Land deteriorated in condition; less labor was employed; less stock was kept; bills for cake and fertilizers were reduced.

Again, the author says:

Again, the author says:

Again, the author says:

In September, 1897, a royal commission was appointed to inquire into the depression of agriculture. The evidence made a startling revelation of the extent to which owners and occupiers of land and the land itself had been impoverished since the report of the Duke of Richmond's commission. It showed that the value of produce had diminished by nearly one-half, while the cost of production had rather increased than diminished; that quantities of corn land had passed out of cultivation; that its restoration while the present prices prevailed was economically impossible; that its adaptation to other uses required an immediate outlay which few owners could afford to make. Scarcely one bright feature relieved the gloom of the outlook. Foreign competition had falsified all predictions. No patent was possible for the improved processes of agriculture. They could be appropriated by all the world. The skill which British farmers had acquired by a half a century of costly experiments was turned against them by foreign agriculturalists working under more favorable conditions. Even distance ceased to afford its natural protection, either of time or of cost of conveyance, for not even the perishable products of foreign countries were excluded from English markets.

The present chancellor of the exchequer of England, the

The present chancellor of the exchequer of England, the famous Lloyd George, standing in his place in Parliament, declared:

Clared:

There is no important industry in which those who are engaged in it are so miserably paid as that of the agricultural laborer. I think their wages and their housing conditions are a perfect scandal to this great country.

* * My honorable friend has called attention to the fact that there has been a great deal of emigration and, what is still more important, migration from the agricultural districts during the last few years. Those who are acquainted with the facts will not be astonished at the numbers who have left those districts and they must be surprised that many more have not left. When wages are so much better in the mining areas and other areas it is marvelous that ablebodied men should be prepared to go on laboring at all seasons for the miserable reward which labor on the soil brings to them.

* * We are losing our population in rural areas and in some respects the best part of our population.

* * You can not get a great country

built up permanently on conditions which make rural life unpopular, putting it at its lowest, and that is really the case now.

The chanceller, speaking in Parliament at an earlier date in April, 1909, said:

April, 1909, said:

Any man who has crossed and recrossed this country from north to south and east to west must have been perplexed at finding that there was so much waste and wilderness possible in such a crowded little island. There are millions of acres in this country which are more stripped and sterile than they were and providing a living for fewer people than they did even a thousand years ago—acres which abroad would either be clad in profitable trees or be brought even to a higher state of cultivation. * * * We are not getting out of the land anything like what it is capable of endowing us with of the enormous quantity of agricultural and dairy produce and fruit, and of the timber which is imported into this country a considerable portion could be raised on our own land.

Mr. President, it is not my purpose to pursue this feature of the discussion further, nor shall I enter upon an analysis of the contemporary conditions in England-although the latter would be an interesting subject and possibly more instructive than the past. Cobden said that it was his purpose to make England the workshop of the world. We may admit for the sake of the argument that that has been accomplished. Let us concede the commercial supremacy of this marvelous nation; let us concede, furthermore, that situated as England is it was statesmanship to turn her course in the direction which was taken from 1842. But I do not envy her nor covet for our country her supremacy. Her industrial record discloses nearly a hundred years of continuous, unrelieved hardship, and deadening distress and poverty among her agricultural people. Her official records are crowded with report after report revealing in reluctant language the suffering and pauperism among her You may argue that free trade was not the cause farmers. of this, and I may argue that it was, and honest men may finally separate without agreement as to who is right.

But one thing is sure, the fact can not be denied, and if free trade did not cause the distress and suffering and abandoned acres it did not relieve from them. If it was not the cause, it was not the remedy. In any event the surging, discontented mob crowding Trafalgar Square, enjoying at most but half the wage of the laborer in America, and the thousands and thousands of acres once clothed in plenty, the home of that sturdy class of yeomanry who made England great, and so long as they lived kept her great, now abandoned, given over to utter waste or to the pleasure of the huntsman with his hounds, are not things for us to imitate—the policy which brings about these conditions is not a policy for the United States, with her millions of acres, with a Government dependent upon the wholesomeness and the strength of her citizenship, to adopt. Moreover, if free trade did not cause this condition, even if it can not remedy it, as it has not, I prefer to avoid that policy. I prefer yet awhile the doctrine of Jefferson, Madison, and Jackson, of Blaine, Garfield, and McKinley; all those who believe that we should produce what we want, depend upon ourselves for what we need, diversify occupation, build up citizenship, and keep the home as an incentive and protection for those who have cleared the forests and conquered the desert and planted firmer and deeper than any other class the foundations of the Republic,

both economically and politically.

It is said, as I have stated, that this is a "mental" or a mere "fanciful tariff," or, to put it in the more elegant and poetic language of the Senator from Indiana [Mr. Shively], that it is a "humbug tariff." The Senator from Indiana has spent three hours this afternoon trying to satisfy the farmer that it is a "humbug tariff." It would have been very much easier to have just let it remain where it was if it did neither good nor harm, so that the American farmer could at least have had the felicitation of believing that he was protected. It did not hurt anybody, and it is not going to lower the price of the product for the man in the city. Bread is going to be no cheaper, he said; meat no cheaper; all the things which we eat no cheaper. Then why take away one of the mental pleasures of the agriculturist? Have we arrived at the point where we are not only going to deny him a substantial interest, but we are not even going to permit him to enjoy his mental pleasure and felicitation?

If it were possible, Mr. President, to benefit the consumers, then your argument would be strong in the places where that argument was made last fall; but when you say here upon the floor of the Senate that you can not benefit the consumer, then you give no reason under heaven or among men for removing this duty and the possible incidental protection which it may afford to the great producing interests of the country. moment you say that you are going to reduce the cost of living by taking the duty off the products of the farm, you say that you are going to reduce the price of the farmers' products, and therefore, standing here, where the light beats upon the throne and all that we say is recorded, and confronted by statistics and facts, you are compelled to admit that the argument made that you are going to reduce the cost of living is false in order that you may escape the proposition that you are reducing it at the expense of the American farmer.

A distinguished member of the Ways and Means Committee, after the bill had passed the House, had an interview in a New York paper which circulates throughout the Union, and in that interview he explained how they were going to reduce the cost of living. The interview is headed:

Effect of tariff on living cost,

This is an interview, and therefore I presume I am permitted to refer to it without a breach of the rules of the Senate. This distinguished member of the Ways and Means Committee, one of the various able men upon that committee, told the American people that they were going to reduce the cost of living in this way. He said:

Food: All duty has been taken off meats, fresh and prepared. This means that meat from Argentina can be imported to compete with the product of American packers. Under the Payne tariff the duty on bacon and hams was 20 per cent; on fresh beef, 18 per cent; on veal, 15 per cent; on pork, 8 per cent; on lamb, 16 per cent. * * Fruits: All citrous fruits—lemons, oranges, and grapefruit—are reduced from 1½ to one-half cent per pound, opening the markets of the Mediterranean to this country. The Payne tariff effectually prevented competition and limited the citrous-fruit supply to California and Florida. All fresh fruits are cut from 25 cents to 10 cents a bashel, permitting importations from Canada and the Tropics.

Poultry, live, is cut from 3 cents to 1 cent per pound; dead, from 5 to 2 cents. Cheese is cut in various grades from 35 and 42 per cent to 20 per cent. This will particularly affect the cheaper grades, used in quantities by the average consumer.

Butter, from 6 to 3 cents per pound; beans, from 45 to 25 cents a bushel; canned beans, from 2½ to 1 cent a pound; prepared vegetables of all kinds, from 40 to 25 per cent; giggs, from 40 to 25 per cent; gggs, from 5 to 2 cents a dozen; onlons, from 40 to 25 per cent; peas, from 25 to 15 cents a bushel; split peas, from 45 to 25 cents per bushel.

In this list of articles, through and by means of which the cost of living is going to be reduced, you find no articles except those which relate closely to the American producer and to his vocation and interests. Does anyone deny that the object and purpose, as it was expressed repeatedly during the last campaign, of the reduction of these duties was for the purpose of reducing the cost of living? Do not the campaign documents and the campaign arguments from one end of this country to the other show that that was the object and purpose? I think it was your belief that it would reduce the cost of living; but it could do so only by reducing the price to the producer. Do you want to do that? You may do it, but I do not believe some of you want to do it. But we must repeat, after you reduce the price to the farmer, how do you know that the present combines and trusts will let the consumer have the benefit? Instead of hazarding the interests of the farmer, why not go after these trusts?

A short time ago an enterprising rancher in my State, shipping potatoes, put a postal card in each sack of potatoes which he shipped and asked the purchaser of those potatoes if he would please write him back and tell what he paid for the potatoes. The farmer sold the potatoes at 55 cents a sack. The people who wrote him back—there were several hundred of them-paid all the way from \$1.50 to \$2.50 a sack. potato raiser, the wheat raiser, the barley raiser, the wool raiser, the sugar-beet raiser, and that class of men are the only men who are singled out, so far as this particular line of duties is concerned, upon whom to experiment with reference to reducing the price. The farmer plants his potatoes; he tills them the season through, in sunshine and in storm; he takes the chance of losing his crop; he harvests them; he hauls them to the depot; and he gets from 38 to 55 cents a bushel; the consumer pays \$1.50 to \$2.50; and yet you single out the potato raiser and the producer against whom to reduce the duty. The only man who could be affected as to price would be the farmer, who gets 55 cents. You do not reach the fellow who got \$2.50 for doing in a few days what it took the labor and effort of the farmer for a season.

Mr. President, I have said about all I desire to say. I do not propose to undertake to discuss in detail these schedules. Others are better fitted to do so, and I shall not undertake the task; but in conclusion I want to say this, and this only: That, in my opinion, anything which is calculated to discourage in any way American agriculture has its effect upon the entire country and will in the end have its depressing effect throughout the entire commercial interests of the United States. only that, but so long as our people are crowding to the cities. so long as the cities are filling up—and the congested centers are becoming more deplorable in their conditions and environment-it is the duty of the American Government not only here but in every other way possible to encourage people to go into the agricultural field.

It leads to a healthier civilization, to a broader and stronger citizenship, to a citizenship better calculated to discharge the duties of citizenship of the Republic. It diversifies industries; it leads to a wholesome national life.

Mr. WILLIAMS. Mr. President, I do not intend to keep the Senate long at this moment. I want briefly, however, to comment upon some things in connection with the arguments made upon the other side.

These duties upon cattle and meat and wheat and flour and corn either do result in benefit to the farmer or they do not. If they do result in benefit to the farmer, they can result in that benefit only in one way, and that is by raising the price of his product. If they do raise the price of his product, that increase can have only one effect or tendency, and that is to increase the price of bread and meat to all the people of the United States, the poor as well as the rich, the low as well as the high.

Mr. WARREN. Mr. President, may I ask the Senator a ques-

tion?

Mr. WILLIAMS. Certainly.

Mr. WARREN. Does the Senator mean "raise the prices" or "maintain the prices"? Does he contend that prices will still rise for the farmer's products?

Mr. WILLIAMS. I intended to use the word I did use-"raise"; and the Senator will understand, in a minute, why I used it.

If these duties are operative and raise the prices, then you are taxing the meat and bread of the poor in order to contribute to the prosperity of the farmer. If that be true, so far as I am individually concerned, I am not willing to do it. Upon the other hand, if you embrace the other alternative, that they are not operative, then the removal of the duty will serve one good purpose, and that will be to undeceive—or, if I may frame a deceived and fooled by political oratory and literature for so many years to believe that increasing prices are due to the tariff. In either event a good purpose will be moving the duty. In one event by decreasing the price of bread and meat; in the other by "unfooling" the western and northwestern farmer.

Some one might ask which one of the two things I think it will do. My individual opinion does not cut much figure, but still I will give it. I do not believe it will raise the prices, and I will give my reason for saying that. I shall not run over and repeat the argument made by the Senator from Indiana [Mr. SHIVELY], which was very exhaustive and very complete, to wit, that it will not raise the prices because these are export articles, whose prices are not dependent upon the local market, except here and there in a momentary way, owing to other things upon which I need not dwell at this time-transportation and various other things—but are dependent on world-market prices. I think there are certain other forces—world forces—that are now so strong that the prices of meat and bread or the things out of which meat and bread are made are going to go up for quite some time to come.

In the first place, the natural tendency of this age is one of industrial rather than agricultural development, a tendency which leads to the constant increase of urban populations as compared with rural populations.

In the second place, this natural tendency is increased by the fact that in every civilized country of the world except one— Great Britain-there is a more or less high system of protection which hothouses the population into the cities at the expense of

The next great reason is that whether the interchangeable value of farm products as compared with one another and with manufactured products and with the price of labor shall increase or not, the apparent price will increase, because of the decrease in value of that in which they are measured, to wit, gold. That decrease of the value of what they are measured in is brought about by the constantly growing increase of the production of gold. If that stops, that tendency will stop. As long as that goes on, it will have its influence, whatever it may be, in raising prices.

If I am right in my view of the matter, then, in the first place, this after-described effect will follow: The Senator from Idaho [Mr. Borah] is exactly right when he says that the backbone of the strength of the Republican Party and of protectionism in this country hitherto has been the western and the north-western farmer. If he finds out that notwithstanding the re-

peal of these duties the prices of his products are going up anyhow, he will cease to attribute their rise in recent years to protectionism, because he will have to attribute their rise in the years to follow to something else. Then he will say to you gentlemen across the Chamber: "You have fooled me long enough. You have made me believe a falsehood long enough. I am tired of it. Falsus in uno, falsus in omnibus. don't believe in you at all, and I am going to quit having anything to do with you politically."

So much for that. Perhaps there is another reason why I

believe it.

If 1 am wrong in my conclusion, if, upon the other hand, this free listing shall result in a reduction of the prices of meat and bread, then we shall have accomplished a much greater good than a mere political result. I do not want to see America go into the business of robbing the poor in order to enrich her landlords, as Germany is doing, and as England did up to the time of the repeal of the corn laws, and as France is doing to-day, and as Austria-Hungary is doing to-day.

While upon that subject, the Senator from Idaho said some-

thing about the comparative condition of the English farmers back in the corn-law days and now. I was surprised to hear him utter the opinion that they were better off then than now. All he has to do is to go to the agricultural part of mid-England to-day, and if he sees the farming classes there he will find the most prosperous set of men, outside of the farming classes of the United States, that are now to be found in the country anywhere in the world. And if he compares to-day's English farmer with the English farmer of corn-law days he will compare Hyperion to a satyr.

Mr. BORAH. Mr. President, I think the Senator states a fact which, as he states it, is very likely true, because there are only about a dozen left, and they are very prosperous.

WILLIAMS. Oh, well, I am awfully fond of a joke myself, and have sometimes been accused of destroying a dignified occasion by it; but whenever I indulge in a joke it possesses either the element of being harmonious with fact or else it possesses the element of being applicable to the situation or the argument.

Mr. BORAH. I hope the Senator will not suppose that I was trying to get into competition with him as to humor. I would not attempt such a thing as that.

Mr. WILLIAMS. If the Senator had supposed that I meant that, he would have held me guilty of arriving at "a lame and impotent conclusion," or competition at any rate.

The farmers in England are better off to-day than they were in corn-law days. Now, mark me, I say farmers, not landlords. The landlords were better off then than they are now. Senator says that certain tariff-reform people in England at that time persuaded the farmers of England that repealing the duty on corn and all that would not ruin them. Yes; they persuaded them. They not only persuaded them, but the farmers of England remain persuaded up to this good day. In fact, they know it now, although only persuaded at first.

Then the Senator indulged in a little imaginary history about Rome that was very amusing to a man who knows history. upshot of his statement was that the reason Italy went to pieces, as far as her agriculture was concerned, was because Rome did not "protect" her farmers against the pauper labor and the pauper agricultural products of Asia and Africa.

Every man who has been a student of Roman history knows why the peasant and farmer class and the yeomen and old sturdy legionaries who were citizens of the Roman Empire went out of agriculture in Italy. The Senator mentioned the fact that in the immediate neighborhood of Rome—the Eternal City The Senator mentioned the fact itself—the lands were lying idle, or else were devoted to great patrician estates, villas, amusements, game preserves, and one thing or another, and said, substantially, that it was owing to lack of protection for the farmer. It was not owing to that. It was owing to these two facts:

First, Rome traveled farther in the direction of socialism than protectionism in America even has thus far gone. The principle underlying American protectionism, the most respectable argument made for it, is that it is intended to increase or maintain the wages of "the laboring man"; in other words, that it is to give something to the poor and to the laboring man as such. I have always thought that if you wanted to do that you could do it at less public expense by fixing a national standard of wages, and taking out of the Treasury at the end of each week for every man that did not earn the standard wage the difference between what he did earn and what he ought to have earned if he had earned the national standard. Then it would cost the people less and give the laborer more, because

none of it would leak to his boss on the way. But Rome went a step farther. She gave to all the free citizens of the city of Rome not only free bread but free circuses—panem et circenses. Do you suppose any man in Italy was going out to work on the farm 12 months of the year to make corn, when all he has to do is to come into the town of Rome and other towns with

similar privileges plus a free circus and get it?
Socialism destroyed the agriculture of Rome, and Italy par-

Socialism destroyed the agriculture of Rome, and Italy partially; but the thing that destroyed it most was the system of slavery. The lands were farmed out to great patrician landlords. They did not want free labor upon them. They brought in and substituted for free labor slave labor. Slave labor then, as always, was inefficient, because it is an unwilling labor. White slave labor is more inefficient than negro slave labor, because the white man is not only without hope, as the negro slave was, of any betterment of his own condition by his labor, but he is rebellious instead of being docile, as the negro slave was. So that Rome had this great system of labor disadvantage to contend with.

But I shall not enter into a discussion going away back into history. I have mentioned these things merely as saliently irrelevant characteristics of the argument to which we have just listened from the Senator from Idaho [Mr. Borah].

Now, to answer something of more weight. The Senator from Idaho gave us certain comparisons between the acreage in England in 1866 and the acreage in 1911, I believe, or some recent year. The Senator from Idaho was very careful not to give us the agricultural production of the two years. Potatoes were one of the things the Senator spoke of. I find, for example, that in the year 1911 England and Ireland, which I suppose are about as big as Pennsylvania and Delaware—I have not the time to make the comparison of areas now—produced more potatoes than the entire United States, from the Canadian line to the Gulf and from the Atlantic to the Pacific.

Potatoes raised in England, Ireland, and the United States in 1911.

In 1860, or thereabouts, the production of wheat in Great Britain was about 13 bushels to the acre. It is now 32 bushels to the acre. I find from the foregoing that in 1907 the acreage in wheat in England was 1,537,200, and in 1911 it was 1,804,000, a growth of nearly 300,000 acres in a tight little bit of an island—and not all the island at that, but just the English part of it—about as large as a good big American State. I find that in Scotland the acreage in wheat in 1907 was 48,000 acres, and in 1911 63,500 acres, which is about 15,000 acres of increase. I find that in 1907 England produced 53,000,000 bushels of wheat, and in 1911 60,700,000, an increase of 7,700,000. I find that in 1907 Scotland produced 1,953,000 bushels, and in 1911 2,786,000.

There was a time during which England went out of the wheat business almost entirely. There was a period, not very remote in our history, when new lands and agricultural production were overtaking and passing agricultural demands, and when at the same time a dollar was becoming year by year more and more valuable. That led to prices of corn and wheat and all other farm products that were ruinous, as measured in dollars, to the farmer, not only in Great Britain, but on the Continent of Europe, in Australia, and in America. During this period wheat was selling at about forty-odd cents a bushel here, if I remember correctly, and corn was selling at twenty-odd cents a bushel. At that time England went out of wheat production to a large extent and put her lands more and more into intensive farming. But I know by actual contact that there is to-day not a more prosperous farming class anywhere outside of the United States than in Oxfordshire and Warwickshire and mid-England, nor is there a people that spend their time more merrily. They take the week end off every week, and they are playing bowls and cricket and going to see regatta matches and all that.

I speak of the farmers whom I met and with whom I had many pleasant hours of converse. I do not know about farm labor. I suppose farm labor there is like it is nearly everywhere else in the world and like the labor in the factory is—pretty close to the ground. I suppose it will stay there for a long time, until men learn the great truth which Jesus Christ taught—that there ought to be a sort of spiritually founded, individualistic, and voluntary communism in the world; that the highest duty of a man is to work with all of his ability and all of his strength to do that which he can best do at the greatest profit, and out of his profit to keep of what he earns only that which he and his family need. Until that time comes I see no relief from the Savior's utterance, "The poor ye have always with you"; and, of course, the poorest of the poor will be those who work for wages.

So much for that. I want to refute one other point made by the Senator and some other gentlemen, and that is what would be the effect upon exports and imports if we gave the world—and that means Canada—free wheat and free flour.

In the first place, remember, if you please, that we are not going to give free wheat or free flour either to Canadians until Canada gives to our farmers free access for their flour and wheat to the Canadian market. So when you ask what will be the effect of giving Canada free wheat and free flour, your question is exactly this: What will be the effect of both sides giving free markets to the other? What will be the effect of the removal of a tax burden levied by a tax on our consumers on Canadian wheat and flour provided that at the same time Canada removes the tax which she levies on our wheat and flour when bought by her consumers? That is the precise question.

My own opinion is that it will increase exports and imports from both countries, which seems at first blush paradoxical. But here is a great American city close to the border. Transportation reasons will make the Canadian farmer seeking the highest price send his wheat to the mill at that American city. Here is a great Canadian city close to the border. Transportation reasons will make the American farmer seeking the highest price send his wheat to the Canadian mill city. So it will result in the seeming paradox of increasing exports and imports from both countries, a seeming paradox, I say, because it is not a real paradox. All freedom of trade between all parts of the world invariably has that double result.

I am no more afraid of competition between a Canadian Province and an American State—and if I were a Canadian I would be no more afraid of it either—than I am afraid of competition between Minnesota and North Dakota, or between Mississippi and Georgia, or between Maine and Florida.

One of the most curious things in the world is that men will insist upon hampering trade by tollgate-tariff taxes when they are always bending every energy to unhamper trade by every other means known to humanity. The very man who will stand here and argue for a protective tariff for protecting home industry wants to build the Panama Canal to lessen the transportation rate, which protects the man on the Pacific slope from foreign competition. The very man who stands here and says a Canadian Province will ruin an American State if the citizens of the State can buy things from Canada would spend a great deal of energy to make the freight rate between North Dakota and the State of Washington one-half of what it is now. So much for that. Now, upon one other point and I am through.

But first I remember about the different prices of wheat in different places, which has been so much dwelt on in this debate. Without taking up the time of the Senate, but just to illustrate how foolish all that is and how it necessarily comes from local conditions, one place is an American milling center and another is a farming community in Canada across the border. Take it vice versa. Of course the price at the milling center exceeds that in the farming community. Prices vary in Canada just as prices vary in the United States. In order to illustrate that I want to insert from the Yearbook of the Department of Agriculture for 1911 the average farm price of wheat per bushel on the first of each month. Remember, this is the farm price, so that transportation rates to milling centers have nothing to do with it. I will read only one year. I will take the year 1910. For the North Atlantic States it was \$1.13, in round numbers; for the North Central States east of the Mississippi River, \$1.12, in round numbers; for the North Central States west of the Mississippi River, 98 cents, in round numbers; for the South Central States, \$1.12; and for the far Western States, an even dollar. I shall ask permission to insert the entire table.

The PRESIDENT pro tempore. Without objection, that will be the order.

The table referred to is as follows:

[From Yearbook, 1911.]

Average farm price of wheat per bushel on the 1st of each month,

Month.	United States.		North Atlantic States.		South Atlantic States.		North Central States east of Mississippi River.

Mr. WILLIAMS. Now, there is one other thing I want to say. I do not want the country to think that I, at any rate, am intellectually dishonest with it. I do not want any Senator to think so. If anybody thinks I indorse every paragraph or proviso in the pending bill, then I reckon that he is mistaken, of course. I differ from the Senator from Minnesota [Mr. Clapp] in one very important respect. The Senator does not seem to believe in party government. I do. I do not know any very in the world of the senator does not be seem to b way in the world of carrying on free government except in a bipartisan way. It happens always to have been and now to be a fact that countries which are despotic have no parties and countries which are free always have parties and party government. In England, first and chief of all free Governments, the principle of party goes so far that a man untrue to party must resign office. When Napoleon constructed a government he made partisanship, or "factionalism," as he called it, a crime.

Now, if you believe in party at all, you have got to believe in a majority of the party ruling the party. When I strike a paragraph that I do not believe in, it does not faze me to I have been touched up two or three times in this debate about my individual views on sugar. I do not believe in the sugar schedule of this bill, but I have got my choice between the Payne-Aldrich law and this bill as expressions of fiscal policy. I have my choice between sustaining my colleagues and my party and staying with them or deserting them and all hopes of future usefulness. No matter of principle is involved. A rate of taxation is never a matter of principle. It can not be.

I have said and I say now that the least burdensome of all taxes upon the consumer is a tax upon sugar, a reasonable tax. I was willing to have taken the English free-trade duty-40 cents a hundred-which would have put Louisiana out of business as completely as free sugar but would have given the American Government \$30,000,000 revenue in a manner least burdensomely laid upon the people—laid upon a finished product and not a raw material—and thereby enabling us to reduce I do not even believe that I owe any apology to my constituents, the country, or myself for the fact that when we reach that

schedule I shall vote for it as worded in this bill. I shall vote for it upon the general ground that I am not conceited enough and not egotistical enough to believe that I either ought to or

and not egotistical enough to believe that I either ought to or could make my opinion prevail against the opinion of the vast majority of the school of politics to which I belong.

I am a good deal of an individualist. I am a good deal of a worshiper of Thomas Jefferson, who was the high chief of individualists. I believe the world is to be saved by individualism and by the emphasis of the fact of the individual's personal right and liberty as against governmental power.

But I have never seen any way of accomplishing any important result in this world except by "team work." Politics, baseball, football, and church work are all the same in this regard. A man takes himself very seriously who thinks he can accomplish much by himself. If he forgets all the other spheres that are rolling around outside of the earth and comes down simply to the earth, and then forgets all the earth except his own country, and forgets all that except his own township, he still can not hope to accomplish much by himself. What is doable must be done by cooperation with those who come nearest to believing as he believes.

If every time he gets into power with enough of his own people they all go to pieces because A believes that paragraph B is wrong and C believes that paragraph D is wrong, and each that he must stand out and vote against the whole bill because the wrong paragraph is in it, then you would have to have nine-tenths of the population of the country and nine-tenths of the members in the legislative halls on your side before you

could ever do anything. The question with which you are faced here to-day, every one of you—and the American people are not going to let you forget it-is this: Which of these two things do you prefer, the Payne-Aldrich law or the Underwood bill? You are here, each one of you, to represent the whole American people, as the Senator from Minnesota failed to say. If you want to go back home and defend the iniquities of the Payne-Aldrich law as against the provisions of this bill, imperfect as this bill is, go and do it. I for one do not envy those of you who have led your people to believe that you are in favor of "a revision of the tariff downward." When you undertake that task of self-defense you

are going to meet some difficulties. Mr. President, I apologize for taking so much of the time of the Senate at this hour. It is customary to go into executive session at 6 o'clock. I intended to stop at 6 o'clock; it is now a

quarter after. I desist.

Mr. SHIVELY. I ask unanimous consent to incorporate as a part of my remarks made this afternoon a list of articles of the farm that the bill puts on the free list and also a table of statistics relating to the price of wheat.

The PRESIDENT pro tempore. That will be the order, un-

less there is objection. The Chair hears none.

BUREAU OF MINES, PITTSBURGH, PA.

Mr. SWANSON. Mr. President, I submit a favorable report out of order from the Committee on Public Buildings and Grounds. I report back favorably without amendment the bill (S. 2689) amending an act entitled "An act to increase the limit of cost of certain public buildings; to authorize the enlargement, extension, remodeling, or improvement of certain public buildings; to authorize the erection and completion of public buildto authorize the purchase of sites for public buildings; and for other purposes," approved March 4, 1913.

This is a very important matter, and I should like to get unanimous consent for its consideration. It will take but a few minutes. It simply proposes the erection of fireproof

laboratories for the Bureau of Mines at Pittsburgh.

The PRESIDENT pro tempore. The Senator from Virginia asks unanimous consent for the present consideration of the bill

which has been reported by him.

Mr. GALLINGER. Let the bill be read for the information of the Senate.

Mr. BRISTOW. Let it be read. Mr. SWANSON. It will take but a few minutes to read it. The PRESIDENT pro tempore. The bill will be read at

The Secretary read the bill; and there being no objection, the Senate, as in Committee of the Whole, proceeded to its con-It proposes to amend section 26 of the act approved March 4, 1913, which authorizes the Secretary of the Treasury to enter into a contract or contracts for the erection of fire-proof laboratories for the Bureau of Mines in the city of Pitts-

by contribution from the State of Pennsylvania, or from other sources, for the purpose of enlarging, by purchase, condemna-tion, or otherwise, and improving the site authorized to be acquired for said Bureau of Mines, or for other work contemplated by said legislation, provided that the acceptance of such contributions and the improvements made therewith shall involve the United States in no expenditure in excess of the limit of cost heretofore fixed.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third

time, and passed.

EXECUTIVE SESSION.

Mr. BACON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 12 minutes spent in executive session, the doors were reopened and (at 6 o'clock and 24 minutes p. m.) the Senate adjourned until to-morrow, Thursday, August 14, 1913, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate August 13, 1913.

MINISTER.

William J. Price, of Kentucky, to be envoy extraordinary and minister plenipotentiary of the United States of America to Panama, vice H. Percival Dodge, resigned.

CONSTRUCTOR IN THE REVENUE-CUTTER SERVICE.

Frederick Allen Hunnewell, of New York, to be constructor in the United States Revenue-Cutter Service with the rank and pay of a first lieutenant in said service, in place of William C. Besselievre, deceased.

COLLECTOR OF INTERNAL REVENUE.

Thomas Scott Mayes, of Kentucky, to be collector of internal revenue for the fifth district of Kentucky, in place of Ludlow F. Petty, superseded.

ASSISTANT SURGEONS IN THE PUBLIC HEALTH SERVICE.

Howard Franklin Smith to be assistant surgeon in the Public

Health Service. (Additional assistant surgeon.)

Lon Oliver Weldon to be assistant surgeon in the Public Health Service. (Additional assistant surgeon.)

CONFIRMATIONS.

Executive nominations confirmed by the Senate August 13, 1913. ASSISTANT APPRAISER OF MERCHANDISE.

Campbell Whitthorne to be assistant appraiser of merchandise in the district of San Francisco, Cal.

APPOINTMENTS AND PROMOTIONS IN THE NAVY.

The following-named citizens to be assistant surgeons, in the Medical Reserve Corps:

Frederick Ceres, and Robert L. Crawford

Civil Engineer Adolfo J. Menocal to be a civil engineer with rank of captain.

Civil Engineer Charles W. Parks to be a civil engineer with rank of commander.

POSTMASTERS.

ALABAMA.

W. P. Tartt, Livingston.

ARIZONA.

J. S. Campbell, Williams.

ARKANSAS.

T. O. Poole, De Queen,

KENTUCKY.

E. T. Schmitt, Louisville.

MINNESOTA.

M. F. Finnegan, Morris. H. E. Hoard, Montevideo. Oscar Johnston, Nashwauk. Edwin E. Lietz, Eyota. Louis Tillmans, Aurora.

MISSISSIPPI

J. H. Robb, Greenville.

Emily Taylor St. John, Harriman.

SENATE.

THURSDAY, August 14, 1913.

The Senate met at 11 o'clock a. m. Prayer by Rev. C. A. Thomas, of the city of Washington. The VICE PRESIDENT resumed the chair.

The Journal of yesterday's proceedings was read and approved.

AFFAIRS IN INSULAR POSSESSIONS.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of War, transmitting certain information relative to a compilation prepared by the Bureau of Insular Affairs regarding the administration of the affairs of noncontiguous territory, and requesting that the printing thereof be authorized by Congress by the passage of a concurrent resolu-tion, which was referred to the Committee on Printing.

PETITIONS AND MEMORIALS.

Mr. SHEPPARD presented a petition signed by sundry citizens of the State of Texas, praying for the adoption of an amendment to the Constitution extending the right of suffrage

to women, which was ordered to lie on the table.

Mr. MYERS presented petitions signed by sundry citizens of the State of Montana, praying for the adoption of an amendment to the Constitution extending the right of suffrage to women, which were ordered to lie on the table.

Mr. TILLMAN presented a memorial of sundry wholesale and retail fruit dealers, residents of Charleston, S. C., remonstrating against the proposed duty on bananas, which was ordered to lie on the table.

THE REPUBLIC COAL CO.

Mr. MYERS, from the Committee on Public Lands, to which was referred the joint resolution (S. J. Res. 41) authorizing the Secretary of the Interior to sell or lease certain public lands to the Republic Coal Co., a corporation, reported it with an amendment and submitted a report (No. 101) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

A bill (S. 2994) for the relief of Heph Pope (with accompanying paper); to the Committee on Claims.

By Mr. BURTON:

A bill (S. 2995) granting a pension to Charles S. Allen; to the Committee on Pensions.

AMENDMENT TO THE TARIFF BILL.

Mr. JONES submitted an amendment intended to be proposed by him to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes, which was ordered to lie on the table and be printed.

MARY COULTER EARLE.

Mr. FLETCHER submitted the following resolution (S. Res. 161), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Secretary of the Senate be, and he hereby is, authorized and directed to pay out of the miscellaneous items of the contingent fund of the Senate to Mary Coulter Earle, widow of Sherod L. Earle, deceased, late a messenger of the United States Senate, a sum equal to six months' salary at the rate he was receiving by law at the time of his death, said sum to be considered as including funeral expenses and all other allowances.

COMMITTEE SERVICE.

On motion of Mr. KERN, it was-

On motion of Mr. KERN, it was—
Ordered, That the following changes in the committees of the Senate be made, to take effect August 15, 1913:
That Senator George E. Chamberlain be appointed chairman of the Committee on Military Affairs in the place of Senator Johnston of Alabama, deceased.
That Senator Henry L. Myers be appointed chairman of the Committee on Public Lands in the place of Senator Chamberlain, resigned as chairman.
That Senator Marcus A. Smith be appointed chairman of the Committee on Irrigation and Reclamation of Arid Lands in the place of Senator Myers, resigned as chairman.
That Senator J. K. Vardaman be appointed chairman of the Committee on Conservation of National Resources in place of Senator Smith of Arizona, resigned as chairman.
That Senator Vardaman be excused from further service on the Committee on Expenditures in the Post Office Department.

THE TARIFF.

Mr. DILLINGHAM. Mr. President, I desire to give notice that on to-morrow, Friday, at the conclusion of the morning business, I shall address the Senate on the pending tariff bill.

THE TARIFF-IMPORTATION OF PLUMAGE.

Mr. McLEAN. Mr. President, I desire to give notice that on Saturday next, the 16th, I will address the Senate very briefly on the proviso in paragraph 357, which relates to the importation of plumage.

WOMAN SUFFRAGE.

Mr. TILLMAN. Mr. President, I desire to give notice that on Monday next immediately after the routine morning business I will ask permission to address the Senate on Dr. Bledsoe's article on the Mission of Woman, and incidentally I will myself discuss woman suffrage,

THE TARIFF.

Mr. SIMMONS. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government,

and for other purposes.

Mr. THOMAS. Mr. President, the opposition to this great measure in the Senate is out of harmony with itself. But little of it is aimed at the bill as a whole. It is diffused and distributed among different paragraphs, and upon nearly all of them there is wide disparity of opinion. It is a unit upon two subjects and two only. These concern the action of the Ex-ecutive and of the Democratic caucus, both of which are anathema to the Republican conscience. Both indeed have be-come abhorrent to enemies of the bill everywhere; to some good men who, while favoring it in part at least, prefer to go without it rather than obtain it as the offspring of such obnoxious and indefensible processes. Nearly every speech upon the bill which has thus far fallen from the lips of Senators upon the other side of the Chamber has been charged with denunciation of the twin crimes of Executive aggression and caucus tyranny. tender Republican consciences both these things are detestable. They constitute in their eyes the dynamics of modern political conditions; the sinister manifestations of all that is repulsive in popular government. Senators are unable to contemplate them with patience or composure; and all deem it their duty to denounce the one and repudiate the other with declamatory indignation. Their passionate protests have thus far gone un-challenged, and if we permit them longer to remain so, the public may justly conclude that by our silence we have acquiesced in the justice of Republican criticism, or that we can not challenge the integrity of Republican argument.

Mr. President, I do not hesitate to applaud the Executive who

uses in a proper manner his great powers and influence to carry out and make effective the popular will as expressed at the polls, and the legislative majority which welds itself together as a means to the end of satisfactory and comprehensive legislation to the enactment of which it has pledged its honor. each of these weapons may be abused is beside the question, for that is true of all powers wherever lodged and however exer-

The President is the Executive of the Nation. He is by the Constitution endowed with a very comprehensive legislative authority. He must approve or veto all acts of Congress. he does the latter, his action is final unless both Senate and House override it by a two-thirds vote. He is also required from time to time to inform Congress of the state of the Union. recommend to their consideration such measures as he shall judge necessary and convenient, convene both Houses on extraordinary occasions, make treaties by and with the advice and consent of the Senate, which become a part of the supreme law of the land. Endowed with powers so great and far-reaching, why should not the Executive who "shall" recommend legislation also exert himself in a lawful and proper manner to secure its enactment? And now does he invade the legislative jurisdiction in the one instance any more than in the other?

Mr. President, Senators and Representatives are in large degree the agents of their constituencies. They are expected to look after home interests frequently to the detriment or the subordination of those which are national in their scope and character. They must sometimes at the peril of their political fortunes secure appropriations for public buildings, advocate pension bills, establish and retain military posts and navy yards within their States and districts, unmindful of the general good, and because local influences demand them. These features of congressional activity are multiplying, and with their increase the Congressman, whether of the House or the Senate, is becoming more and more a local and less and less a national State needs, State interests, and State demands are apt to outweigh national ones with them and turn the balance when antagonisms appear.

These conditions have exalted the President in the eyes and hearts of the people. He has become in very truth their national representative. They elect him, charge him with a national program, look to him to make it effective, give him the credit when it is done, and hold him responsible for its failure. They

know that he must not be swayed by any but national considerations; that he has no local constituency clamoring at his heels and insistent upon its own desires without regard to the rest of the country. And since the people have come to demand so much and to expect so much from their President, he must become a factor in the legislative program of his day if he would rise to the requirements of his position and give that return for which he has been chosen. And the people applaud and have confidence in him just in proportion as he measures up to their desires and becomes the successful exponent of their needs and purposes.

Mr. President, his worst enemies must admit that Theodore Roosevelt was the most popular of modern Presidents. made him so, unless it was that the people regarded him as devoted to their interests and as determined upon their recognition by all branches of the Government? His power and influence waxed stronger and stronger as he threw his great personality into the scale of popular legislation, thus making needed reforms effective. Further, people knew that without it the reforms they clamored for would never come and with it they would surely triumph. The Executive who with dignity and self-confidence impresses a party pledge upon the Congress and uses his legitimate authority to secure its enactment may alarm that timid conservatism which shudders at any departure from established usage, but he will surely command the approval of an intelligent public opinion. And in thus acting he need offend no constitutional limitation nor transcend any rule of Executive propriety.

The Senator from California, in disapproving President Wilson's activities in behalf of the Underwood bill, quoted with approval a few days ago a plank of the Democratic national platform of 1904, which condemned similar conduct in President Roosevelt as dangerous, unconstitutional, and unprecedented. Such was the Democratic attitude then. But, Mr. President, the Senator did not mention the fate of that platform nor the disaster which overtook the Democracy while trying to ride upon it. We met in 1904 the most signal defeat in our history; the people indorsed Mr. Roosevelt's conduct by a colossal majority, and emphatically approved of that Executive method which brought effective results. They said by their verdict and with truth that democracy is effectively and safely served by publicspirited Executives who, with public opinion behind them, advise Congress what to do and then turn in and help them do it. The Democratic Party was taught its lesson in 1904, and Bourbon Republicans might do worse than profit by the example, fortified, as it has been, by the fate of their last President.

The Payne-Aldrich bill was a monument of what Mr. Geveland once called party perfidy. It was inconsistent with Mr. Taft's oft-repeated construction of the platform on which he was elected. The people, angry and disappointed, felt very justly that Mr. Taft had the power and by using it could have prevented the enactment of the bill, and, failing, should have vetoed it. Hence they held him as the head of the Nation directly responsible for the betrayal of their interests. They denounced Mr. Aldrich; they invelghed against the Congress; but the choicest vials of their wrath were saved for the Executive. When Mr. Taft, in Minnesota, not only defended but praised the bill, these were emptied upon his head. Winona became the Waterloo of his party. He doomed it then and there to deserved and everlasting defeat, for he justified the impression that his great powers were in fact utilized in legislation for and not against the measure. He lost the public confidence, ceased to be the people's representative, and Ichabod was written upon his

house from thenceforth forever.

Mr. President, what gave Mr. Wilson that political stamina which sustained him through the long struggle at Baltimore and finally brought him the nomination? What was it if it was not the fact that as governor of New Jersey he did things? would have been the fate of New Jersey's Democracy had he contented himself with a perfunctory message to the general assembly? He did not stop there. Indeed, that was but the beginning of his activities. He met with legislators in caucus; he conferred with them from time to time, and at all times counseling, encouraging, urging. He visited outlying cities, spoke to their inhabitants, molded public opinion. He focused the light of publicity upon the nature of proposed legislative measures and the dangers consequent upon their defeat. This he did in season and out of season. When the end came and the assembly adjourned, the governor had kept the faith.

The general assembly, thanks to him, had done its duty and the entire Nation applauded. His transition to the White House was from that hour but a question of time, for the people had found the man they needed. I thank God, Mr. President, that the Executive of this mighty Nation has been steadfastly loyal to those views of public duty of which he became the exponent as New Jersey's governor, that he has used and will continue to use his great office wisely and constitutionally in behalf of progressive legislation, and that under his directing hand the machinery of government is responding, slowly perhaps, but

surely, to the will of the people.

President, a hostile press has here and there insinuated that the President has used and is using the power of patronage in behalf of the Underwood bill. No Senator has done him that injustice. He would disdain the employment of such a weapon for such a purpose. Unlike his predecessor, he has no system of rewards and punishments. He points to the party covenant, keeps close to the public heart and conscience, feels keenly the public need, summons duty and loyalty to his aid, and overcomes his enemies by a serene courage which shrinks at no opposition and blanches before no dangers. These are his weapons, and with them the end was never doubtful. Mr. President, I believe thoroughly in the alliance of the Executive with the legislative authority. Montesquieu's theory of division and coordination of powers has, I think, no place in government beyond the United States of America. He based it upon the assumption that such was the Government of England, a fallacy which Burke immediately exposed. The latter declared these powers could not be wholly separated, and he was right. He also said that if separated they would be productive of what he termed "hideous corruption," and in that he may have been right. I do not pretend to say whether he was or not, but I am confident that if the heads of our departments were Members of the House and entitled to seats in that body, with power to initiate and direct the course of legislation, the great cause of democracy would be better served than it is at present. And our democracy has distinctly gained from what are called the legislative activities of Presidents Roosevelt and Wilson, which, in my judgment, have been entirely within the range of their constitutional prerogatives, and wholly consistent with the demands of an enlightened public opinion.

Mr. President, the caucus is neither an unmixed blessing nor an unmixed evil. Like all human devices, it is subject to abuse. It has been perverted many times and for untoward purposes. Hence it is well that an aroused hostility should check its evil tendencies and condemn it as a pernicious agency for wrongdoing. And I do not hesitate to commend the spirit which re jects the caucus, in so far as it operates as a fetter upon intelligent and independent public activities, and an agency for defeating the public will. But, Mr. President, it is quite as logical to condemn the elements of fire or of water, because conflagrations and floods occur, and refuse to employ them in the great work of progress and civilization, as to reject wholly and unreservedly the expediencies of united party action. There are times, and this is one of them, when the policy of one for all and all for one is indispensable to the accomplishment of a great public object. And when such occasions exist it would be a most unwise statesmanship which rejected an obvious and per-fectly legitimate method of attaining that end. If it be true that the exception proves the rule, it is because the exception becomes imperiously exigent, requiring a suspension of the rule in the immediate case. And the action of the Democratic ma-jority of the United States Senate, which stands united in the interest of pending tariff revision, is obviously wise, just, and expedient. History will applaud it as a means to the success of this great measure. We resort to the discipline of union when essential to the needs of the hour and apologize to no opponent

for our conduct.

Mr. President, the Democratic majority in this Chamber is a slender one. It is charged with the duty of enacting a great remedial statute, upon the success of which our party has staked its future. That measure has naturally aroused the opposition of every privilege and privilege beneficiary in the United States. Many of these are powerful in some particular State or States. These demand exceptional treatment at the hands of individual Senators who are besieged with demand and supplication, and whose political futures are threatened every hour of every day. Yielding to one of them means yielding to all of them, thus defeating the object of the measure and wrecking the party covenants before the very eyes of those who enjoined their observance upon us. To strengthen the hearts and purposes of each is the end and the aim of all. This can be done-this has been done by taking counsel together for the common good by full, fair, and earnest consideration and compromise, by debating opinions, and by accepting the final consensus as better and wiser than the individual judgment of any man.

Mr. President, we would infer from many expressions made upon this floor that a caucus is an assemblage of men governed absolutely by some sinister and diabolical spirit evolved from the darkness of secret conclave, superhuman in origin and in

power, whose influence becomes supreme from the moment of meeting and controlling those participating for all time to come; that this spirit is wholly antagonistic to the views and desires of the individuals composing the membership who would, if they could, shake off the incubus of its control; that they are power-less to do this, having ceased to become free agents through some alchemy of subtle change occurring in the caucus room. All are slaves to the demon of the ring, whose bidding becomes absolute and beyond recall.

Mr. President, there seems to be something in a name, Mr. William Shakespeare to the contrary notwithstanding. shudder at a caucus who eagerly embrace a conference. anything else and the hobgoblin is laid at once. Men can agree with open minds in a conference or convention; in a caucus, Verily this is but straining at a gnat and swallowing a never.

camel.

The Senate caucus, composed of 51 men, each with a full voice and vote, met, discussed, and considered every paragraph of this measure, with no limit as to time or opinion. It kept the public constantly informed of its deliberations. It reached a final result with practical unanimity. It laid no injunction upon the conscience or the action of any Senator beyond that which animates us all when acting in concert, whether by convention, by association, or by parliamentary rule. It voiced a conclusion by authority of the party there represented and applied the wish of the majority to an act of legislation everywhere conceded to be a great party measure. It became the sword and buckler of every Democratic Senator, making our ranks invulnerable alike to the spears of the common enemy and to the subtler and more dangerous agencies of so-called Democratic opposition. And it has centralized responsibility lest blame for defeat, should that be our portion, might fall where it was undeserved.

Mr. President, few beyond the enemies of this measure who hope and pray that ultimate disaster may overtake it are de-nouncing us for acting in unity upon its provisions. They hope to make a breach in our ranks by deriding and denouncing our discipline and tactics; but, Mr. President, the hope is a vain one. We shall obey our masters, the people of the Nation, and every man on this side of this Chamber, true to his conscience and his trust, will vindicate that confidence of his constituents

which invested him with his senatorial office.

Mr. CLAPP. Mr. President, I shall not detain the Senate at this time further than to say, in reply to the discussion by the Senator from Colorado [Mr. Thomas] of the caucus, that I have an abiding faith in the law of gravitation and am always willing to wait for its operations. The American people had the caucus system in their own internal and local affairs at one time, but they have gone to work in almost every State in this Union and have abandoned the caucus. We had in the Constitution of the United States a provision for the election of Senators by the State legislatures, but the people, by one means and another, took up the process of determining for themselves who their Senators should be, until finally that force reflected itself in the American Senate in submitting a joint resolution for a constitutional amendment.

So, too, that same spirit, that same denouncement, and that same abandonment of the caucus, which the people recognized as a vicious instrumentality against them in their domestic and local affairs, sooner or later will reflect itself in the Senate as the other forces did, and the caucus will be abandoned here.

Having abiding faith in the eternal law of gravitation, I bide my time when that law will effectuate itself in these political

forces and instrumentalities.

Mr. SIMMONS. Mr. President, without indulging in any criticism of either side of the Chamber in connection with the debate on the pending bill, I want to inquire of the other side of the Chamber if it would not be possible at this time to agree upon a day for a vote upon the bill? In that connection, I will ask unanimous consent for a vote upon the bill and all amendments on the 25th day of August. Mr. BRISTOW. Mr. President

Mr. GALLINGER. Mr. President, the newspapers, if they are to be relied upon, have informed us that the Democratic Senators were to be in caucus this morning with a view to securing a recess until November 1 or 15 after this bill has become a law. I presume the statement was an accurate one so far as the caucus was concerned, and I inquire of the Senator from North Carolina, if he can do so without divulging any secrets that ought not to be divulged, as to what result was reached in that caucus?

Mr. SIMMONS. Mr. President, I can only say to the Senator that the question to which he refers has not been considered by any Democratic caucus, nor am I advised that any caucus has been called for the purpose the Senator has indicated.

Mr. GALLINGER. I will ask the Senator if it is in contemplation to hold a caucus in the near future to take up that question?

Mr. SIMMONS. Not that I am advised of.

Mr. GALLINGER. Well, Mr. President, considering the mat-

ter as it exists at the present time

Mr. SIMMONS. Do I understand the Senator as saying that the decision of Senators on that side of the Chamber as to whether they will agree to a day certain on which to vote on the pending bill will depend upon the determination of the question of whether the currency matter is to be taken up?

Mr. GALLINGER. I did not say that. Mr. SIMMONS. Well, I ask the question of the Senator, whether I am to infer that the determination would depend on that?

Mr. GALLINGER. I did not say that. I had in view what the newspapers announced, with apparent authority, and I was somewhat curious to know whether such a caucus had been held, and, if it be proper to divulge the action of the caucus, to have the Senator state it.

Mr. SIMMONS. I wish to say to the Senator that I am sure the newspaper statements with reference to that were without any authority whatsoever. Of course, I can not say what may happen in the future, but so far such statements have been

made without any authority.

Mr. GALLINGER. It has been also stated to me, with some degree of definiteness, perhaps without authority, that the ultimatum has gone forth that Congress shall not be permitted to take a recess during the summer months unless the currency bill has been acted on.

Mr. SIMMONS. I beg the Senator's pardon, but I did not

catch the purport of his last statement.

Mr. GALLINGER. Well, Mr. President, in view of existing conditions, I feel constrained to object to the request made by the Senator from North Carolina.

Mr. BRISTOW. Mr. President

Mr. SIMMONS. Let me ask the Senator, before he takes his seat, does the Senator object to fixing a day now because he thinks we will not have reasonable time between now and August 25 to discuss this measure, or does he refuse to fix a date because he does not know whether or not currency legis-

lation will be taken up for consideration?

Mr. GALLINGER. We are in the midst of a discussion of the most important bill that has been before the Senate for a great many years. Every citizen of the Republic is interested In my judgment, it strikes practically a deathblow to hundreds of industries in my own section of the country, and I for one propose to have it thoroughly discussed before a vote shall be taken.

Mr. SIMMONS. Does not the Senator think that the time fixed by me in my request would give ample opportunity for

discussion?

Mr. GALLINGER. I do not think so. Mr. SIMMONS. Does the Senator suggest any time which

would give sufficient opportunity for discussion?

Mr. GALLINGER. I will make no suggestion. I think we had better go along in an orderly way in the discussion of the various items and schedules of the bill, and later on we will be better prepared to fix a time for voting than we possibly can

Mr. JAMES. Mr. President, I should like to ask the Senator, is it not true that the Senator objects to fixing a time for voting on this bill because he can not obtain an agreement that we will not consider currency legislation at this session?

Mr. GALLINGER. I have just said that that was not my purpose or feeling.

Mr. JAMES. Then, why does the Senator inquire what we

intend to do about currency legislation?

Mr. GALLINGER. I think it is rather important for us to know what is ahead of us if we can ascertain it; but I do not care to be catechized as to my purpose in this matter, and will not be catechized as to my purpose. I content myself by objecting to the request made by the Senator from North Caro-

Mr. JAMES. While the Senator may not desire to be catechized, I think he might take us into his confidence and tell us just why he is unwilling to agree upon a time for voting, and why, before he will enter into an agreement, he makes inquiry

as to what we intend to do about other legislation.

Mr. GALLINGER. Mr. President, the procedure this morning is not at all unusual. When the Republicans were in the majority we were in the habit on this side of the Chamber of asking for days to take votes over and over again, but objection was made. The Senator objecting, however, was not subjected to criticism or to a demand made that he should give his reasons

for objecting. I object; and that ought to be sufficient for this morning.

Mr. JAMES. But it is rather unusual for the Senator, before he objects, to inquire about what we intend to do about other legislation

Mr. GALLINGER. Mr. President-

Mr. JAMES. Because, if the Senator will permit me, that creates the impression in the minds of most of us that the Senator is saying to the Senate and to the country that unless he can get an agreement that legislation which the people of the country desire and which would be passed if it were put to a vote shall be halted, no agreement will be made for a vote upon the bill on which otherwise an agreement to vote would be had.

Mr. GALLINGER. Mr. President, the Senator from Kentucky is not adroit enough to put in my mouth words that I did not utter. Upon the authority of reputable newspapers, stating that the Democratic Members of this body were to have a caucus this morning to consider the question as to whether or not we might take a recess after the passage of this bill until either the 1st or 15th of November, I civilly inquired of the Senator from North Carolina whether the newspaper statement was correct; and if so, if he felt at liberty to state to the Senate what was the result of that caucus; that I would be pleased to have him do so. It was a civil and proper inquiry. The Senator from North Carolina answered that the matter was not considered at their caucus, and that ended the matter so far as I was concerned. I certainly had a right to make the inquiry, I did it for my own personal benefit, and I desire that it shall rest there.

Mr. JAMES. I do not undertake, Mr. President, to claim to be adroit enough to put words in the mouth of the Senator, but I do claim to have some power of fixing in my own mind what the purpose of the Senator was in asking the question.

That is all I have done.

Mr. GALLINGER. Well, Mr. President, the Senator from Kentucky can indulge himself in that opinion to his heart's content.

Mr. PENROSE. Mr. President, I should like to ask the Senator from Kentucky whether, in his opinion, the minority in the Senate have exercised any undue delay in this debate?
Mr. JAMES. What does the Senator call "the minority"?

Certainly he does not call the party to which he belongs the minority, because you only beat the Socialists by a neck.

Mr. PENROSE. I call the Republicans in the Senate the

minority.

Mr. JAMES. Well, the Senator is entirely mistaken if he undertakes to say that a party that ran third in the last presidential race is the minority.

Mr. PENROSE. They are one of the minorities—the minority of the minority. The term, I think, will cover the situa-

They have not enough votes to make a majority. tion.

This bill was held for nearly two months in secret caucus by the majority in the Senate after it came to the Senate. The American people were given absolutely no information as to the changes contemplated, or the reasons for such changes. It is the most unprecedented and extraordinary proceeding ever in-

dulged in by a majority in a legislative body.

So far as the Republicans have ever held conferences in the past, they have been most severely criticized in campaigns by the Democrats of the country; but never before in the history of the American Government or of the American Congress have we witnessed what practically amounts to legislation in secret. The whole essence of American legislation is publicity. The galleries are here in this Chamber in order that the American people may be admitted, and witness the proceedings, and hear what is going on, and see the record of the votes.

The only remnant of secret session is relative to executive business, and even that last vestige of secrecy is criticized by Yet even now we see an important matter like the currency bill deliberated on and voted on by the overwhelming majority of the House of Representatives in a secrecy which would not be tolerated in Russia.

I do not say that this legislative proceeding will make the bill unconstitutional, but I do say that it is in direct violation of the principles of the Constitution of the United States, which declares that legislative proceedings shall be public and open.

Mr. JAMES. Mr. President, I should like to ask the Senator whether he thinks this tariff bill ought to be made, like the one

he helped make last time, by a committee of nine?

Mr. PENROSE. The last tariff bill, of 1909, was reported by
the majority members of the Finance Committee the day after it came to the Senate. They began their sessions about a week before the special session assembled on the call of the President. They were industriously working, concurrently with the House of Representatives, during all the time the bill was in the House of Representatives. Over in the House the hearings began before the new Congress commenced, and were held by the Ways and Means Committee. All that preliminary work was gotten out of the way which, under the control of the party at present in power, has been belated and delayed.

Further, if the RECORD is examined it will be found that since this bill was reported to the Senate considerably over half of the time on the floor of this Chamber has been taken by Senators belonging to the majority. I make that statement with lit-

tle or no fear of contradiction.

Mr. JAMES. If the Senator will permit me, it was stated upon the floor of the Senate by a Member upon that side that one man of the Finance Committee was so potential that he placed a lower duty than would have been justified under the doctrine of the Republican Party of protection upon one product in the State of the then Senator from Iowa, Mr. Dolliver, because the Senator from Iowa was unwilling to bow his back to the lash of the man who bossed the Republican Party and controlled the making of the tariff bill.

Mr. PENROSE. Mr. President, I do not know what duty the Senator refers to. Statements like that are very easy to make. The mere fact that the Republicans have done acts of omission or commission which in the opinion of the Senator were not proper is no excuse for him and his party in violating in a radical and extreme way all the proprieties and precedents of legis-

lative practice.

Mr. JAMES. The Senator knows I referred to the statement of the Senator from Iowa [Mr. KENYON] and to gypsum as the

Mr. PENROSE. I do not know what product the Senator

Mr. JAMES. Mr. KENYON was the Senator who made the

Mr. PENROSE. I was not in the Chamber when the charge was made. I do not know what product the Senator refers to. Mr. SMOOT. Mr. President-

Mr. PENROSE. I am not quite through. I will be in a minute.

The Senator complains about what Republicans did in following the lead of the then majority of the Finance Committee. Criticism of that does not excuse the spectacle of Democratic Senators assembling in secret caucus, deliberately surrendering their individual judgment, sacrificing the interests of their constituents and their States, and going along under the party whip. To my mind the following of a Finance Committee openly deliberating on the floor of the Senate, however much the Democracy in the past may have criticized it, is infinitely to be preferred to these methods worthy of darkest Siberia.

Mr. BACON. Mr. President, in view of the last remark made by the distinguished Senator from Pennsylvania, I wish to

recur for a moment to what was done in the past.

The criticism of the Senator from Pennsylvania is that the Democratic Senators assembled in private caucus, if you please—to give it the most pronounced name, and the one which suits them best-and in that caucus had a deliberation of all the Democratic Senators, and as the result of that caucus have agreed upon a tariff bill. That is the proceeding which is denounced by the Senator from Pennsylvania as something which would not be telerated in Russia, and I do not know but that he said something a little more extreme than that.

Mr. PENROSE. I will go further, and say that this practice is bitterly denounced by a large contingent of the Senator's own

Mr. BACON. Very well. I will accept that statement of the Senator; and I want to contrast it with what was done by the Republican Senators, and let the Senate and the public judge

as to which is the better proceeding.

Mr. President, I have been here during several tariff-revision contests. I remember generally what was done in each of them, but more particularly what was done in the one four years ago. Contrasted with the method adopted and acted upon by the Democrats, I want to present a statement of what was done by the Republicans.

It is a fact that in framing the present bill all of the Democrats assembled in a free conference, with opportunity for every man to represent and advocate his views, and there was a decision by the majority vote of that caucus—and I may say the almost unanimous vote of that caucus—as to what should be the provisions of the bill.

The Republicans, I will grant you, did not do that four years go. They did not take all of the members of the Republican ago. They did not take all of the members of the Republican instances negligible in comparison, whatever the then senior Party into their confidence. But the majority members of the Finance Committee, the Republican members, spent day after lowed with almost absolute unanimity, with the exception of

day and week after week with the persons who were to be particularly benefited by the high rates which were to be incorporated in that bill, persons who were not Members of the Senate; and in a caucus, not composed of all the majority Senators, but composed of a small committee of Senators and of all these aggregated beneficiaries of the tariff bill, those who were to be benefited by it. They were the parties who met in secret caucus to determine what should be the provisions of the bill.

Which was better-that all the Democratic Senators should meet and thus freely discuss and determine upon what should be the bill, or that the Republican members of the Finance Committee should meet in an equally secret caucus with the future beneficiaries of the bill and make the bill which was forced

upon us?

Mr. THOMAS. Mr. President-

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Colorado?

Mr. BACON. I do. Mr. THOMAS. I should like to inquire of the Senator from Georgia if the little coterie of Senators controlling everything, to which he has just referred, was not known as the "senatorial

Mr. BACON. I did not hear it called by that name. Mr. STONE. Mr. President, will the Senator from Georgia permit me just a moment?

Mr. BACON. I will, with pleasure.
Mr. STONE. The Senator very correctly says that in the
Democratic caucus which considered this bill there was free and full discussion, and every Senator expressed his views on any item of the bill he desired to discuss, and did it publicly. Another thing which I think the Senator has overlooked, and which he ought to emphasize, is that when the Finance Committee reported this bill to the caucus every member of the caucus had full liberty not only to discuss it, but to offer any amendment he pleased to any part of it, and numerous amendments were offered and adopted.

Mr. BACON. Undoubtedly; and not only so, Mr. President, but day after day when that caucus was in session the corridors adjoining the room in which the caucus was held were filled with representatives of the newspapers, who were each day given full information as to what was being done in the caucus. t was not a star-chamber proceeding by any means.

Mr. PENROSE rose.

Mr. BACON. I have not finished yet. I beg the Senator to wait a minute.

Mr. PENROSE. Will the Senator permit me to ask him a question?

Mr. BACON. Not right now. I will very shortly. Mr. PENROSE. But this is a very short question.

Mr. BACON. No; not now. I will in a moment. I want to

complete what I was saying.

I am trying to present to the Senate and to the public the contrast between what is now denounced as the action of the Democratic majority and that which was done by the then Republican majority.

What was the conference, Mr. President? Instead of a conference of the Republican members in which there was this free discussion, in which there was this opportunity for amendment and for the presentation of views, after the bill was framed in the way I have stated, the Republican majority sat in this Chamber, and, as I said on that occasion, and I can produce the RECORD and prove it, voted according to the wave of the hand

of one man. I charged it upon them then, and I repeat it now.

Mr. PENROSE. Mr. President, will the Senator permit an interruption at this point?

The VICE PRESIDENT. Does the Senator from Georgia

yield to the Senator from Pennsylvania?

Mr. BACON. I now yield.

Mr. PENROSE. The RECORD will not by any means prove the statement of the Senator from Georgia. The Republicans had a large majority of the Senate in that Congress, but on many votes they failed to command anything like the full party

Mr. BACON. Mr. President, there were some Senators who sat on that side of the Chamber led by the distinguished Senator from Wisconsin [Mr. LA FOLLETTE] and the then distinguished Senator from Iowa, Mr. Dolliver, who did not agree with the majority and who frequently did not vote with them. But it is a fact, and the RECORD will show it, that in the large majority of instances, in a majority so great as to make the minority of the particular representation of which I spoke, led by the Senator from Iowa and the Senator from Wisconsin. Mr. BRISTOW. Mr. President—

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Kansas?

Mr. BACON. I do. Mr. BRISTOW. I challenge the statement that Mr. Aldrich led with practical unanimity. That statement can not be verified by the RECORD.

Mr. BACON. Mr. President, I said there was a minority.

Mr. PENROSE rose.

Mr. BACON. I beg the Senator not to interrupt me until I finish my reply to the Senator from Kansas.

Mr. PENROSE. May I ask the Senator a question? Mr. BACON. Not until I finish answering the Senator from

Kansas, Then I will yield.

I expressly excepted the body of Senators sitting on that side who were then acting with the Senator from Wisconsin and the Senator from Iowa. But I repeat, and I have a document here to prove it-because there is a document here which shows every vote cast upon that occasion-that with the exception of those following the Senators I have named, who were known then as the progressive element, as they are now, with scarcely an instance to the contrary, on every important matter the Republican Party voted solidly as the Senator from Rhode Island indicated it was his desire that they should do.

Mr. GALLINGER. Mr. President—

The VICE PRESIDENT. Does the Senator from Georgia

yield to the Senator from New Hampshire?

Mr. BACON. I do.

Mr. GALLINGER. I wish to ask my learned friend, the Senator from Georgia, if by that statement he means to impeach the honesty or the integrity of those who may have voted as the Senator from Rhode Island did?

Mr. BACON. I do not; but I do mean to say this: The Senator from Pennsylvania [Mr. Penrose] has spoken of the impropriety, the conduct to be denounced, of Senators on this side who congregated together and discussed this measure and agreed upon that which they would support. I was presenting the other picture of the Republican Party four years ago not meeting in general caucus, but in having a committee meet dailyanybody could see them every day streaming over to the Senate Office Building with the beneficiaries of that bill-and that small coterie fixing what the bill should be. The bill came in here, and then the majority—all the Republican Senators, practically speaking, except those who were then known, as they are now, as Progressives-voted solidly in accordance with the provisions of the bill as it had been determined upon in that way. I was asking the Senate and the country to say which was the better method; whether it was better that the party responsible to the country for the bill should meet together and in free discussion determine upon it, or that there should be a small committee of eight or nine from this body meeting with the beneficiaries of the bill and determining upon its provisions. That was the contrast which I desired to present.

Mr. GALLINGER. Mr. President, I was a somewhat obscure member of the Committee on Finance, and very likely on that account was not invited into those conferences, if any were held. I have no recollection of any meetings of that kind being held with the beneficiaries of the bill during the progress of the debate in 1909.

It does seem to me that there is a wide difference between the action of the Republican Party when the last tariff bill was passed, in debating it in the open here, each Senator being permitted to vote as he chose, and the action of the Democratic Party in secret caucus practically binding its members to vote as a unit, which they are doing.

Mr. BACON. There is no such binding action of the caucus. Mr. GALLINGER. I will ask the Senator if in his judgment he feels that each member of the Democratic Party to-day is at full liberty and without criticism to vote his convictions?

Mr. BACON. Just as full a liberty as the Republicans four

Mr. GALLINGER, The Senator from Mississippi [Mr. WILLIAMS | yesterday said that he was not in favor of the provision relating to sugar, but that he followed his party caucus, which had determined upon a certain program. It seemed to me that he had surrendered his individual opinion to the be-hest of the party caucus. Is not that correct? Mr. BACON. When the Senator is through, I will reply.

Mr. GALLINGER. I am through.

Mr. BACON. Mr. President, I agree fully with what the Senator from Mississippi said. There are many things in this been whipped and coerced. Does the Senator believe that? I

bill that I do not agree to. I will go further and say that if I had my way in forming the bill, it would be drafted on some different lines. But I agree with the general principles which are involved, and I surrender and subject my private judgment to the judgment of my colleagues. It is only in such a way

that anything can be accomplished by a body.

But the contrast which I make is this: I think that if the Republican Party determined upon leaving the framing of the bill to the nine men and to the beneficiaries under the bill that met with them in the Office Building, they were right to follow them after the bill had been thus framed in the way they then

What I was asking is, what would be the better course, which can be the best defended, that of the Democrats, who met all together and consulted and discussed, and did it at great pains and at great length, not being simply driven by anybody or unduly influenced by anybody, and in that conference every Senator who felt that he could conscientiously do so subordinating his own private judgment and his personal preference to that of his colleagues, or a proceeding where it is left to nine men and the beneficiaries under the bill to determine upon it, and then for Senators to subordinate their judgment to that rather than to subordinate their judgment to that of all their party colleagues?

The Senator from Kansas [Mr. Bristow] denied what I said about the practical unanimity of the Republican Party. Senator from Kansas was a conspicuous member of that sub-division, as I may speak of it, of the Republican Party that

did not go with the majority.

But, Mr. President, if Senators feel sufficiently interested in this matter to determine whether the statement I have made is correct, there is a document which shows the yea-and-nay vote of every Senator in the consideration and construction of the tariff bill in 1909. An inspection of that document will show that in the large majority of instances, in almost all instances except the particular body or subdivision of the Republican Party to which I have made allusion, they voted solidly I at that time called attention to it, and in the course of that debate more than once used the expression that the Republicans on that side, speaking, of course, of the majority and not of the subdivision of the body led by the Senator from Wisconsin [Mr. LA FOLLETTE] and the Senator from Iowa [Mr. CUMMINS], were voting on the wave of the hand of the Senator from Rhode Island.

Mr. PENROSE. Mr. President, if the Senator will permit me, if the document he refers to shows all the votes, it will show that the Republicans on this side voted according to their views on each schedule where the yeas and nays were called, and on the final passage of the bill 10 of them voted against the measure.

Mr. BACON. Yes; the 10 I speak of.

Mr. PENROSE. There was not the hard-and-fast situation which exists to-day, with every Democrat bound hand and foot under intimidation and menace from the White House to vote for this bill, whether he likes it or not.

Mr. BACON. That is an absolutely unjustified remark.

Mr. PENROSE. I should like to ask the Senator from Georgia whether he prefers the activities of a chairman of the Finance Committee made openly on the floor of the Senate before the public and before the newspaper correspondents or whether he prefers legislation by Executive intimidation and coercion and the personal visits of the President to the lobbies of this Chamber in order to whip Democrats into line for free sugar, free wool, and other schedules that they know will be destructive to the people of their State?

Mr. BACON. The Senator's question is based upon a premise which is not true. The Senator asks me which I prefer, whether I prefer the one or the other, and then that which he denominates as the other is a statement which is not true in fact.

There is no question as to the opinion of the President upon certain of these schedules, but it is an absolute untruthwill not use that word, because that might be construed to mean what I do not intend-but it is absolutely incorrect and without justification to say that Senators have been coerced. We know Senators on this side who are not going to vote for this bill. Why does the Senator say that others are coerced? They are not. The Senators on this side agree upon general principles. They recognize that in order to carry out general principles Senators must surrender private views as to particular cases. I have surrendered mine in some of the provisions of this bill.

Of course, if what the Senator says is true, I am one who has

ask him to say whether he believes it or not. I am willing for the Senator to rise in his place, with his long service with me

Mr. PENROSE. Mr. President-

Mr. BACON. One moment.

Mr. PENROSE. I thought the Senator called on me.

Mr. BACON. On my statement that there are many things in this bill that I do not agree with, I am willing for the Senator to rise in his place and say to the Senate and to the country whether he believes that I have been whipped or coerced into agreeing to this bill.

Mr. PENROSE. I have the highest opinion of the Senator from Georgia as an honorable Senator and a distinguished statesman, but he has just confessed that he has been whipped into

line by the Democratic caucus.

Mr. BACON. If I was not afraid of being a little unparliamentary I should reply to that in a way that would leave no doubt on the mind of the Senator as to what I have meant. have said no such thing.

Mr. PENROSE. Mr. President-

Mr. BACON. The Senator will not interrupt me now until I

Mr. PENROSE. Why does the Senator ask me this pointed question and then keep me muzzled?

No, sir; not by any means.

E. When the Senator is ready I will get up.

Mr. PENROSE. When the Senator is ready I will get up. Mr. BACON. When I am through the Senator will, and not

before, unless I agree to it.

The Senator says I confessed I had been whipped into agreeing to what the caucus had determined. I say, and call upon every Senator on the other side, to say nothing of the Senators on this side, to witness that that remark was absolutely untrue

and unjustified.

On the contrary, I have said that there had been no coercion by the caucus, and I had given my reasons why I had subordinated my wish to the wish of a majority, not that I was coerced, but I believed that in order that party principles might be made effective it was necessary that the private individual views of a Senator should be subordinated to the views of those of his colleagues who thought otherwise, and who might be in the majority. Can there be any possible justification for the Senator making such a speech to me in the Senate under those circumstances?

Mr. PENROSE. Is that the question? Mr. BACON. No. The question I am asking is of the Senator's colleagues, not of him. I asked him once and he failed to reply to it. I asked the Senator whether he will stand in his place and charge that Senators on this side had been whipped and coerced by Executive influence and power? Having been associated with me as long in this Chamber as he has, I asked the Sanator if he would stand in his place and say, in the presence of the statement I had made that I was voting for something in this bill that I did not approve of, he thought I had been coerced by Executive influence to so do? The Senator was careful not to answer that question. He can answer it now if he wishes.

Mr. PENROSE. Mr. President, the Senator may not have been coerced. He seems very willingly to have surrendered his convictions to the majority of the caucus. He presents the extraordinary spectacle of pleading guilty to an indictment and then

proclaiming his innocence and asking me to affirm it.

Mr. BACON. Mr. President, that is a remark that is not justifiable. I have said no such thing. I repeat what I said, that I would vote for all in this bill, although some provisions in it did not meet with my approval, because I believe that in order to make party government or party measures effective it is necessary that the individual should subordinate his private views as to some measure.

Mr. PENROSE. Mr. President-

Mr. BACON. One moment, if you please.

Now, Mr. President, the Senator, in the face of that repeated statement, makes a statement which he knows is not in accordance with that statement. The Senator will not answer the question that I asked him. He will not answer it. Well, Mr. President, if he will not say that I have been coerced by Executive influence, what right has he to say that any one of my colleagues has been coerced by Executive influence?

Mr. PENROSE. If the Senator will permit me, I will answer any question he puts to me. It seems to me we are quibbling We should look at the facts. Whether the Senator is coerced, or an innocent victim of a bunco game, or an unsophisticated gentleman from the country, the fact remains that he has declared to the Senate and to the American people that he has deliberately surrendered his convictions and gone along with his caucus.

Mr. BACON. Well, Mr. President, I want to compare what I have done with what the Senator from Pennsylvania did. met with my colleagues in open, free discussion, and when I was convinced that I was in the minority I surrendered to my col-The Senator from Pennsylvania did not meet in open discussion with his colleagues four years ago, but did whatever the Senator from Rhode Island said he should do when he cracked his whip over his head. That is the difference.

Mr. WILLIAMS. Mr. President, I rise for the purpose of pouring oil upon the troubled waters. I hope that we may go ahead with the consideration of these paragraphs, although I think it would be well to have the Chaplain recalled for a moment in order to render thanks to Almighty God for the conversion of the Senator from Pennsylvania. In an old German story early in my life I read a sermon which was entitled "Satan Rebuking Sin." I never expected to see that reproduced, even in diminuendo, but I have seen it this morning. the Senator from Pennsylvania rebuking secrecy and partisanship is almost equal to the devil rebuking sin.

I do not think there is a man in the United States who expected this spectacle. I feel very close personally to the Sena-tor from Pennsylvania, because while he is of the Quaker Welshmen, I am the Welshman who followed the Stuart-pretty far apart, but we are both Welsh in a certain way. However, I never expected to see the brilliant genius of the Welsh race asserted with the effrontery and success that it has been asserted by the senior Senator from Pennsylvania this morning.

Now, let us waive all that and go to the consideration of the The honest truth is that we are the majority party. American people have thrown upon us the responsibility for action, and we have chosen to act as a party in open and free and full party conference. When a man surrenders his view upon a tax item to the majority view of his party he does a thing that is voluntary. It is not a result of coercion at all. It is a result of the voluntary exercise of his judgment when confronted with the question as to what is best to be done; whether it is better to disrupt the progressive party of this country when it has responsibilities thrown upon it by the American people by letting it go all to pieces—each man working for himself—or whether it is better to get into a family council, as St. John said, "reasoning together in brotherly love with one another," settling upon a common cause, and then as man to man and gentleman to gentleman, bound by both rela-tionships, proceeding to carry that cause to victory. That is all tionships, proceeding to carry that cause to victory. there is in this.

Now, it is pretty hard for the Senator from Pennsylvania to recognize the fact that he is a minority, and, so far as his particular stripe of Republicanism is concerned, that he is a woefully infinitesimal, insignificant minority. It is mighty hard to be tumbled down from a precipice of arrogant dominion a thousand feet high to an abyss of oblivion a thousand feet deep politically, and stand it without growing in self-defense more or less "progressive" himself. Thus the Senator comes in imitating the devil "rebuking sin" and proceeds to rebuke secrecy and partisanship. "A Daniel come to judgment" sure

enough, and from what a wonderful source,

Mr. President, the Democratic Party is responsible for this Mr. President, the Democratic Party is responsible for this bill. It is responsible for doing something or else proving itself incompetent to do anything. The Senator from Pennsylvania knows that as well as I do. He is not and I am not a hypocrite. If his party were in power to-day it would put through a Republican tariff bill. The Democratic Party is in power and is going to put through a Democratic tariff bill as nearly as it can. "As nearly as it must" is a better expression, because it is a case of "nust" and to that extent it is coording. There is not case of "must," and to that extent it is coercion. There is not a man here who is not coerced to a certain extent by the actual industrial condition with which he is confronted.

But when the Senator talks about the caucus "coercing" us or the President "coercing" us, that is idle verbiage cast upon the circumambient atmosphere for self-amusement. When a dozen men with a common purpose meet and determine upon methods by which they shall accomplish a common purpose, and eight of them advocate a certain method of accomplishing the common end and two more another and one another and one still another, and they finally arrive at a given result, nobody is "coerced"; everybody has merely shown common sense—the

common sense which results in concert of action.

Common sense is the rarest sort of sense in the world. There are a great many people in the world who are worth a great deal to the world who have not any common sense, who have merely uncommon sense. They go out in front and raise questions and initiate issues, and frequently because the issues are proven worth consideration they later along are expressed by another awakened and educated common sense, as the policy of another generation. The daring of one generation becomes the

policy of another and the legislative act of a third. These people are worth a great deal to the world in the way of wakening up things, starting things; but the men who do things in the world are the men who cooperate with others for a common

purpose.

I could have borne the sort of lectures we have received this morning if it had fallen from the lips of the Senator from Minnesota [Mr. Clapp] or the Senator from Wisconsin [Mr. La Follette] or the Senator from Kansas [Mr. Bassrow], and in a remote and indefinite way if it had fallen from the lips of the Senator from Idaho [Mr. Borah]; but to come from the lips of the Senator from Pennsylvania is, I think, the most astonishing that I was ever visually subjected to in all my intellectual and political existence.

Mr. GALLINGER. Mr. President, the Senator from Mississippi [Mr. Williams], if he were not so delightful always, might be subject to the criticism that he has poured a peculiar kind of oil on the debate. It must be the "Three-in-one" variety, it seems to me. His criticisms have been pretty severe, but the Senator from Pennsylvania will take care of that

himself.

I simply want to call attention to a historical fact. This morning the Senator from North Carolina [Mr. Simmons] properly asked unanimous consent that a vote should be taken on this bill on the 25th day of the present month. The debate was opened 30 days ago by the Senator from North Dakota [Mr. McCumber], and, as I remember, there was a little hiatus as that speech was made somewhat in advance, for the reason that that Senator had to leave the city. The Senator now asks that in 11 days more we shall take a vote. That is 41 days from the time the Senator from North Dakota made his somewhat premature speech.

Now, let us look at what happened four years ago. And in passing let me suggest that the present bill was held in Demoeratic committee and in Democratic caucus almost two months

before it was reported to the Senate.

Four years ago, Mr. President, the bill was reported to the Senate on the 19th day of April. It passed the Senate on the 8th day of July. It was held here by the Democratic Party for precisely 80 days. We have been debating it 30 days and we are subjected to more or less criticism.

Mr. SIMMONS. The Senator says the bill was held by the Democratic Party that length of time. I will ask him if it was not held a large part of that time by an element in his own

party?

Mr. GALLINGER. By opponents of the bill, yes; that is correct; but it was held by the Democratic Party, because if it could have been decided by this side of the Chamber it would have been decided in very much less time. The bill was in debate 80 days, and yet nobody found any fault about it; it was a very important measure; but now, for some occult, unexplained reason, we are asked to permit this bill to come to a vote after a little over one month's debate; and I think I did entirely right in objecting to the request for unanimous consent on the ground that there are a great many items and schedules in the bill yet to be discussed.

Mr. LA FOLLETTE, Mr. President-

Mr. SIMMONS. Will the Senator from Wiscensin yield to me?

Mr. LA FOLLETTE. I wish to take the time of the Senate for only one moment, in connection with something that has just been said by the Senator from New Hampshire [Mr. Gallinger].

If the Senator from New Hampshire had not objected this morning to fixing a time for a vote on the tariff bill, I should have interposed an objection. I believe I objected a number of times to the fixing of a day for taking a vote four years ago when the Payne-Aldrich bill was pending before the Senate. Whenever this subject has come up in the Senate during the pendency of this bill there has been, upon this side, some suggestion or intimation that an agreement for a vote on the tariff bill at an early day might be secured if assurances were given by the Democrats that currency legislation would not be pressed at this session. For this reason I desire to have it clearly understood now that, while I will object to fixing a time when a vote shall be taken upon the tariff bill, at least until there shall have been opportunity for its full discussion, I want it definitely understood, Mr. President, that in interposing such objection there is not in my mind any purpose to postpone consideration of currency or other legislation.

I want to say now, for one Senator on the Republican side, that I am prepared to give my consent to continuing this extraordinary session to the 1st day of December, if necessary, for the consideration of any legislation important to the inter-

ests of the country. I am ready to remain here in session until the constitutional time for the assembling of the regular session shall arrive, in order to take up the consideration of the currency bill. In saying that I do not commit myself to any

provision in that bill.

The business interests of this country will inevitably undergo some strain in adjusting themselves to the new tariff rates to be enacted into law. These new conditions may well make currency legislation necessary. For one I do not propose to allow anyone to impose upon me in any measure the responsibility of defeating the consideration of any important legislation that may be necessary to accompany this pending tariff legislation. At the same time I want to say, and I want it definitely understood, that with so important a subject as currency legislation I would not be pushed or driven by any condition into giving my assent to rushing a currency bill through which I did not believe to be for the best interests of the country.

Whenever the question of fixing a time to vote upon the pending tariff bill shall hereafter be raised, for one I want it understood that this bill shall be disposed of without reference to any other subject of legislation. I will not be, directly or indirectly, a party to, and I will not consent to be put in the position where it may be inferred that I joined in, an arrangement for terminating debate upon this bill in order to foreclose the Senate and the Congress from the consideration of the currency

bill.

Mr. CLARK of Wyoming. Mr. President, in connection with the request of the Senator from North Carolina [Mr. Simmons], which has been disposed of, and the suggestion of the Senator from Kentucky [Mr. James] that we ought to use expedition in the final determination of this bill, I desire to add to the historical data of the Senator from New Hampshire [Mr. Gallinger] some data that have just been sent to me in regard to

the history of this particular bill.

The bill was received in the Senate on May 9; the bill was referred to the Committee on Finance without instructions on May 15—I assume that this is accurate—the bill was reported to the Senate by the Committee on Finance July 11. General debate on the bill began July 19. The bill was taken up by paragraphs July 23, about 20 days ago. The bill was taken up by paragraphs July 23, about 20 days ago. The bill has 277 pages, made up as follows: Fifteen tariff schedules, or 650 paragraphs, covering 164 pages; an income-tax provision, covering 45 pages; the "cotton-futures" provision, covering 4 pages; and the administrative features, covering the remaining 64 pages. The Senate is now upon its twenty-first day of actual consideration of the schedules, paragraph by paragraphs. It has reached paragraph 198; it has passed over 31 paragraphs, including one re-referred to the Committee on Finance; and it has completely passed over the sugar schedule, that has always been provocative of debate. Only 50 pages of the bill have been partially considered for the first time. Other amendments are to be proposed to the paragraphs considered.

After two weeks of consideration the chairman of the committee [Mr. Simmons] said from his sent in this Chamber:

I want to say that we have been on this bill only two weeks, and in the consideration of no tariff bill which has been presented since I have been here have we advanced so far during the first two weeks as we have in the consideration of this bill.

At the time the Senator from North Carolina made that statement we had considered less than 100 of the 650 paragraphs of the bill.

I offer that as historical data, in view of the discussion which has been going on.

Mr. PENROSE. Mr. President, I do not intend to take up the time of the Senate at any length with this discussion which I have not provoked; but, since the Senator from Mississippi [Mr. Williams] and the Senator from Georgia [Mr. Bacon] have taken occasion to single me out in their remarks, I should like to call the attention of the Senate to one or two thoughts

which are running through my mind.

In the first place, Mr. President, the majority in this Chamber seem to think that they can be excused for any violation of legislative ethics by pointing to the record of the Republican Party. They have been assailing that record, so far as legislative practices are particularly concerned, for many campaigns. When they marched into this Chamber in the majority last spring it was thought that they had the white robes of political purity about them and the emblems of lofty virtue, like lilies, in their hands, maintaining a high moral standard and exciting the admiration of an awakened public conscience and of an aroused humanitarian spirit. We find them, however, not only imitating the practices which they have condemned, but going so far beyond them as to make the Republicans feel that they were innocent amateurs.

For years we heard criticisms of the methods of Speaker Reed and of Speaker Cannon and of the czar-like rules adopted in the House of Representatives; but I say, without fear of contradiction, that nothing has ever been perpetrated in the history of American legislation which equals the secret caucus practices of the Democrats in the House and in the Senate. It has reached the point, Mr. President, when it is, if not in direct violation of the Constitution of the United States, certainly violative of its principles. What record have we; what record has the country of the votes on sugar or on wool or on the several schedules which have been solemnly determined and settled in the darkest secrecy and then submitted to this Chamber for ratification or negation by the two parties in this body? The country has no record or information except the desultory, unofficial, and unauthorized reports appearing in the daily news-

Mr. SIMMONS. I know the Senator does not wish to make

an incorrect statement.

Mr. PENROSE. I have made very few incorrect statements. Mr. SIMMONS. There was no record vote taken in the Mr. SIMMONS. caucus which was not, by express authority of the caucus,

given to the country.

Mr. PENROSE. Mr. President, that is not an official record; that is not a record kept under the solemn oath of office to support the Constitution of the United States, with all the solemnity that characterizes legal proceedings and with all the official sanction that characterizes the open proceedings of this body. God help the country, Mr. President, when the unofficial record of any party caucus has to be the only source of information for the American people as to the legislative acts of their representatives! Furthermore, I am not informed that the official record to which the Senator has referred contained the names of those voting for or against any particular schedule. It merely declared the result.

Now, I will ask the Secretary to read a paragraph from the

Constitution of the United States.
The VICE PRESIDENT. In t In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

Each House shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the Members of either House on any question shall, at the desire of one-fifth of those present, be entered on the Journal.

Mr. PENROSE. Now, Mr. President, I call the attention of the Senate and of the country to the fact that we have no official record of the actual votes which have determined the schedules in this bill. Caucuses or conferences held for a few hours have been criticized in the past; but I challenge any Senator to show until the present time an instance in any Congress in the history of the American Government where caucus proceedings have been conducted for weeks at a time, practically supplanting legislative proceedings. The condition is unprecedented; the condition is revolutionary; the condition is one that when the American people fully realize it they will discount hereafter the pretensions to virtue and political purity of those who have been assailing the Republican Party.

Mr. President, to show you how serious this matter is, I want to call the attention of the Senate to a statement made by the Senator from Mississippi [Mr. Williams]. I read from the

CONGRESSIONAL RECORD of yesterday:

I have said and I say now that the least burdensome of all taxes upon the consumer is a tax upon sugar, a reasonable tax. I was willing to have taken the English free-trade duty—40 cents a hundred—which would have put Louisiana out of business as completely as free

Showing cordial and friendly feeling for Louisiana-

Showing cordial and friendly feeling for Louisiana—but would have given the American Government \$30,000,000 revenue in a manner least burdensomely laid upon the people—laid upon a finished product and not a raw material—and thereby enabling us to reduce still further the duties on clothing and other necessaries. But I do not even believe that I owe any apology fo my constituents, the country, or myself for the fact that when we reach that schedule I shall vote for it as worded in this bill. I shall vote for it upon the general ground that I am not conceited enough and not egotistical enough to believe that I either ought to or could make my opinion prevail against the opinion of the vast majority of the school of politics to which I belong.

Then, after expressing his veneration for Thomas Jefferson the Senator goes on to say:

But I have never seen any way of accomplishing any important result in this world except by "team work." Politics, baseball, football, and church work are all the same in this regard. A man takes himself very seriously who thinks he can accomplish much by himself. If he forgets all the other spheres that are rolling around outside of the

The spheres must have been making a noise on that day [laughter]

and comes down simply to the earth, and then forgets all the earth except his own country, and forgets all that except his own township, he still can not hope to accomplish much by himself.

Mr. President, what does that statement imply? It implies that the Senator from Mississippi acted deliberately, at the behest of a party caucus, against his convictions. He is here a Senator under the solemn oath of office which he took at the beginning of his term, and yet he confesses to his own insignificance, deliberately throws overboard \$30,000,000 of revenue, and candidly states that he is destroying the industry of a great Commonwealth. Is that a position which a Senator of the United States can candidly announce to the country and logically maintain? It enunciated a legislative practice and doctrine which I for one, in spite of the shortcomings with which the Senator from Mississippi has charged me, have never for a moment imagined.

The Senator from Georgia [Mr. BACON] referred to the frequent consultations with beneficiaries of the tariff. I take this occasion, as the State of Louisiana has been mentioned, to tell him that among the beneficiaries which the then majority of the Finance Committee did confer with were the sugar growers of Louisiana. That was a rock-ribbed Democratic State. Republicans in the rest of the country never could hope for aid or encouragement from that section for well-known local reasons. Yet out of their broad and generous patriotism they so framed the sugar schedule as to provide for the future prosperity and well-being of that section of the American people, regardless of party affiliation or sectionalism. The Senator from Georgia is correct in saying that they did, at least in one case, consult with beneficiaries of the tariff bill, and they did it out of a broadminded statesmanship in relation to a section from which there could be no possible return.

I shall not pursue this matter further, Mr. President. There is no disposition on this side of the Chamber to delay a vote on The RECORD will show that over half of the time since the bill has been in the open Senate has been consumed by Democrats in this body or by discussions like the present which they have provoked. At the proper time, when Senators of the minority have been able to explain their views to the people of the country regarding a bill which they are convinced will bring disaster throughout the length and breadth of the land, there will be a vote and the bill will become a law.

Mr. WILLIAMS. Mr. President, the Senator from Pennsylvania, with the usual bewilderment that troubles the Republican intellect, seems to think that a duty upon sugar is a matter of conscience; that there is some principle involved in it; that a tax rate constitutes a principle. I do not believe that. Even if a particular industry were to be destroyed by depriving it of a legislative prop, the people engaged in that industry would have no legitimate right to complain, because no man has any right to demand of all the people that he shall be propped into a profit.

Mr. PENROSE. Mr. President, did not the standard bearer of the Senator's party, the present President of the United States, openly declare on the stump that no legitimate industry was to suffer, that nothing abrupt would be done in connection with tariff legislation, and thereby lull the American people to

sleep upon this issue?

Mr. WILLIAMS. He did and in this particular case, as I have said previously, in my opinion he has made a mistake, and in my opinion the Democratic majority has made a mistake. There never has been any secrecy about my opinion upon that subject. Every word I have said upon the subject I will now reiterate, because every word of it represented then, and represents now, what I believe. But when the Senator arraigns a position upon the rate of a tax as a matter of conscience and arraigns somebody for surrendering his conscience because he voted to take away an artificial legislative prop, although he thought taking away the prop might hurt the man that was propped, he is talking and thinking in a very bewildered way.

No man does any wrong to any human being in the world when he merely says to him, "You shall stand upon your own two feet and wrestle with the balance of the world upon a foot-

ing of equality, without legislative help." What has gotten into the Senator's mind is that he thinks

legislative help becomes a vested right. It can not become a vested right. The Senator is a little bewildered. Mr. PENROSE. Will the Senator permit an interruption?

Mr. WILLIAMS. Yes

Mr. PENROSE. The Senator is a little bewildered, I think. I endeavored to make plain that the Senator under his solemn onth of office was deliberately throwing away a small sum like \$30,000,000 and destroying a State under the coercion of party caucus, and he so pleads guilty in his own statement.

Mr. WILLIAMS. Mr. President, that again illustrates the bewilderment of the regular standpat Republican intellect. The Senator from Pennsylvania evidently thinks that when I entered this body I took an oath to maintain protectionism. I merely took an oath to maintain the Constitution.

Mr. PENROSE. I assume the Senator feels impelled to follow his convictions and his beliefs and his conscience. He has surrendered all of them.

Mr. WILLIAMS. The Senator did not take an oath to follow his convictions upon rates of duties. The Senator from Pennsylvania took no such oath, and nobody here has taken any such oath. The Senator from Pennsylvania knows it as well as I do, without further comment, and there is not a 14-year-old boy that does not know it.

Mr. PENROSE. I supposed that was the effect of the oath. Mr. WILLIAMS. To go ahead, the Senator seems to think We did not single him out. He has we have singled him out. singled himself out.

I do not care to continue further this absorption of the time of the Senate. The Senator's last remarks remind me of what an old friend of mine once said. After getting through hearing a defense made by a man, he said, "That is the first time I ever heard a defense by self-condemnation."

The utmost the Senator has said is to condemn himself, his past methods, and the past methods of his own party, and then to accuse us of imitating and exceeding them. As to the last part of his remarks, I think everybody will agree that we have not exceeded them, at any rate, because that would be impossible.

Even if Senators on this side do surrender their private views concerning the proper rate of duty, as to whether oxalic acid ought to be taxed 15 or 20 per cent or put upon the free list, it is not a surrender either of the Constitution or of the institutions of the American Government, and it is not a surrender of anything that any Senator is by oath or in henor bound to

As to my position on the sugar question, the Senator says I can not candidly announce it, and can not logically defend it. I can candidly announce it, at any rate, but I simply confess that I can not logically defend it. I can not logically defend the provision of the pending bill upon sugar. I am not going to attempt to do it, because it is not my view. But I can candidly announce that the position I could have logically defended I have voluntarily surrendered in order to help get a reformation of the tax laws of this country. That is candid enough, I take it, as an announcement.

So far as being logical is concerned, I think it was Thomas Carlyle who once said that he thanked God that mankind were not invariably logical. So far as I know, nothing in this world can be done by being invariably logical. There are very few things that the Senator from Pennsylvania has accomplished in this world that were accomplished by being invariably logical. I do not know anybody that has changed the rules of the game to suit his hand oftener than the Senator from Pennsylvania.

Mr. SMOOT rose.

Mr. WILLIAMS. I want to express the hope, before I take my seat, that we may get to the schedules of the bill soon.
Mr. SMOOT. Mr. President, I assure the Senator that I

shall not detain the Senate long. I want to refer to the statement made by the Senator from Georgia in relation to the votes cast for the Payne-Aldrich tariff bill, when under consideration in the Senate, as a mere matter of history.

I find, in a casual glance at the votes as recorded in Public Document No. 153, that at different times the following Democratic Senators voted with Mr. Aldrich: Messrs. Clay, Overman, Foster, McEnery, Simmons, Martin, Daniel, Money, McLaurin, Newlands, Owen, Shively, Stone, Gore, Davis, Smith of Mary-land, Chamberlain, Hughes, Taliaferro, Taylor, Rayner, John-ston of Alabama, Fletcher, Culberson, Bankhead, Bailey, and

Mr. GALLINGER. Were there any Democratic defections in the list just read?

Mr. SMOOT. None that I recall. I wish to say that we have taken almost as many record votes upon the pending bill as were taken upon the Payne-Aldrich bill, and I say there is not a single Democrat that has voted with the Republicans on the pending bill, with the exception of the Senator from Louisiana [Mr. THORNTON], and he only upon certain items in the agri-No matter what amendments have offered, whether they have been to take items from the dutiable list and put them upon the free list, where they are under the present law, or whether they have been to reduce rates that have been advanced in the pending bill to the present rate, every single Democrat has voted against a change in the bill.

I simply wanted to call attention to the fact that in my burried running through these votes I had picked out the names I have already read to the Senate. I want to say, also, that I believe, no matter whether the Democratic caucus bound the

members of that caucus as to how they should vote or not, the result will be that upon every vote in the Senate where a record is made there will be a united Democratic vote, with the exception of the two Senators from Louisiana; and no matter whether Senators were bound in the caucus or not, the result is going to be the same.

Mr. LODGE and Mr. BRISTOW addressed the Chair. The PRESIDING OFFICER (Mr. CHAMBERLAIN in the lair). The Senator from Massachusetts is recognized.

Mr. BRISTOW. Mr. President, I have addressed the Chair 14 times this morning. I have been trying to get recognition since 11 o'clock.

The PRESIDING OFFICER. The Senator will permit the present occupant of the chair to state that he has not been here during all of that time. The Chair recognized the Senator from Massachusetts, not observing the Senator from Kansas.

Mr. LODGE. In view of the statement of the Senator, I yield, of course, to the Senator from Kansas.

Mr. BRISTOW. I tried to get recognition when the request was made by the Senator from North Carolina [Mr. SIMMONS].
The PRESIDING OFFICER. The Chair will say to the Senator that the present occupant of the chair was not in the chair at that time.

Mr. BRISTOW. Yes; I recognize the fact that the statement of the present occupant of the chair is correct. I endeavored to get recognition when the Senator from North Carolina made his request for unanimous consent to fix a day to vote upon the pending bill.

I desire to state that, so far as I am concerned, there will be no unanimous consent given to fix a date for voting upon this bill until it has been fully discussed. I think the bill is not

right and ought not to pass.

I do not believe this measure will meet the approval of the American people. I do not believe it is the proper interpreta-tion of the verdict of the election last fall. I believe it is the duty of the Members of the United States Senate to demonstrate that the bill is not what it is claimed to be. I recognize at the same time that those who believe the bill is a proper interpretation of the verdict of the people last fall have the right, and should exercise it, to defend the measure when it is attacked.

I am not complaining because the Senators on the other side of the Chamber who are friendly to this measure have taken time in defending it. I think they will have to take time to defend it, or it will be condemned by the American people.

There is no excuse for an endeavor to hasten the consideration of this bill, unless that excuse is that it will not stand the light of free, open, and fair discussion. I do not believe there is a Senator in this Chamber who has any desire to delay unduly the passage of the bill. I do not care whether we are to stay here until the 1st of December, or whether we should adjourn, if we could, on the 1st of September. That fact would not lessen the discussion of this bill by one hour, so far as I am concerned.

It makes no difference to me whether, after we have completed this arduous task, we are to be forced into the consideration of another measure, more important than this, before we have had any relief or relaxation from the work that is now upon us. Whether we are or whether we are not to be compelled to take up that measure makes no difference to me, so far as the consideration of this one is concerned. If an agreement were had to-morrow that currency legislation would be put over until December, I should not consent to vote upon this bill an hour sooner than I should with the demand that currency be taken up as soon as the tariff measure is completed.

I think the debate which is permitted in the United States Senate is of inestimable value to the American people, because it gives the great mass the time to consider and digest and understand the character of the legislation which the Congress is enacting. I hope the time will never come when bills will be made in the secrecy of either committees or caucuses and driven through under the spur and whip without even Congressmen and Senators knowing the full purport of their contents. I believe that the debate we have here is of the highest importance to the country.

So far as the method that has been employed by the authors of this bill in order to get sufficient support to prevent it from being amended, nothing has been said in condemnation of that practice which has been too strong or too severe to meet my approval. I expect at some other time to express my views with some frankness in regard to the party caucuses. I will not do so this morning.

But when the friends of this bill are driven to a comparison of the record made four years ago in the passage of the Payne-Aldrich bill as their only defense for a party caucus far more tyrannical than anything that was undertaken four years ago by the majority then in control, they plead that they have no

justifiable excuse for the course they are taking now.

In the debate on this floor there has not arisen on the other side of the Chamber a single Senator, with the exception of the efforts of the Senator from Mississippi [Mr. WILLIAMS] last night and this morning, who has endeavored to excuse the caucus rule without a reference to and comparison with the votes and methods of four years ago when Mr. Aldrich was in charge of the bill that is now the present law.

I might suggest that the Senator from Georgia [Mr. BACON] and I regret that he has left the Chamber-goes far afield when he says the Republicans in this Chamber voted according to the wave of Mr. Aldrich's hand, when the pamphlet, the document, of which he is the author shows that there were but four Republicans who voted on every vote as Mr. Aldrich did. Of the whole membership there were but four who voted with him on every vote, and there were a number who voted against him more than a hundred times.

Amendments proposed by Mr. Aldrich and his committee were occasionally defeated; not often, but on a number of roll calls the amendments proposed by the committee were defeated and the Senator from Georgia helped defeat some of them by his own vote, and he helped pass some of them by his own vote, for he himself cast 11 votes with Mr. Aldrich in support of that

Mr. SMOOT. Will the Senator yield to me just a minute? The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Utah?

Mr. BRISTOW. I do, Mr. SMOOT. I wish to call the Senator's attention to the fact that a good many more amendments would have been lost

unless some of the Democrats had voted for them.

Mr. BRISTOW. Of course; everyone knows that. I have run through this pamphlet very hurriedly in the last few minutes, but time after time it shows that the amendments proposed by Mr. Aldrich and the Finance Committee would have been defeated had it not been for the support he got on the Democratic side of the Chamber. There was sufficient inde-pendence on this side, outside of the 10 Senators who voted against the bill, to defeat amendment after amendment and provision after provision if the Democratic Senators had not come to the relief of the chairman of the Committee on Finance in that contest.

I could read here, if Senators desire, vote after vote, and I will be very glad to do it. I have looked at some here this morning that are very interesting.

Mr. GALLINGER. Will the Senator put two or three of them

in the RECORD?

Mr. BRISTOW. I will turn to just one or two.
Mr. PENROSE. The Senator does not refer to the lumber

schedule in his remarks, however.

Mr. BRISTOW. We will take first the amendment proposed by the Senator from Wisconsin [Mr. La Follette] on quebracho. It was defeated—29 yeas to 38 nays.

Mr. ROBINSON. Will the Senator state the page of the

document?

Mr. BRISTOW. On page 15, and extending over to page 16. Of the nays that vote with Mr. Aldrich and prevented the amendment of the Senator from Wisconsin from being adopted there were the following Democrats: Mr. Daniel of Virginia, Mr. Foster of Louisiana, Mr. Martin of Virginia, Mr. Simmons Virginia, of North Carolina, and Mr. Smith of Maryland. Mr. PENROSE. Mr. President—

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Pennsylvania?

Mr. BRISTOW. I do. Mr. PENROSE. I think that duty protected the chestnut

trees of Virginia, did it not?

Mr. BRISTOW. I do not know what it protected, but I know that it was an amendment offered by the Senator from Wisconsin and it would have been adopted if it had not been for the Democratic vote that voted with Mr. Aldrich.

Mr. PENROSE. Will the Senator permit me a moment? The duty protected the chestnut bark of the State of Virginia and therefore was of interest to our Democratic brethren of that

Mr. President-

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Georgia?

Mr. BRISTOW. I do.

Mr. BACON. In order that we may take this as we go along the Senator is illustrating on his side rather conditions where Republicans would have been defeated but for Democratic assistance.

Mr. BRISTOW. I am.

Mr. BACON. The Senator calls attention to the vote on page 15 running over to page 16.

Mr. BRISTOW. Yes.

Mr. BACON. In that case the majority was 9, and it is true if 5 had voted the other way the result would have been changed. Mr. BRISTOW. There were 5 Democrats who voted with the majority. There are a number of other votes, and I will call attention to some of them.

Mr. PENROSE. Will the Senator permit me? I think it is generally conceded that the opponents and critics of the Payne bill have declared that one of the most indefensible schedules in the Payne bill is the quebracho paragraph. It is one of the most vicious, in their opinion, and the most difficult to explain or defend in the bill. The duty was imposed on the representations of a constituent of the Senator from Connecticut, who made himself most active here. The further result was to encourage the bark industry of chestnut trees in Virginia, and hence the Democratic vote. Scratch a Democrat, Mr. President, and occasionally you find a spotted protectionist.

Mr. BACON. Mr. President, that amendment was particularly championed by the Senator from Wisconsin [Mr. La Fol-LETTE] and the then Senator from Virginia, Mr. Daniel, also, if that is the one the Senator now refers to. I can not recall the

name of the article.

Mr. PENROSE. I refer, if the Senator from Georgia is addressing himself to me, to the quebracho paragraph, declared to be one of the most vicious in the Payne bill, and passed into law by the Democratic vote.

Mr. BACON. I recall that the Senator from Wisconsin offered an amendment reducing the proposed duty to one-fourth of 1 cent per pound, and the Democrats and the Progressives voted for and the Republicans voted against it.

Mr. BRISTOW. With the exception of five Democrats. The Senator must admit that if the Democrats had not voted with

Mr. Aldrich it would have been defeated on that vote.

Now, the Senator from Georgia said that with the exception of a few the Republicans voted according to the wave of the hand of Mr. Aldrich. Let us see how the Republicans voted on that amendment. The vote for the amendment offered by the Senator from Wisconsin is as follows: Bacon, Bailey, Bankhead, Beveridge, Borah, Bristow, Brown, Burkett, Clapp-I will just read the Republicans—

Cummins; Dolliver; Gamble, who was not regarded as a Progressive Republican; La Follette; McCumber; Nelson; Smith, of Michigan; and Stephenson, of Wisconsin.

I do not intend to take the time of the Senate, but that vote alone shows that even among the so-called stand-pat Republicans there was not that unanimity of action which the Senator from Georgia thinks.

On the amendment, as shown on page 57 of the pamphlet, imposing a duty of 15 per cent on hides, the vote was 46 to 30. In the 46 votes are numbered the following Democratic Senators: Bailey, Culberson, Fletcher, Foster, Hughes, McEnery, Newlands, Smith, of Maryland, and Tallaferro, of Florida.

If they had not voted with Mr. Aldrich that amendment would have been defeated.

On the bottom of page 57 Senator McCumber offered an amendment placing a duty on lumber of a dollar a thousand feet, which was a reduction in the duty which the bill carried. That amendment received the following votes, Mr. Aldrich of course opposing it, insisting that the duty should remain as it was. Voting with Mr. Aldrich to sustain the higher of the two duties were the following Democrats: Bacon, Bailey, Chamberiain, Fletcher, Foster, Martin, Money, Sinmons, Smith, of Maryland, Taliaferro, and Taylor. Without those votes with Mr. Aldrich for the higher duty the McCumber amendment would have prevailed.

Thus you could go through the entire pamphlet. My attention has been called to a vote on page 19, an amendment by Mr. Mc-CUMBER to the lumber duties. That would not have carried, however, if the Democrats had all voted against Mr. Aldrich. So I did not take that, though he had then a very large support.

Mr. GALLINGER (to Mr. BRISTOW). Read it.

Mr. BRISTOW. This amendment was also offered by Mr. McCumber, reducing the duties materially on lumber, and Mr. Aldrich opposed it. The following Democrats voted with him against the McCumber amendment reducing the duty on lumber.

Mr. GALLINGER. It would have changed the result. Mr. BRISTOW. It would have changed the result, I am advised. Running it over hurriedly, I did not discover that. The following Democrats sustained Mr. Aldrich and the committee: Bacon, Bailey, Bankhead, Chamberlain, Daniel, Fletcher, Foster, Johnston of Alabama, McEnery, Martin, Money, Overman, Simmons, Smith of Maryland, Tallaferro, Taylor, and Tillman—17.

I call this fact to the attention of the Senator from Georgia, because he invited an examination of the document of which he is the author. I repeat, for he was not here at the time I made the statement that on the one hundred and thirty-some roll calls there were but 4 Republican Senators who voted invariably upon every roll call with Mr. Aldrich of the entire membership, and the remaining fifty-odd voted against him from 1 to 106 times. It is interesting to observe how the votes ran on the part of the Republican Senators who voted against Mr. Aldrich. want to read that list: La Follette, 106 times; Bristow, 101 times; Clapp, 91 times; Cummins, 89 times; Dolliver, 73 times; Nelson, 69 times; Brown, 65 times; Burkett, 58 times; Beveridge, 55 times; Crawford, 52 times; Gamble, 32 times; Borah, 25 times; Curtis, 24 times; Burton, 14 times; Johnson of North Dakota, 13 times; McCumber, 11 times; Jones, 10 times; Smith of Michigan, 10 times; du Pont, 8 times; Bulkeley, 7 times; Piles, 7 times; Root, 7 times; Carter of Montana, 5 times; Dick of Ohio, 4 times; Heyburn, 4 times; Page, 4 times; Frye, 3 times; Gallinger, 3 times; Dixon, 3 times; Crane, 3 times; Burnham, 3 times; Brandegee, 3 times; Bourne, 2 times; Bradley, 2 times, and so forth.

This certainly shows some independent voting on the Republican side four years ago. I do not think there was enough independent voting at that time. If there had been sufficient independents then, we would have made a bill that would have met the approval of the American people. But the bill would have been a great deal better than it was if Mr. Aldrich had not gone to the Democratic side of the Chamber and got Democratic votes to sustain him when enough Republicans left to defeat him.

Now I will read a list of the Democrats who voted with Mr. Aldrich and the number of times: McEnery, 66; Daniel of Virginia, 14; Smith of South Carolina, 3; Smith of Maryland, Virginia, 14; Smith of South Carolina, 3; Smith of Maryland, 12; Owen of Oklahoma, 6; Shively of Indiana, 4; Davis of Arkansas, 6; Foster of Louisiana, 29; Rayner of Maryland, 5; Taylor of Tennessee, 11; Tillman of South Carolina, 8; McLaurin of Mississippi, 5; Bailey of Texas, 11; Money of Mississippi, 11; Paynter of Kentucky, 5; Bankhead of Alabama, 10; Clay of Georgia, 6; Culberson of Texas, 6; Chamberlain of Oregon, 16; Martin of Virginia, 18; Newlands of Nevada, 7; Taliaferro of Florida, 14; Simmons of North Carolina, 14; Frazier of Tennessee, 3; Stone of Missouri, 7; Hughes of Colorado, 9; Johnston of Alabama, 7; Overman of North Carolina, 8; Fletcher of Florida, 12; Bacon of Georgia, 11; Gore of Oklahoma, 5. Florida, 12; Bacon of Georgia, 11; Gore of Oklahoma, 5.

Mr. BACON. I should like to call the Senator's attention to some of the votes cast then. Of course it is perfectly ridiculous-I will not use that word-but it is unreasonable to test the question as to how a man stood on the tariff by the simple enumeration of the number of votes cast.

Mr. BRISTOW. If the Senator will permit me, I agree that this is not a test. The test is, What did the man vote for or what did he vote against?

Mr. BACON. I think I——
Mr. BRISTOW. But the Senator from Georgia is the one who brought this phase of the discussion into the Chamber this morning, and he put a construction on it that the facts do not justify, as I think I have demonstrated.

Mr. BACON. I want to say

Mr. BRISTOW. If the Senator will pardon me, it was brought in here as a defense of the caucus system, which apparently from the results binds men to vote against their constituency and against the interests of their country and against their judgment and their conscience.

Mr. BACON. Now, if the Senator will pardon me for a

Mr. BRISTOW. I will be very glad to yield. Mr. BACON. I spoke of the fact that it was no test, as a great many votes were cast, unless it could be shown to be of a uniform character. I happened to turn casually over this document, the correctness of which I will undoubtedly vouch for. It was made by myself and not a clerk. One of the votes, when Mr. Aldrich and myself voted together, was in favor of submitting an amendment to the Constitution providing for an income tax. I suppose that would not be criticized.

Mr. BRISTOW. I think that was very creditable. with him for the same thing. I voted with him several times.

Mr. BACON. Another vote of the 11 which the Senator says I cast with him I find incidentally here. I could not go through them all. The vote was on the question whether a tax should be imposed on tea. Mr. Aldrich voted against the imposition of a tax, and I voted with him against the imposition of a tax. Another instance which I find in a hurried examination where Senator Aldrich and I voted together is this on page 44: Senator CUMMINS moved to recommit Schedule K, with instruc-

tions to report the same back to the Senate with certain specifled rates of duty. Senator Aldrich voted against the motion to recommit because the rates specified in the motion were too low, and I voted against the amendment because the rates specified were too high. That was certainly all right. So I might go through the votes. There are other instances of the same kind. Of course there were some in which the votes were identical. I can say, however, that there was no vote cast by me-and I think I can say equally as to almost all the other Senators on this side of the Chamber-in which the vote was cast in harmony with the vote of Mr. Aldrich and the Republicans where it was not a low tariff duty which was legitimately within the range of a revenue tariff.

Mr. PENROSE. Will the Senator permit me?

The PRESIDING OFFICER. Does the Senator from Kansas

yield to the Senator from Pennsylvania?

Mr. BRISTOW. In just a moment, if the Senator will pardon me. The Senator himself, of course, admits that on the lumber amendment when he voted with Mr. Aldrich it was against the reduction of the duty.

Mr. BACON. No; it was a reduction.

Mr. BRISTOW. The Record shows that it was not.

Mr. BACON. It was a reduction of the duty. The affirmative vote imposing a duty upon lumber was a material reduction from what it was before, and the vote against the reduction to the extent proposed by the Senator from North Dakota

Mr. BRISTOW. It was against the reduction. Mr. BACON. Yes; but I just want to illustrate that, so far as the statement that out of hundreds of votes there were 11 votes cast with Mr. Aldrich, there were many of them of this nature, where the vote was one which was proper, where Mr. Aldrich himself was voting against the tariff. He voted against it because it did not harmonize with the system which he had laid out, the program which he had made in that particular case. He did not favor the tariff upon tea and neither did I, and therefore we happened to vote together at that time. He favored a resolution submitting an amendment to the Consti-tution by which an income tax would be imposed, and so did I. He did it for one reason, however, and I did it for another. He did it to defeat the imposition of the income tax and I did it for the purpose of insuring one. He did it for the purpose of defeating the amendment which was then pending to the bill imposing an income tax. I did it because, while I favored the amendment which was then proposed to that bill, I was also in favor of an amendment to the Constitution which would make the imposition of the tax lawful beyond question or doubt.

Mr. BRISTOW. I believe that when the Senator voted with Mr. Aldrich or against Mr. Aldrich he voted for what he believed was right. I do not question that. I believe when he voted the 11 times he voted with Mr. Aldrich he believed that the things for which Mr. Aldrich was voting were right and therefore he favored them; and I believe that the Senator from Georgia thinks that when I voted 101 times against Mr. Aldrich and 27 times with him I was voting for what I thought was right, and was endeavoring to make the bill as I thought it

ought to be.

Now, the objection I have to the method that is being pursued in the consideration of this bill is that the Members on the other side of the aisle are not following the same rule now.

Mr. BACON. Mr. President, will the Senator yield to me? Mr. BRISTOW. I will be very glad to yield. Mr. BACON. I wish to say that an examination of this document which I hold in my hand, from which he is reading, will prove the correctness of what I have said, that, with the exception of one or two votes where the Republicans were divided, such, for instance, as that upon the lumber duty, and with the exception of the group of Senators whom I have expressly excluded from the number, the Republicans did vote almost universally and solidly in favor of certain propositions.

I am very greatly surprised that the Senator from Kansas has suddenly developed into a defender of a portion of the Republican Party which he so earnestly and vigorously and effectively and incessantly opposed in the tariff discussion of 1909.

Mr. BRISTOW. Mr. President, I am not defending

Mr. BACON. It so happened, Mr. President, that the Senator then belonged to a group which was itself holding caucuses, and everybody knew it at that time. It was right to hold them.

Mr. BRISTOW. The Senator unfortunately has not heard all that I said this morning. If he had been here when I began to speak he would have understood that I declared then-and I declare now-that, in my opinion, there was not sufficient independence in this Chamber upon this side of the Chamber; and I said if there had been more independence than there was, we would have made a tariff bill that would have met the approval of most of the people.

Mr. BACON. The Senator speaks of my absence. I was not out of the Chamber three minutes. I was called into the marble room by some gentlemen who wished to consult me over a matter that related to the Senate business

Mr. BRISTOW. I am not criticizing the Senator.

Mr. BACON. As soon as I came back I was informed that the Senator was alluding to myself. But, Mr. President, as I was saying, here is a document of 100 pages, generally speaking, with a number of yea and nay votes running all through it, hundreds of them, and it is a very easy matter to pick out a vote here and there as an illustration of the accuracy of what I have said.

Any Senator or any person other than a Senator who desires to test the accuracy of my statement has but to take this document and he will see the fact that except the group of Senators led by the Senator from Iowa [Mr. CUMMINS], I will say the Senator from Wisconsin [Mr. La Follette], and the Senator from Kansas [Mr. Bristow]—I will also include him among the leaders-with the exception of that group an examination of this document will show that with the exception of a very few cases the Republicans voted solidly according as Mr. Aldrich proposed that the bill should be framed.

Mr. WILLIAMS. Mr. President

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Mississippi?

Mr. BRISTOW. I must state to the Senator that The PRESIDING OFFICER. Does the Senator yield?

Mr. BRISTOW. I will in just a minute. The RECORD shows that but four voted solidly with Mr. Aldrich. The pamphlet which the Senator has published himself shows that but four

voted invariably with Mr. Aldrich.
Mr. BACON. That may be true of a vote here and there. instance, they were divided on the lumber schedule, possibly upon the quebracho schedule—I believe that is the name of it-but on the great range of those things which imposed a burden upon the people, taxes in Schedule K and all the taxes as to textile fabrics and everything of that kind, the metal schedule of the bill, all imposing great burdens upon the people, the Republican Party voted solidly and this document will

Mr. LA FOLLETTE and Mr. WILLIAMS addressed the Chair. The PRESIDING OFFICER. To whom does the Senator from Kansas vield?

Mr. BRISTOW. I yield to the Senator from Mississippi. Mr. WILLIAMS. Mr. President, the Senator from Kansas having conclusively demonstrated the fact that the Democratic Party ought to have caucused in 1908 and had concerted action. I appeal now to Senators to go back to the paragraph of the tariff bill which we were considering. Not only has the Senator from Kansas demonstrated that, but I believe it is generally admitted on that side that things would have been in a better shape for a good many of us if we had had a caucus at that time and had had concerted action, and I believe it is generally admitted that if you had had a full, free, and fair caucus or conference of Republicans at that time and talked out your differences in brotherly love, you, too, would have been in a better fix to-day.

Mr. BRISTOW. I now yield to the Senator from Wisconsin. Mr. LA FOLLETTE. Mr. President, I want to record my dissent to one statement made by the Senator from Georgia [Mr. Bacon]. I understood him to say that the group with which the Senator from Kansas [Mr. Bristow] affiliated or operated four years ago, when the tariff bill was under consideration, was holding caucuses upon that bill from time to

time.

Mr. BACON. Possibly I should have said "conferences."

Mr. LA FOLLETTE. I shall define what I mean by "a caucus" before this debate is over. I want to say, and I want to have it understood, for I affiliated with that group, that not one caucus was ever held by that band of men with a view of binding their action upon any legislative matter. That is the difference, Mr. President, which will be set forth clearly to the country ultimately between "a conference" and "a caucus." Nor was the rate of duty upon any item or any proposed vote or any duty upon any item ever discussed in any one of those conferences.

Mr. WILLIAMS. Now, Mr. President, can we not go on with the consideration of the bill?

Mr. LODGE, Mr. President

The PRESIDING OFFICER. Does the Senator from Kansas

Mr. BRISTOW. I yield to the Senator from Massachusetts. Mr. LODGE. Mr. President, I entirely understand the feeling of the Senator from Mississippi [Mr. WILLIAMS] that he desires to get back to the schedule. I always have that feeling myself

after I have spoken two or three times in a debate, that the whole debate should cease. [Laughter.] But I should like to say one or two words on this subject, very briefly, in regard to the request made by the Senator from North Carolina [Mr. SIMMONS]. I will take but a moment.

I desire merely to say, Mr. President, that if the Senator from New Hampshire [Mr. Gallinger] had not made the objection he did to fixing a day for voting on the bill, I should have made it. I am not going to enter into a comparison of past records or to discuss the present methods of the Democratic Party in preparing legislation. I think that has been done very successfully by the Senator from Pennsylvania [Mr. Penrose] and by the Senator from Kansas [Mr. Bersrow]. As the situation stands to-day, what the country is interested in is what the majority in this Chamber is doing, not what the Republican

Party did four years ago.

I understand that the habits of the minority are strong with Senators on the other side. They were for 18 years in the minority in this Chamber, and their position was naturally one of opposition and attack. They can not free themselves all at once from the idea that the one thing to do is to point out Republican shortcomings. But the people of the country are not thinking of Republican shortcomings now; they are thinking of what you are doing and what you are going to give them. The responsibility is with you, and I cheerfully leave it there. If you choose to act by a binding caucus, which does not permit a Senator to vote his opinion on a trivial thing like oxalic acid. which the Senator from Mississippi instanced here, that is your affair, and you can take it to the country and let them pass upon it.

But, Mr. President, I do not think the time has come to fix a date for a vote upon the pending bill. We have been discussing the bill-really discussing it-for but 21 days. have got as far as the agricultural schedule, having passed over the sugar schedule, which still remains to be discussed. can not take the destruction of an industry quite so jauntily as do Senators on the other side. I think it is a serious matter; I think it ought to be considered. There is the great wool schedule; there is the cotton schedule; and behind all that are the income tax and the administrative features. It would be absolutely wrong to undertake to crowd those things through in 10 days. There has not been, so far as I have been able to see, the slightest effort on this side to delay; there has not been a word said, so far as I know, by anyone on this side for the purpose of delay; the debate has been wholly legitimate on both sides up to this point; and it is useless, Mr. President, to expect us to fix a day at this time to take a vote upon the pending tariff bill.

As for the banking and currency bill, I wish to say that we have got to deal with that measure sooner or later. My own judgment is that it is even a more important measure than is the tariff, and that we could deal with it a great deal better and a great deal more quickly in the long session if we could get a little breathing space after we have finished the consideration of the tariff bill. I fully recognize, however, that that subject has got to be taken up and that we have got to have legislation upon it; but I have no desire to hold up this bill for the purpose of delaying the other. I do not think, however, Mr. President, that we ought at this time to fix a date

for a vote upon the tariff bill.

Mr. SIMMONS. Mr. President, I did not expect when I made the innocent suggestion that we might possibly now fix a day for a vote upon the pending bill, and suggested the 25th day of this month as the time, that I should provoke a discussion of two hours and a half. I prefaced my request with the statement that I had no criticisms to make of either side of the Chamber for the time that had been taken in the discussion of the bill. My purpose, and my only purpose, was to ascertain, so far as I could, the feeling on the other side of the Chamber upon the question of fixing a date for taking a vote. I had no purpose whatsoever of doing anything that would curtail legitimate discussion. I wanted to ascertain how long the Senators on the other side of the Chamber thought they would require for the discussion of this measure. Personally I have no disposition in the world to interfere with the discussion of the measure, and I shall not complain if the other side takes no more than a proper time for its discussion.

It is true, Mr. President, as has been said by the Senator from New Hampshire [Mr. Gallinger], that the Payne-Aldrich bill was for a long time before the Senate, but the conditions which now confront us are somewhat different from those by which we were then confronted. The Payne-Aldrich bill was a mere change, a slight change, of rates up and down, and everybody recognized that the bill that would be passed would be one which would practically retain the Dingley rates. There

was no feeling of unrest in the country; there was no halting of business because there was to be a revision of the tariff, for everybody understood that the Payne-Aldrich bill was not to be a revision of the tariff, except nominally. Now we are, under our promises to the people, charged with the duty of making a heavy reduction in the tariff duties; we are charged with the obligation of engrafting upon the tariff system of the country the principles and policies for which the Democratic Party stand. That makes it necessary, and has made it necessary for us to make heavy reductions all through this bill. As the result of those reductions, there has been of necessity more or less halting in the business of the country, awaiting the final enactment into law of the new rates.

It is impossible that we should go from a highly protective system to a moderate revenue system without bringing about some slight disturbance in the business of the country while the process is going on and when it is not known exactly when old

rates will be displaced by the new ones.

My understanding is that the business interest of the country, recognizing that this bill will become law, are ready to accept the reductions, and are exceedingly solicitous in the interest of certainty that it shall be acted upon as speedily as possible. The public welfare demands that there should be no unnecessary delay. That, I think, differentiates the situation here from that which existed at the time of the consideration of the Payne-Aldrich bill; and I have urged, and I again appeal to Senators on both sides of the Chamber, that in the interest of the public welfare we get through with this discussion as soon as we properly may, allowing a fair opportunity for presentation of the views of both sides. I am not claiming that up to this time there has been any abuse of the privilege of debate. purpose in making the suggestion was to ascertain what was the feeling on the part of Senators on the other side of the Chamber.

Without violating any confidence, Mr. President, I may say here that it has been suggested-it was suggested last weekthat possibly in certain contingencies we might have an arrangement to vote upon this bill within two weeks from that time, and my suggestion to-day was that the vote be taken in about

two weeks from this time.

Mr. LA FOLLETTE. Mr. President-

Mr. SIMMONS. I am not unduly pressing the matter.

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Wisconsin?

Mr. SIMMONS. I do.

Mr. LA FOLLETTE. I will ask the Senator to state what those contingencies were.

Mr. SIMMONS. Mr. President, as that was a matter of

private conversation, I do not care to go into it.

Mr. LA FOLLETTE. It seems to me

Mr. SIMMONS. It had reference to currency legislation.
Mr. LA FOLLETTE. Mr. President—

Mr. SIMMONS. If the Senator will permit me to finish, that was the reason that in making my request, to which the Senator from New Hampshire [Mr. Gallinger] objected, I asked him the question if his objection was founded upon any determination of the question of whether or not we would take up currency legislation.

Mr. LA FOLLETTE. Then, Mr. President, I will ask the Senator from North Carolina to state whether the suggestion came from a Senator on this side; and if so, whether he pro-fessed to speak for all Republican Senators?

Mr. SIMMONS. Oh, Mr. President, the suggestion came in a conversation, and I do not know whether the suggestion came from one side or the other; but there was acquiescence of the parties to the conference. No one in those conferences, or, more properly, talks, was attempting to speak for all Senators on either side. They were mere discussions and expressions of But, Mr. President, that has nothing to do with the opinions. matter. If Senators on the other side are not willing to enter into an agreement to fix a date for a vote, I am not complaining. I do not see why they should take it as in the nature of an affront or why they should take it as a breach of privilege that I, following the ordinary custom in connection with bills of the character of this one, should make a perfectly legitimate suggestion to the opposition that, if possible, we agree upon some time for a vote upon this bill. If we can not agree, that ends the matter.

To be perfectly frank with the Senate, I wanted to find out exactly where we were in this matter. I wanted to find out whether there was any disposition on the other side to fix a date. If there is none, although I regret it, I have no right to complain. I have the right, as representing this side, to make the request and the other side have the right to decline to

agree to it.

Mr. KENYON. Mr. President-

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Iowa?

Mr. SIMMONS. Yes. Mr. KENYON. I should like to ask the Senator from North Carolina if in the consideration of the Payne-Aldrich bill the sessions did not commence at 10 o'clock in the morning and if night sessions were not also held? Why does the Senator not insist on holding night sessions or commence meeting earlier in the morning?

Mr. SIMMONS. I think the Senator is right; and it may be necessary, Mr. President, in this situation to pursue a similar course; but before a policy of that kind can be determined upon it is necessary to find out what the situation is. I was trying this morning to find out what the situation is, and I have

found out.

Mr. President, I do not desire to go into any discussion with reference to the manner in which we have framed this bill. Ordinarily these tariff bills are made by the majority members of the appropriate committee. This bill as presented to the two Houses was made by the full membership of the party responsible for the proposed legislation. In submitting it as framed by the Ways and Means Committee of the House and as amended by the Finance Committee of the Senate to a caucus or conference of the Democratic membership of those bodies, respectively, they have had no concealments. There has been no effort to conceal from the American people that we were considering this measure in a caucus; we have done it in the open day; and we have no apologies to make for it.

Senators say that the country is in an uproar about the caucus. Oh, Mr. President, I know that certain Republican newspapers and I know that certain Republican and Democratic manufacturers who have had their special privileges cut off by this bill, are denouncing the bill and denouncing the caucus.

Mr. PENROSE. Mr. President—
Mr. SIMMONS. I do not wish to yield now; I only want to take up a few moments' time. Mr. President, I deny that our method of framing this bill has met the disapproval of those who are in favor of tariff reductions and opposed to the outrageous and burdensome exactions of the present tariff for the benefit and enrichment of a privileged few. We are willing to stand or fall by our actions in this behalf.

Why should Senators on the other side be solicitous about the effect of our caucus action upon the fate of the Democratic Party? We are not. We assume full responsibility and have We are not apologizing for our action; we are standno fears. ing by it. This bill represents the collective judgment of the Democrats of this Congress and we are going to pass it as a

fulfillment of our pledges to the people.

Mr. President, the Senator from Kansas said that this bill would not be satisfactory to the country and did not carry out the pledges of the Democratic Party. I deny both of those statements and I confidently assert it will prove satisfactory to the country and it is a fair compliance with our party promises. If it is not satisfactory to the country, then the country can make that fact known at the next election, and without trepidation we appeal to the judgment of the electorate of the country. We are willing to put that question to the test. We are responsible for this legislation, and we have no desire to escape that responsibility and no fears about the result of the country's verdict.

Mr. President, let me say, in conclusion, that the fate of this bill, the fate of the policy and the principles which it engrafts into the fiscal system of this Government, are not to be determined by denunciations of it from the other side of the Chamber nor by commendation of it from this side of the Chamber. It has got to stand the test, and we we are anxious that it shall be passed as soon as possible and be put to the test; and by that -the only method of determining whether it is good or whether it is bad-this side of the Chamber is perfectly will-

Mr. GALLINGER. Mr. President, just a word. I was interested in what the Senator from Wisconsin [Mr. LA FOLLETTE] said concerning our duty to remain here after this bill has been passed upon and consider any other legislation that may be presented to the Congress. My habit has been to attend the sessions of the Senate. Since the first day of the meeting of this session I have been absent—and I regretted the necessity for it—five or six days. I am quite willing to remain here, if it be necessary, until the meeting of the next regular session. I have no disposition to shirk my duty. While I am the second oldest Senator in years, I am in fairly good health and can send for my winter clothes and remain with Senators on both sides of the Chamber to consider any legislation which the Chief Executive or either House of Congress may think valuable. But I have had an impression, Mr. President, and I have

expressed it a couple of times-and I have no apologies to make for so doing-that after we have been here nine months, and no one can tell how much longer it will be before this bill passes, we might be allowed to refresh ourselves; and I have believed that currency legislation would be enacted sooner if we had a little respite than if we are kept here in continuous ses-That is my individual opinion; I speak for no one else on

that or on any other question.

Mr. President, the Senator from North Carolina [Mr. SIMmons] says that the country is anxious to have this bill passed. That may be so; but it has not been expressed to me by anybody, particularly anybody from my section of the country. In England we have 25.351 manufacturing establishments of sufficient size to be recognized as such and a great many smaller ones, and not a soul from New England, manufacturer or laboring man, has written me that he is anxious to have this bill On the contrary, the people there look with fear and trembling upon its enactment. But, Mr. President, it is to become a law; and I repeat what I said this morning, that, after it has been discussed freely and fully and the country thoroughly informed of its character, I shall be prepared to vote upon it and will use no obstructive tactics to prevent a I presume I have occupied about one hour during the session in making some offhand remarks, and I do not expect to take much time in the discussion of the bill in the future; but I shall claim the right, if I have anything to say, to be allowed that privilege, as every other Senator on both sides of the Chamber will be.

Mr. WILLIAMS. Mr. President, I suggest now that we take a vote upon the pending amendment to the paragraph under consideration. I agree perfectly with the Senator from New Hampshire that we ought to have debate, but I think the debate

ought to be upon the bill.

Mr. CRAWFORD. Mr. President—
The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from South Dakota? Mr. WILLIAMS. Of course I do; I must.

Mr. CRAWFORD. If the Senator has the floor, I shall wait until he gets through.

Mr. WILLIAMS. No; I surrender the floor. I merely rose to make that request. I thought we could take a vote upon the pending amendment, and then go on with the bill.

Mr. CRAWFORD. It is about the amendment that I wish

to make a few remarks.

Mr. WILLIAMS. Oh, very well.
Mr. CRAWFORD. Mr. President, we have put in all this day, in the language of the street, "chewing the rag," but not very much has been said about the pending item of the schedule under consideration, and I do not think that it can be taken as an offense if something is said about the question before the Senate.

WILLIAMS. I am glad the Senator is going to talk

about the pending paragraph.

Mr. CRAWFORD. I may talk about it part of the time, but I am going to say this much about the roll calls which have been referred to here this morning before I begin to speak about the pending amendment in the agricultural schedule.

Names found in the same side in roll calls do not always indicate correctly the relation of Senators to each other-that is, they are not always quite a fair expression of the situation as it concerns any particular Member of the Senate. So far as the consideration of the tariff bill of 1909 is concerned, I am not willing to take second place to any Senator in the matter of individual independence in voting. I never attended a conference of any kind with reference to how I should vote upon any proposition in that bill. A number of my votes were misunder-stood, however, particularly with reference to Schedule K, because of the fact that the identical legislative body from which I received my commission as a Senator gave me instructions with reference to what my vote should be upon the woolen It was considered a very important matter in the State which I had then and have now the honor in part to represent; and by a joint resolution, certified under the solemn great seal of the State, and passed almost unanimously by both branches, the very legislative body that commissioned me to come here as a Senator instructed me to vote against a reduction in the tariff upon wool and woolen textiles. I had an old-fashioned idea that I was in honor bound to pay some attention to an expression coming under the seal of my State from the legislature from which I received my commission. That, and that alone, accounts for some nineteen roll calls read here this morning in which my vote was on the same side with that of the then chairman of the Finance Committee. There were some eleven others on the same side, where I differed with some of my Progressive friends about the advisability of undertaking to enact a general income tax against the decision of the Supreme Court of the United States when we could get a corporation tax; and I voted for the corporation tax. time I voted for the constitutional amendment authorizing a general income tax.

I simply call attention to those instances, which explain some thirty-odd roll calls where my own name was on the same side as that of the then Senator from Rhode Island, to show how uncertain and unsafe it is always to draw conclusions with reference to what the individual relation of a Senator may be in a particular roll call. So much for that. Now, a few words

with reference to the agricultural schedule.

Mr. President, what little experience I have had in the world has been related to and identified with the agricultural and farming class. From my earliest recollection I have been associated with the farmer, the occupation of the farmer, the environment of the farmer, his difficulties, and the obstacles against which throughout the entire history of the country he has had to contend. One of the pioneers in western Pennsylvania when that country was new was an ancestor of mine. Some of the pioneers who later went across the Alleghenies to struggle with the great forests in Ohio and open up farms on the hundred-acre lots in the central part of that State were ancestors of mine.

My earliest recollection is of the new land in the wooded strips that skirt the Mississippi River on the west side in northeastern Iowa, where every acre had to be cleared in the forest, among the rocks in the clay soil, where the rain washed and tore out gullies and erosion carried the best soils down into the bottom lands of the Mississippi. From the time I started in my profession in life as a young man my years have been spent in a State which is devoted exclusively to agriculture, a State which has no cities within its borders. I presume the largest town in my State does not possess more than perhaps 20,000 people. The population is engaged almost exclusively in tilling the soil, producing cereals and live stock, and otherwise engaged in agricultural enterprises. So I say that so far as concerns my personal experience in relation to any business in the world it is so closely connected with agriculture that I could not separate myself from it were I to try.

Mr. President, an old story, but certainly one full of the keenest interest, and one which never can be worn out, is that which relates the struggle of the farming class as it has advanced in its conquest over the elements step by step, acre by acre, mile by mile, generation after generation, from the eastern borders of this country across a continent. Conditions have changed, and changed in most remarkable degree in recent years in this

country, when we consider their relation to the farm.

A few years ago there was so much virgin soil not yet open to settlement or under cultivation that agricultural land in the United States possessed comparatively little value. The farmer east of the Allegheny Mountains, the farmer in New England. when he felt that his lands were no longer productive and were worn out, realized that because of the vast empire of richer and more productive soils lying in the newer lands to the west of him there was little to encourage him to conserve the soil or to rebuild it. But it was his children, and oftentimes it was himself, that put up the covered wagon, hitched up the team, took the household goods, practically abandoned the old place, and went West, seeking newer fields and richer soils to cultivate. This new empire of richer fields always opening up to the west of him was the competitor which practically destroyed the value of his land in the older community.

The American farmer endured that sort of competition without protest because his children secured homes in the quest they made in the empire to the west. All were of the same race; all were supporting the same flag; all were creatures under one government. While the new agricultural lands in the West were destroying the profits of agriculture in older settlements, industrial life was there taking its place; urban communities were growing up; there was differentiation and variety of industry everywhere that gave men new fields for the employment of their industry, their activity, and their virility. So they were willing and resigned to see value practically disappearing from the fields, and wealth accumulating in the villages and in the cities, while the lands in the West were producing the food not only for our own people but for the world.

This process went on until the American farmer, whose name has been synonymous with that of the American pioneer, fought his way out through the Mississippi Valley, across the fertile prairies, across the plains west of the Mississippi, into the narrow valleys and the mountains, and down the other side of the mountains, until he reached the Pacific slope and was stopped only by the western sea. When the movement reached that limit there was a sort of return movement; it was in a way

forced backward, until to-day out in Maine, down in New England, over in New York, in Virginia, in Maryland, and all through the East the crowded population is again going out into the fields, reclaiming the old abandoned farms, buying fertilizers, and raising crops where for years they had ceased to raise them.

There is something in this situation that is entitled to grave Everybody admits that the development and consideration. opening up of the western empire in this country created the competition that for a number of years practically destroyed the value of farm lands in New England and in New York and in the Virginias and in Ohio. Everybody admits now, since this territory is so largely filled up and occupied, that values are coming back again into the places that have for many years been regarded as waste places. Now, here comes a proposal to tear down all restraint, remove all tariff restrictions, and subject the owners of these farms to the same sort of an experience with an empire in Canada that they had to face in this empire of the West, inhabited by their own children, sustaining the common flag of a common country.

Is there any reason why that should be done? I admit that it should be done if we have reached the limit of all possibility of production upon the farms of America and if we have reached the point when it is necessary to go beyond the borders of our own country in order to get food for our people. Then I will admit that there is some reason why we should take into consideration whether or not the greatest good to the greatest number does not require that we should draw from the supply of the world the food needed for our own people. But

have we reached that condition?

Let me call your attention to what is said upon that subject by the man who I think was the greatest Secretary of Agriculture we have ever had, Secretary Wilson. In the yearbook for 1909, in calling attention to these abandoned and vacant farms in the East, and the possibilities that lie in them, he says:

in the East, and the possibilities that lie in them, he says:

The United States has been developing for agricultural purposes an area as large as the whole of Europe, while its population is but little larger than that of any of the several European countries.

So much has fashion and sentiment had to do with this agricultural development that many of the lands, particularly in the Eastern States, have been practically abandoned, so far as profitable agricultural uses is concerned, by the shifting and moving of our agricultural population into new regions in which lands are purported to be cheaper and in which the advertised inducements have been proportionately large. With the rapid extension also of our industrial life and the opportunities offered in the past in business and in the professions, the cities have called upon the country for clear brains and vigorous bodies to such an extent that large areas have become so depopulated of active, vigorous minds and bodies that the stock is insufficient to repeople the country districts. The result is that some of the most fertile lands in our Eastern States, some of the most fertile lands in our Eastern States, some of the most fertile lands in our Eastern States, some of the most fertile lands in the prices of provisions have increased for the simple reason that there are not enough people to actually work the soils and raise the crops necessary to feed the nonproducing population of the cities. The great problem which faces American agriculture to-day is the problem of the proper utilization of our soils and the development of our agricultural interests in spite of and in face of the allurements of the cities and the commercial and industrial avocations. It has now become as serious as problem to settle up our Eastern States as it has been in the past to settle the West. The first problem of all is to devise means of resettling the lands which have in recent years been neglected through the mistaken idea that they have been exhausted, but which can be brought

Mr. President, I think all must agree that this is a correct statement made by the great Secretary of Agriculture. caused the skinning of this land, allowing it to go to waste and become unoccupied, in the first place? It was because it could not support and sustain the farmer against the competition of this rich, productive, new, virgin country that was being developed and brought into competition with it in the West. That no longer is the situation, because at present it requires the united effort of all to supply the demand under present condi-tions. Hence the necessity of going back to these eastern lands, rebuilding them, repopulating them, putting value into them again. Can we do that by repeating history, throwing down the fences, and putting into competition with these farms the new and fertile lands of Saskatchewan, British Columbia, Alberta, and Winnipeg? That is the proposal before us. It is the one we must face.

We have not yet reached the limit of agricultural production in this country. Mr. James J. Hill is a man whom everybody recognizes as a wonder; and when he is not interested in building up the carrying trade of the Great Northern Rail-road in these Provinces in western Canada I think he is reliable. I want to call attention to some things said by him about the possibilities, with intelligent treatment, of our own soils in the United States.

When I was governor of South Dakota I attended a conference in the White House, called by Mr. Roosevelt, of prac-

tically all the governors in the United States to consider the question of conservation of natural resources. prominent subjects discussed there was the reclamation of these worn-out farms and the possibilities of production from soil, soil waste by erosion, and so forth. Mr. Hill read a most remarkable paper at that conference, and in that paper he said:

he said:

There are two ways in which the productive power of the earth is lessened: First, by erosion and the sweeping away of the fertile surface into streams and thence to the sea; and, second, by exhaustion through wrong methods of cultivation. The former process has gone far. Thousands of acres in the East and South have been made unfit for tillage. Far more ruinous is the process of soil exhaustion. It is creeping over the land from East to West. The abandoned farms that are now the playthings of the cities' rich, or the game preserves of the patrons of sport, bear witness to the melancholy change. New Hampshire, Vermont, northern New York show long lists of them. * * * When prices of farms should rise by increase of population, in many cases they are falling. Between 1880 and 1900 the land values of Ohio shrank \$60,000,000. Official investigation of two counties in central New York disclosed a condition of agricultural decay. In one land was for sale for about the cost of improvement, and 150 vacant houses were counted in a limited area. In the other population in 1905 was nearly 4,000 less than it was in 1855.

And he continues:

And he continues:

And he continues:

We might expand our resources and add billions of dollars to our national wealth by conserving soil resources * * * for there is good authority for the assertion that a farmer could take more from the same area of ground in four years' grain crop than seven now gives him, leaving the product of the other three years, when the land rested from grain, as a clear profit due to better methods. * * Nearly 36 per cent of our people are engaged directly in agriculture; but all the rest depend upon it. In the last analysis commerce, manufactures, our home market, every form of activity, run back to the bounty of the earth by which every worker, skilled and unskilled, must be fed and by which his wages are ultimately paid. * * Of our farm area only one-half is improved. It does not produce one-half of what it could be made to yield—not by some complex system of intensive culture, but merely by ordinary care and industry intelligently applied. applied.

Those words, spoken by a man of the commanding intellect and wealth of experience and observation that Mr. Hill possesses, were not spoken idly. But, my fellow citizens, are you going to direct the energies of our people in the direction suggested by him by throwing down the bars and putting all of this area, which he wants cultivated more intelligently and with greater intensity, in competition with the virgin empire lying in the Canadian north and west? I think it is a mistake, a most serious mistake, a fundamental mistake, to do it.

I wish to call attention to what another authority says about the possibilities of producing food products from our own soil sufficient for the needs of our own people. I say that patriotism requires that we shall do that if we can rather than place a hundred million people here, growing in number, at the mercy of other countries for food which we can raise ourselves. It is the wrong policy to permit that if we can avoid it. If we can get an abundance of food for our own people out of our own soil, and make the soil better and richer while we are doing it, we have no right, in justice to ourselves, to be at the mercy of either Canada or Argentina or Russia or India or Egypt, or any other country.

Mr. Mark A. Carleton, who for a long period of time was in charge of grain investigation in the Bureau of Plant Industry, under the great Department of Agriculture, calls attention to some remarkable facts with reference to the acreage that can be used in the production of wheat in the United States. Mr. Carleton says the total land area of the United States is nearly 2,000,000,000 acres; and he calls attention to the fact that in 1900 less than half this area was included in farms, and only

about one-fifth of the farm area was improved, and of the area improved less than 3 per cent was devoted to the culture of wheat. If that is true, we have not begun to touch the edge of the possibilities of this country for producing wheat. He says that in 1850 our total improved farm acreage was 113,032,614 acres; in 1900, 414,498,487 acres. In 1866 our total acreage of wheat was 15,424,496 acres and in 1900, 41,971,000 acres, only

4 per cent of our total farm acreage.

I call attention to another significant fact, and that is that the consumption of wheat per capita has been increasing during these years of prosperity and that in these later years the productivity per acre has been increasing.

For instance, according to Mr. Carleton's figures, from 1866 to 1875 the production per acre was 11.9 bushels; from 1876 to 1885, 12.3 bushels; from 1886 to 1895, 12.7 bushels; from 1896 to 1905, 13.5 bushels. Of course, the population is increasing more rapidly in proportion than that. The consumption per capita has increased, according to his figures, giving 10-year periods, as follows: In 1870 it was 5,2 bushels; in 1880, 5,52 bushels; in 1890, 5.49 bushels; in 1900, 5.11 bushels; in 1906, 6.39 bushels; and in 1908, 6.34 bushels.

According to the figures produced by this expert, if we will turn our attention to utilizing our land intelligently in the production of wheat we can raise enough for our domestic needs for the next 50 years, and we have, at least, 80,000,000 acres of land adapted to wheat culture and the production of wheat.

Now, I call attention to this as one of the possibilities that lies ahead of us in the utilization of our own land, in the supplying of the needs of our own people and other people, and to the situation as I have reviewed it once or twice before here as to the results which follow in using these lands, for which you must buy fertilizer, and in the cultivation of which you must use intensive methods. But they will all be destroyed if exposed to unchecked competition with a new virgin empire like that of western Canada, extending from Ontario to British Columbia and from our northern border to the Peace River

Valley and to Hudson Bay.

Mr. GALLINGER. Mr. President—
The PRESIDING OFFICER (Mr. ASHURST in the chair). Does the Senator from South Dakota yield to the Senator from New Hampshire?

Mr. CRAWFORD.

Mr. CRAWFORD. I do. Mr. GALLINGER. I just came into the Chamber. I ask the Senator if I understood him correctly to say that the per capita consumption of wheat is something over 6 bushels. Mr. CRAWFORD. Yes; so this expert, Mr. Carleton, of the Bureau of Plant Industry, said. He stated it to be in 1908,

Mr. GALLINGER. I will then ask the Senator a question that I ought myself to know. How many bushels of wheat are required to make a barrel of flour?

Mr. CRAWFORD. Four and a half, the Senator from North

Dakota [Mr. GRONNA] says.

Mr. GALLINGER. So the per capita consumption is about one and a half barrels of flour in the country.

Mr. CRAWFORD. Yes. Mr. GALLINGER. If the Senator will permit me a moment, that is interesting to me for the reason that I think sometimes our Western friends think they are paying too much tribute to the manufacturing industries of New England. We have something over 7,000,000 people in New England, and we consume altogether western flour, western corn, western oats, and western meat. So there is reciprocity as between the West and the East in that regard.

Mr. CRAWFORD. I will say to the Senator I am not sure whether the people in his part of the country will continue to consume western wheat or not. A statement was made to me recently, when I was on my way to my home, to the effect that if the tariff is removed from wheat and from flour English mills will furnish flour for the people along the Atlantic coast. gentleman undertook to give me figures to sustain his claim. If we are to have free trade in farm products, the people in the manufacturing districts in New England will be eating bread from English flour instead of American.

Mr. GALLINGER. I think that is very probable, and we will be eating less when this bill passes, just as we did from 1893 to 1897 when we consumed, I think, 2,000,000 barrels less than

we had done during prosperous times.

Mr. SHERMAN. Mr. President—

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from Illinois?

Mr. CRAWFORD. Certainly.

Mr. SHERMAN. I wish to supplement the remarks of the Senator from South Dakota. I have the figures on a barrel of flour made from Argentine wheat, landed in New York by way of Liverpool, and they can undersell wheat from Minnesota or

Mr. SMITH of Georgia. I ask the Senator if he will speak

louder. We can not hear him on this side.

SHERMAN. I stated that I have the figures from a New York miller on flour milled from Argentine wheat, landed in New York City from Liverpool, and it undersold last May a barrel of flour milled from Minnesota and North Dakota wheat,

Mr. CRAWFORD. I a while ago quoted from Mr. Hill. Hill is now apparently quite anxious to get some sort of freetrade relations with those rich farming regions in western Canada. No doubt it would be a good thing for the Great Northern Railroad. But when Mr. Hill was writing and speaking over here in the White House, and when he was writing and using his great mind in disinterested fashion, his testimony relating to the influence of the tariff upon farm products is somewhat different. He wrote a book entitled "Highways of Progress," and in that he discussed the conditions of the farms in Germany and compared them with the farms in England, and he used the following language:

How to meet German competition is to-day the study of every intel-gent leader of industry and every cabinet on the Continent of urope. * * * Agricultural industry has not been slighted—

Said he, speaking of Germany. Then he adds:

Behold a contrast that throws light upon the idle host of England's unemployed, marching despondently through the streets whose shop windows are crowded with wares of German make. Between 1875 and 1900, in Great Britain, 2,691,428 acres, which were under cereals, and 755,255 acres which were under green crops, went out of cultivation. In Germany during the same period the cultivated area grew from 22,840,950 to 23,971,573 hectares, an increase of 5 per cent.

Now, this is an authority which must be treated with respect. The Senator from Mississippi [Mr. WILLIAMS] yesterday undertook to talk about the agricultural production of England. I put over against his assertion the testimony of Mr. Hill, who gives the millions of acres that have been abandoned in England and who contrasts them with the marked increase of the cultivated area in Germany-one enjoying protection and the other suffering the evils of free trade.

Mr. Hill calls attention to another fact, and it is one to which I have called attention here repeatedly; and that is the effect upon agricultural enterprise of throwing it into competition with new, rich, virgin soils. As I said, that is what for a generation kept down the value of land in Ohio and other older States. Out in Harrison County, Ohio, where my great-grandfather entered farm land, about the year 1800, they valued that land there in the hills, with its rich grasses and running brooks and fine pasturage, at from \$80 to \$100 an acre in 1880

But after the virgin prairies of the West-Nebraska, Kansas, Illinois, Iowa, Minnesota, and all that region-came into competition with them the value of these Ohio farms, 10 and 15 years later, went down until they were worth only about one-half that price. Afterwards they regained the old value, and now the farmer is improving these eastern farms, increasing their value, and reclaiming them where worn out and wasted, because the empire to the west is largely filled up and attention is being turned again to reclaiming the waste places in the East.

Are you going to help this condition now by repeating the experience of the past, throwing down the bars and letting Saskatchewan, Manitoba, and all that vast region of the Canadian west come in and do for the Dakota farmer what we in the West did to the Ohio farmer? It is a different obligation and a different relation. It was the children of the Ohio farmer who built up these regions in the West, people of one common country, owing obligation to one Government and to one flag, and paying taxes to maintain it. But the proposal now here is to cripple our own people for the purpose of helping an alien farmer to develop an alien soil, inviting our people to go beyond our own borders instead of doing as we should by our own. There is the difference.

Mr. Hill further says:

Agriculture in England has suffered in the last 25 years by the open-g of new land in America and the cheapening of the world's trans-

I say to the Senator from North Dakota that the result of throwing down all the bars and allowing the products from over the border to rush across North Dakota and South Dakota without restraint and have free access to great centers like Chicago and the Twin Cities will take directly from the value of farm property that the pioneers in the Northwest with struggle and sacrifice have made fruitful, where a few years ago it was a wild waste of unbroken prairie. I say we owe some consideration to these American citizens.

Mr. GRONNA, Mr. President—

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from North Dakota?

Mr. CRAWFORD. I do.

Mr. GRONNA. I agree with the Senator from South Dakota that the free admission of farm products would be a great loss to the people not only of my State but of all those States. I shall not take up the time to discuss that. However, I am very much interested in the argument made by the Senator. I think he is proceeding along the right line. It is a wellknown fact that it costs a great deal to reclaim worn-out land. The initial cost is immense.

Mr. CRAWFORD. I am going into that in a moment to show what we are putting into fertilizers.

Mr. GRONNA. I was just going to suggest to the Senator along the line of the argument which he is making, and I agree with him perfectly, that by letting down the bars, as he stated, although our part of the country is not old, we will not be able to compete with the farmers in the new country, where they have settled upon that virgin soil.

Mr. CRAWFORD. Just so. I call attention now to the finding of this Tariff Board upon the effect of the opening up of the new western Provinces in Canada on the value of farm land in the eastern Provinces like Ontario. On page 84 of the report of this Tariff Board (and I am using here the advance paperbound reports that we had access to when we were arguing the question of Canadian reciprocity and I am quoting figures from that report which I then used) I find the following:

Ontario, while reporting the highest Canadian land value, shows the lowest Canadian rate of increase. It is worthy to note that Ontario is feeling the competition of western Canada, just as some years ago the eastern part of the United States felt the competition of our western lands.

Now, some philosophers here allow their philosophy to be so attenuated that they openly say they do not care what the consequence of a policy is upon a State or upon the people of a State. Theory is dearer, far dearer, to them than a consideration of the consequences which may follow putting that theory into effect.

That is what happened to lands in Ontario. It is what happened to lands in Vermont and New Hampshire and New York and Ohio when they had to struggle against the opening of a new empire in the West; but, as I said, it was a common country and it was the children of their own fathers who were getting the benefit of it, and they thought it was unlimited and inexhaustible and never would come to an end. They were supporting one country and one flag. But here we are proposing deliberately to repeal the statute which protects the American farmer against the alien farmer and gives alien farms and an alien people the free benefit of the American market place, thereby discouraging the movement in the direction of intensifying our farming, conserving our soil, building up these waste places again in which I have shown there is so much in rich possibility. I think it will be a mistake.

Now, if you will not disturb the present status of agriculture,

this whole thing is turning in the right direction. the tariff on wheat, except in local zones along the border and around some centers, a great milling center like Minneapolis, possibly has had very little effect or influence, but this thing is coming around. I just want to show what the last census reveals in the way of development of the West and of increasing values in the West, the amount paid out by labor on these farms, and the amount paid out for fertilizer in the older farming regions. When we are talking about industrial life in our factories and our cities we should not forget the great industry which lies at the foundation of it all, and the recruiting station for about all that is worth saving in human life, the recruiting station which you find under the parent roof of the old farm house where they still have old-fashioned notions of piety and of conscience and of uprightness in conduct.

I turn to the report of the Tariff Board, page 94. By the way, this part relates to the production per acre of wheat, and it leads up to something else. It shows what we have to contend with in the way of production as against that new country. On page 94 the Tariff Board says that the average yield of spring wheat per acre in 1910 in the United States was 11.7 bushels; in Canada, 15.53 bushels. Of winter wheat the yield per acre in the United States was 15.8 bushels; in Canada, 23.49 bushels.

These figures do not seem to agree with some others quoted here, but I get them from page 94 of the report of the Tariff Board. So you are getting a much heavier yield per acre in Canada upon much lower-priced land.

Here is an item with reference to what is being put into these lands in the form of fertilizers:

In 1910 in 29 States, being northern New England and Western States and including Maryland, West Virginia, and the District of Columbia, in all of that region they raise winter wheat. In 1900 they paid \$26,062,000 for fertilizers, and in 1910 they paid \$40,409,000 for fertilizers, which was an increase in that one item alone of 51 per cent. Not a dollar do they pay for fertilizers out in Alberta and Saskatchewan. They sow their grain in the rich virgin soil and reap a larger return per acre on an average, and without this expenditure of money.

Yet we propose practically to throw the bars down and let the products from those cheap lands, with their comparatively slight labor and slight expense, come into our own country and enjoy our own market upon an absolute equality with the American farmer.

Mr. GRONNA. Mr. President-

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from North Dakota?

Mr. CRAWFORD. I do. Mr. GRONNA. I do not want to interrupt the Senator too much-

Mr. CRAWFORD. I am glad to have interruptions.

Mr. GRONMA. But in view of what the Senator from Mississippi [Mr. Williams] said yesterday about some European countries—Germany, for instance—I wish to suggest to the Senator at this point that Germany protects her wheat by a duty

of a conventional rate of 35% cents per bushel and by a general rate of 483

Mr. WILLIAMS. The Senator is speaking under a misapprehension. I said nothing in the world about Germany yesterday. Mr. GRONNA. It has increased its production to such an extent that last year Germany produced over 160,000,000 bushels

Now, France protects her wheat by a duty of 37 cents a bushel. It produced last year, I think, some 335,000,000 bushels of wheat. As I said a few days ago, we are practically the only country which can produce a sufficient amount of these food products that will have no tariff on our agricultural products, with the exception of Russia, which, of course, has no tariff duties on her products.

Mr. WILLIAMS. Mr. President—
Mr. GRONNA. I stand corrected, as the Senator from Mississippi said he referred to England instead of to Germany. remember now the Senator referred yesterday to England instead of Germany.

Mr. WILLIAMS. Yes; and the difference is that England has no duty on either wheat or flour. I did say this, and that might have included Germany: I said that all the world is now taxing the poor in order to enrich their landlords except England; and then I mentioned the fact that England made 32 bushels of wheat to the acre.

Mr. GRONNA. If the Senator will permit me to make a

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from North Dakota?

Mr. CRAWFORD. Certainly.

Mr. GRONNA. The Senator from Mississippi has stated that England has no tariff. Of course, that is correct; but England has a certain protection in this way: All the colonies which belong to England have a protective tariff. They give to the English, of course, a preferential. New Zealand, Canada, all the British possessions give to England a preferential rate. If any of the English colonies do not have a protective duty they put a surtax on imported goods and thus discriminate against the products of countries save those of the mother country, or England.

Mr. WILLIAMS. Mr. President—
The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from Mississippi?

Mr. CRAWFORD. I do, but I do not want to have these collateral debates take up my time. They have been indulged in here a good deal in the last 24 hours.

Mr. WILLIAMS. I merely wanted to say, since the Senator from North Dakota brought up the question-

Mr. CRAWFORD. Certainly; I yield.
Mr. WILLIAMS. England now has no duty upon wheat and no duty upon flour; nor is there any law of any of her colonies which enables her to get wheat or flour from them any cheaper than she can get it from America or Argentina or anywhere The differential to which the Senator refers is a differential in favor of the manufactured products of the mother country or the colonies and has nothing to do with the question of wheat or flour.

Mr. GRONNA. It is in favor of the manufactured products and of the agricultural products as well. It gives to the people of England a market for her goods.

Mr. WILLIAMS. England does not export one bushel of any

sort of agricultural product to any of her colonies.

Mr. CRAWFORD. Mr. President, I have already called attention to the fact, and quoted Mr. Hill as my authority, that this policy of England has caused 2,691,042 acres which were under cultivation to go out from under cultivation during the period between 1875 and 1900, while during the same period Germany, with the discrimination in favor of her agriculture, increased the number of her hectares that were under cultivation.

Now, Mr. President, I want just to call attention to the part of the country with which you are to deal when you throw it into competition with Canada, and to what it has been doing, and see whether it is not worth while to consider its interests somewhat in passing upon the question, whether it shall be thrown into absolute unrestrained competition with these Canadian Provinces.

I quote from the census of 1910. I take some of the Eastern States and some of the new States in the West. I gave a list; I named 29 States, Northern and New England and Western States, including Maryland and West Virginia.

In 1900 these States paid the sum of \$245,413,000 cash for labor upon farms.

In 1910, 10 years later, they paid \$432,481,000 cash for labor upon farms, an increase of 76 per cent.

During the same period the number of farms in Colorado increased 86 per cent; in Idaho, 76 per cent; in Montana, 94 per cent; in Nevada, 22 per cent; in North Dakota, 64 per cent; in Oregon, 26 per cent; in South Dakota, 47 per cent; and in Washington, 68 per cent. Nebraska and Kansas were older settled communities. Nebraska increased 6 per cent, Kansas 2 per cent, while there was a slight decrease in the number of farms in Connecticut, probably because of consolidation, and in Illinois, Indiana, Iowa, Massachusetts, Missouri, New Hampshire, Now Jersey, Pennsylvania, Rhode Island, Vermont, and Ohio; and a slight increase in Maine, Maryland, and West Virginia.

But look at what that part of the country did that is lying adjacent these Canadian Provinces. The average increase in the number of farms in all the United States during that 10-

year period was 13.5 per cent.

Now, the investment there, the cash value of the agricultural implements upon the farms of that great group of States was \$556,035,000 in 1900, and in 1910 it was \$938,902,000, an increase of 50.7 per cent. There was an increase in the value of farming implements on the farms in each of these 29 States. It was as great as 217 per cent in Idaho, 212 per cent in North Dakota, 187 per cent in Montana, 176 per cent in South Dakota, 166 per cent in Washington, 81 per cent in Wisconsin, 78 per cent in Missouri, 74 per cent in Minnesota, 65 per cent in Iowa, 73 per cent in Michigan, 77 per cent in Nebraska, 64 per cent in Kansas, 62 per cent in Ohio, 39 per cent in Pennsylvania, and 49 per cent in New York. These implements in which all this investment was made were bought from a trust practically. The people out in this new part of the country, opening these new farms, paying out millions and millions of dollars in the central and eastern portions of the country for fertilizers, paying out all this money for farm labor, are worthy of some consideration. Even if there is no more in it than the question of allowing them to have some comfort out of the feeling that there is, if it is possible to protect them, the margin of 10 cents a bushel on wheat-Senators on the other side say it can not affect it one way or the other—if it is any comfort to them to have the feeling that it is some security to them as against this great empire which may come in competition with them in the Northwest, what do you want to take it away for? Oh, to vindicate a theory—that is all you claim for it—to "unfool" somebody. The farmers are not demanding seriously that they be "unfooled" about this thing. I have lived among them out there all my life, and I have never heard any serious complaint. They are a pretty intelligent people, I will tell you. When you come to examine the census and get in touch with them you will find that the habit of reading is as universal in that part of the country as it is anywhere else in the world. Talk about "unfooling" them!

The census also shows something else. It shows what they have been doing in improving that country. The census re turns for 1910 show these increases in the value of the buildings and in the value of those lands. In Colorado the increase in the value of the buildings and lands was 183 per cent; in Connecticut, 45 per cent; in Idaho, 267 per cent; in Illinois, 71 per cent; in Indiana, 89 per cent; in Iowa, 89 per cent; in Kansas, 79 per cent; in Maine, 54 per cent; in Maryland, 42 per cent; in Massachusetts, 22 per cent; in Michigan, 79 per cent; in cent; in Massachusetts, 22 per cent; in Michigan, 49 per cent; in Minnesota, 120 per cent; in Missouri, 81 per cent; in Montana, 164 per cent; in Nebraska, 118 per cent; in New Hampshire, 23 per cent; in New York, 40 per cent; in North Dakota, 262 per cent; in Oregon, 127 per cent; in Pennsylvania, 26 per cent; in Rhode Island, 30 per cent; in South Dakota, 231 per cent; in Vermont, 45 per cent; in West Virginia, 67 per cent; in Wisconsin, 85 per cent; in Washington, 233 per cent; and in Ohio, 67 per cent. That is in value put into those lands by improving them, by the increased demand for lands under present conditions, and by the fair price which in recent years they are

getting for their crops.

Having seen, particularly in the Northwest, this development during the last quarter of a century, and knowing what the effect was in its first development upon the older sections farther to the East, like Ohio and Indiana and Pennsylvania, I do not want to see a policy adopted here that may cause our people to go through the experience of shrinkage and depreciation of their property values which older communities have experienced, simply in order that alien farmers, to whom we owe no obligation and who owe none to us, may come in and enjoy the market that these people enjoy, upon terms of equality with them.

Do you know what it will do? It will simply accelerate that

tide of emigration that has been tending in the direction of Canada now for several years. You go out with your immigration agents and your land boomers to Saskatoon and Moose Jaw, and those different points in Canada, and say "the Democratic Congress has thrown down the barriers and put you people out here

on the same level of equality with the American farmer." Mr. Hill will profit by it; the town-site man and the Canadian land agent will profit by it; Canadian lands will profit by it; but the lands in North Dakota and South Dakota and Montana, Minnesota and Nebraska, and all through that region, will not profit by it, and according to your own view, it will not make a particle of difference in the cost of living in the United States. What do you want to do it for? Oh, to vindicate a theory, to "unfool" somebody. I think it would be a mistake to do it.

I read again from the census report of 1910 in regard to these States and the increase in value of the farm lands alone, saying nothing about the improvements. In Colorado the increase was 300 per cent; in Idaho, 518 per cent; in Illinois, 106 per cent; in Connecticut, 36 per cent; in Indiana, 93 per cent; in Iowa, 122 per cent; in Kansas, 188 per cent; in Maine, 74 per cent; in Maryland, 35 per cent; in Massachusetts, 32 per cent; in Michigan, 45 per cent; in Minnesota, 82 per cent; in Missouri, 104 per cent; in Montana, 394 per cent; in Nebraska, 231 per cent; in Nevada, 163 per cent; in New Hampshire, 25 per cent; in New Jersey, 31 per cent; in New York, 28 per cent; in North Dakota, 321 per cent; in Oregon, 262 per cent; in Pennsylvania, 9 per cent; in Rhode Island, 11 per cent; in South Dakota, 376 per cent; in Vermont, 27 per cent; in West Virginia, 63 per cent; in Wisconsin, 71 per cent; in Washington, 419 per cent; and in Ohio, 57 per cent.

That is a pretty fine picture of the increase in values.

Mr. President, I recall—and it is not a pleasant recollection the time when, as a young lawyer, acting for my client and directing the sale of property under chattel mortgage, a good standard shorthorn cow, with a calf running beside her, sold out there for \$11.

Mr. MARTINE of New Jersey. I should like to ask, Mr.

President-

The PRESIDING OFFICER (Mr. Hughes in the chair). Does the Senator from North Dakota yield to the Senator from New Jersey

Mr. CRAWFORD. Yes.

Mr. MARTINE of New Jersey. Under what administration

Mr. CRAWFORD. Under Grover Cleveland's administration. Mr. MARTINE of New Jersey. Did not similar instances occur under the Republican administration and under the beneficent system of Republican protection?

Mr. CRAWFORD. They did not. Mr. MARTINE of New Jersey. Well-

Mr. CRAWFORD. I can not give any more time. I have answered your questions, and I want to get through.

Mr. WALSH. Mr. President, I should like to ask the distinguished Senator from South Dakota a question.

The PRESIDING OFFICER. Does the Senator from South

Dakota yield to the Senator from Montana?

Mr. CRAWFORD. Certainly.

Mr. WALSH. I should like to ask the distinguished Senator from South Dakota, as he has now answered the Senator from New Jersey in that way, whether just exactly that condition of affairs did not exist in the year 1890, when I left the State of South Dakota?

Mr. CRAWFORD. Yes; not just exactly the same, but a

pretty bad state of affairs.

Mr. MARTINE of New Jersey. Will the Senator answer me this question-

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from New Jersey? Mr. CRAWFORD, Yes.

Mr. MARTINE of New Jersey. Under which administration of Grover Cleveland did the instance to which the Senator from South Dakota refers occur?

Mr. CRAWFORD. Well, we had two doses of it; one from 1884 to 1888 and the other from 1893 to 1897; and both of them were among the darkest and most pathetic periods in the history of those new western communities.

Mr. MARTINE of New Jersey. Did this instance of the sale of the cow and calf occur under the first administration of

Grover Cleveland?

Mr. CRAWFORD. I think it was under the second adminis-

Mr. MARTINE of New Jersey. Yes. Did you know of any sales under Grover Cleveland's first administration that were so much depressed in price?

Mr. CRAWFORD. I have not brought with me a record of

the proceedings.

Mr. MARTINE of New Jersey. Of course, the Senator from South Dakota knows that in the first administration of Grover Cleveland we were under the régime of a Republican tariff that had been previously enacted.

Mr. CRAWFORD. Yes; but we had a man named Andrew Jackson Sparks, who came out into that country and who acted on the theory that every man who had gone out there to take a homestead and to find a home for himself and family was a scoundrel, a villain, and a thief, who was trying to steal the public domain from Uncle Sam. He suspended entries by the score and by the hundreds, and practically ruined family after family.

Mr. MARTINE of New Jersey. Had that anything to do with the tariff law or the tariff enactment?

Mr. CRAWFORD. It did not. Now, let me go on with this showing with reference to that region of country.

Take the value of land if you have free competition. Here is land in Wisconsin—I quote from the average value, and the average land in Wisconsin is worth \$50 an acre. These values are higher now than they then were, and these are averages:

Land in Wisconsin is worth \$57 an acre, in Michigan it is worth \$46 an acre, in Iowa it is worth \$109 an acre, in Minnesota it is worth \$46 an acre, in North and South Dakota it is worth \$40 an acre, and it yields on an average 11.7 bushels of spring wheat to the acre, and 15.8 bushels of winter wheat to the acre. They are to compete in the market in Minneapolis, which adds a local value because of the great flour mills there, the greatest in the world—they are to compete there with wheat raised in Manitoba, on land worth \$20 an acre, with wheat raised in Saskatchewan on land worth \$22 per acre, and with wheat raised in Alberta on land worth \$20 per acre, yielding 15.53 bushels of spring wheat and 23.49 bushels of winter wheat per acre.

In regard to barley, the average yield per acre is 24.6 bushels in Canada and 22.4 bushels in the United States. In flaxseed the average yield is 4.8 bushels in the United States and 9.97 bushels in Canada. In oats the average yield is 31.9 bushels per acre in the United States and 32.79 bushels in Canada. Of hay the average yield is 1.33 tons per acre in the United States and 1.82 tons per acre in Canada.

The average yearly wage of farm hands in Canada, taken from the Tariff Board report, runs from \$250 to \$300 a year as against \$300 to \$360 a year in Minnesota and in the Dakotas.

What does that mean? It means that a farmer in Iowa, for instance, who owns 160 acres of land worth \$100 an acre could sell it, say, for \$16,000, go to Canada, and in Alberta he can buy \$00 acres with the proceeds of the sale of the 160 acres, and can produce more per acre on the Canadian land than he can on the Iowa land. Then he can send his product back into Iowa and compete on terms of absolute equality with the owner and the purchaser of the land he sold in Iowa.

That can have only one effect upon the Iowa farm, and that is to depreciate and depress its value. You are not going to gain anything by taking this tariff off, as you yourselves say, and our people feel that they will lose something if you take it off. Whether you trace the cause of that loss to a psychological condition or not, the result will be there just the same.

What do you want to do it for? Whom do you help? Is somebody down in New York going to buy the loaf of bread any cheaper? You do not think so yourselves—not one bit cheaper. The loaf will be the same size, and they will pay the same price for it. So what is the use?

The Tariff Board gives some prices for 1910. It is said that the figures for one year are of little value. Well, they are of as much value for one year when they are on our side as they are for another year when they are on the other side; so we will take them for what they are worth. The Tariff Board quotes the farm prices per bushel of cereals in the United States in comparison with prices in Canada. Take wheat in 1910. true, as the Senator from Kentucky said the other day, there is a variation in price as between different States. tation and nearness to market make a difference in the price of wheat in New York as compared with the price in Minnesota; but take the range of prices per bushel for those States, compare it with the range in the Provinces of Canada, and note the difference: New York, 96 cents; Indiana, 87 cents; Illinois, 88 cents; Michigan, 89 cents; Wisconsin, 92 cents; Minnesota, 94 cents; North Dakota, 90 cents; Missouri, 87 cents; South Dakota, 80 cents; Kansas, 84 cents; Saskatchewan, 65 cents; Mani-toba, 80 cents; Ontario, 88 cents.

There is Ontario, lying right across the Niagara River from New York, and the farm price per bushel of wheat in 1910 was 96 cents in New York and 88 cents in Ontario.

Take flaxsed per bushel, and the figures are as follows: New York, \$2.20; Wisconsin, \$2.20; Minnesota, \$2.30; Iowa, \$2.20; Missouri, \$2.10; North Dakota, \$2.35; South Dakota, \$2.29; Kansas, \$2.10; Nebraska, \$2.25; Montana, \$2.40; Mani-

toba, \$2.09; Saskatchewan, right across the line from Montana, \$2.08; and Alberta, \$1.87.

I want to give the figures for more than one year in relation to barley, because there is nothing psychological or confined to mere theory when you consider the effect of the tariff on barley, the tariff on flaxseed, and the tariff on rye. Those are articles that we import. Barley and rye are used in distilling and in brewing, and the great American Oil Trust uses the flaxseed in making linseed oil. It is a great trust, and gets the benefit of the duty reduction on flax. The tariff on rye or flax or barley is a tariff that does directly affect the price, and who pays it? The man who drinks a glass of beer pays an infinitesimal part of it. On the amount of difference to him it would take him a very long time to get drunk. [Laughter.] The difference a little tariff on rye makes in the cost of a gallon of whisky would be so small that it would not cut much figure, and when it comes to the consumer of linseed oil, a little tax on the flaxseed that goes to the American trust never reaches the consumer, and you know it.

Why do you want to take the tariff off of rye and reduce it down to the danger line on barley, or take it off of any of these farm products grown along the border? What good will it do? It will do harm.

I will give you a few figures on oats, and then I will pass on to barley. According to the Tariff Board's report, the average yield of oats per acre in Canada in 1910 was 32.79 bushels; in the United States, 31.09 bushels. The farm value of oats per bushel was 32 cents in Alberta; 28½ cents in Saskatchewan; 21 cents in Manitoba; and 36 cents in Ontario; while the farm price per bushel in Montana was 46 cents; in North Dakota, 37 cents; in Minnesota, 32 cents; in Michigan, 35 cents; and in New York, 42 cents. Notice the difference in favor of the price per bushel on the American side.

Here is the experience of the farmer with the tariff on barley: There are two Provinces in Canada which now raise considerable barley. One is Ontario and the other is Mantoba. In the region west of there they have not gone into raising it because of the limited field for selling it, with 30 cents per bushel against them in the form of an American tariff. The average yield in Ontario is 4 bushels per acre above the average yield in Wisconsin, 8 bushels per acre above that in Minnesota, 1 bushel above that in New York, and less than 1 bushel above that in Iowa. I am taking these figures from the Tariff Board report. The highest farm prices per bushel in 1910—76 and 77 cents—were in New Hampshire, Maine, and Nova Scotia, and the lowest prices per bushel—36 cents, 38 cents, and 39 cents—were in Saskatchewan, Alberta, and Manitoba, respectively.

It seems that they have in Canada two barley-growing regions that are somewhat distinct from each other. There is the Ontario barley and the barley of the eastern Provinces, and then there is the barley of western Canada. The Ontario barley region is a fine barley-growing region, and the brewers at Syracuse, Buffalo, and that region in central New York have for a number of years wanted to break down the tariff and buy their barley from the Ontario farmer instead of from the Minnesota and Dakota farmer, because the Milwaukee brewer gets his barley from the Minnesota and Dakota farmer at a less rate, which makes it harder for the eastern brewer to compete with the Minneapolis and Milwaukee brewer; and so the eastern brewers want to break down the wall and get over and buy their barley from the Ontario farmer instead of from the Dakota farmer. Is the Senate going to legislate here against the Dakota farmer, the Minnesota farmer, and the western farmers generally to help the brewer of beer in New York? That is what this proposition means.

Ontario has declined in the production of malting barley on account of the tariff; and while the Ontario farmer has not been raising it, the farmers in the Northwest have been doing a good business raising it. It has been a profitable business for them, and the tariff has been a specific and a distinct help to them.

In Table 15 in the report of the Tariff Board, page 99, it appears that Minnesota was the heaviest producer of barley near the Canadian border. In 1910 Minnesota raised nearly 27,000,000 bushels; then came Wisconsin with 22,429,000 bushels; then South Dakota with 18,655,000 bushels; then North Dakota with 15,045,000 bushels. In 1910 Ontario produced 20,727,000 bushels and Montana 13,820,000 bushels. The average yield in the United States was 22.4 bushels per acre and in Canada 24.62 bushels per acre. In Ontario the farm price per bushel was 53 cents and in Manitoba 39 cents. Notwithstanding the fact that the tariff shuts Canadian barley out of the United

States, in that portion of Canada its production has somewhat

It appears from the table on page 100 of the report of the Tariff Board that in 1900 all the Provinces in Canada produced 20,322,660 bushels, and in 1909 they produced 48,810,685 bushels, while in 1910 the United States produced 162,227,000 bushels and the Canadian Provinces 45,147,600 bushels. There was a drought in North Dakota and in part of South Dakota that year, which made the crop of 1910 less than that of 1909, so that there was not a normal barley yield.

Before 1897 the duty on barley was not 30 cents a bushel, but was 30 per cent ad valorem. In 1897 it was fixed at 30 cents a Under the old rate of 30 per cent ad valorem there bushel. were large importations of barley. In 1897 there were over a million bushels imported. After the duty of 30 cents a bushel was placed upon it the importations practically ceased, and in 1909 there were only 2,420 bushels of barley imported. course the year when we had a failure on account of the drought it would come in, but I am speaking of the average. In 1909 the figures of the Tariff Board give the importations Under the McKinley law, from October 1, at 2,420 bushels. 1890, to August 27, 1894, there was a duty the same as the present duty of 30 cents a bushel on barley. In 1892, under that duty, the December price per bushel in Chicago ran from 65 cents to 67 cents, and the May price the same year was 65 cents; in 1803 the December barley in Chicago ran from 62 cents to 64 cents, and the price of May barley from 55 cents to 60 cents; in 1804 December barley in Chicago ran from 52½ cents to 53½ cents, and the price of May barley from 51 to 52 cents; in 1894 the tariff on barley was materially reduced in the new tariff law enacted at that time, from 30 cents per bushel to 30 per cent ad valorem; and in 1895 the December price in Chicago ran from 33 cents to 40 cents, and the May price of barley ran from 25 cents to 26 cents; in 1896 the December barley ran from 22 cents—just see how it went down-from 22 cents to 37 cents, and May barley from 22½ cents to 35 cents; in 1897 December barley ran from 25½ cents a bushel to 42 cents, and May barley from 36 cents to 53 cents. Then, again, the duty of 30 cents a bushel was imposed under the tariff act of 1897, and we have had that rate since, and the price of barley has steadily increased. Here are the figures, the low and the high price in December, and the low and the high price in May, in the Chicago market: In 1898, December, low 40 cents, high 50½ cents; May, low 36 cents, high 42 cents; in 1899, December, low 35 cents, high 45; May, low 36, high 44. I will not read all of these, but will ask to have them printed in the RECORD; but, coming down here to 1907, the December low price was 78 cents, the high \$1.02; the May low price was 60 cents and the high 75 cents. In 1908, low for December 57, and high 64; and for May, low 66, and high 75.

That is very prosy and very tedious here in the United States Senate, but I want to say to you that it means a great deal to the farmers in the Northwest who are producing barley. ask permission to insert the entire table as part of my remarks.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[Cents per bushel.]

Years.	December and low Chicago	price in	May high and low price in Chicago		
	Low.	High.	Low.	High.

1 Not given.

Mr. CRAWFORD. These figures are taken from Table 17, page 101, Report of the Tariff Board. This board also reports (p. 105) that-

the price of barley in Canada is generally below the price of the United States. From 1900 to 1909 the Chicago price ranged from 1 cent to 46 cents above the Winnipeg price. Half of this time the difference was above 13 cents.

Mr. WALSH. Mr. President, will the Senator yield for a question?

The VICE PRESIDENT. Does the Senator from South Dakota yield to the Senator from Montana?

Mr. CRAWFORD. Certainly.

Mr. WALSH. The figures are interesting. Has the Senator figures showing the amount of barley produced and imported into this country that is used in the malting business?

Mr. CRAWFORD. No; I have not the malting barley separate from the other barley. My figures are the ones furnished by the Tariff Board.

Mr. WALSH. Can the Senator give us substantially the percentage of the barley that is used in the malting business?

Mr. CRAWFORD. No; I would not undertake to do that.

Mr. WALSH. The Senator would not undertake to say that it is in excess of 40 per cent, would he?

Mr. CRAWFORD. No; I would not undertake to quote figures unless I had the figures, and I have not those. But I know that we consider that the chief market for our barley is the brewers, who use it in making malt and utilize the byproducts

Mr. WALSH. Let me ask the Senator another question. understand that he is objecting to the reduction of the rate on

barley from 25 cents to 15 cents?

Mr. CRAWFORD. Oh, not specifically. I am discussing the situation here, and the attitude of the Senate in the treat-I am discussing ment of the farmer in the Northwest. I will say to my old friend from Montana that I can see a tendency here which only regards this bill as the first step; and your attitude is perfectly apparent. You are not going to stop until all the products of

the farm are put on the free list.

Mr. WALSH. Of course that is no answer to the question. Mr. CRAWFORD. It is an observation as to the apparent

tendency

Mr. WALSH. That, of course, would involve me in a discussion with reference to the general deductions to be drawn from the entire address of the Senator. I simply want to know what the particular objection is that he has to the barley schedule, and why he thinks 15 cents a bushel is not sufficient protection, and upon what basis he argues that it is not.

Mr. CRAWFORD. I am not going to undertake to go into any cheeseparing here with reference to whether this rate should be 15 cents, or 11 cents, or 13 cents, or 15 cents, or 16 cents. I am discussing the general merits of the matter and the necessity for considering the interests of that part of the country. I think whacking away here at these margins in flax and barley and rye is simply the first step in a policy that will end in putting them on the free list.

Take rye: In this bill rye is on the free list. What good does that do? Why, it will help these distilleries get Canadian rye to make whisky out of. That is all there is to it. Some big distiller will be able to get what you call "basic raw material" a little cheaper. You want to have a rye farmer in Ontario compete with a rye farmer over in New York so that the owner of a distillery somewhere can have the benefit of the competition between the two, and so you put rye on the What other purpose had you in putting it on the That is practically all it is used for. Rye bread free list?

is eaten only by the aristocrats, and not by the poor people.

Mr. MARTINE of New Jersey. Mr. President—
The VICE PRESIDENT. Does the Senator from South Dakota yield to the Senator from New Jersey?

Mr. CRAWFORD. I am nearly through. Mr. MARTINE of New Jersey. I am not going to make any extended observation. I simply want to correct a statement that I do not believe the Senator will want to have go as he

The Senator says rye bread is eaten only by the aristocrats. That is absolutely not the case. Let me tell the Senator that not only in this country but in Germany it is very largely Mr. CRAWFORD. I understand it is largely eaten in Europe.

Mr. MARTINE of New Jersey. Well, we will ship it to Europe. Only a few years ago there was almost a rebellion in the German Army when it was proposed by the authorities there to feed the German soldiers on wheat bread instead of rye bread. It is used very largely as an article of diet. I have no doubt that in the boyhood days of the Senator he

fattened on rye bread. I can say that I did.

Mr. CRAWFORD. No, sir; I did not; and rye bread is not eaten to any great extent in the United States. It is in foreign countries; or if you go to a tony, aristocratic hotel in the United States they may bring you some rye bread with these caraway seeds in it. But what do we common people do? We scorn that kind of bread. We eat good, old-fashioned white, wheat bread; and we are not afraid we will be deprived of it

by having a little tariff on wheat.

The Tariff Board, on page 105, reports that the price of barley in Canada is generally below the price in the United States. From 1900 to 1909 the Chicago price ranged from 1 cent to 46 cents above the Winnipeg price. Half of this time the difference was above 13 cents.

Here is flaxseed. The crop which is usually raised when the sod is first turned over on the prairie is the crop of flax. It is the crop of the pioneer in subduing the new soil. It is a crop raised very extensively in the Dakotas, Minnesota, Montana, and through the northwest, and, as a rule, near the flax regions

of Canada. Linseed oil is made from flax.

The American Linseed Oil Co., known as the Linseed Oil Trust, I find was created by merging 47 different corporations. I get this from Moody, who wrote up all these trusts. It is allied with the Smelter Trust. It is under Standard Oil domination. Rockefeller, jr., is one of its directors. It controls 85 per cent of the linseed-oil production in the United States. It manufactures American and Calcutta linseed oil, raw and boiled, and refined varnish, oil cake, oil meal, and crushed flaxseed. Now you go to whacking away at a tariff on flaxseed, which we import but do not export, a tariff that benefits more directly than any other the pioneer farmers who are subduing the virgin prairies of the West-you go to whacking away at that, and cutting it down, for the benefit of whom? This gigantic trust.

What do you want to do it for? Why do you not let alone the man who is raising the flax and having some protection against his Canadian competitor, rather than strike a blow at him for the purpose of helping a great trust, and lose the

revenue besides?

I ask leave to have printed with my remarks a list of the institutions engaged in brewing beer and distilling whisky and that are in the Linseed Oil Trust, so as to have the people of the country know who is going to get the benefit, if there is any benefit, of placing rye on the free list and reducing the tariff on flax and barley.

There being no objection, the matter referred to was ordered

to be printed in the RECORD, as follows:

There being no objection, the matter referred to was ordered to be printed in the Record, as follows:

The American Linseed Oil Co., known as the Linseed Oil Trust, which was created by the merger of 47 different corporations: It is allied with the Smelters Trust and is under Standard Oil domination. Rockefeller, jr., is one of its directors. It controls 85 per cent of the linseed oil production in the United States. It manufactures American and Calcutta linseed oil, raw and boiled, and refined varnish, oil cake, oil meal, and crushed flaxseed. It is a New Jersey corporation, with its main office in New York. Its common stock is \$16,750,000 and its preferred stock is \$16,750,000.

The American Malt Corporation, a big holding company of New Jersey: Common stock, \$5,248,800; preferred stock, \$8,353,400; bonds, \$3,714,000, bearing 6 per cent interest.

The Distilleries Securities Corporation (over 100 plants and warehouses in the United States), a New Jersey corporation: Common stock, \$30,762,950, paying 6 per cent dividends; bonds, \$15,400,412, bearing 5 and 6 per cent. It controls also the United States Industrial Alcohol Co., whose common stock is \$12,000,000; preferred stock, \$6,000,000; paying 7 per cent.

The Chicago Breweries (Ltd.), London and Chicago: Common stock, £400,000, paying 5½ per cent dividends, with bonds in £276,500, paying 6 per cent.

Dayton Breweries Co. (consolidation of 7 companies): Common stock, \$1,249,125; preferred stock, same amount; bonds, \$2,500,000; 6 per cent interest.

Hueben-Toledo United Breweries Co., of Toledo, Ohio: Common stock, \$1,278,000; preferred stock, the same amount, paying 7 per cent; bonds, \$3,918,923; preferred stock, the same amount, paying 7 per cent; bonds, \$2,550,000, pays 6 per cent interest.

Jones Brewing Co. (Boston and London): Common stock, \$5,324,000. Kansas City Breweries Co.: Common stock, \$1,557,000; preferred stock, the same amount, pays 6 per cent interest.

Missachusetts Breweries Co. (10 combined Boston companies): Common stock, \$3,714,250; prefe

Pittsburg Brewing Co. (16 companies consolidated): Common stock, \$5,962,250, paying 5 per cent dividends; preferred stock, \$6,100,000, paying 7 per cent dividends; bonds, \$6,319,000, paying 6 per cent in-

paying 7 per cent dividends; bonds, \$6,319,000, paying 6 per cent interest.

St. Louis Brewerles (Ltd.) (10 companies consolidated): Common stock, \$4,383,000; preferred stock, exactly same amount, paying 8 per cent dividends; bonds, \$4,880,600, paying 6 per cent interest.

Springfield Brewerles Co., Springfield, Mass.: Common stock, \$1,150,000; preferred stock, \$1,150,000, paying 8 per cent dividends; bonds, \$930,000, paying 6 per cent interest.

United Brewerles Co. (13 Chicago companies consolidated): Common stock, \$2,731,500; preferred stock, \$2,731,500; bonds \$1,654,000, paying 6 per cent interest.

Hoster-Columbus Associated Brewerles Co., Columbus, Ohio: Common stock, \$1,650,000; preferred stock, \$2,700,000; bonds, \$5,250,000.

Mr. CRAWFORD. In what I had to say in regard to wheat, my argument was more upon the general proposition of retaining a rate which you say is harmless, for the purpose of encouraging the American farmer, as he looks into the future, to believe that he is going to be safe in turning his face to the reclamation of these waste places, rebuilding them, buying fertilizer for them, and increasing the productivity of our own soil, upon the broad philosophy that every nation ought to raise its own food products when it can do so instead of discouraging the farmer, so far as his avocation is concerned, by holding always before him the menace that he is going to undergo the same experience that the eastern farmer did when the western do-

main, under our own flag, was being developed.

Mr. WILLIAMS. Mr. President, I once more express the hope that we may now have a vote upon the pending amendment

to the paragraph.
Mr. GALLINGER. I suggest the absence of a quorum. The VICE PRESIDENT. The Senator from New Hampshire suggests the absence of a quorum. The Secretary will call the

roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst Bacon Brady Brandegee Hollis Hughes James Johnson Norris Smith, S. C. Page Penrose Perkins Smoot Sterling Stone Thomas Thompson Thornton Tillman Bristow Poindexter Ransdell Robinson Shafroth Jones Kenyon Kern Lane Bryan Burton Catron Chamberlain Lea Lewis Lodge McLean Martin, Va. Martine, N. J. Sheppard Townsend Vardaman Sheppard Sherman Shively Simmons Smith, Ariz, Smith, Ga, Smith, Md. Chilton Clapp Crawford Dillingham Walsh Warren Williams Jallinger Gronna Nelson

Mr. JAMES. I desire to announce that the senior Senator from Kentucky [Mr. Bradley] is detained from attendance here by reason of illness. He is paired with the junior Senator from Indiana [Mr. KERN].

Mr. GRONNA. I wish to announce that my colleague [Mr. McCumber] is necessarily absent on account of illness. He is paired with the senior Senator from Nevada [Mr. Newlands].

Mr. BRYAN. My colleague [Mr. Fletcher] is absent on business of the Senate.

Mr. THORNTON. I wish to announce the necessary absence of the Senator from Alabama [Mr. BANKHEAD]. He is paired with the junior Senator from West Virginia [Mr. Goff]. I ask that this announcement may stand for the day.

The VICE PRESIDENT. Fifty-eight Senators have answered

to the roll call. A quorum of the Senate is present.

Mr. NORRIS. Mr. President, I am not conscious of having any prejudice on the particular schedule now under consideration; and I believe I approach the discussion of the particular motion now pending in the Senate without any feeling or partisanship or prejudice of any kind.

The Democratic caucus of the House, when they had this bill under consideration, placed a tariff of 10 cents a bushel upon wheat. The Democrats of the Senate, in their caucus, have proposed an amendment to strike that paragraph out of the bill and thus put wheat on the free list; and, as I understand the parliamentary situation, that motion is now pending before the Senate.

I had intended earlier to make some preparation and submit some remarks to the Senate on the agricultural schedule, after giving the subject the proper consideration which I believed it deserved. On account, however, of various things, among which was the condition of my own health, I have been unable to give it the attention which I ought to give it in order to make my remarks logical, or perhaps intelligent. But the Congress of the United States went all over the discussion of this question in regard to the tariff on agricultural products in the consideration of the so-called reciprocity treaty with Canada. This particular schedule in the bill is just about the same as the reciprocity bill, with the exception, in my judgment, that it gets nothing back, while the reciprocity bill did get something in return for the free admission of Canadian agricultural products to our market. Of course, in addition to that, it admits these products free from all the world, although we have more to fear, perhaps, in most instances, from Canada than from any other country.

I said that I did not believe I had any prejudices on this subject. In fact, if I had any, they would naturally have been the other way, because the so-called reciprocity treaty was proposed by a Republican President, the leader of the party to which I gave allegiance. It was brought into the House of Representa-

tives by a Republican committee in the first place. called leader of the Republican Party was sponsor for the propo-In addition to that, the legislature of the State, which I then had and now have the honor in part to represent, passed a resolution instructing the members of the Nebraska delegation to support the so-called Canadian reciprocity measure. In addition to that, the delegation from my State, as it was then constituted, was unanimously in favor of the so-called reciprocity bill, with the exception of myself. So that I had every reason of a partisan or a political nature to be favorable to the Canadian reciprocity bill. As a matter of fact, I took my position with a great deal of danger to my own political existence. In opposition to the administration of my own party, standing alone in the delegation from my own State, and contrary to definite instructions from my own State legislature, I opposed reciprocity not because I wanted to, but because a fair and honest consideration of the subject led me irresistibly to such a position and I could not have done otherwise and had any respect for my own conscientious convictions.

I opposed it after very mature and careful consideration, giving it the best thought of which I was capable, and with a desire, I am satisfied I can say correctly, to support the measure if I could possibly bring my mind to a conscientious belief in its justice, and I think I can consistently oppose this particular tariff schedule now without anyone having any right to make the charge that I am opposing it for partisan considerations.

I am aware that a great deal can be said on both sides of this

I am aware that a great deal can be said on both sides of this great question; and firmly convinced as I am that the reciprocity bill and this bill were and are wrong, and do an injustice to the great agricultural classes of our country, I am free to concede to those who favored reciprocity and those who favor this schedule the same honesty of purpose that I claim for myself.

I know that it is claimed on one side that the tariff on agricultural products does the farmer no good. That, of course, is strenuously denied on the other side. There have been volumes of statistics given on the subject; but I know that when I was trying to reach a fair and honest conclusion I was irresistibly led to the conclusion that the American farmer, because of the tariff on agricultural products, was getting a better price for the produce of his farm than the Canadian farmer.

There were put into the Record yesterday some statistics showing that the price of wheat was different in one section of our own country than in another. In my judgment, that does not demonstrate anything. I do not believe any one market, on any one day, in any one place will prove or disprove this important proposition. The price of wheat, like the price of other farm products, varies for a great many reasons. I know that sometimes in one locality there may be some particular local situation that will have an effect upon the price. Sometimes some one on some board of trade tries to corner the market, and that has an effect upon the price. Local conditions do have an effect; and you can get figures to prove almost anything you want to on this question, if you do not have regard for those considerations.

I have examined—not now, but during the consideration of the Canadian reciprocity bill—all the statistics I could get hold of, and have examined most of those that were put in the CONGRESSIONAL RECORD at that time. It seems to me that a fair and honest consideration of conditions that are fair and honest must lead any unbiased and unprejudiced mind to the conclusion that the farmer has been getting the benefit of the tariff on agricultural products. There has been a difference in different years. For the moment, however, let us lay aside what the figures demonstrate and consider only the theory of the matter.

During all that discussion it was practically conceded by nearly all of those who took part in the debates and in the newspaper discussions throughout the country, taking wheat as an illustration, that if we consumed all the wheat we produced the tariff would be effective, and the producer of wheat would get the benefit of it. I believe that is generally conceded. On the other hand, I am willing to concede that if we consumed none of the product, but exported it all, the tariff would do us no good, no matter how high it might be.

I believe those two propositions can not be successfully contradicted. They represent the two extremes of this question. As you bring those extremes together, the benefit of the tariff is being felt to a greater degree as they approach the same point. So when we reach a point where we consume all the wheat we produce we will get the full benefit of whatever tariff is levied upon wheat.

It seems to me, too, that the gentlemen who contend that the farmer has gotten no benefit from the tariff on wheat have

their theories exploded by the actual facts. I will concede that if you will take a year when our production of wheat exceeded by a very large amount our consumption we would find but little benefit from the tariff. If you would take another year, where we consumed nearly all of our production, we would find a great deal of benefit from the tariff. While they vary, everybody concedes that one year with another for the last 25 years we have been reaching the point where we are going to consume all the wheat that we produce. Comparatively speaking, we are very near to that point now.

So it was truly said by the Senator from Idaho [Mr. Borah] yesterday that while in the past several years ago the farmer perhaps did not get much benefit, sometimes none perhaps, from the fariff on some of his agricultural products, it is conceded that now we are reaching a point in our history where he is getting benefit, and where, as the years come and go and we reach the point where we consume what we produce, he will get the full benefit of every cent of tariff that is levied upon his product.

It is said by those who oppose this theory that because we do not consume all that we produce we are therefore thrown upon the world's market; that the farmer sells his product upon the world's market; and that the world's market controls the price. I think it is universally conceded that the world's market place on wheat is Liverpool, England. If that theory be true, then the difference in the price of wheat at some great center of the United States—for Instance, Minneapolis—and at Liverpool ought to be measured by the cost of transportation of the wheat from Minneapolis to Liverpool, the world's market. I believe that will be conceded by all. In other words, the price in Liverpool ought to be the price at Minneapolis plus the cost of transporting the wheat from Minneapolis to Liverpool.

I obtained some figures some time ago from the Bureau of Statistics of the Agricultural Department with a view of preparing an address on this subject. I have taken the year 1911. I will say frankly to those who oppose the position I am taking that that year is more favorable to the view I am taking of this question than the year 1912 or than I think the year 1913 would be, but I submit in all fairness I have a right to take a year that according to the theory I have laid down here is the most favorable to that theory.

It is fair to do this, also, for the reason that it is conceded by everybody that year by year we are rapidly approaching a point when we will consume all the wheat that we produce, and everybody concedes that when that time arrives the farmer will get the benefit of every cent of the tariff that is levied on wheat. Any other year could be taken and the demonstration would be just as logical; the result would bring us to the same conclusion, but the difference would not be so glaring. We exported in 1912, according to the Bureau of Statistics, something over 61,000,000 bushels of wheat. In 1911 we exported something more than 32,000,000 bushels. We could therefore expect the difference in price between our markets and Canada, or between our market and the world's market, to be greater in 1911 than in 1912. To those who want to pursue the subject further, I will say that it would be interesting, in addition to the figures that I have given for 1911, to take those for 1912, where it will also be shown that the farmer is getting considerable benefit from the tariff on wheat, but not so much benefit as in the year 1911, when we came nearer consuming all the wheat that we produced.

In 1911 the Bureau of Statistics tells me that we produced 621,000.339 bushels of wheat and that we exported in that year 32,668,615 bushels. Comparatively a small amount was exported.

I have obtained from the same Bureau of Statistics the price that it would cost to transport a bushel of wheat from Minneapolis to Liverpool, and I will insert in the Record a table showing the cost of transportation of a bushel of wheat, giving it item by item, from Minneapolis to Liverpool. It makes a total, I will say, of 20½ cents. That is what it costs to transport a bushel of wheat from Minneapolis to Liverpool under the most favorable circumstances.

The table referred to is as follows:

Freight cost per bushel on wheat from Minnesota to Liverpool.

	Cents.
Minneapolis to Duluth Duluth to Buffalo, by lake Buffalo to New York, by canal New York to Liverpool, by steamship Elevator charges Trimming (leveling) cargo, lake and ocean Marine insurance, lake and ocean Other transport costs	- 5.0 - 2.0 - 5.0 - 4.0 - 2.0 5 - 1.0
Total	

I have from the same bureau the price of wheat for each month during the year 1911 in Minneapolis and for seven months of the year in Liverpool. They were unable to give me the figures for Liverpool for more than seven months of the year. For instance, this table shows that in January the price of wheat in Minneapolis was \$1.066 and in Liverpool it was \$1.113. If the farmer does not get any benefit from the tariff on whicht there ought to be a difference in the price of 20½ cents, the cost of transportation; but, as a matter of fact, the difference, as we see, is only a little over 4 cents. Without reading all the table I will give only the average. The average for the year in Minneapolis was \$1.008; in Liverpool \$1.114. This shows that during the year 1911 the farmer was benefited by the tariff to the amount of nearly 11 cents on every bushel of wheat he produced.

Price of wheat for each month during 1911 in Minneapolis and for 7 months of 1911 in Liverpool.

	Minne- apolis.	Liver- pool.

Average	1.008	1.114

Difference in favor of Liverpool for the year of 10 cents. Cost of transportation from Minneapolis to Liverpool, 201

It seems to me that it is practically a mathematical demonstration that the American farmer was not selling his wheat upon the world's market and that he was getting some benefit from the tariff. If you will figure out other years where we come nearer to consuming all the wheat we produce the difference will be greater. If you take a year like 1912, where our exportation of wheat was a good deal greater than in 1911, you will find that the difference is not so great.

If, when you read this table, as it will be printed in the RECORD, you should find that in one month there is a big difference in one way and in another month a big difference in another way, you might think it happened so that year, but you will find that in every month for which statistics are given the theory has worked out that there is a less difference between the Minneapolis and Liverpool market than 201 cents, the cost of transportation.

I do not think that table tells all the story, Mr. President. I have tried to get the same grade of wheat. I believe if we had wheat graded in Canada exactly as it is graded here and put the same grades up in competition against each other, there is nothing that would demonstrate this theory much more clearly. There is no doubt in my mind but that the Canadian wheat that goes into the Liverpool markets is of a higher grade than the American wheat that goes into the markets, and you can see that that would only be another demonstration of the proposition I have laid down that the American producer of wheat must get some benefit. Otherwise there would be more difference in these two markets.

The grade of wheat that I have given in the table for Minneapolis is No. 1 northern Minnesota, and the Canadian wheat is No. 1 northern Manitoba, which is a little better wheat than the Minnesota wheat.

The letter put in the RECORD by the Senator from North Dakota [Mr. Gronna] yesterday, as I remember it, shows that between these grades there is really about 2 cents difference in their quality, the Canadian wheat being the best. Therefore, to be fair and accurate we ought to add about 2 cents in each instance to the American market price, or take that amount from the price of the Canadlan wheat. That would equalize the grades and show that for the year 1911 the difference in the price of wheat at Minneapolis and Liverpool was only about 8 cents, while it cost 20½ cents to transport the wheat from one city to the other. This demonstrates that for that year the farmer was in reality getting a benefit of about 12½ cents

per bushel on his wheat on account of the tariff.

Mr. President, right along that line during the discussion of the so-called Canadian reciprocity—

Mr. GRONNA. Mr. President—

Mr. NORRIS. I yield to the Senator,

Mr. GRONNA. Before the Senator leaves the question of grades, if he will permit me, I want to make this suggestion Mr. NORRIS. I will certainly yield to the Senator.

Mr. GRONNA. The contract price for wheat is based on No. 1 northern grade. It is shown in the letter which was put in the RECORD yesterday that all No. 2 northern Winnipeg wheat would be accepted as Minnesota No. 1 northern. It is also shown that the difference in the price of No. 1 and No. 2 northern is 6 cents. It is also shown in the same letter that a large portion of No. 3 Winnipeg is accepted as No. 1 Minnesota grade with a difference in price between No. 1 and No. 3 of 8 cents a bushel.

I simply call attention to these grades because it is important in making the difference in the Canadian price and the American price.

Mr. NORRIS. I am much obliged to the Senator. Of course the difference in the two prices of wheat I have given has not been named by me, but the letter and the statement of the Scnator show that there is a difference in favor of Canadian wheat. So I think I am far within a reasonable rule when I say that there would be at least a difference of 2 cents.

Mr. NELSON. Two cents. Mr. NORRIS. Two cents.

Mr. NELSON. At least 2 cents.
Mr. NORRIS. At least 2 cents. That ought to be added to the price of Minneapolis wheat that I have given in the table. The table without that demonstrates the proposition, but with it the benefit of the tariff is more clearly illustrated.

Mr. NELSON. Mr. President— Mr. NORRIS. I yield to the Senator.

Mr. NELSON. The Canadian wheat is what is known as No. 1 hard. The bulk of the Minnesota and of the Dakota wheat is No. 1 northern. There is a difference in price of at least 2 points on these grades.

There is another matter, if the Senator will allow me. They can take that No. 1 hard Canadian wheat and mix it with No. 2 and No. 3 and grade the mixture up to Minnesota No. 1 northern and in that way add to the price of No. 2 and No. 3.

Mr. NORRIS. I am very much obliged to the Senator for his valuable suggestion.

I was about to say, Mr. President, when I was interrupted by the Senator from North Dakota, that during the discussion of the reciprocity treaty there was put into the RECORD a table by the Senator from North Dakota showing the prices of wheat along the Canadian line. I desire to include that table, with some additions, in my remarks. It shows that all the way along the Canadian line the price paid for wheat to the farmer on the American side was from 11 and 12 to 15 cents higher than the price paid to the farmer on the Canadian side.

The table referred to is as follows:

Comparative prices of wheat in the United States and Canada.

Dates.	Name of town in United States.	Price per bushel.	Name of town in Canada.	Price per bushel,	Dif- fer- ence in price.	Distance of towns.

Mr. NORRIS. Now, there might be an instance where some local condition might affect the price, as the Senator from Mississippi [Mr. WILLIAMS] well said yesterday. a mill in some locality, and if it was only one instance, I would

not cite it, because those local conditions might control.

But all the way along that line, if you will take, as I did during that debate, a Great Northern Railway map, a Northern Pacific Railway map, the map of the Great Soo Railroad, that have lines running back and forth across the line, and pick out the towns that are on one side and then a corresponding town on the other and get the prices of wheat, you will find invariably that on the American side of that line the American farmer is getting a higher price for his wheat than is paid on the other side to the Canadian farmer. There is no exception. The difference in favor of the American farmer is found to be the absolute rule along the Canadian border all the way from the Lakes to the Pacific Ocean. In no instance have I ever found a case where it was not true that the price paid on the American side was higher than the price paid on the Canadian side. In many instances these towns are only 2 or 3 miles apart. They are situated on the same railroad, where the freight rate and all other conditions, including local conditions, are exactly and absolutely the same.

Mr. CRAWFORD. Mr. President-

Mr. NELSON. Will the Senator allow me further?

The VICE PRESIDENT. To whom does the Senator from

Nebraska yield? Mr. NORRIS. I will yield first to the Senator from South Dakota.

Mr. CRAWFORD. And that difference is not confined to any particular year? Mr. NORRIS.

Mr. NORRIS. Oh, I think not.
Mr. CRAWFORD. You find it generally through every year? Mr. NORRIS. Practically without exception. Now, I yield

to the Senator from Minnesota.

Mr. NELSON. I want to emphasize the fact the Senator is stating now by saying that there have been many cases along the international boundary line of smuggling. A great many Canadians have attempted to take advantage of our market by hauling their grain by teams across the line. They have been caught in the act of smuggling, the temptation has been so strong on account of the American price.

Mr. NORRIS. I know that there are a good many instances, not only in wheat but in other products of the farm, where that same thing has occurred. I have had some personal knowledge

of several instances.

Mr. President, I am going to take one particular town on that border. It is in North Dakota. It is on the line between North Dakota and Canada. The line between the United States and Canada is the main street of the town, so that, technically speaking, they do have two towns, because they are under different flags and different Governments. It is a small village, not more than a few hundred inhabitants. It is called Portal, and on the north side of the street it is called North They have only one railroad in that town, and that is the Great Soo Railroad, which has a line through the town north and south, connecting with the main line on each side, so that the only way the people of Portal have of shipping their produce to market is over the Soo Railroad. The freight rate from the north side of the main street at the elevator there is just the same as the freight rate on the south side of the street, where the American elevator is located. So there is no difference in conditions absolutely, with the exception of the boundary line and the tariff.

I have talked with several men on the subject. In fact, I had a friend, who is an employee of the Soo Railroad, go to the town a few years ago on purpose to give me direct information

that I knew would be reliable.

The Senator from North Dakota put in some figures relating to that particular place in this table. For instance, on December 31, 1910, on the American side of the main street wheat was worth 90 cents a bushel; on the opposite side of the street, over in Canada, at the elevator there wheat was worth 75 cents a bushel.

On January 10, 1911, on the American side of the street wheat was 92 cents, and on the other side of the street in

Canada 79 cents.

On April 6, 1911, on the United States side of the street wheat

was 91 cents and on the Canadian side 85 cents.

There can be no difference in conditions. Wheat would perhaps go out of that town on the same train, two carloads, one loaded on one side of the line and the other on the other; perhaps raised on adjoining farms, only one is in Canada and the other in the United States, with nothing between them but an imaginary line, the same kind of wheat in the same train from the same town to the same destination, one shipped in bond and the other shipped open without bond, the farmer on the Canadian side getting 75 cents a bushel, the farmer on the American side getting 90 cents a bushel.

Mr. NELSON. Will the Senator allow me?

Mr. NORRIS. I yield to the Senator.

Mr. NELSON. As a strong verification of the position taken by the Senator, I desire to call his attention to the fact that the day following the election in Canada when reciprocity was defeated, the price of wheat in Minneapolis increased 8 cents |

a bushel from what it was on the day of election. That night the returns came in and the result was so overwhelming that they knew in Minneapolis by midnight that Canadian reciprocity had been defeated, and the result was that the next day wheat was 8 cents a bushel higher in Minneapolis than it was on election day, and barley was about 10 cents higher. No stronger proof can be found of the difference in the two markets.

Mr. NORRIS. I am much obliged to the Senator from Min-

nesota for the observation he has made.

Mr. President, there is another question involved in this matter, and that is, Will the placing of wheat on the free list reduce the cost of living? I admit, to begin with, that that is a serious proposition. I do not want by my vote to increase the burdens of the poor or of the men and the women who have to toil in order to gain their living; but, while, if I believed that a tariff would increase the cost of living, it would not be in the case of agricultural products a predominating influence, it would be entitled to a great deal of consideration.

Our Democratic brethren, who say the tariff does not do the farmer any good and say that it does not affect him, have been frank enough and honest enough to admit in the Senate that taking the tariff off agricultural products will not reduce the cost of living. I presume they would say that, according to my theory, it would reduce the cost of living; and, taking wheat as an illustration, for instance, if the poor man ate wheat I can see how it might have a direct effect; but the amendment now pending before the Senate is to strike out of the bill a provision imposing a tariff of only 10 cents a bushel on wheat. The poor man does not eat wheat; he does not buy wheat; but he buys and eats bread. Is there any man who will claim that the reand eats bread. Is there any man who will chain that the removal of the tariff of 10 cents a bushel on wheat will reduce the price of a loaf of bread or increase its size? I do not believe anyone will so contend. The price of a loaf of bread, everybody knows, does not vary with the price of wheat.

From the standpoint of our friends on the other side, and also from our standpoint, the removal of the tariff will not reduce the cost of living; then, as the Senator from South Dakota [Mr.

CRAWFORD] this afternoon said, why not leave it on?

The men who produce wheat are just as intelligent as are we. Even though the argument has been produced here that the theories which have been offered may be all fallacious and amount to nothing, the men who are engaged in the pursuit of farming, intelligent and knowing more about their business than any man here on the Senate floor, agree with practical unanimity that the tariff has been and is of great benefit to the farmer. Why not let the farmers decide the question in which they are primarily interested, when you admit by deciding it the other way that you will not do anybody any good?

It has been shown also by the Senator from Wisconsin [Mr. LA FOLLETTE] that there is a difference in the cost of production—he says of about 6 cents per bushel. It costs 6 cents more to produce a bushel of wheat here than in Canada. Under ordinary circumstances I am a believer in the theory that the tariff ought to measure the difference in the cost of production at home and abroad. We ought, however, to take into considera-tion each particular item upon which we are placing a tariff, and if there is anything peculiar controlling that particular product it ought to be given due weight, whether to increase or to lower the tariff above or below that particular difference.

It is a difficult thing to measure the cost of production on the farm; it is almost an impossibility; and it is an impossibility to be exactly accurate. Then, again, the cost of production to the farmer this year may, although he is on the same farm and has the same equipment, be entirely different from what it will be next year; so that we ought to be liberal in applying this rule to agricultural products.

We can not go out and analyze the cost of the production of a bushel of wheat as we can the making of a coat or of a pair of The yield of wheat depends upon the sun and upon the rain and upon conditions that man can not control; and what would be profitable one year may not be profitable another year.

There is another reason why we ought to be liberal, Mr. President. As stated so well and so much better than I can state it by the Senator from Idaho [Mr. Borah] yesterday, the farmers of this country for many, many weary years have been getting but little direct benefit from the protective tariff. An indirect benefit, I think, they have always had, and my own judgment is that that has been a vast benefit to them; but until we approach a time when we consume or come near consuming a large portion of what we produce, as I said awhile ago, the farmer will not get the full benefit of the tariff levied upon farm products; so that if any man should be treated liberally

it should be the farmer.

Mr. President, there is still another reason why he should be treated liberally. If we look at the subject only from a

selfish standpoint, we must admit, when we come to consider it fairly and squarely, that at the base of all prosperity and at the base of all advancement rests agriculture. If those engaged in agriculture are not prosperous, there can be no real, genuine prosperity. Instead of making it unprofitable on the farm by compelling the farmer to self in a free-trade market and buy in a protected market, we ought to do just the reverse, so far as we can do so by legislation.

One of the sad lessons of the last census to me was that it showed in many localities that there had been a decrease in farm population, but always an increase in the city population. We ought to legislate so as to have the tide go the other way and to give it any legitimate assistance that we can possibly Every nation that has neglected agriculture has sooner or later come to ruin and to decay, and if we are going to make it unprofitable to the farmer, if we are going to make his life burdensome and unhappy on the farm, we are only going to accelerate the movement and drive from the farm to the already overcrowded cities the surplus population and make millions of consumers who ought to be and, under proper circumstances, would be producers.

We ought to remember, too, that the strongest element of our Government is on the farm. It is in the overcrowded cities where poverty prevails, where crime spreads, where misery lives, where disease is located, where anarchy is born; but in the country, in the agricultural communities, we find a stronger and more patriotic citizenship, and in case of danger and in need it is to the farm that the Government must go for its strong arm of protection and defense. We can not, in my judgment, do anything that is fair and honest that will add to the comfort or the happiness of the agricultural classes that we ought not do.

Mr. President, on the same page of the bill where we find the item of wheat we find also the item of rice. This bill provides for a tariff of 1 cent a pound on rice, while it puts wheat on the free list. While I do not claim to be informed on the rice situation, it does seem to me that that is a discrimination that is unfair and unbecoming the Senate of the United States to enact into law

It is conceded, I believe, on the other side of the Chamber that the duty of 1 cent a pound on rice will increase the cost to the consumer. If it were only 10 cents a bushel, and if it were levied on the bushel, I do not believe anybody would claim that it would affect the price to the consumer, but I cent a pound, if applied to wheat, would mean 60 cents a bushel on wheat. You take all the tariff off wheat and you just cut Why not treat the farmer who raises rice it in two on rice. and the farmer who raises wheat precisely the same and cut the tariff in two on the wheat farmer, just as you have done on the rice farmer?

I am in favor of a reduction of the tariff on agricultural products. I believe 10 cents a bushel on wheat is a little too low-if I could have my way about it I would make it 15 cents but I would be perfectly willing to cut it in two and treat the farmer of the West the same as you have treated the farmer of the South who raises rice. There may be reasons-but I have not heard them given here-why you should take all the tariff off the farmer who produces wheat and only take half of the tariff off the farmer who produces rice and still leave the farmer who produces rice with a higher tariff, after you have lowered it on his rice, than the wheat farmer had on his wheat before you began your reduction.

Mr. WILLIAMS. Mr. President-

Mr. NORRIS. I am not quite through. I have been reminded of something else which I desire to say. One of the great questions involved in the cost of living, greater, I think, than the tariff, is the question of transportation. The Senator from Idaho told us yesterday of a man who raised potatoes, who put a postal card into every sack, saying that he had sold the sack of potatoes for 55 cents a bushel, and asking the purchaser to let him know on the inclosed card what he had paid. The word came back from quite a large number that they paid from a dollar and a half to two dollars and a half a sack for the potatoes, showing that between the farmer and the consumer the price was raised, in round numbers, from a dollar to a dollar and a half for the sack. The question of transportation enters into everything we eat, wear, and use; it can not be dissociated from anything that is consumed by humanity. seems to me that if we would honestly, in a nonpartisan spirit, engage in an effort to reduce the cost of transportation on all the commodities of life, we would be doing much more for the consumer than we can do by taking the tariff off the products of the farm, thus making it more unprofitable for life on the

farm and driving from the farm to the overcrowded cities mil-Hons of men who ought to be producers instead of consumers.

Mr. NELSON. Will the Senator from Nebraska allow me to make a suggestion in that connection?

Mr. NORRIS. I yield to the Senator.

Mr. NELSON. I merely want to suggest to the Senator that in the matter of transportation the burden falls upon the products of the farm, upon cereals and other crops by reason of their bulk. You can ship \$100 worth of cotton or woolen goods, and the freight on them is comparatively small; but when you ship \$160 worth of grain or wheat, for instance, or potatoes or oats. the freight is immense. The burden falls on that class of products, and hence we ought to give them every protection we can.

I thank the Senator for the suggestion. Mr. WILLIAMS. Mr. President, I think we might now have

a vote upon the pending amendment.

Mr. NORRIS. I ask for a roll call on the amendment.

Mr. GALLINGER. Mr. President, I will occupy a moment before the vote is taken, and just a moment.

It was my privilege, by voice and vote, to do what I could to defeat the so-called reciprocity agreement. It gave us something in return for opening our markets to the farm products of Canada; but I was satisfied that, notwithstanding we did get some return, the advantage was altogether with our northern neighbor. This bill is infinitely worse than was the Canadian reciprocity agreement, and so I am resolutely opposed to the proposition to remove the duty from wheat and other products of the farm.

Mr. President, I come from a section of country where agriculture has been largely discontinued and where manufacturing has taken its place. The six New England States have a population of between seven and eight millions. It was suggested this morning by the Senator from South Dakota [Mr. Crawrord] that we were consuming a barrel and a half of flour per capita. If that be so, New England, beyond a question, consumes eight or nine million barrels of flour produced in the West. We are raising very little corn and very little oats. We are de-

pendent upon the great West for those products.

Mr. President, if I were provincial, if I wanted to do what I thought would be for the best interests of my own people on this proposition, provided that the removal of the duty would decrease the price of agricultural products. I would vote for the proposition to remove the duty; but New England Senators have not voted in that way in the past, and the Republican Senators from New England are not going to vote that way during this contest on tariff legislation. The 10 New England Republican Senators will vote with the Senators from the West to protect their agricultural interests, even though we may not get as many votes in return as we think we ought to get to protect our manufacturing interests.

I rose, Mr. President, simply to say that New England Senators take a national view of this tariff question, and they are not going to discriminate against the products of the West, even though they might derive some little benefit from voting for the

Democratic tariff bill.

Mr. SMITH of Georgia. Mr. President, I desire to relieve somewhat the apparent distress of my friend from South Dakota [Mr. Crawford] and also my friend from North Dakota [Mr. Growna]. I sent this morning to the office of the Secretary of the Senate to obtain a paper with the prices of commodities, to see what the relative prices of wheat were in Minneapolis and in Winnipeg. I want to give the Senators the pleasing information that in Winnipeg No. 1 northern is selling at 95½ cents and at Minneapolis at 89½ cents per bushel, and No. 2 in Winnipeg is selling at 93½ and in Minneapolis at 87½ cents per bushel.

I have also a slip of a week ago, quoting the market prices, which showed only No. 2, and it gives No. 2 at Winnipeg at 93

cents a bushel and at Minneapolis at 871.

Mr. CRAWFORD. The same grade of wheat?

Mr. SMITH of Georgia. The same grade, No. 2. Furthermore, I wish to read to my friend a comforting assurance from one of the Republican papers of Dakota known as Sheldon's Progress. It is headed:

THAT TARIFF AGAIN?

Yesterday No. 1 northern wheat sold at Winnipeg for 96 cents, at Minneapolis for 88 cents, at Duluth for 87 cents, and at Chicago for 91 cents. Would we suffer from the importation of Canadian wheat, or would we not?

Furthermore, I desire to read from another Republican paper of North Dakota upon the subject of wheat. It is from the Fargo Forum. I understand it is one of the leading Republican papers of the State. I shall not read that portion of the editorial which comments upon the speech of my friend the Senator from North Dakota, but I shall read a portion of it which

refers to the relative prices of wheat in Winnipeg and in Minneapolis.

It first gives the quotations of the day previous in Winnipeg and Minneapolis, which it states "wheat cash close, No. 1 northern, at Winnipeg, 95 cents; wheat cash close, No. 1 northern, Minneapolis, 87 to 88½ cents." It further states:

And the North Dakota farmer knows that Winnipeg prices have been higher than North Dakota prices during the 1912 crop, when it was harvested. If the North Dakota farmer has any competition to fear in selling his wheat or any other crop, it is from the Canadian northwest; and the Canada farmer, selling in the open market, has been obtaining higher prices than the American with his protected market.

As we have already passed over corn, I wish to call attention to a few facts applicable to this great commodity. For the past five years the United States has produced over 75 per cent of the world's supply of corn. The balance of the world has produced less than 25 per cent of the world's supply of corn. we produce three-fourths of the world's supply of corn against all the balance of the world, how is it possible for that other one-fourth to come here and compete with our three-fourths? If we turn to the prices of corn, we find that corn has sold cheaper in the United States, year by year, for the past 20 years, than it has in any other part of the world.

If corn is selling cheaper here than anywhere else, if we are exporting it and supplying the markets of the world, then when streams run uphill their corn will come over and compete with

But let us consider the enormous value of our corn crop. In 1910 our corn crop was worth \$1,652,822,000—the greatest of all the farmer's crops, by far. Next to it came cotton, but the

value of the corn crop was twice the value of the cotton crop.

Mr. CRAWFORD. Mr. President, if the Senator will permit me, I have heard no contention here that we should have a tariff on corn, any more than we should have a tariff on cotton. Corn is one of the grains on which this discussion has proceeded, as barley and rye and flax and wheat and I think oats are involved in it. But I have heard no contention that there should be a tariff on corn.

Mr. SMITH of Georgia. But I brought corn into the discussion, and I have brought it in because it is the farmer's greatest product, and because it is not and could not be helped by a protective tariff. The protective tariff has taxed everything which the corn producer has had to buy, and it can not be even pre-tended that it gave him a penny in return. That is why I have called attention to corn. It is dutiable now.

Why has the duty been kept upon corn, unless it was through the generosity of the Senator from New Hampshire and other Senators who represented the protected industries, who were willing to leave on corn a duty that could not add a penny to its value, while the corn grower was helping them retain duties on everything the corn grower bought?

If you take the price of wheat for the past 20 years, you will find that the price in Canada has averaged about the same as

the price in the United States.

I pass now to the next great crop of the farmer-oats.

If you take the price of oats for the past 20 years and compare the Canadian and the American prices, you will find that sometimes one was higher and sometimes the other. Usually, however, the American price ranged higher, but in no year did the American price average more than 6 cents a bushel higher than the Canadian price. So the duty of 6 cents placed upon oats by this bill, according to the experience of the past 20 years, if the object is to compensate for difference in price, will be ample compensation.

I shall not stop to speak of cotton. We produce \$850,000,000 worth of cotton. Of course the cotton grower has no protection. We do not ask it for him. It is true that \$20,000,000 of cotton came in from foreign countries last year. It is true that our long-staple cotton in Georgia has for its great competitor the Egyptian cotton. But we say to the American cotton grower, "The people must be clothed with cotton goods, and you ought not to ask to reach your hands into the pockets of the people who are to be clothed with your product and seek a higher price for it by an arbitrary standard fixed by statute."

Our oats crop amounted to \$480,000,000, and when we take corn, wheat, cotton, and oats we have \$3,750,000,000 of the

farmer's products.

The Senators are disturbed about this bill injuring the farmer. It can not lessen the market price of any of the prod-

ucts which yield this \$3,750,000,000 to the farmers.

I understood the Senator from Wisconsin [Mr. LA FOLLETTE] to concede that a duty of 15 cents a bushel on barley about equaled the difference in price, or the difference in the cost of production, as I think he put it.

Mr. WILLIAMS. He said it exceeded it, and gave a protec-

Mr. SMITH of Georgia. It exceeded it; so the barley grower is not hurt.

A duty of \$2 a ton is left on hay. The hay raiser is not hurt; and the great bulk of the hay in this country is used by the farmer himself.

Take cattle: Being the greatest corn-growing country in the world, and with a capacity to increase our production that scarcely has a limit, what better can be done for the farmer than to let the young cattle from adjoining countries come here, where, at our crib, we can feed and fatten them, and double their value, and furnish immediate use for our corn, and add at least 50 per cent to its selling price by utilizing it upon cattle? It is in the interest of the farmer to have free cattle. It will put dollars and cents into his pocket. Then where is the provision in this bill, as we offer it, that is to hurt the farmer?

There is not a Senator upon this floor who feels a deeper in-

terest in agriculture than I do.

Mr. GRONNA. Mr. President—
The VICE PRESIDENT, Does the Senator from Georgia yield to the Senator from North Dakota?

Mr. SMITH of Georgia, Yes.

Mr. GRONNA. In speaking of cattle, it developed in the debate the other day, and I believe it was agreed to by both sides of the Chamber-at least, it was agreed to by the Senator from Indiana [Mr. Shively]-that the importation price of cattle which I gave, which is the one given in the Handbook, is about \$14.20 per head. That figure refers to stockers. Twenty per cent ad valorem duty would be about \$2.80, which the farmer would have to pay. It was agreed by the same Senator that the export price of cattle was \$80. That would be \$16, at the rate of 20 per cent. The Senator from Indiana made the remark that it was a profitable business, which is true, and the difference in the transaction would be \$16 less \$2.80, or more than \$13 profit. So I can not understand the way the calculation is made by the Senator from Georgia.

Mr. SMITH of Georgia. I made no calculation upon cattle. I did not figure it out at all. But I do say that corn put into fattening cattle pays, if intelligently fed, that we have the great corn supply of the world, and that young cattle brought over here and fattened by the farmer will pay the farmer, so that free cattle can not hurt the farmer. I voted for free cattle be-

cause I believed it would help him.

I have quite decided views about the importance of the farmer to the country. I do not believe any class of our citizens should be encouraged more. I do not believe it is possible to develop a great citizenship without a great farming class. I believe the tariff system under which they have lived has reached into the pockets of the farmers and has taken from them their hard-Without stopping to make the calculation, it is earned money. a safe proposition that the farmers of this country for the past 20 years have contributed as much as \$500,000,000 a year to the protected industries of this country by reason of the protective tariff.

Mr. SMOOT. Mr. President-

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Utah?

Mr. SMITH of Georgia. Yes.

SMOOT. The Senator does not want us to understand that Canada is going to ship her cattle into the United States to eat our corn, does he?

Mr. SMITH of Georgia. I do not know whether she will

Mr. SMOOT. I know that she will not, Mr. President. I know that the fattest cattle-

Mr. SMITH of Georgia. One moment, Mr. President. I will yield to the Senator for a question, but not for a speech. Mr. SMOOT. No; I am not going to make a speech.

Mr. SMITH of Georgia. But the Senator was going on to tell me that he knew Canada would not ship her cattle here to be fed. If that is the question he wishes to ask me, I will answer it. If he wishes to ask me another question, I yield to him, but not for discussion.

Mr. SMOOT. Then the Senator simply says that he does not know whether Canada would ship her cattle in here to eat our corn and allow us to fatten her cattle or not? He says he

does not know as to that?

Mr. SMITH of Georgia. What I say is that if making cattle free has any effect at all upon the farmer it will cause cattle to be shipped into the United States; and if our farmer can buy the young cattle of Mexico and the young cattle of Canada and feed them our splendid supply of corn, it will pay the farmer. What will happen definitely with reference to shipments we can not tell; I have not stated. But I do insist that to make cattle free is in the interest of the farmer, and it will pay him to the same extent that it has any effect at all upon shipments.

Mr. President, what do you find if you study the product of the farmer item by item, which is the only way to consider the effect on him of the Payne-Aldrich bill, or the Dingley bill, or the McKinley bill, or the tariff bills that have been in force for half a century? If you want to know how they are to affect the farmer, you must not generalize about it. You must take what the farmer produces and sit down and figure that product. It is a dollar-and-cent calculation.

If you study the corn grower, you can see a duty does not help him. If it is wheat, I have shown that it does not help him. If it is oats, we have left a duty of 6 cents a bushel upon oats. If it is hay, we have left a duty of \$2 a ton on it. If it is eggs, we have made them free. So far as eggs are concerned, they are not good if kept very long or shipped very far unless they are handled in refrigerator cars; and then they are not fit to eat. The really good egg is the egg that is sold close to home.

If you consider the product of the farmer and figure it as a business proposition, you will see that it is not generosity for Senators representing sections dominated by protected industries to vote for a little tax on farm products. It will not pay the farmer anything. It has not paid the farmer anything. It is simply an effort to induce his approval of the protective tariff, which takes his money and gives it to those from whom he buys.

I am glad this bill cuts off the duty on the things the farmer must buy. I am glad it makes his agricultural implements free. I am glad it makes the cheap blanket free. I am glad it has cut down cotton goods to a little over 13 per cent. I am glad it has taken 60 per cent off woolen manufactured goods, that it has taken 35 per cent off cotton manufactured goods, and has made free nearly everything else the farmer has to buy.

I rejoice also for him in the reduction of 50 per cent off of linen and flax. I think the time has come when something should be done for the farmer. I think he has carried the burden for 50 years. I think that the reason to-day why men have been leaving the farm and going into the industries is that our high protective tariff has fattened the industries at the expense of the farm.

Mr. GALLINGER. Mr. President-

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from New Hampshire?

Mr. SMITH of Georgia. Yes, sir. Mr. GALLINGER. My colleague [Mr. Hollis], as well as other Senators, have declaimed against the protected industries on the ground that they are paying starvation wages. Why should the farmer or the farmer's boy ever leave the farm and go to the manufacturing centers if that is true?

Mr. SMITH of Georgia. Even those wages are larger than the wages on the farm as a rule. Yet the bulk of the profits have not gone to the wage earners in the industry. They have gone to the owners. I do not speak particularly of New Hampshire. I had in mind particularly just then the figures of the Steel Trust; \$1,400,000,000 of stock and less than \$400,000,000 of investment; over a billion dollars of watered stock to oppress the people of this country and to increase the charges for the great base of industrial progress, to burden the manufacturers, as well as the railroads and all classes of people.

But I did not intend to enter into a discussion upon any such lines as this. I only wished to go far enough to enter my protest against the suggestion that this bill hurts the farmer, and to call attention to particular items that any man may see for himself that it helps the farmer by studying its effect on those things which he raises on his farm. I admit that the reduction on the things that he buys has not gone as far as I want it to go. I am perfectly frank about that. But our industries have purchased their machinery in markets that have added 50 per cent in many instances to a fair price for the machinery. have cut that one-half. I hope it will be cut again before a great while. I hope that we will really bring the entire tariff to a revenue basis in the course of time. But I think we have gone as far as we could in this bill now, and I believe the country will prosper under it.

Mr. GALLINGER. Mr. President-

The VICE PRESIDENT. Does the Senator from Georgia yield further to the Senator from New Hampshire?

Mr. SMITH of Georgia. Yes, sir.
Mr. GALLINGER. If the Senator will permit me, I have
been wanting to ask some Senator during this debate what he means by a tariff for revenue only. Does the Senator mean that if we could raise all our revenue by internal-revenue taxation, by an income tax, and means of that kind, he would wipe out entirely

Mr. SMITH of Georgia. No.

Mr. GALLINGER. The duty upon imports?

Mr. SMITH of Georgia. I answer the Senator, I mean a tariff levied where the object of levying it is to raise revenue and nothing else. I will say candidly to the Senator that in some of these duties we have left we have recognized existing conditions. I speak for my own mental operation in approving them. I have recognized existing conditions. I have felt that we could not afford to go as far as I would like to see the law go, lest serious injury would affect those industries in view of the position they have occupied in the past.

Mr. GALLINGER. Then, Mr. President, the Senator says he would wipe out all taxation that was protective to the industries. So the Senator would put all manufacturing industries upon an equal footing with the manufacturing industries of

Europe and Asia.

Mr. SMITH of Georgia. The Senator has not quoted me exactly.

Mr. GALLINGER. I meant to.

Mr. SMITH of Georgia. I know that. I said I would put them on a revenue basis. You could not levy a tax on a commodity produced here for revenue purposes only that might not bring some incidental protection. You could not levy a tax here the sole object of which was revenue on certain classes of goods that would not in a measure incidentally produce protection. But what I mean is this: I hope to see the time come when our industries, being reestablished with machinery that was not taxed, standing upon a basis of development as an incident to freedom from tax for those things they are called upon to buy, reaching out into the markets of the world with their products, will not seek simply to swap dollars with their fellows, but with a broadened trade, which I believe the capacity of our people makes possible, fully equal their profits now earned from their fellow citizens by their larger sales in all markets of the world.

Mr. GALLINGER. If the Senator will permit me, I join the Senator in that aspiration. But under existing conditions it is an iridescent dream. I wish to suggest to the Senator from Georgia, who is always fair in debate and courteous, that unless the duties placed upon imports are sufficient to at least equalize the difference in cost at home and abroad, a duty less than that is of no earthly account whatever, and might as well be entirely abolished. We might as well go absolutely to free trade as to exact an import duty that does not protect us so far as equaliz-

ing the cost of production is concerned.

Mr. WILLIAMS. The Senator means of no earthly account as protection?

Mr. GALLINGER. Of no earthly account as protection.

Mr. SMITH of Georgia. Mr. President, 25 years ago if I had suggested to the men producing cotton yarn under No. 20's that the tax on cotton yarn should be reduced to 5 per cent below 10's and 7½ per cent from 9's to 19's, inclusive, they would have told me it would be impossible for them to do business; that such a hope was an iridescent dream. Yet such progress has been made by these spinners that to-day they can not for a moment suggest that they can not meet the competition from abroad in any market in the world.

I do not believe 25 years will pass before all the cotton industries of the United States, growing and developing just as the lower grades have grown and developed, will be able to produce their goods on a revenue tariff of 10 per cent, and be able to enter the markets of the world as well as to supply their fellow citizens at a lower price. If not many years ago we had suggested free pig iron and free steel billets, the friends of these industries would have told us, "You are going to destroy us." Yet we now fix the market of pig iron in the United States for the world, and we can produce bar steel cheaper than it can be produced in any other part of the world.

I believe it will help industries to take them out of the hothouse. You can not take a plant out of a hothouse instantly and put it where it is exposed to the weather. You must do it

by degrees.

What I meant when I said I hoped for progress, and what I meant when I said in this bill I had voted for duties higher than those I wished, was to consider them as a hothouse plant, a plant that ought to have been out in the sunlight but has been hothoused. We have not put them out completely, but we have put them out a good part of the way, and we expect them to grow and to flourish.

I earnestly hope for the prosperity of every industry in the

United States.

Mr. GALLINGER. Do I understand the Senator to say, representing himself if not his party, that he believes the Democratic Party is to get entirely rid of tariff duties?

Mr. SMITH of Georgia. I have not undertaken to speak for

the Democratic Party at all.

Mr. GALLINGER. Speaking for the Senator himself?

Mr. SMITH of Georgia. I expressed the hope, and I have illustrated my hope by the present ability of manufacturers of low-grade cotton goods, that a few years ago would have told us they were ruined by a 5 per cent duty or a 71 per cent duty, now being able to go to the world with ease and prosperity. believe the Senator from New Hampshire would be delighted to see the day when the New England mills handling the finest fabrics, which they have only been handling for a few years and in the handling of which they are improving every day, could compete successfully in the free markets of the world. I have such confidence in our fellow citizens of New England and in their genius that I believe they will meet the occasion and eventually be able to ship their fine goods all over the

Mr. GALLINGER. I again join with the Senator in his aspiration. I am one of those who believe that free trade is the ideal condition, but unfortunately it is not susceptible of being put into practical operation. I have been wondering just how soon the Senator would get to that point and take chances that I am unwilling to take. I do not think the Senator will even please our southern friends by declaring himself in favor of

absolute free trade.

Mr. SMITH of Georgia. The Senator has declared himself

for nothing of the kind.

Mr. GALLINGER. Then I have misunderstood the Senator. The Senator hopes for it, and I thought his illustration indicated that he expected to reach it not in the distant future.

Mr. SMITH of Georgia. The Senator meant just what he said, all that he said, and no more than he said. The Senator expressed the hope that the industries engaged in producing the highest class of cotton manufactured goods might in the end, like the industries now producing the cheapest class of goods, be able to master the markets of the world. This bill expresses the Senator's view of what should be done now to a large extent, but not on every item. I could not hope to see a tariff bill that met in every item what I believe in; and if I worked out one by myself and then thought of it for 30 days longer I do not believe every item would be what I approved. But, take it as a whole, I believe in it, and I think it has gone as far as it could.

Mr. GALLINGER. What attracted my attention particularly—and the Senator is not the only Senator who has made the suggestion; my amiable colleague [Mr. Hollis] made it the other day-was that this is the first step, and that the Democratic Party intend to proceed along the same highway until they accomplish more than is accomplished in this bill, and I was wondering how rapidly our Democratic friends in-

tended to go in the direction of free trade.

Mr. SMITH of Georgia. Mr. President, it is impossible for us to tell the Senator that. I have illustrated the rapidity with which I wish to go. It would depend upon the rapidity with which certain progress is made. I believe progress will be made. I have the confidence that it will be made; but what I was seeking to press was that the bill puts dollars into the pockets of the farmers of the country. This bill takes burdens off the farmers of this country and, as I believe, the country has no greater hope than from a farm population. As I believe in developing and relying for our very best citizenship upon our farm population, I rejoice that I see in the bill service to the American farmer.

Mr. TOWNSEND and Mr. WILLIAMS addressed the Chair. Mr. WILLIAMS. Can we not have a vote now on the pending

amendment?

The VICE PRESIDENT. The Senator from Michigan.

Mr. WILLIAMS. We have debated all of to-day and half of yesterday upon one paragraph of the bill.

Mr. TOWNSEND. I shall not occupy one-half the time the Senator from Mississippi has done.

Mr. WILLIAMS. Oh, well, that does not cut much figure. Everyone knows that the Senator from Mississippi happens to be in charge of this portion of the bill, and he is therefore com-

pelled to occupy some little time.

Mr. TOWNSEND. Mr. President, I have no disposition to delay action on this amendment, and I should not say anything at this time were it not for the fact that on yesterday Senators referred to some remarks made by me in 1911, when the so-called Canadian reciprocity bill was before the Senate. It is true that I supported that bill at that time and I stated my reasons for so doing. So far as they apply to that measure and the conditions which attended it, they expressed my convic-

That bill, however, was not the same as this one, and besides I have seen some reasons why my position at that time was not the correct one as viewed by a majority of the American people.

That measure was a proposition to enter into reciprocal trade relations with Canada whereby both Nations were supposed to receive benefits. We gave up something in exchange for something received. I did not think at that time, nor do I think now, that many of the agricultural products of the United States cost much more to produce here than they cost in Canada, and believing as I did then and as I do now, in a protective tariff, which is one which measures approximately the difference in the cost of production here and abroad, I supported the measure. I did not do it, however, for the direct benefits which might grow out of the pact, but there were other things which induced my vote.

I realized that at that time Congress had passed the Payne tariff bill containing the maximum and minimum provisions, and owing to Canada's preferential rates to England that provision would be attended with peculiar difficulties of administration unless relieved by reciprocal trade relations. I also saw the mighty possibilities which lay in the boundary waters between the two countries, and I believed that these waterways could and should be improved for the mutual benefit of both Nations, so that the Atlantic seaboard could be extended to the Great Lakes, to the very heart of the Western Continent; and I felt that reciprocity might aid in hastening the consummation of this desirable result; hence my action in the matter.

But, I repeat, that measure was not this one. Under this bill our farmers as well as our manufacturers will be compelled to compete with nations in which the cost of production is admittedly much less than the cost of production in the United States, and no tariff will be imposed to equalize such conditions,

I have confidence in the intellectual integrity and honesty of the Senator from Georgia [Mr. SMITH]. I have no doubt he believes that this will be a benefit to the farmer. I certainly have no doubt that he does not wish to injure the farmer. But I can not follow his logic, because it seems to me absolutely necessary to come to the conclusion that this discrimination against the farmers of the country can not possibly result in their benefit. It must, therefore, it seems to me, result in their injury. We have a market here which has been built up under the protective system, and I make no apology for protection. I believe in it as an economic policy when applied to the United States. We have built up a social condition here, a condition of living, which is the envy of the world. Whatever Senators may say as to isolated cases where men are employed at too low wages, it is an undisputed fact that wages and conditions of living in the United States are much better, much higher, than those which obtain in any other country in the world.

Sir, it seems to me that we are forced to the inevitable conclusion that if we are to go to a competitive basis, as has been stated we shall go, then the conditions of competition must be the same in every material respect.

The Senator from Georgia [Mr. SMITH] cites cases mentioned by the junior Senator from New Hampshire [Mr. Hollis], where wages are low in some of the factories, still he admits they are higher than those paid upon the farm. To me the conclusion is inevitable that, if we are going into competition with other countries we must compete with them as to wages; if we are going to compete with them as to wages, our laborers must compete with foreign laborers as to the conditions of living. I do not believe that any thoughtful patriotic American wants to see the condition either of our farmers or our laborers worse than it is to-day.

Mr. President, I am not frightened about high prices; they do not disturb me very much. I recognize the fact that artificial prices, which are made possible by combinations between producers, ought to be remedied, but the tariff is not the

remedy; repealing the tariff will not cure that evil.

I know of no rule or policy consistent with general prosperity whereby all men can secure good prices for what they sell and obtain at low prices the things they buy. There must be a buyer for every seller. If the consumer pays a small price the producer can not receive a large one. That is inevitable.

I have said that this bill is discriminatory against the farmer and therefore I object to it. I believe in the farmer. It has been the proud boast of public men that they were born and reared upon the farm; I myself happen to have that distinguished honor. My childhood and early manhood were passed upon the farm, for which I have always been grateful. The farm is a good place to be born; it will be well to cherish and protect it.

I do not believe the farmers are being fooled, as the Senator from Mississippi [Mr. WILLIAMS] said the other day. They have not been "fooled by the Republican Party" during past years. If there is one class in this country who on the average are higher in moral and intellectual intelligence than another I believe it to be the farming class. They are not fooled; understand what is going on; they understand their relation to

the fiscal policy of this Government; and yet Senators take the floor and in spite of the bill, which is clearly understandable, state that it is not going to injure the agriculturist. They say his prices will remain as they are now, or possibly they may increase as a result of the passage of this measure. But if this bill is not going to reduce prices, if it is not going to cheapen the cost of living, why do this vain thing? Why single out the farmer and say to him that his products shall be placed upon the free list, while all other products shall have some nominal protection retained upon them? The measure would, at least, look better if the products of agriculture in the North were treated as other products are.

I am in favor of a tariff on manufactured articles where the legitimate cost of their production here is higher than it is abroad. I believe in it not only because prosperous American manufacturers are desirable to the welfare of our urban population, but to the farmer himself. The best possible industrial condition is one which exists under diversified industries, where the factory is close to the farm. Our phenomenal growth as a nation has been achieved under such conditions. Now, when we have reached a point where the policy that we have followed is of some value to the farmer, we say to him that we are going to open the market for which he has toiled and waited to the pauper-produced products of all other nations. This certainly can do him no good. He will get no benefit from it. What do the proponents of the measure hope to accomplish by placing farm products on the free list? Some say such action will not reduce the price of these products. Then why do it?

There must have been some reason why this was done. real fact is that it is expected that farm products will be cheapened and thus the cost of living will be reduced. Will this be fair to the farmer? Will it encourage agriculture? Mr. President, it is not the Republican Party that is fooling the farmer; it is this Democratic administration that is trying to fool him, but he will not be fooled. He knows. It will not convince the farmer of the justice of this bill for Senators to grow eloquent over the imaginary benefits which may come from this change in our fiscal policy, but they will learn their lesson from the actual operation of the law.

I have said this much because of the quotation from my 1911 speech by the junior Senator from Montana [Mr. Walsh]. I voted and spoke for Canadian reciprocity. However defective that measure may have been, it was but a political mistake. This bill is not only a political mistake, but it will also be an industrial one, and its disastrous results will fall heaviest upon one of our most useful, industrious, and patriotic citizens-the American farmer.

Mr. WILLIAMS. Mr. President, having listened very attentively to the confession of the Senator's sins, can we not now have a vote upon the pending amendment to this paragraph?

The VICE PRESIDENT. As the Chair remembers, there was a request for the yeas and nays on the amendment, made by the Senator from North Dakota [Mr. Gronna]. Is the request seconded?

The yeas and nays were ordered.

Mr. BRISTOW. As I understand, we are now to vote on the committee amendment to strike out the paragraph and to put wheat on the free list?

The VICE PRESIDENT. That is the question. The Secretary will call the roll.

The Secretary proceeded to call the roll.
Mr. CHILTON (when his name was called). I have a general pair with the junior Senator from Maryland [Mr. Jackson], and therefore withhold my vote.

Mr. SHEPPARD (when Mr. Culberson's name was called). My colleague [Mr. Culberson] is necessarily absent. He is paired with the Senator from Delaware [Mr. DU PONT].

Mr. BRISTOW (when Mr. CUMMINS's name was called). desire to state that the Senator from Iowa [Mr. Cummins] is necessarily absent. He is paired with the senior Senator from Nebraska [Mr. Hitchcock].

Mr. JAMES (when his name was called). I have a general pair with the junior Senator from Massachusetts [Mr. Weeks].

I transfer that pair to the junior Senator from Tennessee [Mr. Shields] and vote. I vote "yea."

I desire to state while on my feet that my colleague [Mr. Bradley] is detained from attendance here by reason of illness, but he has a general pair with the Senator from Indiana [Mr. KERN]. I ask that this announcement stand for the day.

Mr. KERN (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. Bradley], and therefore withhold my vote. If I were at liberty to vote, I should vote "yea."

Mr. GRONNA (when Mr. McCumber's name was called). wish to state that my colleague [Mr. McCumber] is necessarily absent on account of illness in his family. He is paired with cent per pound; bran and middlings, 15 of 1 cent per pound.

the senior Senator from Nevada [Mr. Newlands]. I wish this announcement to stand for the remainder of the day.

Mr. PENROSE (when Mr. OLIVER's name was called). colleague [Mr. OLIVER] is unavoidably detained from the Chamber. He has a general pair with the senior Senator from Oregon [Mr. CHAMBERLAIN].

Mr. REED (when his name was called). I have a pair with the Senator from Michigan [Mr. SMITH], and therefore with-

Mr. TOWNSEND (when the name of Mr. Smith of Michigan was called). My colleague [Mr. SMITH of Michigan], who is paired with the junior Senator from Missouri [Mr. Reed], is unavoidably detained from the Senate. If my colleague were present, he would vote "nay" on this amendment.

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from New York [Mr. Root].

I transfer that pair to the Senator from Oklahoma [Mr. Gore] and will vote. I vote "yea."

Mr. WARREN (when his name was called). I have a pair with the senior Senator from Florida [Mr. Fletcher]. I transfer that pair so that the Senator from Florida may stand paired with the Senator from Maine [Mr. Burleigh], and I will vote. I vote "nay."

The roll call was concluded.

Mr. SMOOT. I desire to announce that the junior Senator from Wisconsin [Mr. Stephenson] and the senior Senator from Delaware [Mr. DU PONT] are unavoidably detained from the

Senate. I will allow this announcement to stand for the day.

Mr. CHAMBERLAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence I

withhold my vote.

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Oklahoma [Mr. Owen] and will vote. I vote "yea."

Mr. FLETCHER. I inquire if the Senator from Wyoming [Mr. Warren] has voted?

Mr. WARREN] has voted?

Mr. WARREN. I will say to the Senator from Florida that I have transferred my pair with him to the Senator from Maine [Mr. Burleigh], and I have voted. If the Senator wishes to vote, of course I will withdraw the transfer.

Mr. FLETCHER. If the Senator has voted, then I will vote. I vote "yea."

Mr. SMITH of Maryland. The Senator from Delaware [Mr. SAULSBURY] is unavoidably absent. He is paired with the Sen-

ator from Rhode Island [Mr. Colt].
Mr. GALLINGER. I have been requested to announce that the Senator from Rhode Island [Mr. Colt] is paired with the Senator from Delaware [Mr. SAULSBURY] and that the Senator from West Virginia [Mr. Goff] is paired with the Senator from Alabama [Mr. Bankhead]. I will also announce that the Senator from Wisconsin [Mr. Stephenson], the Senator from Maine [Mr. Burleigh], the Senator from California [Mr. Works], and the Senator from New Mexico [Mr. Fall] are absent and unpaired.

The result was announced—yeas 37, nays 32, as follows:

1184	YE	AS-37.	
Ashurst Bacon Bryan Clarke, Ark. Fletcher Hollis Hughes James Johnson Lane	Lea Lewis Martine, N. J. Myers O'Gorman Overman Pittman Pomerene Reed	Robinson Shafroth Sheppard Shively Simmons Smith, Arlz. Smith, Ga. Smith, Md. Smith, S. C. Stone	Swanson Thomas Thompson Tillman Vardaman Walsh Williams
	NA	YS-32.	
Borah Brady Brandegee Bristow Burton Catron Clapp Clark, Wyo.	Crawford Dillingham Gallinger Gronna Jones Kenyon La Follette Lippitt	Lodge McLean Nelson Norris Page Penrose Perkins Poindexter	Ransdell Sherman Smoot Sterling Sutherland Thornton Townsend Warren
		OTING-26.	
Bankhead Bradley Burleigh Chamberlain Chilton Colt Culberson	Cummins du Pont Fall Goff Gore Hitchcock Jackson	Kern McCumber Newlands Oliver Owen Root Saulsbury	Shields Smith, Mich. Stephenson Weeks Works

So the amendment of the committee was agreed to.

Mr. GRONNA. Mr. President, yesterday I asked the consent of the Senate to modify the amendment I offered in accordance with the amendment which I now send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The Secretary. On page 56, after line 17, it is proposed to insert as a new paragraph the following;

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from North Dakota.

Mr. NELSON. I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). I again announce my pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence, I withhold my vote. If permitted to vote, I should vote "nay."

Mr. JAMES (when his name was called). I transfer the pair I have with the Senator from Massachusetts [Mr. Weeks] to the Senator from Tennessee [Mr. Shields] and will vote. I vote "nay."

Mr. KERN (when his name was called). On account of my pair with the Senator from Kentucky [Mr. Bradley] I with-

hold my vote.

Mr. TOWNSEND (when the name of Mr. SMITH of Michigan was called). I desire to make the same announcement as I did a moment ago as to the absence of my colleague the senior Senator from Michigan [Mr. SMITH]. I ask that this announcement stand for the remainder of the day.

Mr. THOMAS (when his name was called). I again transfer my pair with the senior Senator from New York [Mr. Root] to the Senator from Oklahoma [Mr. Gore] and vote. I vote

"nav."

The roll call was concluded.

Mr. CHAMBERLAIN. I transfer my pair with the Senator from Pennsylvania [Mr. OLIVER] to the Senator from South Carolina [Mr. TILLMAN] and vote. I vote "nay."

Mr. CHILTON. I desire to announce my pair as on the

previous vote, and withhold my vote.

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Oklahoma [Mr. Owen] and will vote. I vote "nay."

Mr. CLARKE of Arkansas (after having voted in the negative). I desire to inquire whether or not the junior Senator from Utah [Mr. Sutherland] has voted?

The VICE PRESIDENT. The Chair is informed that that Senator has not voted.

Mr. CLARKE of Arkansas. Then I withdraw my vote.

Mr. BRISTOW. I am requested by the senior Senator from Iowa [Mr. Cummins] to state that he is necessarily absent and is paired with the senior Senator from Nebraska [Mr. HITCH-

The result was announced—yeas 31, nays 36, as follows:

THE PESHIE	YE	AS-31.	00, 00 20110110
Borah Brady Brandegee Bristow Burton Catron Clapp Clark, Wyo.	Crawford Dillingham Gallinger Gronna Jones Kenyon La Follette Lippitt	Lodge McLean Nelson Norris Page Penrose Perkins Poindexter VS—36.	Ransdell Sherman Smoot Sterling Thornton Townsend Warren
Ashurst Bacon Bryan Chamberlain Fletcher Hollis Hughes James Johnson	Lane Lea Lewis Martin, Va. Martine, N. J. Myers O'Gorman Overman Pittman	Pomerene Reed Robinson Shafroth Sheppard Shively Simmons Smith, Ariz. Smith, Ga.	Smith, Md. Smith, S. C. Stone Swanson Thomas Thompson Vardaman Walsh Williams
	NOT V	OTING-28.	
Bankhead Bradley Burleigh Chilton Clarke, Ark. Colt Culberson	Cummins du Pont Fall Goff Gore Hitchcock Jackson	Kern McCumber Newlands Oliver Owen Root Saulsbury	Shields Smith, Mich. Stephenson Sutherland Tillman Weeks Works

So Mr. Gronna's amendment was rejected.

The reading of the bill was resumed, and the Secretary read paragraph 199, on page 56, as follows:

199. Biscuits, bread, wafers, cakes, and other baked articles, and puddings, by whatever name known, containing chocolate, nuts, fruit, or confectionery of any kind, and without regard to the component material of chief value, 25 per cent ad valorem.

Mr. PENROSE. Mr. President, I do not intend to take up more than a minute of the time of the Senate in regard to this paragraph. I only wish to call the attention of the Senate to some information which I have here from a person in the business of manufacturing biscuits. He states that skilled bakers in foreign countries receive, on an average, less than \$7.50 per week, and that a great many bakers are working at a wage of from five to six dollars per week. This communication goes on to declare that the good bakers in this country receive from fifteen to thirty dollars a week, and that this enormous difference in the wages would impose a severe handi-

cap upon any American manufacturer should this reduction in the tariff come about. The result, it is declared, on account of this great difference in wages, would be a very large reduction in the number of persons employed, or else a very large reduction in their present rate of wages.

Perhaps the Senator from Mississippi views this statement with indifference, or perhaps he has some information which will contradict the assurance made in this communication.

Mr. WILLIAMS. I view it with indifference and regard it as irrelevant, both.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, in paragraph 200, page 56, line 24, after the word "substitutes," to strike out "3" and insert "2½," so as to make the paragraph

200. Butter and butter substitutes, 21 cents per pound.

Mr. DILLINGHAM. Mr. President, I should be glad if the Senator in charge of this part of the bill would let that paragraph go over until to-morrow morning. I propose to submit some remarks generally upon the bill, and especially upon this paragraph of it.

Mr. WILLIAMS. I agree to that.

The VICE PRESIDENT. Paragraph 200 will be passed over.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, in paragraph 201, page 57, line 1, after the word "therefor," to strike out "20 per cent ad valorem" and insert "2½ cents per pound," so as to make the paragraph read:

201. Cheese and substitutes therefor, 21 cents per pound.

Mr. GRONNA. Mr. President, I do not wish to take the time of the Senate further than to offer an amendment to the amendment of the committee and ask to have a statement printed in connection with it.

The VICE PRESIDENT. If there be no objection, the statement will be printed.

The matter referred to is as follows:

CHEESE.

Canadian rate: 3 cents per pound.
Payne rate: 6 cents per pound.

The VICE PRESIDENT. The amendment offered by the Senator from North Dakota will be stated.

The Secretary. In paragraph 201, line 2, in the committee amendment, it is proposed to strike out " $2\frac{1}{2}$ " and insert "3," so that, if amended, it will read:

Cheese and substitutes therefor, 3 cents per pound.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from North Dakota to the amendment of the committee.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question now recurs upon the amendment of the committee.

The amendment of the committee was agreed to.

The reading of the bill was resumed, and the Secretary proceeded to read paragraph 202, on page 57.

Mr. GRONNA. Mr. President, before we consider paragraph 202 I wish to offer an amendment, which I send to the desk.

The VICE PRESIDENT. The amendment will be stated. The SECRETARY. On page 57, after line 2, it is proposed to insert a new paragraph, to read as follows:

2011. Milk, fresh, 2 cents per gallon; cream, 5 cents per gallon.

Mr. GRONNA. Mr. President, I shall not take up any of the time of the Senate in discussing this paragraph, but will simply state that I do not believe we should place these articles on the free list. In order not to delay the Senate, however, I will simply ask to have a statement printed in the RECORD.

The VICE PRESIDENT. If there be no objection, that order

will be made.

The matter referred to is as follows:

MILE AND CREAM.

Canadian rates: Condensed milk, 32 cents per pound, including weight of package; milk foods not otherwise provided for, 25 per cent ad valorem.

l valorem.

Payne rates: Milk, 2 cents per gallon; cream, 5 cents per gallon, Dingley rate: Milk, 2 cents per gallon.

Wilson rates: Milk, free; cream, 10 per cent ad valorem.

Imports, 1912.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from North Dakota.

The amendment was rejected.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, in paragraph 203, page 57, line 5, after the word "Beets," to strike out "10 per cent ad valorem; sugar beets" and insert "of all kinds," so as to make the paragraph read:

203. Beets of all kinds, 5 per cent ad valorem.

The VICE PRESIDENT. The question is on the amendment of the committee.

The amendment was agreed to.

The reading of the bill was resumed, and the Secretary read paragraph 204, page 57, as follows:

204. Beans, peas, prepared or preserved, or contained in tins, jars, bottles, or similar packages, including the weight of immediate coverings, 1 cent per pound; mushrooms and truffles, 2½ cents per pound.

Mr. WILLIAMS. Mr. President, I ask that that paragraph may go back to the committee, because I want to suggest to the committee, after the word "truffles," the insertion of the words "including the weight of immediate coverings," which are omitted from the bill as it stands.

The VICE PRESIDENT. If there be no objection, the para-

graph will go back to the committee.

Mr. SMOOT. Why not make it now? Mr. WILLIAMS. Mr. President, it has been suggested that I make the motion now to put in those words. I therefore move that, after the word "truffles," in line 10, the words "including the weight of immediate coverings" be inserted.

The VICE PRESIDENT. The amendment will be stated. The Secretary. In paragraph 204, after the word "truffles" and the comma, in line 10, it is proposed to insert:

Including the weight of immediate coverings.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, in paragraph 208, page 57, line 21, after the numerals "208," to paragraph 208, page 57, line 21, after the numerals "208," to strike out "Eggs not specially provided for in this section, 2 cents per dozen; eggs," and to insert "Eggs"; and, on page 58, line 1, after the word "containers," to strike out "2½" and insert "2"; and, in the same line, after the word "pound." to insert a semicolon and the words "frozen or liquid egg albumen, 1 cent per pound," so as to make the paragraph read:

208. Eggs frozen or otherwise prepared or preserved in tins or other packages, not specially provided for in this section, including the weight of the immediate coverings or containers, 2 cents per pound; frozen or liquid egg albumen, 1 cent per pound.

Mr. GRONNA. Mr. President, I wish to offer an amendment

to this paragraph.

The egg industry is a tremendous industry. It was protected by a duty of 5 cents per dozen in the present law. It was protected by a duty of 5 cents per dozen under the Dingley law and 3 cents per dozen under the Wilson law. Canada has a duty of 3 cents per dozen on eggs. I am offering an amendment to provide a duty of 3 cents.

I do not wish to take up the time of the Senate further. Mr. WILLIAMS. But, Mr. President, if I am not mistaken, the Senator offered that amendment just a few minutes ago, and it was voted down.

Mr. GRONNA. No. I will say to the Senator this is on eggs. Mr. WILLIAMS. I thought the Senator had offered an amendment on eggs.

Mr. GRONNA. No.

Mr. WILLIAMS. Very well.
Mr. GALLINGER. I will ask the Senator from North Dakota if he can give the production of eggs in this country? I remember having looked it up in some former debate, and I found it was enormous

Mr. GRONNA. Yes; I will say to the Senator from New Hampshire that the production of eggs in 1912 was 1,700,000,000 dozen. I have here a statement of the number of dozen produced in the different States. The imports of eggs for 1912 were 1,098,703 dozen, of the value of \$150,986. They brought in a revenue of \$54,935. The exports were more than 15,000,000 dozen, of a value of \$3,395,952. But I do not want to delay the Senate. I simply ask to have this statement printed in the

The VICE PRESIDENT. In the absence of objection, that order will be made.

The matter referred to is as follows:

Canadian rate: 3 cents per dozen, Payne rate: 5 cents per dozen, Dingley rate: 5 cents per dozen, Wilson rate: 3 cents per dozen.

Imports, 1912: 1,098.703 dozen; value, \$150.986; revenue, \$54,935.
 Exports, 1912: 15,405,609 dozen; value, \$3,395,952.
 Production of eggs in 1912: 1,700,000,000 dozen.

Mr. WADDIN IV. II. G. I. II. I. A.I	

Mr. WARREN. Has the Senator the value of the total pro-

duction of eggs in the United States?

Mr. GRONNA. I did not calculate that, but it exceeds \$400,000,000.

I offer an amendment, which I send to the desk.

Mr. BRISTOW. As I understand the Senator's amendment, it provides for a duty of 3 cents a dozen instead of 5 cents a

dozen, the present duty?

Mr. GRONNA. Yes; it is to impose a duty of 3 cents a dozen, which is a reduction of 2 cents from the present law.

Mr. LODGE. Of course if the first part of the committee amendment is adopted, that will strike out "eggs" entirely, for the rest of the paragraph provides only for frozen and preserved eggs

Mr. GRONNA. Yes; the Senate bill places eggs on the free list. Mr. LODGE. The House bill gave them a duty of 2 cents a

Mr. GRONNA. Yes; the House bill gave them a duty of 2 cents a dozen.

Mr. LODGE. Then the amendment offered by the Senator from North Dakota is to the House paragraph, affecting it before it is stricken out.

Mr. WILLIAMS. Mr. President, in this case I think the Senate amendment should come first; should it not? Should

we not perfect the paragraph first?

The VICE PRESIDENT. The Chair thinks not in this case. The amendment of the Senator from North Dakota is really an amendment to the committee amendment.

Mr. WILLIAMS. All right; perhaps the Chair is right.

The VICE PRESIDENT. The Secretary will state the amendment of the Senator from North Dakota to the amendment of the committee.

The Secretary. In lieu of so much of the committee amendment as strikes out down to "egg," in line 22, it is proposed to insert: "Eggs not specially provided for in this section, 3 cents per dozen."

Mr. SHIVELY. I simply want to note that the exports for the fiscal year ended June 30, 1913, were 20,409,390 dozen, as against imports of 1,367,223 dozen, or the exports as compared with the imports were in the ratio of 15 to 1.

Mr. GRONNA. Mr. President, I also gave the exports and

imports of \$205,832, or \$21 worth of exports to \$1 worth of imports.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from North Dakota to the amendment of the committee

Mr. CRAWFORD and Mr. WARREN called for the yeas and nays, and they were ordered.

The Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). I again announce my pair with the junior Senator from Pennsylvania [Mr. OLIVER], which I transfer to the senior Senator from South Carolina [Mr. TILLMAN], and vote "nay."

Mr. CHILTON (when his name was called). I announce my pair with the junior Senator from Maryland [Mr. Jackson] I announce my

and withhold my vote.

Mr. JAMES (when his name was called). I again transfer the pair I have with the Senator from Massachusetts [Mr. Weeks] to the Senator from Tennessee [Mr. Shields] and I vote "nay."

Mr. KERN (when his name was called). In the absence of the Senator from Kentucky [Mr. Bradley], I withhold my vote. Mr. NELSON (when his name was called). I have a general

pair with the senior Senator from Georgia [Mr. BACON]. believe he has not voted. I transfer that pair to the junior Senator from Wisconsin [Mr. Stephenson] and vote. I vote

Mr. REED (when his name was called). I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Oklahoma [Mr. Owen] and vote. I vote "nay."

Mr. THOMAS (when his name was called). I again transfer my pair with the Senator from New York [Mr. Root] to the Senator from Oklahoma [Mr. Gore] and vote "nay."

The roll call was concluded.

Mr. CHAMBERLAIN (after having voted in the negative). I withdraw my vote, because the senior Senator from South Carolina [Mr. TILLMAN] has entered the Chamber. I will let my pair with the Senator from Pennsylvania [Mr. OLIVER] stand.

The result was announced—yeas 28, nays 35, as follows:

	YE	AS—28.	
Brady Brandegee Bristow Burton Catron Clark, Wyo, Crawford	Dillingham Gallinger Gronna Jones Kenyon La Follette Lippitt	Lodge McLean Nelson Norris Page Penrose Perkins	Poindexter Sherman Smoot Sterling Thornton Townsend Warren

Bacon Bankhead Borah Bradley Burleigh Chamberlain Chilton Clapp	Clarke, Ark. Colt Culberson Cummins du Pont Fall Goff Gore	Hitchcock Jackson Kern McCumber Newlands Oliver Owen Ransdell	Root Saulsbury Shields Smith, Mich. Stephenson Sutherland Weeks Works

So Mr. Gronna's amendment to the amendment of the committee was rejected.

The VICE PRESIDENT. The question recurs on agreeing to the amendment proposed by the committee.

The amendment was agreed to.

Mr. KERN. I move that the Senate adjourn.

The motion was agreed to, and (at 6 o'clock and 5 minutes p. m.) the Senate adjourned until to-morrow, Friday, August 15, 1913, at 11 o'clock a. m.

SENATE.

FRIDAY, August 15, 1913.

The Senate met at 11 o'clock a. m. Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. The Journal of yesterday's proceedings was read and approved.

PETITIONS.

Mr. POINDEXTER presented a petition of sundry citizens of Seattle, Wash., praying that an investigation be made into the circumstances attending the origin, instigation, and progress of the recent riot at Seattle, Wash., which was referred

the imports for a certain year. I took my figures from the year-book. I think they are for 1912.

Mr. SHIVELY. These are the official statistics for the fiscal year 1913. The exports, in value, were \$4,301,653, as against

fornia, praying for the adoption of the proposed tariff referendum, which were referred to the Committee on Finance

Mr. WEEKS presented petitions signed by sundry citizens of the State of Massachusetts, praying for the adoption of an amendment to the Constitution extending the right of suffrage to women, which were ordered to lie on the table.

He also presented papers to accompany the bill (S. 1580) granting a pension to T. Oliver Dowd, alias Terence O'Dowd, which were referred to the Committee on Pensions.

MARY COULTER EARLE.

Mr. WILLIAMS, from the Committee to Audit and Control the Contingent Expenses of the Senate, to which was referred Senate resolution 161, submitted by Mr. Fletcher on the 14th instant, reported favorably thereon, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the Secretary of the Senate be, and he hereby is, authorized and directed to pay out of the miscellaneous items of the contingent fund of the Senate to Mary Coulter Earle, widow of Sherod L. Earle, deceased, late a messenger of the United States Senate, a sum equal to six months' salary at the rate he was receiving by law at the time of his death, said sum to be considered as including funeral expenses and all other allowances.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. THOMPSON:

A bill (S. 2996) to correct the military record of John W. Cleavenger (with accompanying paper); to the Committee on Military Affairs.

By Mr. TOWNSEND:

A bill (S. 2997) for the relief of the heirs of George C. Lull, deceased (with accompanying papers); to the Committee on

Mr. BRANDEGEE submitted the following concurrent resolution (S. Con. Res. 7), which was read and referred to the Committee on Naval Affairs:

Whereas it is necessary that the United States shall always possess an adequate Navy composed of vessels of various classes, properly proportioned in number and kind, and a personnel and equipment sufficient to maintain the same in the highest state of efficiency: Now, therefore, be it

therefore, be it

Resolved by the Senate (the House of Representatives concurring),
That the Committees of the Senate and of the House of Representatives
on Naval Affairs or any subcommittees thereof, acting jointly or
separately, are hereby directed to inquire and report to the Senate and
House of Representatives:

1. What increase is desirable in the Naval Establishment.

2. Whether it is desirable and feasible to provide a definite naval
program to extend over a series of years with respect to the construc-

program to extend over a series of years.

3. In what order the United States Navy ranks among the first eight naval powers in naval efficiency, in view of the number, type, age, armor, and armament of its ships, and the quality, skill, and discipline of its personnel. of its personnel.

4. What proportion of our naval fighting efficiency is constantly available for instant active sea service in case of emergency.

CONDITIONS IN MEXICO.

The VICE PRESIDENT. If there are no further concurrent or other resolutions, there being no resolution coming over, the morning business is closed.

Mr. SIMMONS. I ask unanimous consent that the Senate

proceed to the consideration of House bill 3321.

Mr. PENROSE. The morning business is not over, I hope. Mr. SIMMONS. The Chair announced that the morning business was closed.

Mr. PENROSE. I was engaged in conversation. Mr. SIMMONS. Of course, I do not object at all.

Mr. PENROSE. Mr. President, it has been my intention for some time to call the attention of the Senate to certain phases of the Mexican situation, but not desiring to do anything that partook of the spirit of Jingoism and with a patriotic desire not to embarrass the administration in its efforts to find a solution of the many embarrassing questions pressing in that Republic, I have heretofore refrained, and I do not intend.

Mr. SIMMONS. Mr. President—

Mr. PENROSE. I am going to offer a resolution in a minute,

if the Senator will permit me.

I do not intend this morning to go into the matter at any great length or to give to the Senate all the information which I have at hand, but the matter is rather closely brought home to me this morning by a communication from Pennsylvania reciting that the son-in-law of the lieutenant governor of the State is in hourly expectation of being executed or killed, not to mention the destruction of a large amount of property belonging to a Canadian company with headquarters in Toronto of which he is the engineer.

which I have to offer, I will ask to have the Secretary read the following from this morning's Philadelphia Inquirer.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

[From the Philadelphia Inquirer, Friday, Aug. 15, 1913.]

FEAR MEXICANS MAY SLAUGHTER PENNSYLVANIANS—LIEUT. GOV. REYNOLDS
APPEALS FOR SON-IN-LAW'S FAMILY—PRESIDENT PUBLICLY REPRIMANDS
AMBASSADOR WILSON FOR BRITISH ATTACK.

Senator OLIVER appealed to the State Department at Washington yesterday in behalf of Shirley C. Huise, son-in-law of Lieut. Gov. John M. Reynolds, of Pennsylvania, who with his wife and daughter are in danger of death in their camp at Oquilla, Mexico.

President Wilson last night publicly reprimanded Ambassador Henry Lane Wilson for his recent attack on the British foreign office.

Washington, D. C., August 14.

Shirley C. Hulse, son-in-iaw of Lieut. Gov. John M. Reynolds, of Pennsylvania, with his wife and little daughter, are in imminent danger of death in their camp at Oquilla, 100 miles south of the city of Chinashua, Mexico.

The State Department has been appealed to in an effort to rescue the Americans

The State Department has been appeared.

The Americans.

Lieut. Gov. Reynolds received these advices to-day from W. B. Fuller, general manager of the Mexican Northern Power & Irrigation Co., which is building a large dam at La Bouquilla, near Santa Rosalia.

Mr. Fuller advises Gov. Reynolds that he had just escaped into Texas on horseback by the barest possible good fortune. He was threatened with execution by the federal forces led by Gen. Mercado.

Senators George T. OLIVER and BOIES PENROSE, of Pennsylvania, were communicated with by Lieut. Gov. Reynolds. Senator OLIVER promptly laid the matter before Secretary of State Bryan, who sent the following dispatch to the American consul at Cludad Juarez, via El Paso:
"Forward following immediately, by courier if necessary, to consul at

following dispatch to the American consult at Chinan Justez, via Ed. Paso:

"Forward following immediately, by courier if necessary, to consult at Chihuahua:

"Senator Oliver has been informed by lieutenant governor of Pennsylvania that the latter's son-in-law, Shirley C. Hulse, wife, and little daughter are in imminent danger at Pearson construction camp, Oquilia, near Rosalia, 100 miles south of Chihuahua. The company's chief engineer and general manager, W. B. Fuller, has informed the lieutenant governor that he (Fuller) has just escaped from Mexico under a threat of execution by federalists and believes Americans still in camp are likely to come under the displeasure of the federal general, Mercado. You are instructed to ascertain the welfare of Mr. Hulse and his family and of other Americans in that section, employing courier if necessary, and telegraph the department as soon as possible concerning them."

That the situation of the Hulses is critical is believed at the State Department. Lieut, Gov. Reynolds has received advices at Bedford, Pa., his home, that railroad communication between El Paso, Tex., and Chihuahua, Mexico, is broken, and that there is no way for the Americans in the camp at Oquilia to escape. It is the purpose of the State Department to make every effort to get into communication with Mr. Hulse, and Secretary Bryan has assured both of the Pennsylvania Senators that every effort will be made to insure the safety of all those menaced by the Mexicans.

Mr. Fuller, who is the chief engineer of the construction work on the dam, which entalls an expenditure of millions, has Mr. Hulse as his principal assistant. Having been menaced for days by the Mexicans, Fuller decided to fee across the border, believing that were he to remain longer he and his associates would be killed or imprisoned by orders of Gen. Mercado.

Fuller, upon his arrival at El Paso to-day told a thrilling story of his escape and of his experience before leaving the camp. He says that the climax of a series of forced loans a

senger that the dam and threatened to take the dam was interfering with the order.

Mercado's allegation was that the dam was interfering with the natural flow of the Conchos River. He also charged Fuller with assisting the rebels to secure ammunition and provisions. The company is building the dam under Federal and State charters, granted during the Diaz régime.

FORCED TO LOAN MONEY.

Fuller declares that he has been forced to pay out to rebel and Federal commanders a total sum of \$\mathbb{P}29,000\$ in enforced loans during the revolution in order to continue operations. He also declares he has been obliged to turn off 6,000 laborers on account of lack of provisions in the mining camp.

LIND HAS INSTRUCTIONS.

To callers this afternoon President Wilson indicated that reports that John Lind, special representative of the administration at Mexico City did not possess definite instructions, were erroneous. It was plainly intimated that Mr. Lind has written statements defining "certain principles" of the administration, and that these will be conveyed to Huerta through Secretary O'Shaughnessy in due time.

Despite the fact that it is admitted that Huerta is getting better control of the situation, there has been no change in the administration's policy not to recognize the present Government of Mexico. Under no circumstances will Huerta be recognized, nor will the administration countenance him as a candidate for the presidency at the elections in October.

Mr. PENROSE, Now, Mr. President, things are getting pretty close home when American citizens are molested and threatened with their lives and their property in this way. am perfectly willing to wait a few days to see the policy of the administration developed and to ascertain whether Mr. Lind's mysterious mission will have a tangible result. But after that, at any early period next week, I shall take occasion to address the Senate upon conditions in Mexico as to which I have recently been informed. I also shall at that time offer a resolu-If the Senator from North Carolina will be patient for a few moments, preliminary to the introduction of two resolutions nity of the United States and the firm intention of the Amerition which I hope will go some way toward asserting the digcan people to protect the lives and property of Americans residing in Mexico.,

In the meanwhile I desire to offer two resolutions of a preliminary character to which I can not imagine there will be any objection, and to which I would expect the chairman of the Committee on Foreign Relations to agree. The first one I ask the Secretary to read

The VICE PRESIDENT, The Secretary will read the resolution.

The Secretary read as follows:

Senate resolution 162.

Resolved, That the President be requested to inform the Senate whether William Bayard Hale, at present in the City of Mexico, is or has been employed as an agent of any executive department of the Government, and if so at what rate of compensation and under what instructions.

Mr. BACON rose. Mr. PENROSE. I yield to the Senator, if he desires. If he accepts the resolution-

Mr. BACON. No; I do not. I am going to move to refer it to the Committee on Foreign Relations.

Mr. PENROSE, Will the Senator permit me to ask him whether he has any information as to whether this gentleman is an employee of any of the executive departments?

Mr. BACON. For the same reason that I would move to refer the resolution to the committee, of course I decline to answer

the Senator.

Mr. PENROSE. Mr. President, we are rapidly reaching a point here in this matter when declining to answer will not satisfy the Senate or the American people. This gentleman has been strangely active in Mexico for a considerable period. According to the newspaper accounts he met Mr. Lind when he arrived at Vera Cruz. He conveys the impression in the City of Mexico, I am informed, that he is the official representative of President Wilson.

I have known this gentleman for a number of years. He left Ardmore, in Pennsylvania, near Philadelphia, some 13 years ago. He is supposed to be exploiting a well-known publication concern and incidentally advising the President of the United States. I consider him a most dangerous adviser, and if the administration is being governed in its conduct by the information and the advice coming from Dr. Hale, I think the sooner the tie is severed and we know where we are the better it will be for the unfortunate Americans now within the limits of the Republic of Mexico.

I suppose the resolution will lie over, unless the Senator from Georgia makes a motion, which he may be able to carry, to

refer it to the committee.

Mr. BACON. It will lie over under the rule, but at the proper time I will make the motion to refer it to the Committee on Foreign Relations.

Mr. PENROSE. I should like to have the Secretary read a brief extract showing-

Mr. BACON. Mr. President, if the resolution lies over, the Senator from Pennsylvania well understands the fact that it is not now in order for discussion.

Mr. PENROSE. I know that. I am simply indulging-Mr. BACON. I do not object to its being discussed, and, of course, the Senator will have ample opportunity to discuss it, when it is in order. The only reason why I now have any objection whatever is this: If the Senator would proceed, of course, there must be answer, and the Senator will recognize that in the present condition it is not proper that I should unduly occupy the time of the Senate in a reply. The resolution will come up in its order, and then the Senator can make his statement, and a reply will be made, if there is any.

Mr. PENROSE. I was simply asking the indulgence of the Senate, which is rarely refused to any Senator, when not abused, by unanimous consent, to make a very few brief remarks in connection with the life of a Pennsylvania constituent, and the son-in-law of the second officer of that Commonwealth, who may be killed by this time for all I know. If any declaration of firmness made this morning may halt any such villainy of

that kind, I shall not have spoken in vain.

Mr. BACON. Did I understand that the Senator wishes to

speak to this resolution?

Mr. PENROSE. I do. I do not want to speak at all, if-Mr. BACON. Of course if the Senator desires to speak I shall not myself interpose any objection.

Mr. PENROSE. I would have been through by this time if the Senator from Georgia had permitted me to go on.

Mr. BACON. I was simply stating the fact that the Senator would not simply occupy the time but naturally it would lead to discussion. I shall not make any objection to the Senator proceeding.

Mr. PENROSE. Now, if the Senate will bear with me for moment, I will ask the Secretary to read the following article about Mr. Hale. It is short. It is from the New York Times of yesterday.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

HALE BLAMED FOR MEXICAN IRRITATION—ATTITUDE OF THE ADMINISTRA-TION'S CONFIDENTIAL INVESTIGATOR HAS NOT HELPED PEACE—WAS WILSON'S MOUTHPIECE IN THE MEXICAN ESTIMATION—REPORT ON A CONVERSATION HE HAD WITH AN AID OF GEN. DIAZ.

MEXICO CITY, August 5

Americans in Mexico, as well as Mexicans, are severely criticizing the activities here of Dr. William Bayard Hale, the unofficial investigator for President Wilson, as pernicious and mischief-making in their effect. Dr. Hale's presence here, in the opinion of many, is responsible for some of the irritation which has complicated the relations between Mexico and the United States, and has made the way by no means easy for Mr. Wilson's second emissary, Mr. Lind.

As illustrative of the attitude of President Wilson's confidential investigator to Mexican affairs, the following report from an aid of Gen. Felix Diaz of a conversation with Dr. Hale has come to light here:

MEXICO, June 30, 1913.

My Dear General: In order not to overtax your attention, I will refer only to a few important data concerning the conversation I had during several hours of yesterday afternoon with Dr. W. Bayard Hale. As I told you before, this gentleman is a personal friend of President Wilson and Secretary of State Bryan, to whom he will, no doubt, submit an unofficial report concerning the political and economical situation of Mexico; but he says that the purpose of his visit is to gather data for a series of articles which he intendss to publish in American magazines.

Mexico; but he says that the purpose of his visit is to gather data for a series of articles which he intendss to publish in American magazines.

Dr. Hale is a distinguished person, of easy speech and vast learning; but I regret to inform you that I consider his influence near the American Government as very detrimental to Mexico, as he is laboring under strong prejudices, and he appears to have come to Mexico solely for the purpose of ratifying an opinion adverse to this administration, an opinion he had formed before he started.

He speaks with horror of the "assassination" of Messrs, Madero and Pino Suarez, which he classifies with the bitterest terms, and this topic, which he says "will bring about terrible consequences," excites him more than any other questions of interest, to the extent that all the reports of Ambassador Wilson are blased, and that therefore they do not deserve any consideration; and on the other hand, he admits that he has received information from the Maderos relative to the "assasination" of their relatives. He is a friend of all the enemies of Ambassador Wilson and of the slanderers of this administration.

I asked Dr. Hale what was the reason why the American Government did not recognize the Government of this country notwithstanding that England, France, and other powers had recognized it, but be was unable to give me a definite reply. Nevertheless, he gave me to understand that the death of the Maderos and Pino Suarez had greatly influenced President Wilson and his advisers against having anything to do with Gen. Huerta. He believes that the resignations of Madero and Pino Suarez were obtained by means of violence or threats against their persons, and that this is proven by their "assassination," with reference to which incident he says that he has data which has not been published to this day.

He thinks the military situation is very gloomy, and states that in his opinion the Government has only made mistakes since the removal of Gen. Mondragon, while the rebel movements are lac

a murderer"; that he believes you to be a person of calm judgment, clear understanding, and a clear conscience, and that you are inspired by true patriotism.

He asked me whether you were continuing your election work, and, having answered him in the affirmative, he asked whether I believed the elections would take place in October. He inquired as to whether you and Gen. Huerta were really friends (though he said this was very doubtful), and whether Gen. Huerta would be willing to leave the Presidency when the term for the legal holding of it expires. He is of the opinion that on account of the disturbances of the country it will be impossible to hold really general elections in October.

I infer from what Dr. Hale has told me that, in his opinion, the United States will not recognize this administration so long as Gen. Huerta is at the head of it, but that there will be no delay in recognizing it after the elections, pursuant to free suffrage, and when the new President, whoever he may be, has taken his seat.

I believe I have convinced Dr. Hale that the rebels are receiving in the north all kinds of assistance from their friends in the Southwest of the United States, and that the millions of dollars that are being spent by the United States to enforce the neutrality laws are not invested as efficiently as could be expected.

Dr. Hale is of the opinion that the greatest danger for the Government during the present disturbed conditions of the country lies in the possibility of the rebels isolating the capital by cutting railway and telegraphic communication with Vera Cruz. In this case he believes the United States would send a number of war vossels to Vera Cruz, and if the interruption would continue with the interior of the country, and the lack of news from the center should cause some concern about the fate of foreigners, marines might be landed in Vera Cruz, in order to proceed to the City of Mexico and afford them protection. He is of the opinion that it is very essential that the Government of the United

the marines have to come to Mexico they will not come for the purpose of intervention, but to protect the residents from foreign countries. This, however, would be a dangerous venture, as it might give room for international complications, which should be avoided, if possible.

Yours, very sincerely,

By whom is that signed?

Mr. BACON. By whom is that signed? Mr. PENROSE. It is not signed by anyone, because no one wants his name known who lives in Mexico, but I will furnish the name to the Senator as the chairman of the committee. When I make my statement next week to the Senate I shall read communications from American citizens without naming them, but I want to inform the Senator from Georgia that I will give him and his committee the names of all my authorities.

Mr. BACON. I do not care anything about the name. I am perfectly content that the article may be put in as an anonymous

communication.

Mr. PENROSE. But I do not intend to quote the names of American business men and have them exposed to the depredations of banditti in Mexico. The Senator from Georgia, however, shall have the names.

Mr. LODGE. This letter, as I understand, is addressed to

Gen. Felix Diaz, and is written by a Mexican.

Mr. PENROSE. Yes. Mr. LIPPITT. I understand that that is in no sense an anonymous communication.

Mr. PENROSE. It is not. It comes from a reputable journal. Mr. BACON. But it is anonymous so far as the Senate is

concerned.

Mr. PENROSE. Well, Mr. President, there will be many anonymous communications on this subject read to the Senate, because Americans are not going to make their statements here and thus expose themselves to every form of depredation in Mexico as the result of publicity in Washington; but the committee will be furnished, so far as I am concerned, with the names and addresses of everyone to whom I shall refer or from whom I shall quote. My silence shall not be as much like that of the cemetery as is that of the chairman of the Committee on Foreign Relations regarding this matter.

Mr. SIMMONS. Mr. President, I desire to inquire if this

matter is proceeding by unanimous consent?

Mr. PENROSE. If the Senator will just be patient for the reading of a telegram, I shall be through.

Mr. LODGE. The resolution is open for debate. Mr. PENROSE. I omitted, Mr. President, to have read a telegram from the lieutenant governor of Pennsylvania, received a few hours ago, and I should like to have it read by the

The VICE PRESIDENT. Is there objection?
Mr. SIMMONS. Will that finish what the Senator from Pennsylvania has to say?

Mr. PENROSE. That will close what I have to say.

The VICE PRESIDENT. The Secretary will read as re-

quested.

The Secretary read as follows:

BEDFORD, PA., August 14, 1913.

Hon. Boies Penrose, Washington, D. C .:

Hon. Boies Penrose, Washington, D. C.:

Received following telegram dated El Paso to-day from W. B. Fuller, chief engineer and general manager Mexican Northern Power Co., constructing great power dam on Conches River, Chihuahua: "Have just escaped from Mexico under threat of execution. See to-day's issue New York or Chicago American. Hulse and family are well, but now liable to come under Mercadoe's displeasure. Advise prompt action through State Department to prevent Federals hurting Americans in Boquilla." Hulse referred to is my son-in-law, principal assistant engineer, there with wife and child. Am deeply concerned for them, and hope for your best efforts in their protection.

JOHN M. REYNOLDS.

Mr. PENROSE. Now, Mr. President, the Senator from Georgia objects to the passage of this resolution. It therefore goes over. It is simply a resolution for information. Let it go over, and I will offer the resolution which I send to the desk

and to which the Senator may not object.

The VICE PRESIDENT. The Secretary will read the reso-

lution submitted by the Senator from Pennsylvania.
The resolution (S. Res. 163) was read, as follows:

Resolved, That the President be requested to direct the Secretary of State to transmit to the Senate the reports of the American consul at Durango, Mexico, covering all occurrences since January 1 of the present

Mr. BACON. That will go over, Mr. President, and I notify the Senator that I will make the same motion in reference to it

when it comes up.

Mr. PENROSE. I myself shall have the information for the Senate and for the Senator next week.

Mr. BACON. Mr. President, it is perfectly apparent to everybody that in the present condition of affairs matters of this kind ought to be considered with care before they are acted upon. It is not an unreasonable suggestion that the Committee on Foreign Relations, charged with this responsibility and this

duty, selected especially for this purpose, should in present conditions have the opportunity to look over every paper of this kind before it is acted upon by the Senate. It may be that after we have looked over it the committee may coincide with the wish of the Senator from Pennsylvania and ask for the information. But I insist upon it that everything which now relates to the Mexican situation which calls for action by the Senate should first be considered by the Committee on Foreign

Relations before that action is taken.

Mr. PENROSE. Mr. President, while the Senator from Georgia is deliberating in his committee Americans in Mexico are daily being murdered and slaughtered and executed. Here is a prominent citizen of Pennsylvania, who may have fallen before the bullets of an execution squad by this time for aught I know. Has the Senator from Georgia any idea of the number of Americans who have been killed since this disturbance arose?

Mr. BACON. Well, I may have an idea about it, but I

thought

Mr. PENROSE. I am informed that over a hundred have been killed and that their names are on record in the files of the Department of State.

Mr. BACON. I thought I had the floor. I yielded because I understood the Senator wished to interrupt me for an inquiry.

Mr. President, I have said what I intended to say with reference to the propriety of the reference of all these matters to the Committee on Foreign Relations. I will say little more now, because there is no motion pending, though there will be at the proper time.

I want to say that the President of the United States is known by this Senate, and I am satisfied that it is recognized by Senators, not only on this side, but certainly by a very large proportion, if not a majority, of those on the other side, that he is in good faith, to the best of his ability, attempting to deal with the present situation in a manner to save this country the great disaster of a war. I believe the American people recognize that fact, and that they uphold him in the effort which he

in good faith is thus making.

Mr. President, I should regret to say anything at this time that would interfere with that effort or to impede in any manner the progress of it or to jeopardize the success of it. For that reason I do not reply at present to what the Senator I am informed of the fact that he will on a future day probably present matters here which will make it necessary for reply to be made, but I am content with the statement that the President is making this effort, and that I think the American people recognize the importance of it, and that he is doing the very best that can be done under the circumstances. There are many things under such circumstances which it is not proper to make public for various reasons, but that I will not now discuss.

Mr. President, it seems to me that the matter comes with very ill grace from the Senator from Pennsylvania this morning, because the very paper which he has read shows the fact that, immediately upon the information being given to the Secretary of State by the Senators from Pennsylvania, active steps were taken for the purpose of protecting the persons whose safety is now a matter of concern.

Mr. President, will the Senator permit me? Mr. PENROSE. The VICE PRESIDENT. Does the Senator from Georgia

yield to the Senator from Pennsylvania?

Mr. BACON. I do. Mr. PENROSE. Similar articles have appeared in all the newspapers; in fact, yesterday, the American, of New York and Chicago, had this matter fully exploited. If the Senator will permit me a moment further while I am on my feet, I fully believe that the administration in a patriotic spirit is engaged in trying to solve this problem. As I have said, I am not a "jingo," and abhor the prospect of a war with Mexico as much as any American can, but I do think when daily occurrences of the murder of American men and outrages committed on American women are brought to the attention of our State Department, that it is time we should take some action, of a police character at least, to prevent the repetition of such murders and outrages, and not wait for the interminable delay and the uncertain outcome of a very complicated situation which may not develop for quite a while.

Mr. BACON. Well, Mr. President, I wish to say, as I have said before, that everything is being done that can be done consistently with the maintenance of peaceful relations. It is

not denied that force is not now being used.

Mr. PENROSE. Mr. President—

Mr. BACON. I hope the Senator will allow me to proceed.

I yielded to the Senator a moment ago.

Mr. PENROSE. If the Senator will just permit me one more word, everything is being done except the actual physical protection of life and property. Homilies are issued from

Washington about the beauties of peace and abstract discussions regarding intervention, but the practical condition of murder, rape, and destruction of property confronts us. It is a pretty serious question, Mr. President.

I should like to ask the Senator before I take my seat-Mr. BACON. I hope the Senator will allow me to proceed. have the floor. I can not begin a sentence but that the Senator gets up and makes a speech before the end of that sentence.

Mr. PENROSE. The Senator yielded to me, and I should merely like to ask, before taking my seat, when his committee is going to meet?

Mr. BACON. The committee meets on Saturday, and if the Senator from Pennsylvania desires to appear before the committee he always has the right to do so.

Mr. PENROSE. Will the Senator take up and report this

resolution if it goes to the committee now?

Mr. BACON. I am not prepared to say what we will do about it. It will be for the committee to determine, not for There is upon that committee representation from the Senator's own side of the Chamber which in its personnel is not second to any equal number of Senators on the other side of the Chamber, and his interest and the interest of those whom he represents will be pretty safe in their hands as well as in the hands of Senators of that committee on this side of the Chamber.

I wish simply to say, Mr. President, because I realize the importance of not occupying time now, that everything is being done which can be done short of force. Force means war, and war is not a thing to be rushed into hurriedly and rashly, and a thing, the worst of all calamities, not to be encouraged by intemperate speech at this time. That is all I wish to say now.

Mr. POINDEXTER, Mr. SIMMONS, and Mr. LODGE ad-

dressed the Chair.

The VICE PRESIDENT. The Senator from Washington. Mr. POINDEXTER. I should like to ask a question of the Senator from Georgia.

Mr. SIMMONS, Mr. President, I ask for the regular order. Mr. LODGE. Mr. President, a resolution is pending, offered in the morning hour, and I will state to the Senator that there is no use trying to cut off this discussion.

Mr. SIMMONS. The resolution was offered in the morning

hour and a motion made to refer it to the committee.

Mr. LODGE. The Senator from Pennsylvania offered a second resolution, which is now pending and for which he has asked present consideration.

Mr. BACON. No; I asked that that resolution go over. Mr. LODGE. An objection may put it over; but it does not preclude a Senator's right to discuss it.

Mr. BACON. Undoubtedly; it is not in order. Mr. LODGE. Very well, Mr. President, we will continue the discussion on the tariff bill.

Mr. SIMMONS. That is the privilege of the Senator.

Mr. LODGE. Let me now say to the Senator that I want to support the President in every possible way in this Mexican I would not do one thing to embarrass him; I want to help him. I do not recognize that he is a Democratic President when we are dealing with a foreign country; I think he is the American President, just as much mine as yours. I want no partisanship; but you can not have nonpartisanship on party We have got to deal with this question.

Mr. BACON. Mr. President, I have not the slightest-Mr. LODGE. One moment, Mr. President, I believe I have

the floor now.

Mr. BACON. Certainly.

Mr. LODGEI. The Senator has been saying that he had the floor at intervals of two minutes. Mr. President, the situation in Mexico

Mr. SIMMONS. I made a call for the regular order, Mr.

President.

Mr. POINDEXTER. Mr. President-

Mr. SIMMONS. My understanding is that this resolution goes If the Senator wants to discuss it when it is in order to discuss it, I have no sort of objection, but I do say

Mr. LODGE. I have the floor, and I propose to— The VICE PRESIDENT. The Senator from Washington [Mr. Poindexter] has the floor.

Mr. LODGE. I propose to finish what I have to say; it will take but a moment.

Mr. SIMMONS. I call for the regular order.

The VICE PRESIDENT. The Chair is obliged to state that

the Chair recognized the Senator from Washington,
Mr. POINDEXTER. Mr. President, I submit the resolution
which I send to the desk and ask the Secretary to read it.

The resolution (S. Res. 164) was read, as follows:

Resolved, That the President of the United States be, and is hereby, requested to transmit to the Senate a statement of what, if any, measures, diplomatic or otherwise, have been taken by this Government for the protection of citizens of the United States from violence in the disorders in Mexico.

Mr. POINDEXTER. Mr. President-

Mr. BACON. Let the resolution go over, Mr. President. Mr. LODGE. That can not be done while the Senator from Washington has the floor. I assure the Senator that the policy now being pursued is a most unfortunate one. There is no desire here to do anything but sustain the President. I do not

want to excite any debate. You can do nothing worse than exercise the power of your majority on the Mexican question. If you make it a party question, you deal the worst blow to the administration that you can possibly deal. It is not to be dis-

missed with a smile and a sneer.

Mr. POINDEXTER. Mr. President, I agree and am in thorough sympathy with the evident spirit of the Senator from Georgia [Mr. Bacon] that this is a matter which should be handled in moderation and with a great deal of self-restraint: but I am also of the opinion that it is a matter which is bound to be considered. It can not be disposed of by being suppressed.

The resolution which I have just submitted to the Senate I introduced in this body on the 28th day of February, during the last administration. The complaint that I had at that time and that other Senators and millions of people had was not because of the action of the administration, but because of its inaction. It is perfectly evident that while this trouble was beginning and growing and coming to an acute issue opportunities in which diplomacy might have performed a great service to the American people were neglected. Now we have to deal with a situation which has come about through the in-

action of the American Government.

Lately it is perfectly evident that the administration has actively taken up this question and is dealing with it in a manner which I think ought to receive the support and encouragement of every patriotic citizen. I am in thorough harmony and sympathy with that action; but I should like to say, in conclusion, to the Senator from Georgia, as chairman of the Committee on Foreign Relations, that I believe it would tend toward moderate discussion and the subduing of passion over the incidents which the Mexican revolution has produced if the President of the United States would pursue in this matter somewhat the same spirit he has pursued so successfully in connection with other great questions before the country and communicate frankly, so far as it is not incompatible with the objects which he has in view, with the Senate and with the Congress. Let us have some understanding. I should like to submit to the Senator from Georgia if he does not think that it would be well for the Committee on Foreign Relations to consider this resolution which has been pending in his committee ever since the 28th day of February? Is it not advisable, in respectful terms, in the exercise of the authority which goes with the action of the Senate, to request the President to communicate with the Senate and inform us, confidentially if necessary, and in such terms as his discretion may dictate, the policies which he has in view, and as to which, if he is to carry them out, it is absolutely necessary that the Senate should be consulted, and that they should be discussed in the Senate?

My purpose in rising was simply to call attention to the fact that we have had no communication on the subject. I am not referring to any particular case. I think we ought to be informed about the general objects which the administration has in view, particularly those phases in regard to which the Senate will be called upon to act.

The VICE PRESIDENT. The resolution goes over under the

THE TARIFF.

Mr. SIMMONS. Mr. President, I desire to inquire whether the Chair put my request for unanimous consent for the present consideration of the tariff bill?

The VICE PRESIDENT. The Chair did not put it, for the reason that the Senator from Pennsylvania [Mr. Pennose] rose, and, as the Chair understood, in view of the colloquy between the Senator from Pennsylvania and the Senator from North Carolina, it was desirable that the Chair withdraw the announcement that the morning business was closed.

Mr. SIMMONS. May I ask that my request be now placed

before the Senate?

The VICE PRESIDENT. The Senator from North Carolina asks unanimous consent that the Senate proceed to the con-sideration of House bill 8321, There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Govern-

ment, and for other purposes.

Mr. DHLLINGHAM obtained the floor.

Mr. LODGE. Mr. President, the Senator from Vermont is

kind enough to yield to me for a moment.

I should like to say, before we go on with the tariff, that I regard the Mexican question as of the utmost delicacy and difficulty. I think the President of the United States is endeavoring to find a solution by which war may be avoided and order restored in Mexico. I wish to aid him in every possible way in bringing about that result. I think the general question of Mexico has not reached a point where it is wise to discuss it here; certainly not in public. I have tried to study the question; I have tried to make up my own mind about it; and I see the utmost difficulty in determining on any policy.

I think these matters should be first considered by the Committee on Foreign Relations. The President of the United States sent for all the members of the Foreign Relations Committee, and I think it was wise and statesmanlike in him to But I wish to say to my good friend from Georgia that I hope he and his friends on that side will pursue the same policy as that adopted by the President. When resolutions are offered—which we must expect, in view of these things—I hope they will not treat them as if they were deserving of no attention, but will remember that we all want to act together on this question, and that these matters are too serious to be made the subject of party action by the mere power of the majority to say, "This shall be done," or "That shall be done," and bury them in the committee.

I suggest to the majority in this Chamber that they adopt the policy of the President and consider that those of us on this side are just as anxious to avoid war, just as anxious to bring a proper solution to the vexed, troubled, and dangerous condition in Mexico as they are. I ask them to forget for the moment that they have a majority of five or six in this Chamber, and to remember that we are all American citizens, all American Senators, in the presence of a grave problem, for which we should all unite to aid the administrationmust be our mouthpiece and representative-in finding some

This Chamber could be papered with signed statements of the horrors there. They have been held back. I know some have been held back at my request. I do not want them brought forward to inflame feeling. But we must show confidence in each other. I think, in the interest of the country, it is not well for the mainting to the lightly it is not well for the majority to treat lightly any resolution which is offered in good faith by Senators on this side, who are just as anxious to uphold the President's hands as they are; to dismiss it with a sneer, and say, "This will be done," or "That will be done." I think, if I may venture to say so, that is not the wisest way of dealing with matters so grave as

Mr. KERN. Mr. President-

The VICE PRESIDENT. Does the Senator from Vermont

yield to the Senator from Indiana?

Mr. DILLINGHAM. I do. I will yield for a reply to the Senator from Massachusetts, but I shall decline to yield beyond

Mr. BACON. I hope the Senator will permit me to say a few words, in view of what the Senator from Massachusetts has

Mr. DILLINGHAM. Yes; I say, I will yield for a reply to the Senator from Massachusetts.

Mr. BACON. Mr. President, the Senator from Massachusetts has constructed a man of straw and pummeled him with very considerable skill and ability.

Mr. LODGE. The trouble I find with the whole discussion

of this question lies in just that sort of debate.

Mr. BACON. Mr. President, I appeal to Senators on that side of the Chamber to know whether, in any of the discussions which have been had here on the Mexican question, some of which occurred when the Senator from Massachusetts was absent, there has been any disposition to do what the Senator now accuses this side of the Chamber of doing-to draw any party lines? I appeal to the Senators on the other side of the Chamber to know if I and my colleagues in concert with me have not, on the contrary, borne testimony to the fact that the Senators on that side of the Chamber were as thoroughly in accord with the desire of the President to solve this question without war, and as thoroughly in earnest in the wish to sustain him in that effort as have been Senators on this side of

To such an extent has that been done that Senators on that side of the Chamber have themselves kindly and generously borne testimony to the fact that we recognized that in matters pertaining to foreign affairs party lines stopped at the seashore. That has been said here repeatedly. The Senator from South Dakota [Mr. Crawford], notably, made a most excellent and impressive address to the Senate, during the absence of the Senator from Massachusetts, in which he expressed his gratification that that sentiment had been uttered by Senators on this side of the Chamber, and in which he congratulated the Senate and the country on the fact that such was the case; and it The Senator from Iowa [Mr. KENYON] did likeis the case. Not only here in the Senate, but in a statement given wise. by me to the public press, I bore testimony to the same fact, and emphasized it, and stated as strongly as I could that in this matter there were no party lines.

There had been an attempt made to create upon the mind of the public the impression that the Senate was at issue with

the President. I denied that such was the fact.

Mr. CLARK of Wyoming. Mr. President, will the Senator

yield to me for a moment?

Mr. BACON. I hope the Senator will let me complete this statement, and then I will yield with pleasure. I denied in a public statement that there was any such issue, and went on to say that not only was that true of the Democratic side, but it was equally true of the Republican side, and that the Republicans were as thoroughly in accord with the President in his efforts to preserve peace as were the Democratic Senators.

I should like to have the RECORD searched for anything that has happened this morning upon which a finger can be put to indicate that there is any disposition to draw any party lines in this matter, or to sneer at anybody. I should like to have some Senator point to a word that has been said that can be so construed. Why, Mr. President, the only thing that has been said that could have been construed as being said in the slightest unkindness-and possibly I was wrong in that, under the circumstances-was when I said that what came from the Senator from Pennsylvania [Mr. Penrose] came with ill grace, because the very article which he had read from the desk showed that the Secretary of State was doing all he could to protect the people whose safety now so greatly concerned him. Possibly I was wrong; and if so, I am sorry, because nothing is further from my wish or heart than that there could be possibly entertained the thought that in this grave emergency, one which concerns the entire people, of all classes and of all parties, we should be drawing party lines.

Mr. PENROSE rose.

Mr. BACON. If the Senator will pardon me a moment, the only allusion I made to party was to compliment the Senators of the Foreign Relations Committee on the other side of the Cham-The only allusion I made to party, when the Senator inquired of me whether the committee would on Saturday take certain action, was to say that on the Senator's side of the Chamber there was a most distinguished representation upon the Foreign Relations Committee, and that the interests which he represented would certainly be safe in their hands.

What possible word has been uttered here to-day or at any other time which would justify the Senator from Massachusetts [Mr. Lodge] in assuming—because it is an assumption, without fact to sustain it-that there has been any disposition on this

side to draw party lines?

I have said, and I have reiterated, that there was none in the committee. I have said before on the floor of the Senate that there was none in the committee. I have said on the floor of the Senate that there was none among the Senators on the Republican side of the Chamber, regardless of whether they were on the committee or not, and I repeat it. I only speak of it because to sit silent would be to recognize the correctness of the suggestion of the Senator from Massachusetts.

It is not correct, Mr. President. We recognize the fact that if this country has trouble which relates to foreign matters there should be no party lines, and I thank God in the belief that there are none. I repudiate and deny the suggestion that anything which has been said or done will justify any such insinuation on the part of the Senator from Massachusetts.

Mr. CLARK of Wyoming. Mr. President-

The VICE PRESIDENT. Does the Senator from Vermont

yield to the Senator from Wyoming?

Mr. DILLINGHAM. Mr. President, I yielded to the Senator from Massachusetts to make a short statement, not knowing what was coming; and then I thought it was only fair to yield to the Senator from Georgia to reply to him. But I should dislike to again yield for a discussion of this question. I think we ought to discuss the question that is before the Senate. I do

not like to say that I will not yield to the Senator from Wyoming.

Mr. President, it is not my purpose at this time to discuss the provisions of the pending bill either by schedules or in detail. This, I apprehend, would be of little advantage inasmuch as the proposed legislation represents, according to the report of the committee having it in charge, "a just and fair interpretation, in the light of existing conditions, of the latest authoritative utterances of the party in power"; and, down to the present time, the dominant party in the Senate has united in voting down every amendment which has been offered to its provisions which was in the slightest degree intended to modify any of the rates therein imposed.

REASONS FOR SUPERIOR CONDITIONS IN UNITED STATES.

But it has seemed to me that in the discussion that has already been had one of the principles in political economy, one which has been recognized by those best versed in the history of civilization, one which, in my judgment, has found expression in the United States as nowhere else in the world, has been somewhat overlooked and, in the proposed legislation, seems to have been ignored. It was forcibly brought to my mind on the 18th of July when, in a running debate between the Senator from Utah [Mr. SMOOT], the Senator from Ohio [Mr. Pome-RENE], and the senior Senator from Mississippi [Mr. WILLIAMS] upon the question of wages paid for labor in the different countries, and the influences operating to increase or decrease the same, the Senator from Mississippi said:

the same, the Senator from Mississippi said:

Mr. President, the Senator from Utah [Mr. Smoot] has just apparently squelched the Senator from Ohio [Mr. Pomerene] by asking him to name a single industry in the United States which pays lower wages at this time than the same industry in some other country. The sophism underlying it all is that he throws himself upon an undisputed and indisputable fact, and then assumes that the reason of it is that the particular industry has been protected. The trouble with his assumption is one which I will point out.

I shall now ask the Senator a question, and shall yield to him to answer it. My question will have reference to a time when we were Colonies, when we had no protective system, and when we were subject to industrial tyranny on the part of the mother country, at a time when, as the great Pitt said, "an American could not make a horse-shoe."

shee."
I want to ask the Senator, and I want to give him six weeks in which to answer it, because I do not want to take advantage of him right now, and I will give him a cheap two-dollar-and-a-half chromo if he can answer it in the affirmative, whether he knows during colonial times, when we were 13 Colonies of Great Britain, a single industry in the United States in which the laborers were on the average and as a rule not paid a higher wage than they were paid in Great Britain?

Further on in the debate he said:

Every man who came to America as a traveler, whether from France or from Great Britain, dwelt in his diary and the report of his travels in those days upon one salient fact—the high amount of pay received by common workmen. Every historian of any standing has referred since to the same fact.

In these quotations, it will be noted, the distinguished Senator from Mississippi not only concedes but confidently asserts the fact that during the colonial period of our history the wages paid to laborers in the Colonies were so much higher in amount than those paid in the mother country for labor of a similar character as to be noticeable to all observers, and that the wages now paid in all the industries of the United States are higher than those paid in similar industries abroad is an "undisputed and indisputable fact." But in an attempt by the Senator from Mississippi to disconnect the high rate of wages paid in the United States from the operation of the protective principle in tariff legislation he says:

principle in tariff legislation he says:

I do not think there is anything in the world that poor, erring, fallible humanity has made so many mistakes about as in connection with the fact of mistaking a coincidence for cause and effect. Wages are higher in Australia than they are in Great Britain. Wages were for many years higher in Australia than they are in Great Britain. Wages for long years have been higher in Cape Colony than they have been in Great Britain. Yet New Zealand and Australia are protectionist colonies and Cape Colony was a free-trade colony and England is a free-trade country. Wages have been higher in England than they were in Germany, and yet Germany is next to the United States and Russia the most barbarous of all nations in connection with the prevalency of protectionism. Now, then, when a man says that the reason why wages are higher in Great Britain than they are in Russia or Germany or France is because Great Britain is a free-trade country and Russia and Germany and France are protectionist, he simply makes a mistake or else he willfully makes a mistatement.

The Senator then makes this assertion:

The Senator then makes this assertion:

The truth is that they are higher in England because the general standard of living of the English people is higher than of the people upon the Continent. You frequently hear it said that high wages produce a high standard of living. The truth is that, as a rule, a higher standard of living—the people having once become accustomed to it—demands of necessity and obtains higher wages.

And he adds:

The next truth is that as a general proposition, although not always true, wages are high just in proportion as institutions are democratic. In using that word I do not mean democratic spelled with a large D, of course, but with a little d. In other words, just in proportion as the will of the people is asserted in government itself it is also proportion-

ately asserted in industrial life; and as a majority of the people are laborers, their will is asserted and they always will strike for higher reages. Just in proportion as the people are suppressed the laboring man is suppressed, and his reage suppressed with him. Just in proportion as institutions are popular the laboring man has labor rights, which he may assert by strike or otherwise, and in proportion as he can not or dare not assert his rights by strike or by ballot or otherwise he receives lover vages.

Truer words were never spoken by any statesman. The Senator from Mississippi, a man of broad reading and deep thought, has, in the words last quoted, given expression to a principle which has been demonstrated in history, and one which must be recognized by all thoughtful men. As I listened to his utterances I was reminded that Ellis H. Roberts, as long ago as 1884, when delivering a course of lectures at Cornell University on political economy from the standpoint of American legislation, took precisely the same ground. In discussing the question of wages and the principles which govern them Mr. Roberts first quoted Prof. Seeley's declaration that this Republic "is the state in which free will is most active and alive in every individual," in labor and trade as well as in society and politics, and said:

individual," in labor and trade as well as in society and politics, and said:

Very radical is this other consideration. Low wages are not caused by density of population, by the strife for a livelihood to-day. They are the bequest of the ancient serfdom; they have grown out of the caste which has prevailed everywhere in the Old World. The pay for labor has been lowest where despotism has been most arrogant and caste most exclusive. Show me the standard of wages which have been paid on farm and in shop and I can tell you the type of the Government by era and by country. You have been told of the grinding tyranny of oriental countries. There wages have been infinitesimal, and, as in Egypt, the ruler enforced unlimited demands for personal service. In Europe in the Middle Ages the mechanic received the most nominal salary—half a franc a day. In England in Elizabeth's time, Hume tells us, labor was well paid at 8 pence a day. It is not the crush of numbers, not the present stress of necessity alone, which is responsible for the low wages in the Old World. On the contrary, with the growth of population labor receives better pay and higher consideration. With the advance of personal liberty the pay of the producers in every class has become higher.

The improvement of the material condition of peoples has kept even pace with their gain in political institutions. With the breaking down of the monarchy in France the people everywhere secured a larger share in the rewards of production. You can follow the march of wages in the progress of the British constitution. Through the continental nations constitutional liberty has either immediately preceded or at once followed considerable amelioration in the condition of the industrial population.

Wages have been high in America, in the British colonies only in less degree than in the United States; they have attained a similar standard in Australia, not simply because of the unbroken soil and broad expanse of territory, but because the spirit of independence inspired the ca

WHY WAGES WERE HIGHER IN THE COLONIES THAN IN ENGLAND.

Why were the wages higher in the American Colonies than in England? Apply the principle enunciated by the Senator from Mississippi, and which is so fully supported by the eminent authority whom I have already quoted. It was because the immigration from England in the seventeenth century was largely made up of representative Englishmen, who, developed by the great intellectual movement of the sixteenth century, had the courage to assert the supremacy of personal liberty over absolutism, and their descendants were the product of a century and a half of colonial life; in every fiber of their being they represented the fundamental principles upon which human rights are founded, and in the great crisis of 1776 they became, as has often been said, "the greatest nation builders of the world."

From that day to this there have existed in the world two forms of civilization, one based upon the monarchical principles, in which there is a clear dividing line between the classes, where labor has never received its just reward; the other, founded upon the principle that all just powers of the government are derived from the consent of the governed—a representative form of Republic in which every man is a living factor, and in which the door of opportunity is open to every person who is worthy to enter.

Wages were higher in the American colonies than in the old country, and they have, since the establishment of our Government, continued to be higher; the reason for it is not alone because of the wider natural field of opportunity, but lies in the fact of the greater liberty of the individual under American institutions; of the increased self-respect which has resulted; of that larger development of manhood which has enabled him to demand and receive an adequate return for his services and to

maintain a higher standard of living than that which prevails in European countries.

THE FIRST GREAT EXPERIMENT IN FREE GOVERNMENT.

This principle is recognized by British authorities as well as Mr. MacKenzie, in his History of the Nineteenth Century, says:

since the closing period of the eighteenth century an experiment of the deepest interest to mankind had been in progress on the western shores of the Atlantic. Three million British subjects, dissatisfied with the rule of the parent country, had undertaken to govern themselves. They entertained no purposes of aggression, and being troubled with no fear of their neighbors they did not waste the national resources by the maintenance of fleets and armies. Having the development of a continent with its boundless resources to occupy them, they elected a career of peaceful industry. Europe still lay at the feet of a few great families; still squandered her substance in the maintenance of enormous multitudes of armed men; still baffled the industry of her toiling millions by the constant employment of these armed multitudes in devastating wars, flowing out of the ambition of self-will or offended pride of menarchs. The Americans were so bold as to undertake the conduct of their affairs on principles directly the reverse of those by which the world in all preceding ages had been guided.

COMPARISON OF POLITICAL CONDITIONS IN THE TWO COUNTRIES.

COMPARISON OF POLITICAL CONDITIONS IN THE TWO COUNTRIES.

What were those principles upon which the world in all pre-ceding ages had been guided? How did England's government differ from that which our fathers founded and handed down to us? The historian to whom I have already referred calls sharp attention to the fact that in England the people as a whole were wholly disassociated from any proprietary interest in the soil, so completely so that one-half of the land was owned by about 1,000 persons and four-fifths of it by five or six thousand persons. Another writer has estimated that there are more men in the State of Massachusetts who own the roofs which cover their heads at night than in all England. The historian to whom I have referred informs us that at the time of the establishment of the United States Government the parliamentary system in England had become "so corrupt there was scarcely a shred of honest representation left in it."

He tells us-

Two-thirds of the House of Commons were appointed by peers or other influential persons. Every nobleman had a number of seats at his unquestionable disposal. * * * Three hundred members, it is estimated, were returned by 160 persons. * * * The members who bought seats sold their votes, and this made their outlay reproductive.

In sharp contrast with conditions in America both before and after the Revolution is the statement that England's lawmakers of that time were those few gentlemen who owned the land, and the legislation of the age was wholly in the interest of the privileged classes, with little regard for the poor. Wages were of the lowest character, taxation was monstrous, the criminal laws were savage and were administered in a spirit appropriately relentless. Mr. MacKenzie says that at the time of our American Revolution:

Our (England's) criminal law recognized 223 capital offenses. Nor were these mainly the legacy of the Dark Ages, for 156 of them bore no mere remote date than the reigns of the Georges. * * If a man injured Westminster Bridge he was hanged. If he appeared disguised on a public road he was hanged. If he cut down young trees, if he shot rabbits, if he stole property valued at 5 shillings, if he stole anything at all from a bleach field, if he wrote a threatening letter to extert money, if he returned prematurely from transportation—for any of these offenses he was immediately hanged.

Is it any wonder that wages in the Colonies were superior to

those in the mother country?

During the almost three-quarters of a century following the adoption of the American Constitution and before the War between the States in 1861, our industrial States, with governments founded upon the principles enunciated in the Declaration of Independence, advanced rapidly in development. Individual liberty under law, freedom of action politically, socially, and industrially, served to develop those sturdy elements of character which stand for the best there is in civilization. Independence and force of character among the people became the rule, the power of individual initiative was developed, class distinctions were abolished, and every avenue to success was opened to That the price demanded for labor in this free competition. country was greater than in the old country was inevitable. With the tardy recognition of the rights of the laboring classes and the slow development of individual liberty in the mother country it could not be otherwise.

In order to comprehend this we have only to remember that as late as 1819, 30 years after the United States had become an independent nation and 5 years after the War of 1812 had terminated, the Government of Great Britain was resolute in extinguishing by military force any discontent of the people. When the Manchester reformers held a meeting of 60,000 persons to petition for parliamentary reform the meeting had hardly begun before it was broken up by the interference of military power, and Parliament proceeded to pass acts by which Englishmen were not to assemble in larger numbers than 50 persons, unless a magistrate convened them, and "the lands, and Greece combined.

exciting privilege of carrying a flag on such occasions was expressly denied them."

The difference in the character of the two Governments is even more sharply indicated by the fact that the Americans recognized the principle that if this was to be a government of the people and by the people that every member of the community should become intelligent and capable of performing all the functions of citizenship. Thus they established at once the best system of public schools at public expense that has ever been developed and one that has become a prime factor in our type of civilization, and under which we have to-day in training for good citizenship an army of over 18,000,000 boys and girls. On the other hand, there existed among the upper and middle classes of the old country prejudice against the education of the poor and, if I may quote an English author. discontent and an overthrow of that healthy subordination without which society can not exist." As late as 1818 only one youth out of seventeen was attending school in England; in 1833 only one out of eleven; and it was not until 1836 that a grant of £20,000 was appropriated, to be expended by the national and British foreign school societies, and that constituted the origin of the present system of national education in England. In 1839 this was increased to £30,000 by the close vote in Parliament of 275 to 273. The difference in the principles upon which the two Governments had up to this time maintained is emphasized by the language of Lord Cockburn, who said:

The principle was reverenced as indisputable that the ignorance of the people was necessary to their obedience of the law.

This thought is further emphasized by the fact that it was not until 1836 that the heavy tax of fourpence on each copy of newspapers was removed—a tax which rendered the newspaper almost impossible of access by the poor. Nor was it until after 1870 that dissenters were enabled to educate their sons in the universities

I might refer to other elements in English history showing the slow progress that was made between the reform act of 1832 and that of 1882, which removed the disabilities and lightened some of the burdens, generally improving the conditions of the British people, but it is unnecessary to do so. A contrast between the political and social conditions in the United States and those in other European nations than England would even be more to our advantage. Upon the principle advanced by the Senator from Mississippi, the correctness of which I fully recognize, there are to be found in a comparison of the laws and the systems of this and other foreign Governments abundant reasons for the high rate of wages paid and the superior living conditions which prevail in the United States.

Since the close of our Civil War the two Governments have prospered, grown, and expanded along all the lines of industry. and of commerce. Both have well fulfilled their parts along all the lines of advance in the civilization of the world, and both stand to-day as leaders in their respective spheres. have to recognize the differences still existing between them in political principles and social distinctions, and that the reward for labor in the trades in the United States is, according to the British Board of Trade, about 130 per cent higher than in England and Wales, with slightly shorter hours, while the expenditure for food and rent is higher by only about 52 per cent.

ADOPTION OF PROTECTION AS A NATIONAL POLICY.

At the close of the Civil War our Nation, with an increased confidence in the ability of a free people to preserve free institntions, entered upon a system of development unequaled in the history of any other nation, the result of which has challenged the admiration of the world. The central thought of this great movement was not only to develop our vast national resources, but in doing so to open the door of opportunity to everyone worthy to enter. Realizing that, if free institutions were to continue, if the Government was to be safely and wisely administered, every possible advantage should be given to all the industrial classes to improve their condition socially and industrially; that American homes, established upon a more liberal basis than those of any nation, should be multiplied and increased; and to the end that the already superior condition of American labor should be maintained, the Republican Party, with prophetic vision, secured the passage of the free homestead act, which threw open the great Northwest to actual settlers. And with what result?

AGRICULTURAL EXPANSION.

Prior to that time we had opened up in almost two centuries of colonial and national life only 2,000,000 of farms. But under this system we have in the last 50 years opened up three and one-half millions of farms, and we now have an agricultural area eleven times as great as the total area of Great Britain—as great, in fact, as that of Great Britain, France, Germany, Italy, Spain, Norway, Sweden, Switzerland, Austria, Portugal. Nether-We have in the United States

in actually improved agricultural land an area six times as great as the entire area of Great Britain; in fact, as great as the areas of Great Britain, France, Germany, Italy, Portugal, Switzerland, and Greece combined.

NECESSITY FOR MARKETS.

But what could be the object of opening up these vast areas of agricultural lands if a market for their product must be sought in foreign nations? Could it be hoped that with really improved agricultural lands six times as great in area as the whole of Great Britain we should find a profitable market abroad for the products of this vast field? Such a proposition was preposterous and was discarded almost by common consent. Moreover, the proposition that under such conditions the United States should remain dependent in any substantial degree upon foreign nations for manufactured commodities, thus continuing our people at their mercy in the matter of prices, was even more preposterous. The judgment of the American people, recognizing the soundness of the proposition that there should be a home market for home productions throughout the length and breadth of our land, demanded legislation that would make the Nation independent industrially as well as politically; that would extend manufacturing industries throughout the Nation; that would encourage the exchange of commodities of all classes; and that would encourage to the utmost that system of public carriers which has connected the East with the West, the North with the South, the agricultural area with that of the manufacturing area, and has enabled us to build up that remarkable system of interstate exchange which has made us the most prosperous people in the world.

PROTECTION AND HOME MARKETS.

To this end and because the people demanded it the Republican Party inaugurated the great system of protective-tariff legislation which after more than a half century of trial has demonstrated the correctness of its principle as applied to American conditions. They fully realized that the development of manufacturing industries in America was absolutely demanded not only to provide a market for our vast agricultural products, but also to protect our American people against exorbitant charges on foreign-made goods and to protect the American workingman from unjust competition with low-paid labor in Europe.

DEVELOPMENT OF MANUFACTURES.

What has been the result? At that time, 1860, the products of our mills were less in value than those of any other first-Under the old system agriculture had flourished, manufacturing had languished, and to such an extent that products of American mills amounted in 1860 to only \$2,000,-000,000; but under the Republican policy of protection the value of such products jumped to \$4,232,000,000 in 1870 and equaled the output of France with her centuries of progress. In another 10 years the value of American manufactured goods had increased to \$5,369,000,000 and became equal to those of Great Britain or of Germany. In 1890 the value of the output of American mills had still further increased to \$9,372,000,000 and equaled the production of Great Britain and France combined. In 1900, or 40 years after the adoption of this system of protection, the value of American manufactured products had reached the enormous sum of \$13,000,000,000, which was greater than the value of the output of all the mills of Great Britain, Germany, and France combined, while in 1910 the value of such products had advanced to \$20,672,000,000, the increase alone from 1900 to 1910 being over four times as great in amount as the entire products of our manufactures in 1860. This was an achievement never before attained in any nation, and its importance can only be conceived when it is remembered that from twenty to twenty-five millions of our people derive their maintenance through these industries. In addition to the market these industries brought to the agricultural areas, it appears also that a large proportion of the raw material consumed in the production of such manufactured commodities came from American farms, from American mines, from American forests, and only a small proportion, comparatively, has been imported. And better than all this is the fact that it has been found that nearly all of this vast product has been consumed in the markets of the United States.

MARVELOUS RESULTS.

How happily this Republican policy was conceived, how well it has been carried out, and what magnificent results have been achieved is indicated by the fact that since 1870, when the system of protection had been fully established, the value of American manufactures has increased from four billions to more than twenty billions, in round numbers, an increase of 378 per cent, while the increase in the value of farm products has jumped from \$1,958,000,000 to \$8,417,000,000, an increase of 330 per cent. Could a more perfect balance be conceived or

achieved? Can a more convincing illustration be found in all history of the establishment of an economic system intended for and operating to the advantage of all the people of all classes?

With this vast development along the two great lines of industry in the United States, our population during the same period-1870-1910-has jumped from 38,000,000 to 95,000,000 of souls; our national wealth from \$30,000,000,000 to more than \$130,000,000,000, an increase of 330 per cent. We have not only supplied our own market with all classes of products, but our exports during the period named have increased from \$392,771,000 to \$2,204,222,000, an increase of 480 per cent. Not only this, but we are told by our Government statisticians that the absolute free trade between the States of the Union, which in no way injures the American standard of wages and living, has increased from \$7,000,000,000 in 1870 to \$33,000,000,000 in 1911, an increase of 340 per cent, all of which implies that we are becoming an increasingly credit Nation; that we are not only supplying home demands with every conceivable product, but the ratio of our sales abroad has outstripped our purchases from other nations. Not only this, but in this vast scheme of national development the superior standards of American living have been maintained and the character of our citizenship has been upheld.

Mr. President, I have already set forth the unprecedented growth and development under the protective system inaugurated and maintained by the Republican Party. The most serious disaster which has ever come to the American industries came during the last administration of President Cleveland, when, as now, both branches of Congress were Democratic and under the operation of the Wilson-Gorman Act, which was the last expression of the thought of that party upon revenue legislation down to the present time. Immediately following a return of the Republican Party to power, and under the provisions of the Dingley bill, confidence returned and the country entered upon a period of prosperity unequaled in the history of this or any other Nation, a prosperity which has extended to, every branch of industry and which has included in its blessing every individual in a Nation of almost 100,000,000 of people, and which has continued over a period of 15 years and which has been so great that the people have forgotten that the conditions were ever otherwise.

PROTECTION TO BE ABANDONED.

In the face of this remarkable showing, despite the fact that we are surrounded on every side by evidences of the wisdom of the Republican policies under which the resources of the country have been so marvelously developed and the conditions of the people so signally improved, and under the provisions of which the wage earners of the country have continued to receive that higher rate of wages which always prevails where free institutions are maintained by a free people, the Democratic Party proposes to change the entire policy of the Nation, and, by the abolition of the protective principle, which takes into consideration the difference in the cost of production of commodities in the United States and in foreign nations-by which rule intelligently applied all rates ought, in my judgment, to be determined—to compel the American workingmen to compete with underpaid labor abroad, with the resulting consequences which such a change implies.

There can be no question about this. The Democratic Party has for half a century, in one form or another, expressed its abhorrence of the protective principle, and has sought through every means to break it down and to establish in its place a system of revenue laws which utterly ignore the protective policy and open up competition between producers in America and Europe upon what is practically an even basis. In other words, they propose to give to Europeans the advantage of the American market, which can, in my opinion, but result disadvantageously to millions of American workingmen and bring suffering to countless numbers of American homes.

DEMOCRATIC POLICY FROM DEMOCRATIC SOURCES.

Am I right in my conception of the purpose of the Democratic Party? As early as 1856, in its platform of that year, it declared in favor of "free seas and for progressive free trade throughout the world." They have never departed from this doctrine. They have changed the form of declaration from time to time, but each and all of their utterances have meant one and precisely the same thing. In 1912 Mr. Underwood, then as now chairman of the Committee on Ways and Means of the House of Representatives, presented and secured the passage through that body of his tariff bill of that year. It was a Democratic measure, and the Committee on Ways and Means in its report made on June 4, 1912, used this language:

The bill was not framed with any protective purpose in mind, but with the view only to raising the maximum amount of revenue in keeping with a proper safeguarding of the consumers' interests.

In their platform for 1912 the Democratic Party went so far

We declare it to be a fundamental principle of the Democratic Party that the Federal Government under the Constitution has no right or power to impose or collect tariff duties except for the purpose of revenue.

Not only that, but the President of the United States now is, and at all times has been, unalterably opposed to the system of protection; and as long ago as 1883, when he appeared before the Tariff Commission, in speaking of protection he used this language:

I maintain that it is not only a pernicious but a corrupt system. When asked if he was advocating the repeal of all tariff

laws, he said:

Of all protective-tariff laws, of the establishing a tariff for revenue merely. It seems to me very absurd to maintain that we shall have free trade between different portions of this country and at the same time shut curselves out from free communication with other producing countries of the world.

He thus proclaims his inability to distinguish between competition among American workingmen, all living under the same free institutions, all enjoying the same advantages, and a competition between them as a whole and the working body of Europe, with their inferior advantages and vastly lower scale of wages. In other words, any theory is absurd to him which does not afford to the American people the same free trade between the United States and foreign nations which now prevails between the States of the Union. That his views have not changed since that time is manifest, for in his message to Congress on the 8th of April he says:

to Congress on the 8th of April he says:

It is plain what those principles must be. We must abolish everything that bears even the semblance of privilege or of any kind of artificial advantage and put our business men and producers under the stimulation of a constant necessity to be efficient, economical, and merchants than any in the world. Aside from the duties laid upon articles which we do not and probably can not produce, therefore, and the duties laid upon luxuries and merely for the sake of the revenues they yield, the object of the tariff duties henceforth laid must be effective competition, the whetting of American wits by contest with the wits of the rest of the world.

This means porthing more or less than that the "effective

This means nothing more or less than that the "effective competition" which the President mentions is the competition between the workingmen of the United States and those of Europe, without the so-called "artificial advantage" which the President says must be abolished. Not only this, but following the policy thus enunciated, the Ways and Means Committee of the House of Representatives prepared the pending measure and presented it to the House with their report, which says:

and presented it to the House with their report, which says:

The so-called theory of cost of production as a regulator of rates was fully discussed at the time tariff-revision bills were introduced by the Ways and Means Committee during the Sixty-second Congress (1912). It will be recalled that much was said by protection advocates in support of the view that it was incumbent upon the United States to maintain a system of tariff rates that would cover differences in cost of production between the United States and foreign countries, in addition to a reasonable margin of profit. That doctrine became the basis of the work of the Tariff Board which furnished reports to the President, later transmitted by the Executive to Congress, concerning wool and woolens, cottons, pulp, and paper. Many manufacturers have presented arguments based on the doctrine of comparative costs. The statement is therefore made that no part of the committee's work has been founded upon a belief in the cost-of-production theory, and the theory is absolutely rejected as a guide to tariff making.

The bill passed the House, was sent to the Senate and was

The bill passed the House, was sent to the Senate and was referred to the Committee on Finance, in whose hands it remained under consideration for a period of two months.

Not only this, Mr. President, but when the bill was reported to the Senate by the Senator from Missouri [Mr. STONE], on the 18th day of July, it was accompanied by a report, in which the Committee on Finance say:

As a result of this examination and study your committee wishes to give its assent to the soundness of the general principles upon which this measure was originally constructed, as well as the theory upon which the revision of the tariff has proceeded. * * * Following the lead of the House, your committee has sought in the amendments it now proposes to the House bill to further carry out and perfect the theory of establishing a revenue-producing tariff upon the basis of competitive rates, as a just and fair interpretation in the light of existing conditions of the latest authoritative utterances of the party in power upon that subject.

And only yesterday in this body the Senator from Georgia [Mr. SMITH], in the midst of his very interesting remarks, used this language:

I hope that we will really bring the entire tariff to a revenue basis in the course of time. But I think we have gone as far as we could in this bill now, and I believe the country will prosper under it.

Only one interpretation can be placed upon these various utterances. It is simply this, that the markets of the United States are to be thrown open to the producers of other nations where it is conceded that wages are lower than in the United States, and where the cost of production is less, and under such conditions to compel "the whetting of American wits by contest with the wits of the world."

DEMOCRATIC POLICY AS CONSTRUED BY POREIGN NATIONS.

This is the interpretation that foreign nations place upon the terms of this bill. It is he interpretation which was pieced upon the Wilson bill in 1895, when it will be remembered that, in anticipation of the reduction made in the woolen schedule of that measure, the foreign manufacturers filled to overflowing the bonded warehouses of the United States with woolen cloths and dress goods, all of which were thrown upon our markets in competition with our home products; and what is more remarkable is the fact that during the two years of 1806 and 1807, during which time the Wilson bill was in operation, the quantity of woolen cloths imported was substantially as great as all of the goods of like character that have been imported under the Dingley and Payne laws during the last 15 years. was the effect upon the woolen industries of the country during the three years in which the Wilson bill was in operation? I speak only for New England when I say that the best available information at my command indicates that 80 per cent of the woolen mills were closed and their employees thrown out of

And at this point we have a fresh illustration of the fact that history repeats itself, for in anticipation of the passage of the pending bill, in the preparation of which no thought has been had to protect American industries or to make allowances for the great advantage which has been offered to our foreign competitors in the markets of the United States, they have already been rushing their products across the ocean in vast quantities, and we are officially informed that as early as June 30 of the present year goods to the value of nearly \$105,000,000 were already in our bonded warehouses ready to be placed upon the markets of the United States in competition with those of our own production as soon as the present bill becomes a law. And the thought of the foreign producers is indicated by the fact that among these products thus ready to be thrown upon the American market is found tobacco to the value of \$25,000,000; sugar to the value of \$15,250,000; raw wool to the value of \$16,500,000; manufactures of fibers, chiefly burlap and lineus, to the value of \$8,500,000; cotton to the value of \$4,500,000; and woolen goods to the value of \$4,330,000.

With the purpose of this measure so firmly declared by the President of the United States, so clearly presented both by the House Committee on Ways and Means and the Senate Committee on Finance, and so fully recognized by interested producers the world over, all of whom have long looked longingly upon our immense markets, we are compelled to face the fact that the superior conditions heretofore existing here in the United States-the result of that intelligent effort which has its birth and finds its nourishment under free institutions-are jecpardized by the terms of this bill; that the purpose to protect them tariff legislation has been abandoned, and that the purpose of the Democratic Party, by all legislation as long as it shall be in power, is to increasingly place the producers of our Nation upon a level with those of all the rest of the world.

THE SECTIONAL CHARACTER OF THE UNDERWOOD BILL

The first step in this revolutionary movement is found in the provisions of the pending bill, and I can not do better at this time than to again call attention to the following quotation from the report of the Committee on Ways and Means where

The statement is therefore made that no part of the committee's work has been founded upon a belief in the cost-of-production theory, and the theory is absolutely rejected as a guide to tariff making.

This being so, we naturally inquire where, in what portions of our country, this policy will be most keenly felt?

If Senators, in order to ascertain where the industries of the land are more largely developed, will direct their attention to the States lying east of the Rocky Mountains and will compare those of the New England, the Middle Atlantic, the East North Central, and the West North Central groups, which include the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, New Jersey, Ohio, Illinois, Indiana, Wisconsin, Michigan, North Dakota, South Dakota, Minnesota, Nebraska, Iowa, Kansas, and Missouri, with the South Atlantic, East Central, and South Central divisions, which include the States of Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Mississippi, Alabama, Oklahoma, Arkansas, Louisiana, and Texas, they will find food for earnest thought and material which, it seems to me, indicates that this measure is so sectional in its operation and so discouraging to a great majority of the industries of our country that it ought to meet the condemnation of all thoughtful men.

I have caused to be prepared a table showing the number of establishments, the number of wage earners employed, the amount of capital invested, the amount of wages paid, and the

value of the goods produced, in what may be called the northern and southern sections of the country, which I ask leave to insert at this point.

Table showing the number of establishments, the number of wage carners employed, the amount of capital invested, the amount of wages paid, and the value of the goods produced.

Group.	Number of estab- lish- ments.	Capital.		Value of products.
New England Middle Atlantic East North Central West North Central	25, 351 81, 315 60, 013 27, 171	6, 4	503, 854, 000 505, 675, 000 547, 225, 000 171, 572, 000	\$2,670,065,000 7,141,761,000 5,211,702,000 1,803,899,000
Total	193, 850	14,	728, 326, 600	16,827,427,000

0	fumber f estab- hments.	Ca	pital.	Value of products.

	Number of estab- ifshments.	C	Capital.	Value of products.	
North South	193, 850 55, 808	\$14,728,326,000 2,520,490,000		\$16,827,427,000 2,637,117,000	
			Wage earners.	Wages.	

From this table it appears that in the portion of the industrial
North lying east of the Rocky Mountains are located 72 per
and all the second and are rocated 12 per
cent of all the manufacturing establishments in the United
States and 79 per cent of all the capital employed in manu-
factures; that in those States are employed 78 per cent of all
the wage earners, who receive 81 per cent of the total wages
paid in the manufacturing industries of the Nation; and that
81 per cent in value of products of such industries come from
these States. Not only this but in these States are found 66
per cent of the population of the United States, a large propor-
tion of whom are directly affected by the provisions of this
measure and the remainder of whom must of necessity be
1 d 1 1 1 1

MANUFACTURING STATES MOST AFFECTED.

injuriously affected.

But let us narrow the limits of comparison that we may more clearly comprehend the discriminatory features of this measure and determine more definitely where they will be most keenly felt. Let us compare that portion lying east of the Mississippi River and north of the Ohio River and north also of the States of West Virginia and Maryland, which comprises, Mr. President, only 13.7 of the area of continental United States, with that portion which lies south of the line indicated. In other words, let us compare the industries of the New England States—New York, Pennsylvania, New Jersey, Ohio, Illinois, Indiana, Wisconsin, and Michigan—with those in the

States of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia.

TEXTILES.

While the population of the first-named States—that is, those in the north, east of the Mississippi River—is only 4S per cent of the total population of continental United States, and while they have only 45 per cent of the total representation in the Congress of the United States, they have invested within their borders 70 per cent of the total capital invested in textiles which include the manufactures of cotton and small wares, woolen, worsted, and felt goods, silk and silk goods, including throwsters, hosiery, and knit goods, carpets and rugs other than rag, cordage, and twine and jute, linen goods, shoddy, and dying and finishing textiles. They employ 74 per cent of all the wage earners employed in the manufacture of textiles in the United States, and pay 75 per cent of the total wages paid in these allied industries in the United States, and produce 77 per cent of the total value of the textiles produced in the United States.

FOUNDRY AND MACHINE SHOP PRODUCTS.

The foundry and machine shop industries rank first among all the industries of the United States in the value of their cutput, and second in the number of wage earners employed. In the States which I have already enumerated will be found \$86\frac{1}{2}\$ per cent of all the capital invested in that particular industry between Canada and the Gulf, and between the Atlantic and Pacific coasts. Employment is given to \$6 per cent of all the wage earners in that industry; wages are paid to the extent of \$5\frac{1}{2}\$ per cent of the total paid in this industry in the United States; and goods are produced to the value of \$4\frac{1}{2}\$ per cent of the total of the produce of the foundry and machine shop enterprise in all the States.

BOOTS AND SHOES.

Within the borders of these States are located, also, factories in which there are invested 85 per cent of all the capital invested in the manufacture of boots and shoes in the United States, an industry which, in the value of its products, ranks ninth among all the industries of the country; that in these States, and in this particular industry, are employed 86 per cent of all the wage earners to whom is paid 87½ per cent of the total amount paid in the United States in this industry; and that their products amount in value to 90 per cent of the total value of the products of the boot and shoe industry in the United States.

ELECTRICAL APPARATUS.

Mr. President, in this country there is already a mighty, but still growing, demand for electrical machinery and apparatus. Where is it produced, where are the industries located? Within the limits of the States I have already indicated is found invested 96½ per cent of the total capital invested in this industry in the United States; in these States are employed 96½ per cent of the total number of wage earners; in these States is paid 96½ per cent of the total amount paid in wages in this industry; and in these States the value of the manufactured products in this industry equals 96 per cent of the entire value of the output of this industry in the United States.

COPPER, TIN, ETC.

Not only this, but in this same list of States there has been invested in the copper, tin, and sheet-iron industries 69 per cent of the total capital invested in this industry in the United States; there have been employed 73 per cent of the total number of the wage earners in each industry; wages have been paid to the extent of 70½ per cent of the total paid in the country; and goods have been produced to the value of 60½ per cent of the total value of all the goods of this industry produced in the entire length and breadth of the Nation.

MARBLE AND GRANITE.

In this same list of States there will be found 74 per cent of the entire capital invested in the marble and stone work industry of the United States. I am glad to speak of this, because the production and manufacture of granite is peculiarly a New England industry Vermont, in the value of the production of marble and granite, ranks first among all the States of the Union, and the manufacture of the finished product constitutes the principal industry of the State. The marble, granite, and stone work industry is conspicuous among all the industries in the United States in that a higher per cent of wages is represented in the total expenses of manufacture in this industry than in any other.

While in all the other industries already mentioned the statistics gathered in the last census—1909—are expressive, they do not present a comprehensive idea of the present-day propor-

tions of the production of automobiles and automobile parts. In the last three or four years this industry has made astounding strides, but even as far back as 1909 there was invested in this industry in the group of States with which we are now dealing nearly \$168,000,000, wage earners to the number of 73,088 were paid substantially \$47,000,000 in wages annually, and products valued at over \$240,000,000 were placed upon the market. The production of automobiles in this group of States represented in that year 961 per cent of the capital invested, the number of wage earners employed, the amount of wages paid, and the value of products in the whole United States. MISCELLANEOUS INDUSTRIES.

I might go more into detail to show the manufacturing energy in this section of the country, but it is enough to say that its products in the canning and preserving industries are valued at \$77,000,000 annually, or nearly one-half the amount of all the products in this industry throughout the country. Practically all the cutlery manufactured in the United States comes from these divisions and represents a product valued at over \$50,000,000 annually. Nearly 90 per cent of all the watches and clocks produced in America are the product of those States and represent in value \$30,000,000 annually. Brass and bronze products to the value of \$144,000,000, or 96 per cent of the total production in the United States, are there manufactured. Eighty-two and one-half millions of dollars represent the value of jewelry produced annually in the United States, but seventyfive millions of this is the production of the States already mentioned. Eighty per cent in value of all the typewriters manufactured in the United States come from the States mentioned and represent an output valued at \$16,000,000. I might go further and refer to the manufactures of planos, organs, scales, cash registers, and countless lines of production for which these States are famous, but time forbids.

Recapitulating, let me say that this group of States employs 72.9 per cent of all the wage earners in all the manufacturing industries of the United States, and if injury is to result to the industries of the country by reason of the operation of the pending measure, it will be more severely felt in the sections I have mentioned than in any other portion of the Union. That this fact may be more clearly disclosed let me say that of all the wage earners in the United States employed in manufactures 16.6 per cent are in New England, 33.4 per cent are in New York, New Jersey, and Pennsylvania, and 22.9 per cent are in Ohio, Indiana, Illinois, Michigan, and Wisconsin.

NEW ENGLAND AND THE SOUTH. But I desire to call attention to what seems to me to be a still greater and more unreasonable discrimination against the New England division of States. Without a careful study of the relative conditions existing in different sections of the country the operation of this new policy, with all its possible results, can not be understood. For this reason I feel compelled to direct the attention of the Senate to the fact that in the 11 Southern States already enumerated there is a total population of 22,392,414. In the allied textile industries capital to the amount of \$371,652,000 has been invested; employment is given to 163,441 wage earners, who receive annually \$42,937,000. the other hand, the little strip of territory comprising the New England States, which occupy only 2 per cent of the area of continental United States, there is a population of only 6,552,661. yet they have invested in these industries \$722,607,000, employ 344,867 wage earners, pay in wages \$149,803,000, and produce goods valued at \$643,113,000.

It thus appears that this little group of New England States, with but 29 per cent of the population of the 11 Southern States mentioned, and having only 44 Representatives and Senators in Congress, as compared with 126 for the southern group, have nearly double the capital invested in textiles that is found in the Southern States; they employ more than double the number of wage earners, pay nearly three and one-fourth times the amount in wages, and produce commodities valued at more than two and one-half times those of the 11 Southern States. This, in part, indicates the extent to which the rates on textiles in the pending bill will affect the New England States.

And here I pause long enough to call attention to the fact that in the competition between the northern and southern mills in the cotton industries the advantage in the production of uncolored cloths, plain and woven-the products of the automatic loom-has been with the South, because of her longer hours of labor, the lower rate of wages paid, and the more extensive employment of child labor.

The census of 1910 shows that the percentage of labor in making cotton goods was: In Maine, 30.2 per cent; in New Hampshire, 29.6 per cent; in Massachusetts, 27.4 per cent; in Rhode Island, 29.1 per cent; in Connecticut, 28.5 per cent—or an average of 28.9 per cent; while in Georgia it was 17.7 per

cent; in North Carolina, 18.5 per cent; in South Carolina, 20.2 per cent-or an average of 18.8 per cent. Another test can be readily applied to show that the rate of wages in the cotton mills of New England is higher than in those of the South. In the cotton mills of South Carolina, North Carolina, Georgia, and Alabama, the four leading cotton-manufacturing States of the South, there are employed 133,219 wage earners, to whom are paid in wages \$34,967,000; in the cotton-manufacturing States of New England there are employed in this industry 188,984 wage earners, to whom are paid \$77,236,000 in wages. It thus appears that while the southern States mentioned have 70 per cent as many wage earners employed as in the New England States, the amount paid in wages in the southern States is but 45 per cent of the amount paid in wages in the New England States, from which it appears that the annual wage paid to the cotton-mill operatives in New England is 56 per cent higher than in the South.

The difference in the labor cost of production in the two sections is largely accounted for by the larger percentage of children employed in the southern mills than in those in the North.

COMPARISON OF CHILD LABOR IN NORTHERN AND SOUTHERN MILLS.

Not long since the Bureau of Labor instituted an investigation on the subject, selecting representative cotton mills in the North employing 33,030 wage earners and similar establishments in the South employing 48,305 wage earners, the result of which investigation in the mills selected in both sections showed that only 5.2 per cent of such wage earners in the northern mills were under 16 years of age, while in the southern mills 20 per cent were under that age. In other words, the number of this class of employees was almost four times as great in the southern mills as those in the North and constituted substantially one-fifth of the entire number of employees in the group of mills selected for investigation in the South.

The result of this system is shown in the report of the Bureau of Labor on the condition of woman and child wage earners in the United States, volume 1, Cotton Textile Industry, page 21, where it says:

A marked difference is also to be noted in the grade of the product of northern and southern mills, as the following table shows:

Pounds of yarn spun and per cent of each grade spun by cotton mills in New England, in Southern, and in all other States, 1905.

[Compiled from special reports of Census Office, Manufactures, 1905, pt. 3, p. 38. Unfortunately the comparison is somewhat impaired by the selection of the year 1904, when the New England industry suffered from the most protracted strike in its history (bld., p. 19). It would lead too far afield to go further into detail, but the census tables show a very interesting development.]

	Total pounds of yarn spun in 1905 (mil- lions).	Per cent of yarn No. 20 and under (coarse).	Per cent of yarn No. 21 to 40 (medi- um).	Per cent of yard No. 41 and over (fine).
New England States	667. 9	37.3	47. 5	15. 2
Southern States	745. 4	64.0	33. 6	2. 4
All other States	116. 1	66.9	29. 1	4. 0

Thus 64 per cent of southern work is coarse yarn (No. 20 and under), whereas in New England 47 per cent of the yarn is medium counts. The difference is most striking in fine counts, 15 per cent of the total in New England being fine, whereas only 2 per cent in the South is No. 41 and over. This fact evidently confirms the prediction made at the Tenth Census—1880—that there would tend to be a division of the field; the South would manufacture coarse goods and New England fine. In other words, the much-discussed competition between northern and southern mills is ending in the capture of coarse work by the South, while the older industry in New England passes on to finer grades. It is generally conceded that handling finer numbers of yarn requires greater skill than handling coarse. Judged by this standard the southern operative falls short of the operative of New England. The fineness of the yarn, moreover, would effect the number of children employed. While children may be profitably employed spinning coarse yarn, they cease to be profitable on fine. The number of children over 14 years of age in New England would therefore tend to be smaller than in the South, even if children under 14 were not permitted to work in the southern mills.

With such a competition in the lower-priced products of the

With such a competition in the lower-priced products of the cotton mills of the United States it is no wonder that the New England mills have been compelled to engage in the production of cottons, colored, decorated, or figured, of vastly higher quality, which, with their more skilled labor, they are able to But in doing this they have come into sharp competiproduce. tion with the cotton manufacturers of the Old World, and in this respect constitute in this country a class by themselves. Their products, because of their fine quality and artistic designs, command high prices and are just as much luxuries in the market of the United States and as such are just as much subject to the higher rates of duty as silks and other goods classed as luxuries, and yet under the provisions of this bill this class of fabrics are singled out among all other classes of products of which cotton is the base for a reduction of duty, which can but be oppressive to the industries of New England.

NEW ENGLAND AND THE SOUTH COMPARED IN OTHER INDUSTRIES.

Returning, Mr. President, to the other products of New England affected by this bill, let me remind the Senate that in the manufacture of foundry and machine-shop products, the first industry in the country in the value of products, the New England States alone have invested more than four times as much capital as the 11 Southern States combined; they employ more than four times the number of wage earners, pay over four and one-half times the amount paid in wages, and the value of their product is three and one-half times greater. The Southern States mentioned produce comparatively no electrical machinery and apparatus, while the New England States employ nearly 20,000 wage earners in this industry, pay in wages over \$10,500,000, and produce goods valued at over \$22,000,000. Outside of Virginia the 11 Southern States produce no paper or wood pulp, but the New England States employ 27,658 wage earners in this industry, pay nearly \$15,500,000 annually in wages, and produce goods valued at over \$39,500,000. The Southern States produce, comparatively speaking, no brass and bronze products, and yet the New England States have invested in this industry nearly \$52,000,000; they employ nearly 19,000 wage earners, pay nearly \$11,000,000 in wages, and produce goods valued at nearly \$74,000,000.

The Southern States produce practically no cutlery and tools, and yet the New England States have invested in this industry nearly \$27,000,000, they employ over 15,000 wage earners, pay over \$8,000,000 in wages, and produce goods in great variety, valued at nearly \$23,500,000. In marble and stone work the New England States have nearly two and one-half times more capital invested than the Southern States, they employ nearly three times as many wage earners, pay nearly four times the amount in wages, and produce goods valued at two and two-thirds more than the Southern States. The New England States have invested in the boot and shoe industry over twenty times the capital invested by the Southern States in this industry, they employ 104,420 wage earners, as compared with 3,577 for the Southern States; they pay in wages \$56,323,000, as compared with \$1,099,000 for the Southern States; and the value of their products amounts to \$319,950,000, as compared with \$8,017,000 for the 11 Southern States.

NEW ENGLAND'S PLACE IN THE UNION AS AN INDUSTRIAL FACTOR.

But without further comparing the industries of New England with other sections of the country let me remind the Senate that, although circumscribed in area and unable because of natural conditions to successfully compete in agriculture with more favored sections of our country, that division of States produces cotton goods valued at more than 50 per cent of the total product for the United States, over 60 per cent of the total value of woolens and worsteds, over 15 per cent of the hosiery and knit goods, over 17 per cent of the silk goods, and over 40 per cent of the products of the allied industries classified under textiles. She produces over 62 per cent in value of the boots and shoes of the whole country, nearly 25 per cent of the product of marble and stone work, nearly 50 per cent of the brass and bronze products, over 42 per cent of the jewelry, over 20 per cent of the electrical machinery and apparatus, over 15 per cent of the foundry and machine-shop products, over 40 per cent of the cutlery and tools, over 35 per cent of the paper and wood pulp, over 20 per cent of the typewriters, over 10 per cent of the products of canning and preserving, and over 6% per cent of the lumber and timber products. The percentages I have just given relate to the value of the products.

Speaking generally, the census of 1910 discloses the fact that the manufacturers of New England produce substantially one-eighth of the entire manufactured product of the country in value. Among the nine groups of States designated in the census she stands third in the number of wage earners (1,101,290); she stands third in the value of products (\$2,670,065,000); and third in the value added by manufacture. In connection with the question of the value added by manufacture, it is interesting to note that of the total expenses incurred in the production of goods, the New England manufacturers paid a higher percentage in wages than those of any other geographical division of States in the Union.

What does all this indicate regarding the character, the intelligence, the enterprise, the capacity, and the achievement of

the people of New England?

It simply means that they have lived under free governments, that there has been developed among her people an independence of judgment and an exhibition of courage which has resulted in the investment in the manufacturing industries of capital to the amount of \$2,500,000,000 and a distribution in wages and

salaries paid of \$670,000,000 annually. Around these industries a splendid body of citizens has grown up which, measured by the number of those born of native white parentage, by the degree of literacy prevailing among her numbers, by the school attendance of her children, by the amount of deposits in savings banks, by the number of those owning their own homes, and every other condition which enters into the element of prosperity and good citizenship can but excite the admiration and respect of mankind.

DISCRIMINATION AGAINST NEW ENGLAND FARMERS.

But this discrimination against the industrial enterprises of New England is not the only injury that this measure inflicts upon her people, for through its agricultural schedules it strikes a vital blow to that class of New England farmers who are dependent upon the markets found in the industrial communities of New England for a sale of the products which they, through many years of experience, have adapted to the demands of such communities.

What will result if this bill is adopted? It should be remembered that the Provinces of Quebec and Ontario produce nearly 83 per cent of the dairy products of Canada, for which, ever since the abrogation of the treaty of 1854, the Dominion of Canada has been seeking a market in the United States without being willing to grant any reciprocal privileges. In the Province of Quebec alone there is made 73 per cent of all the butter produced in these two Provinces in Canada which are devoted to dairy farming. Owing to the duty heretofore existing the American dairyman has had the American market, and Canada has been compelled to export to Great Britain the product of her dairies. In 1900 she exported to the mother country fifty-seven times more butter than she sold in the United States and one thousand times more cheese. In that year Canada supplied Great Britain with 66 per cent of all the cheese that country imported. The proposed bill reduces the rates on these two products 58 per cent. Why? Is there any reason for it except to give the New England markets to the Province of Quebec.

Why open the New England markets to the Province of Quebec, which lies immediately to the north and is connected with every industrial community in New England by excellently conducted railroads? It should not be forgotten that this New England market alone represents a population nine-tenths as large in numbers as the entire population of the Dominion of Canada, and that in the three industrial States of Massachusetts, Rhode Island, and Connecticut there are alone over five millions of consumers.

Vermont produces one-half of the butter made in New England. Lying as she does upon the border of Canada, enjoying excellent railroad connections on both sides of the State with Montreal, she is unable to dispose of any of her butter in that market because of the imposition of the Canadian tariff duty of 4 cents a pound. On the other hand, the Democratic Party proposes to throw open the entire New England market to the dairy products of that Province, reducing the duty to 2½ cents per pound. Why rob the New England dairyman, who performs all the obligation of citizenship, for the benefit of the Quebec dairyman, who owes allegiance to another Government and who voluntarily contributes nothing to ours?

Why should Canada be accorded this advantage? Why should the New England farmer be deprived of his market? Has Canada shown the slightest indication of friendship in the matter of trade? None whatever. But, on the other hand, she has resolutely and continually discriminated against the products of New England while seeking in that industrial section a market for her agricultural and dairy products.

CANADA NOT ENTITLED TO THIS UNASKED FAVOR.

In this connection do not for a moment forget that all the carpets, clothing, collars and cuffs, cotton print, sheets, telephone and telegraph instruments and fixtures, firearms, furniture, window glass, gloves, knit goods, leather goods, leather beltings, sewing machines, boots and shoes, silk goods, typewriters, ribbons, velvets, woolen blankets, flannels, cloths used in the production of gentlemen's clothing, granite, marble, slate, mill machinery, scales, organs, pianos, harnesses, harness hardware, and others of the great lines of production in the United States, and particularly in New England, are barred out of the Dominion by the old-time Canadian tariff wall, which imposes duties that amount upon an average to over 30 per cent of the value of such products.

This is bad enough, but the situation is made more galling when it is found that Canada in her opposition to American-made goods is also maintaining her special arrangement with Great Britain, by which she gives the mother country a preferential tariff rate on all of the lines of goods I have just named, as well as others, averaging substantially 10 per cent

ad valorem less than the rates which she gives the United States upon the same articles. Do not forget that against the products of marble, granite, and slate industries of New England, Canada maintains a tariff of 35 per cent ad valorem on finished products; and not a square-foot stone, the value of which has been increased by American labor beyond the cost of taking it from the quarry, can go into the Dominion except at that rate of duty. And yet, in the face of this fact, after a full debate, the Democrats of this body have unanimously declared that Canadian and other foreign granite, cut and finished by foreign labor, may enter the United States upon the payment of a duty of 25 per cent ad valorem, a discrimination in favor of the Canadian stonecutter over the American of 40 per cent; and I may add in passing that our Democratic friends have also decreed that Canadian lime may come into the United States on the payment of 5 per cent ad valorem, while the American manufacturer of lime is compelled to pay 15 per cent ad valorem upon his product if sold in Canada, a discrimination against the American workingman of 200 per cent.

The production of textiles is also met by a Canadian duty of 35 per cent ad valorem, while the rate given to Great Britain is 22½ per cent. Upon woolen goods Canada imposes a rate of 27.7 per cent ad valorem against the United States, while the rate given to Great Britain upon the same class of commodities is only 22.5 per cent. Upon bridgework, shafting, cut nails and wire, and some other products of our foundry and machine shops the average rate of duty imposed against us by Canada is 40 per cent, while the preferential rate on British-made goods is only 26 per cent ad valorem. On hosiery and knit goods Canada imposes a duty of 25 per cent against us, while she concedes to Great Britain the right to enter her territory with the same class of goods upon the payment of 22.5 per cent. Upon cotton goods the average rate of duty imposed by Canada against us is 30 per cent, while that imposed upon importations from Great Britain is only about 20 per cent.

WHAT CANADA HAS COMPELLED US TO DO.

This policy on the part of Canada has compelled all of the great manufacturers of the United States who desire to find markets for their goods in the Dominion to establish branch factories on the other side of the line, where by the employment of Canadian labor and the use of Canadian raw material they have brought forth their products for the Canadian market and have at the same time built up Canadian communities. I have seen a consular report indicating that even two years ago no less than 184 American factories had installed branch establishments in Canada, with a combined capital of \$233,000,000 and that the products of these factories included agricultural implements, electric machinery, gas engines, saws and tools, machinery, iron and steel work, automobiles, and many other lines of products. In the city of Hamilton alone there are 15 such branches, 2 of which employ 5,000 men; in Montreal there are 19 and in Toronto 63.

The Fairbanks Scale Co., one of Vermont's largest producers, has been compelled to establish a branch establishment on the other side of the line, as have many others. And it may be of interest to know that while we are asked to give the market of our great Nation to the lumbermen of Canada, neither an American-made ax or saw, nor a sawmill, can be sent to aid in their great enterprise, thus encouraged, without paying the old-time prohibitive duty of about 25 per cent. Do not mis-understand me. I do not complain of Canada's policy of protection, under which she is developing industrial independence, I simply affirm that under the provisions of this bill the American industries are being sacrificed to the interest of other people, some of whom, like the Dominion of Canada, recognize the value of home production and home markets and rigidly adhere to a protective system, and at the same time we are giving them unasked privileges in our markets which are destructive of the interests of American citizens.

WHY GIVE NEW ENGLAND MARKETS TO CANADA?

But why be generous rather than just? Why, in spite of all these things, should anyone desire to open the New England markets to the products of the Canadian farms and dairies? I have already called attention to the fact that in this little strip of territory called New England there are to-day over 92 per cent as many individual consumers as there are in the whole Dominion of Canada, if you count them from the Atlantic to the Pacific. This market of the New England States belongs to the farmers of the United States, who bear all the burdens of citizenship and are entitled to its privileges and advantages, and they should not be compelled to compete upon unfair terms with foreigners. In New England our hills and vales are dotted with small farms, which are worked by their owners. These men can not compete with the great West in the production of

the cereals or in the production of beef and pork; nor with the Pacific coast in the production of fruits; nor with the South in the production of cotton; all of which products find a ready market within her borders. But they can specialize and produce those commodities which are demanded by this dense population of consumers, and thus, too, share in the general prosperity of all.

VALUE OF HOME MARKETS TO NEW ENGLAND FARMERS,

Much has been written about the value of near-by markets for farm and dairy products. Can it be more strikingly illustrated than by the results of the census of 1900, from which it appears that the State in which an acre of land brought the largest return to its owner was New Jersey? Why? Simply because the whole State is dotted with manufacturing towns and cities, and because she has New York on the one hand and Philadelphia on the other, and the small farmer can produce what the near-by market demands and secure for his produce the highest retail prices. Ranking next to I Rhode Island, where similar conditions exist. Ranking next to New Jersey was Next to Rhode Island was Massachusetts, and then Connecticut. And so it was found that just in proportion to the nearness of a farm to a great industrial center just in the same proportion the value per acre of the produce of the land is enhanced in value.

What will an industrial depression in New England mean to the New England farmer? Let me illustrate by saying that the census of 1910 shows that Vermont ranked first in the per capita production of butter and third in the per capita production of cheese of all the States in the Union. And what is true in Vermont in relation to the dairy products, poultry, vegetables, fruits, and other products of the farm is true of all the other New England States in greater or less degree. Their farmers find their profits in suiting their products to the demands of the home market in the manufacturing sections of that division

of States

How will the pending measure affect the New England farmer

in respect to Canadian products?

In this bill the rates are decreased 100 per cent from the present duties on eggs, milk, cream, potatoes, corn, rye, wheat, flax, buckwheat, cabbage, bacon and hams, lard, tallow, fresh beef, veal, and so forth, cattle, swine, and sheep. The duties are reduced 60 per cent on poultry, butter, cheese, apples, peaches, pears, and so forth, straw, oats, peas, and horses. The rates on hay, onions, and barley are reduced 50 per cent. And this is done without any reciprocal advantage offered to or received by any class of producers in the United States

He can but remember the dark days under the Wilson bill in the years 1895, 1896, and 1897, when all classes received such staggering blows that each sympathized with the other in the sufferings which followed; vast throngs of workingmen were without employment, soup houses were opened in many of our cities, armies of the unemployed demanded work of the public authorities, farm and dairy produce suffered heavy decline in prices, and the finest products of New England's farms and dairies sold in the markets of New England for prices less than the cost of production. This was the result of the last previous attempt of the Democratic Party to compel American citizens to preserve their birthright by "whetting their wits" in competition with those who grant no favors.

ABANDONMENT OF THE PROTECTIVE PRINCIPLE-ITS EFFECT.

Mr. President, I can not avoid the conviction that, however pure the motive of those who have framed this measure may have been, however high their purpose, they have approached the question from a standpoint which is entirely inconsistent with what I conceive to be the settled policy of the American people after an experience of a half century—a policy which recognizes the correctness of the principle that, just in proportion as political conditions are free, just in proportion as they extend to every element in society an opportunity for growth and development, just in the same proportion will be found that superiority in the standard of living among the masses which has always prevailed in the United States.

The abandonment of this principle in this measure is the abandonment of a purpose to further recognize the superior condition of the wage earners in the United States over those in foreign nations—a condition which has been invariably looked upon by thoughtful men as essential to the preservation

of our institutions.

Such a change of policy is not only dangerous to free institutions, in that it will draw Americans into a sharper competition with conditions existing under other forms of government, but also that in its effect upon the industries of the United States it will prove so sectional in its character and so oppressive in its operation that the injuries resulting will be vastly greater than any advantage which, in the minds of its most ardent supporters, can possible be achieved.

Its burdens, unless I greatly underrate the protests which have been uttered in this Chamber by those who represent the great agricultural West, the protests which have here been uttered by those who represent the great industrial States of the North, will be so unequally distributed as to demonstrate that it is essentially class legislation. It is conceded by the promoters of the measure that the revenue to be derived by the imposition of revenue duties will fail to measure in amount with that now received under the existing law, and that a deficit of millions of dollars will exist.

How is this defect to be met? I am aware that the Democratic Party has long looked upon an income tax as desirable and as an instrumentality to be used in the destruction of the tariff policy of the Republican Party; and now, although in a time of profound peace, when the country is prosperous and when no unusual exigency exists, on the first opportunity that has been offered, the right of Congress to impose such a tax is

sought to be exercised.

WHERE THE INCOME TAX WILL FALL MOST HEAVILY.

The great industries of the North are not only to suffer from a reduction of duties upon competitive commodities manufactured in the Old World to a degree heretofore unknown in the tariff legislation of the United States, but they are also called upon in a large measure to make up a deficit in the annual revenues of the Government caused by this revolutionary change in

our national policy.

This tax will fall almost wholly upon those sections of the country where commerce and industries more largely prevail. We are unable in judging of the probable operation of the income tax to refer to past experience, because the scheme is new and untried. We are compelled to seek other sources of information. The probable operation of the income tax may be indicated if we ascertain the amount of taxes paid by the people of different States on legacies and distributive shares of personal property as a result of the Spanish War, and, by a comparison of those paid by different States, discover where the imposition of the income tax will be most keenly felt.

The records show that under the law of June 13, 1898, the people of Massachusetts, Connecticut, Rhode Island, New Jersey, New York, and Pennsylvania, with a population almost precisely the same as the population of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia, but with a representation in Congress in 1900 of only 112, as against 120 in the last-named States, paid taxes in the year 1900 to the amount of \$2,116,116.20, as against taxes paid by the States in the South I have already enumerated to the amount of \$112,428.82. In other words, the first-named States, with a less representation in Congress, paid an amount in taxes nearly 19 times as great as that paid by the 11 Southern States. Massachusetts alone, with a population of one-sixth that of the Southern States mentioned, paid a tax 4 times as great as the 11 Southern States together, and yet the 11 States have more than 7 times the number of Representatives and Senators in Congress.

If we apply another test, we find that in the payment of the

If we apply another test, we find that in the payment of the special excise tax on corporations, joint-stock companies or associations, and insurance companies, now in operation, for the fiscal year ending June 30, 1912, the 11 Southern States already mentioned, with a population of 22,392,414, paid a tax of \$1,937,457, while Massachusetts and Connecticut with a population of 4,481,172 paid a corporation tax of \$1,932,056. The 11 Southern States which I have mentioned have Representatives and Senators in Congress to the number of 126, while Connecticut and Massachusetts have but 25. To carry the comparison a step further, let me say that the State of Illinois, with a population of between five and six millions, paid a tax of \$2,867,056, or more than one and one-half times that of the 11 Southern States together, and yet Illinois has a representation in Congress of but 29, while the 11 Southern States have four times that number.

Mr. President, I believe in the principle of an income tax. I was opposed to the constitutional amendment granting power to the Federal Government to impose such a system because I did not deem it necessary to the maintenance of the General Government. On the other hand, I did believe, in view of the burdensome rates of taxation maintained in some of our States and the difficulty they are finding in devising an equitable apportionment of such burdens—I believed, I say, that the imposition of an income tax should have been reserved to the States as one of their sovereign powers. But this is neither here nor there. The constitutional amendment has been adopted, Congress has the undoubted power to impose this tax, and the promoters of this measure propose to use it to meet the expected deficit.

NECESSITY FOR A TARIFF BOARD.

In view of all these considerations, Mr. President, I am driven to the conclusion that the proposed measure is one which is unequal in its application to the different interests of the country; one which is burdensome to particular sections of the country but which affects only slightly certain other portions of our country; that it is one all of the provisions of which support a policy which is un-American in spirit, and one which, in my judgment, is destructive to the highest and best interests of the Nation as a whole. For these reasons I am unalterably opposed to its passage, and I am more than ever convinced of that which has been so often asserted, and which I believe has come to be a settled conviction of the country, that legislation of this character ought not to be undertaken except upon in-formation which can only be derived through the work of a Government board or commission, absolutely nonpartisan in character, composed of men technically equipped for the work, through whose scientific investigations the actual difference in the cost of production of all classes of commodities in the United States and in foreign nations can be ascertained and reported to Congress. For a long time I have been convinced that a permanent board of this character should be established, and I confidently expect that the operation of this measure, if it is enacted into law, will deepen the conviction in the minds of all thinking people that it is unsafe to longer continue the old methods of arranging and fixing tariff schedules. can people must determine what the national policy shall be and Congress must have the benefit of authentic data and unquestioned information upon which to base legislation intended to carry such policy into effect.

The PRESIDING OFFICER (Mr. Walsh in the chair). The

Secretary will proceed with the reading of the bill.

Mr. SMOOT. I do not believe many Senators understood that the Senator from Vermont would be through so soon, and they are perhaps down at lunch at this time. I think some are absent who would like to be here, and therefore I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the

The Secretary called the roll, and the following Senators answered to their names:

Myers Nelson Norris O'Gorman Overman Owen Ashurst Gallinger Bacon Borah Gronna Hollis Simmons Smith, Ariz. Smith, S. C. Smoot Stone Brady Brandegee Bristow Hughes James Johnson Page Penrose Perkins Poindexter Sutherland Bryan Burton Jones
Kenyon
Kern
La Follette
Lane
Lea
Lewis
Lippitt
Lodige
Martine, N. J. Jones Sutherland Swanson Themas Thompson Thornton Tillman Vardaman Walsh Weeks Williams Catron Clapp Clark, Wyo. Crawford Cummins Dillingham Pomerene Ransdell Reed Robinson Saulsbury Sheppard Sherman Williams Fletcher

Mr. JAMES. The Senator from Kentucky [Mr. Bradley] is detained from the Senate by reason of illness. He has a general pair with the Senator from Indiana [Mr. Kern].

Mr. LANE. I was requested by my colleague, the Senator from Oregon [Mr. Chamberlain], to state that he is unavoidably absent and that he is paired with the Senator from Pennsylvania [Mr. Oriver]

sylvania [Mr. OLIVER].

Mr. SHEPPARD. My colleague [Mr. Culberson] is necessarily absent. He is paired with the Senator from Delaware [Mr. DU PONT]. I will let this announcement stand for the day.

Mr. GRONNA. I wish to announce that my colleague [Mr. McCumber] is necessarily absent on account of sickness in his family, and that he is paired with the senior Senator from Nevada [Mr. Newlands].

Mr. THORNTON. I wish to announce the necessary absence of the Senator from Alabama [Mr. Bankhead] and also the fact that he is paired with the junior Senator from West Virginia [Mr. Goff].

Mr. GALLINGER. I desire to announce the enforced absence of the junior Senator from Maine [Mr. Burleigh] on account of illness. I will state that he is unpaired.

The PRESIDING OFFICER. Sixty-seven Senators have answered to their names. There is a quorum of the Senate

present.

Mr. PAGE. Mr. President, I wish to relieve the Senate of any misgivings about listening to a speech from me this afternoon. I simply want to offer a very few suggestions in regard to the particular industry which will be affected by the reduction of the duty on butter from 6 cents to 2½ cents a pound.

I see that the Senator in charge of this part of the bill, the senior Senator from Mississippi [Mr. WILLIAMS], is in his seat. He knows the great respect I have for him. I think he is one of the most erudite and learned Senators here. I should like to ask him if, in his opinion, the reduction of the duty on butter from 6 to 24 cents a pound will not be detrimental to the interests of a strictly dairying State, like Vermont?

Mr. WILLIAMS. Does the Senator mean by that the dairy

people who produce the butter?

Mr. PAGE. I do.

Mr. WILLIAMS. If they had to take less for their butter in the market, they ought, for heaven knows butter is high Everybody eats butter, and the people ought to

get cheaper butter if they can.

Mr. PAGE. I remember the late Serator from Idaho used to discourse to us occasionally as to the duties of a Senator. I think he remarked often that a Member of the House was a representative of his State, but that a Senator was a Senator of the United States. Having in view the duties of a Senator as expressed by the late lamented Heyburn, perhaps I have no right to approach this subject purely as a Vermont Senator representing a Vermont interest; but it seems to me that in a matter as closely affecting the welfare and interest of a State as the dairying interests affect Vermont I ought to speak; indeed, that I have no right to be silent concerning this particular

item in the bill and its application to Vermont.

Vermont is distinctively a dairying State. records show that 85 per cent of all the farmers of Vermont are engaged in dairying. I am sorry the Senator from Mississippi has left the Senate, but perhaps some other Senator upon the other side of the Chamber may answer my question. like to know if it is assumed on the Democratic side of the Senate that the increase in the duty on butter from 4 cents to 6 cents per pound, made by the Dingley law, did not benefit the State which I have the honor in part to represent? I think it is claimed by some theorists that it did not benefit Vermont to have this increase in duty. To my mind, nothing could be more fallacious than such a theory. I believe Vermont was immensely benefited by this change of duty from 4 to 6 cents; and I believe it is susceptible of absolute proof, as nearly as anything uncertain can be proved, that that duty started Vermont upon an upward path to prosperity, which has continued from 1896 down to the present time.

Mr. WILLIAMS entered the Chamber.

Mr. PAGE. The Senator from Mississippi has returned. I will ask him the question whether, in his opinion, the increase of duty from 4 to 6 cents by the Dingley law resulted in added

prosperity to a dairying State like Vermont?

Mr. WILLIAMS. If the Senator from Vermont means by that to ask me whether I think the increase in that duty added to the price of butter, I frankly say that I think it probably did, and, of course, it added that much to the prosperity of the fellow who was making butter and selling it, and deducted that much from the prosperity of the man who had to buy it.

Mr. PAGE. Then I want to repeat what I said a moment

The Senator from Mississippi will remember that former Senator Heyburn, of Idaho, was wont to say that a Member of the other House represented his State, but that a Senator was a Senator of the United States, and that as such he represented the whole country. Is that the view of the Senator from Mississippi?

Mr. WILLIAMS. That is my view precisely; and for that reason I think the few butter makers in Vermont are less to be considered than the entire butter-consuming public of the

Mr. PAGE. Let me ask the Senator a further question. Am I, as a Senator representing in part the State of Vermont, justified in protesting here in behalf of the agricultural inter-

ests of my State against this change?

Mr. WILLIAMS. Upon the theory that you are representing Vermont alone, yes; upon the theory that you are representing

the entire United States, no.

Mr. PAGE. But is it not true that in the making of a tariff bill we bring together here the consensus of views and opinions of all the States, and that the making of a tariff bill is a compromise in which those views meet together and eventually form a bill?

Mr. WILLIAMS. That involves the idea that, instead of each individual Senator considering the interest of the entire country, each individual Senator shall consider his local interest, and then by a process of aggregating these things, logrolling them out, the general prosperity is arrived at. In that theory I do not believe.

Mr. PAGE. I am sorry to disagree with the Senator from Mississippi, for he knows my good opinion of his abilities; he that in making up this schedule of duties he and his Demo-

knows how I would like to agree with him; but I can not in this case. It seems to me that it is the duty of a Senator from Vermont, in view of the fact that Vermont is distinctively a dairying State, to stand here and protest against what you have done in this bill.

Mr. WILLIAMS. I have no quarrel with that position, and would not even have questioned it, except for the fact that the

Senator from Vermont put me upon the witness stand.

Mr. PAGE. I asked the question because I wished to know the Senator's view about that; and I think his reply was not altogether conclusive, because I think, in his own heart, he feels that the only proper way to frame a just and equitable bill is to consider all the interests of all the States as they are presented here in the Senate by the representatives of those States. Am I right in that, I will ask the Senator?

Mr. WILLIAMS. Well, I hardly know. When the Senator says "to consider all the interests of all the people," if he means that, of course he is clearly right; but if the Senator means to concede to each demand what each wants, or to even consider with favor each special demand of each special interest or each special locality, he is just as clearly wrong. My own view is, that we should spread our vision over a broader horoscope, that we should take into view all the people and disregard special interests as much as is possible with the weakness of human nature.

Mr. PAGE. In a measure I fully agree with the Senator, and yet it seems to me that the only possible way of reaching a just result is for us to get together, each making his claim for his State, each making his protest where his State has been injured, in the opinion of the Senator, each setting forth the benefits that have come to his State by any given course of legislation, and in the final result trying to reach a just conclusion.

Let me say distinctly, in answer to the suggestion of the Senator from Mississippi, that in 1909 the question arose as to what Vermont should do under the Payne-Aldrich bill with reference to her different industries. I said to former Senator Aldrich, "I want you to know that Vermont is a progressive State; we want to take our share of the diminutions and dis-counts and reductions of duty in this bill." Take, for instance, marble. If we go down to the New Willard Hotel we find that

there is a wainscoting made in Italy.

I had a conference with the marble people in the State of Vermont with regard to that duty, and they said, "We can not compete with Italy on anything that has much hand labor expended upon it, but we are willing to join with the rest of the people of the country, in view of the demand for a reduction, and stand our share of that reduction." The Senator from Mississtand our share of that reduction." The Senator from Mississippi will remember that thus far Vermont has made no protest against the reduction of the duty on marble. We have felt, however, that on granite, which is distinctively a Vermont industry, you have been too severe on us. We are now receiving three and a third times as much protection as we shall receive under the bill now under consideration. We believe that is wrong, and so we made our protest; and I should not regard myself as having done my duty as a Senator from Vermont if I had not done so. I do not believe the Senator from Mississippi will tell me that he believes I did wrong in making that protest.

Mr. WILLIAMS. Does the Senator think that either he or Vermont or anybody else could have a vested right in a tax?

Mr. PAGE. No, sir; but we have a right when we think we are wronged to enter our protest; and the only place where we can properly make that protest is here on the floor of the Senate when this bill is under discussion.

Mr. WILLIAMS. But the law that the Senator is complaining of is the reduction of a tax; that is what he calls a wrong. So I asked the Senator if he thought he or anybody else could

have a vested right in a tax.

Mr. PAGE. I do not; but I do believe that in the readjustment of tariff duties, instead of making the protection three and onethird times smaller than it is, we ought to have had reductions that were reasonable. I submit to the Senator that when the Democratic platform was made one of the provisions of that platform was that no legitimate industry should be injured. think that President Wilson in his anteelection canvass told the people in his letters and in his speeches that "if an industry is competitive, if it is legitimate, if there are no special reasons why it should not exist, the Democratic Party will see to it that it is not unduly wronged."

I say I protested the other day, and I now protest to the Senator, that in their treatment of the great granite industry of Vermont—for next to agriculture it is the biggest industry in Vermont—we have been wronged. I protest to the Secutor

cratic colleagues have treated Vermont with greater severity than they have treated the average interests of this country, as I shall try to show in my remarks a little later on.

I wish, however, first to show that, beginning with the advance in the duty in 1897, under the Dingley law, Vermont entered upon an area of great prosperity. We are not coming here and saying to the Senate that Vermont is poor; we are not begging. I take the other ground; that is, that we have been exceptionally prosperous, and we have been prosperous because we have had the New England market, which I think legitimately belongs to Vermont and not to Canada.

Now, without taking the time of the Senate with any extended remarks, I merely want to quote from the statistics for Vermont in the report of the Thirteenth Census for only two or three minutes to show what has been accomplished by

Vermont in the last 10 years.

In the first place, I think, one of the best evidences of success and of prosperity is the way we have been able to treat our educational matters. I now quote from page 578 of the report. Under table 9, showing school attendance, we find that out of 31,451 school population between the ages of 10 and 14 years, 30,391, or 96.6 per cent, were attending school. I am very proud of this fact, because it shows that in this respect Vermont is ahead of every other State in the Union. On page 579, in table 10, we find that the total number of illiterates of native parentage had decreased from 3,231 in 1900 to 2,234 in 1910, the percentage in 1910 being only 1.2, or 12 persons out of each 1,000. Again, the reports give the State percentage of illiteracy as 13.1 per cent among the foreign born, and only 1.9 per cent among the native whites.

Vermont probably has a larger percentage of native sons of native sons than has any other State in the Union. I may come to the figures later; but, as I remember, the percentage is about 65 or 75 per cent, while in my own county the percentage is more than 80 per cent of native sons of native sons. When you say that the per cent of illiteracy among native whites is only 1.9 per cent you speak volumes for the prosperity of Vermont. I think the Senator from Mississippi will agree with me in regard to that test, for it really is

a great test.

In regard to the value of our farm property, in 1900 the value of all farm property in Vermont was \$108,000,000, while in 1910 it was \$145,000,000, an increase of 34.1 per cent. know but that there are some of the newer States which can make a better showing; very likely there are; but for a State which between 1880 and 1890 actually lost in its rural population; in a State where the farm values actually declined, as they did between 1880 and 1890, and, I rather think, only barely held their own between 1890 and 1900, a gain of 34 per cent in the value of our farm property is a wonderful showing.

I read from page 592: "The actual and relative gain during the decade from 1900 to 1910 was over five times as great as during the decade immediately preceding, while in the two decades between 1870 and 1890 decreases in value were re-

ported.'

Again, the average value of land and buildings per acre in 1870 was \$24.62; in 1880 it was \$22.40-note the decline; in 1890 it was \$18.30-note the further decline; in 1900 it was

\$17.58-note the still further decline.

But after we received the protection on butter given us under the Dingley law it gave us what legitimately belonged to us-the New England market, and in the decade from 1900 to 1910 we made the wonderful gain of more than 40 per cent in the value of our farms. In round numbers they increased from \$17 to \$24 per acre. In 1900 we became a distinctively dairying State. Formerly we raised more or less sheep and we raised a great many horses. To-day we do very little in the sheep industry, and it is a fact that the horses which we use on our farms are largely brought from Iowa and Missouri.

I am proud of that fact. I do not know but that under the operation of this bill we shall be compelled to go into diversified farming, and in that respect it may be beneficial to us.

The facts are that our farmers have come to be very skillful in the making of bufter, and the State, because of that fact, has become very prosperous. I am sure the Senator from Mississippi, whatever broad ground he may assume in regard to this matter, will say that he does not blame us for feeling solicitous in regard to the future under this tariff cut. to-day receiving nearly two and a half times the protection on butter that we shall receive if the provisions of the bill now before us become law; or, to be exact about it, the present law gives us 2.4 per cent as much protection as we shall receive under the bill now under consideration.

Another fact which I want to bring to the attention of the Senate in regard to the prosperity of Vermont is this: Up to 1890 Vermont, like many other States, was badly in debt; we were heavily mortgaged; but from 1900 to 1910 the census report shows that we reduced the percentage of debt to value from 41 to 33 per cent.

I think Vermont is an ideal, a typical State to consider in discussing this important question of the tariff on butter, as

Vermont is distinctly a dairying State.

Speaking with reference to dairying, the census report says that of all the farms in the State, 86.4 per cent report cattle and 85.4 per cent report dairy cows, which, I suppose, means that more than 85 per cent of all our farmers were engaged in

this great industry.

Of the 3,721 foreign-born white farmers in Vermont in 1910, 2,463 were born in Canada. I want to bring that fact to the front now, because I shall speak of it later. Pretty much all of the foreigners we have in Vermont to-day are Canadians. It is oftentimes said that Canada is just as good a country as Vermont, but many of their best citizens, when by thrift they get a little something ahead, come down into Vermont, buy our best farms, and become not only our very best farmers, but our very best citizens.

The increase in crops during the past 10 years is phenomenal, because you must bear in mind that we do not increase our acreage at all. In the West you increase your crops because you increase your acreage, while in Vermont our acreage remains substantially stationary, but the total value of crops in 1909 was 51.1 per cent greater than in 1899—a really wonderful

showing.

The product of our manufactures is not directly related to the question under discussion, but I happen to note this sentence in the census report, and I want to read it to the

From 1899 to 1909 the total value of products increased \$2.456,000, or 43.4 per cent, and the value added by manufacture was \$285,000, or 37 per cent.

I think it is a fact that our increase in this respect has been due to our quarries. The increase in marble, slate, and granite has been very great, and that accounts largely for our increase in manufactures.

And while reading let me read this sentence:

Of the 1,958 establishments reported for all industries 6.7 per cent employed no wage earners, 56.2 per cent from 1 to 5, 21.1 per cent from 6 to 20, 10.1 per cent from 21 to 50, and only 5.9 per cent over 50.

In other words, the business is largely in the hands of small concerns. You may go into any of our little granite towns in Vermont and you will find that the granite producer comes up from the quarry. He gets a little money ahead, acquires a little experience, and starts off in business for himself. are very proud of the progress Vermont is making in regard to those little industries, and we believe they ought not to be injuriously disturbed.

I desire to refer to one more item, because it pertains to this particular feature, and then I shall be through with statistics,

taken from the census report. I read from page 623:

Butter, cheese, and condensed milk.—Vermont is one of the leading dairy-producing States, ranking ninth in respect to number of establishments and tenth in value of products.

One word in regard to that thrift of Vermont, which is largely the outcome of the prosperity of our dairying interests. I was observing yesterday the report of the banks of the city of Washington. They were called upon to make a report as of August 9. This is a city of three or four hundred thousand population. I live in a little village with a population of 423. In that little village our bank, the Lamoille County Savings Bank & Trust Co., has about \$2,700,000 in assets, and in the same bank building and connected with it is a national bank, the two together having three million one hundred and some odd thousand dollars of assets, a greater amount, I think, although I am not certain about it, than have the majority of the banks in this city.

The farmers of Vermont get up early in the morning; you will find many of them up at 4 or 5 o'clock, and they work until late at night. They are pretty thrifty, and when they get a dollar they lay it away in the savings banks. I want to give you some figures that are almost phenomenal. From 1904

Mr. GALLINGER. Mr. President—
The PRESIDING OFFICER. Does the Senator from Vermont yield to the Senator from New Hampshire?

Mr. PAGE. With pleasure.
Mr. GALLINGER. I remember once listening to a most interesting lecture by Henry Ward Beecher, in which he criticized New England pretty severely. Among other things, he said

that the farmers got up in the morning to wake up the cows to

Mr. PAGE. Well, if the Senator will allow me, I remember the Senator from Michigan [Mr. Townsend] yesterday spoke of his great pride in the fact that he was a farmer. I want to express my pride in that same fact. My father was a farmer. In my early life while attending school I often got up in the morning at 4 o'clock and milked or helped milk the cows and then went up to what we called "the back farm," where we kept the heifers and cows that were not in milk. I had to go up to this farm on the hill, let out the cows, drive them down 20 or 30 rods to a spring to water them, then drive them back, tie them up, feed them, and clean out the stable. Many and many a time I have gone up the half mile or more to the back farm with the thermometer registering 25°, 30°, or 35° below zero. It is almost impossible, as every northern farmer knows, to get cows to go to the spring in cold weather. They will drink when you get them to the water, but they hate to go out on a cold morning to drink. I have driven those reluctant cows down to water and then driven them back when the weather was so cold that I wondered how I stood it; but I believe to-day that my good health may be attributed to the fact that in my boyhood days I had to do just that kind of work.

It is a good thing to get up in the morning, and it is a good thing to work hard. Hard work does not hurt a boy or a man; it is worty that hurts, and our Vermont farmers under the present tariff have not been worrying very much; they have been making a little money and putting it by in the savings bank for

a rainy day,

From 1904 to 1909 the increase in deposits in little Vermont was \$15,830,504.64. We have a population of only three hundred and fifty-odd thousand. We have only a little over 9,000 square miles of territory, and yet the gain in savings-bank deposits in the five years ending 1905 was \$15,000,000, and the gain in the

year 1912 alone was \$6,453,614.39.

There may be some other States that can beat us, but we are very proud of our record, and I doubt if it can be beaten. I believe Massachusetts claims to be a little the best State so far as savings-bank deposits go, but we are very proud of what we do in Vermont, and I want to say to the Senate that this prosperity is largely because of the prosperity of our dairying inter-We are nothing if we are not good dairymen.

Mr. MARTINE of New Jersey. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ver-

mont yield to the Senator from New Jersey?

Mr. PAGE. With great pleasure.

Mr. MARTINE of New Jersey. I thought the Senator was arguing that the magnificent thrift and splendid health he possesses came from the beneficent effects of the tariff. I think the Senator said something to the effect that it was owing to our splendid tariff, did he not?

Mr. PAGE. The Senator failed to catch what I said. I said we laid the foundation of our prosperity by hard work, and that hard work did not hurt anybody, but worrying did, and that when we were making these gains we did not have to

Mr. MARTINE of New Jersey. I thought the Senator said the tariff brought about this magnificent result.

Mr. PAGE. It has done so, by giving us a prosperity that lets us live.

Mr. MARTINE of New Jersey. Does not the Senator attribute anything to God's glorious sunshine, magnificent climatic conditions, and atmosphere that make up the opportunities of the population of America?

Mr. PAGE. Most assuredly I do.

Mr. MARTINE of New Jersey. Does not he attribute anything to sunshine and rain and the great possibilities of an American in America ultimately, mayhap, becoming a Senator, as the Senator from Vermont has, and the ingenuity and general ability of the American race, even without tariffs?

I am not one of those who believe that all these glories and blessings that have come to America, and this magnificent and wonderful progress that have come, are entirely attributable to the tariff. Heaven only knows what we would have done without it. We have grown in spite of your tariff. Without it, I believe we might not have advanced quite so rapidly, but the goal would have been reached anyway, with American genius and intellect and thrift, and with God's blessings.

The Senator is simply emphasizing what I am very glad to have brought to the attention of the Senate now. We had the same sunshine, we had the same rain, we had the same blessed privileges that we have now, so far as God has given them to us, in 1870 and 1890 and 1900. But let me say to the Senator that it was under the present tariff on butter that the value of our farm lands increased from \$17 to \$24 an Let me go back. In 1870 the value per acre of our farm lands was \$24. We have just gotten back now to the level of 1870. In 1880 it was \$22; in 1890, \$18; in 1900, \$17. But under this tariff, which gives us a good protection on butter and gives us the New England market, the value of farm lands in Vermont has increased from \$17 to \$24 an acre since 1900.

Mr. MARTINE of New Jersey. That is very nice for the Senator, who makes the butter, but God help the poor mortals of us that eat it! We pay too much. We feel that it would be a most beneficent blessing if the price of butter were reduced. I think if you should canvass the average householder in the District of Columbia, or in almost any State of the Union, he would tell you that he thought butter was inordinately high and that

the farmers of Vermont were reaping too rich a profit,

Mr. PAGE. Mr. President, I should like to take the good Senator from New Jersey up to Vermont and show him the manufacturing industries of our State. I could take him to Hardwick, for instance, which is only about 14 miles from my town. At 4 o'clock in the afternoon he would see the granite workers marching from the quarries to their homes, and from 4 o'clock forward they have nothing to do. The farmer often gets up and goes to work at 4 o'clock in the morning and not infrequently works until 9 at night.

Mr. MARTINE of New Jersey. I wish to remark, regarding the quarry workmen, that I am one of those who insist that the leisure hours that the quarry workmen have are not the result of the tariff, nor are they a voluntary offering on the part of the quarry owners. They have been the result of the formation of labor organizations that have dictated the hours

of labor.

Mr. GALLINGER. Mr. President, will the Senator permit me?

The PRESIDING OFFICER. Does the Senator from Vermont yield to the Senator from New Hampshire?

Mr. PAGE. I do.

Mr. GALLINGER. As I understand the matter, the difference between Vermont and New Jersey is that the Vermonters have kept their farms and are producing butter on them, while the Senator from New Jersey sold his farm for house lots and got rich.

Mr. MARTINE of New Jersey. That is anticipating some-I have not discovered that I have gotten rich. But I did cultivate my farm, and I was one of the farmers who never discovered the splendid benefits and magnificent profits resulting from the tariff. I never discovered that the price of a bushel of wheat or a bushel of potatoes that I raised was enhanced one whit by the tariff. I was wise enough, I felt, to see that I was being fed with thin gruel when my Republican friends told me that, and the farmers generally throughout the country have opened their eyes to the fact that this was false teaching and that the tariff really did not help them.

I remember that right here in his place last year the distinguished Senator from New York [Mr. Root] stated that the farmers had gotten little, if any, benefit out of protection. The farmers are a fairly intelligent body of men, and you can not delude them with the thought that a duty of 25 cents a bushel on potatoes, or 25 cents a bushel on wheat, is helping

them at all, since we are an export people.

I read the tariff list over, and I find that a duty of 10 cents apiece, I believe, was levied on pumpkins in your last tariff bill. It would be very much of a pumpkin head that would be captured by any such argument. That duty did not help the farmer a bit, barring the territory right along the line of Canada. The pumpkin would decay and rot before it got far inland. It may have helped a few farmers right along the border; but the mass of the farmers have reaped nothing from it, and the verdict of the farmers has been positively and

absolutely against this iniquity.

Mr. PAGE. Mr. President, I wish to say to the Senator from New Jersey that if any State in the Union has a right to speak well of the tariff, it is New Jersey, and if any man in the Senate has a right to speak well of it, it is the Senator from New Jersey, because the manufacturers have moved into his State in such numbers that they have crowded him out of his farm, and have taken his farm to build their homes upon. I wish to say to him that the manufacturers of Vermont, so far as I know—and I have talked with them—are not jealous because the farmers get good prices for their products. The granite men work eight hours a day. They see the farmers working 16 hours a day. They are able to get wages which at the minimum are \$2.50 a day, and run from that figure up to \$5 a day, or even more, for eight hours' work. They are content. They are not

selfish to the extent that they want to see the Vermont farmer

deprived of his protection.

I think the Senator is all wrong, if he speaks for his own people, in saying that they are jealous because the farmer is living fairly well. Why, Mr. President, if you will give the farmer the purchasing power, he will buy the shoes made down in New Jersey. If you deprive him of that power by reducing his income, he will wear his old-shoes a couple of years longer, and New Jersey will suffer because Vermont suffers.

Mr. MARTINE of New Jersey. The Senator speaks about

my farm being built up by the beneficiaries of the tariff. He is utterly wrong. It was not built up by the beneficiaries of the tariff. I realize that New Jersey is brim full of manufacturing enterprises. I realize, too, that the manufacturers and mill owners have been fostered and favored by a tariff inordinately high and infinitely unjust. I realize that while the few who were the owners of these great enterprises may have made, and have made, most fabulous profits, as a rule the laborers who were the authors of the money that was turned out were paid but miserable wages.

I cited to you within the past few months instances in the city of Paterson, one of the cities most favored and fostered by the tariff system, where people were stalking the streets really asking for bread because they had refused to accept without murmur the wages that were proffered to them by the mill I can recall that within 9 miles of my own home, in great manufacturing woolen and shoddy mills, white women were paid as low wages as 75 and 80 cents a day and children were employed at a less sum. And this under the most munifi-cent and extravagant system of protection!

I say the average breadwinner has not reaped his share from the so-called protective tariff. It has benefited a handful of mill owners and a handful of quarry owners; but when we turn to the mass of the people of our country I do not believe

the toilers and breadwinners have reaped their share.

I can understand full well that you men of New England, like the men of Louisiana with their sugar proposition, have lived so long by having had your chins held out of water by the public that you seem to think you can not live without it, Just brace up and make up your minds that there is no more reason why your manufacturers should be protected than some other manufacturers. It comes out of the whole mass of the people. Let us lift the burden. With all the wealth that you have accumulated in Vermont, in Heaven's name, I say, just let up on the tariff on butter and let some poor child and some poor mother have a little more liberal stipend of it to spread upon the buckwheat cakes that I heard caviled about here by the Senator from North Dakota the other day.

Mr. PAGE. I should be very glad to continue this, but I can see by the attitude of my beloved friend the Senator from Mississippi [Mr. WILLIAMS] that he will not quite consent. He is anxious to have me keep my word and cut short my argument. He is anxious to have a vote on this paragraph. I am afraid if the Senator from New Jersey and myself should get to discussing this matter we would extend the discussion too long

I am only going to say that the Senator may find in his State some rare instances here and there where the people are not being fully employed at good wages; but they are like the single spears of grass that are left after the mower has been over the field. I do not know of any place in Vermont where the people are not all employed, and all employed at good

It is a great mistake to theorize about this matter. Senator is a good Bible scholar, and he will remember that when a certain man was taken down to the pool and had washed his eyes, he saw, and they asked him to tell them some-thing about it. He said, "I can not explain your many theories about this, but this thing I do know-that whereas once I was blind, now I see.'

In 1870, 1880, and 1890, according to the census, Vermont was not prosperous. In 1897 you passed the Dingley bill, giving us a duty of 6 cents per pound on butter. I do not care to theorize about it, but the fact is that from that time to this we have been prosperous. We have been prosperous in our agricultural interests; we have been prosperous in our granite; we have been prosperous in our marble; we have been prosperous in our slate. It has not been a one-sided prosperity; we have been throughout our borders a prosperous and a happy State, and I want to see that prosperity continued.

Mr. MARTINE of New Jersey. That has been the trouble with the Senator's party. He speaks of their being washed, and now they see. They saw last November, and in figures and decree beyond parallel they have relegated your doctrines

to the rear.

Mr. PAGE. More theory, Mr. President. If I were to have my say about it, I should say that Mr. Wilson was not a majority President; but I do not want to debate that with my good friend from New Jersey.

Mr. WILLIAMS. Abraham Lincoln was not, either, as the

Senator will remember; but let us go on.

Mr. PAGE. There has been something said; and I think I can drive the facts straight home to the Senator from Mississippi, because he said it, about the influence of Canada. If I am wrong, he will correct me. He said to us yesterday: "Gentlemen, you need not be afraid of Canada." I will ask the Senator if I am not right?

Mr. WILLIAMS. I do not remember whether I said that or not; but if I did not I will say it now.

Mr. PAGE. I made a little note here which reads like this: Senator Williams said yesterday he was not afraid of competition between Canada and the United States,

Mr. WILLIAMS. Oh, I remember. I said I was no more afraid of competition between any Province in Canada and any State in the United States than I was afraid of competition between Minnesota and California or between Mississippi and

Alabama. I said that, and I repeat it now.
Mr. PAGE. Mr. President, when I was a boy I was very anxious to go to college. Sometimes when I see the erudition of my good friend the Senator from Mississippi [Mr. WILLIAMS] I wish I, too, might have gone to Heidelberg and have received the kind of education that he did. But my father was a hard-fisted old fellow, and he said: "My son, I do not believe in nsted old fellow, and he said: "My son, I do not believe in sending you to college. I would rather have you take the horse and travel through Canada among the French people, buying hides, skins, furs, and wool for a couple of years than to have you go to the best college in this country."

I always regretted that I did not have the opportunity to go to college; but I did not. But I did have the other experience, and I know Canada like an open book. I have visited almost every sizable town in the Province of Quebec. I have been in every Province in Canada from the Pacific to the Atlantic.

When I hear men say here that the conditions in the Province of Quebec are substantially the same as the conditions in Vermont I smile, because I know the statement is erroneous. think the statistics which are relied upon by our Democratic friends to show this are statistics of the English-speaking people of Ontario and of those people in the extreme northwest, where the climate is cold, and where the population is new and wages naturally high. But I desire to say to the Senator from Mississippl and to the Senate that when you start from Vermont and go across the forty-fifth parallel you go only a few miles before you strike the French country. You would know you were going into another country if you did not know anything about the forty-fifth parallel. You can see it.

Why, I went once to the city of Rimouski, which has a population of four or five thousand. As you go down the St. Lawrence from Quebec north you first strike Riviere du Loup, which is a sizable city, and then farther on you come to the largest city on the St. Lawrence north of Quebec, Rimouski. That is a city where more than one-third-and I guess more than two-thirds, but I want to speak within reason-of the houses are built of logs and whitewashed. They have what we call an "ogee" roof. The roof flattens out at the bottom and forms a primitive sort of veranda. The people are good. Tkey are thrifty. They rely upon the Catholic priest to tell them when to sell their horses and their hogs and their potatoes. I do not know but that they have some education; I think they have, but it is comparatively little. The farm lands are very much cheaper; the buildings are cheaper; the roads are nothing like ours.

In the little State of Vermont this year we are putting \$1,000,000 into what we call State highways. We tax ourselves very heavily for these benefits. The taxation, in my judgment, is more than double what it is in Canada. We are to be called apon to pay a national income tax in Vermont. It will be a very good sized tax, too, considering our population. If we pay that tax, why should we not have the home market?

If the Senator from Mississippi has studied the conditions in Vermont, he knows that on the west side of the State the Central Vermont Railroad reaches up into Canada. On the east side the Boston & Maine reaches up into Canada. I know the conditions in Canada, because there is hardly a county in Quebec, Prince Edward Island, Nova Scotia, or New Brunswick that I do not trade in. I know them all, and I know them well. I know that the freight rates from the Province of Quebec—which, as I have remarked, is our chief competitor—to Boston, to Providence, to New Haven, and so forth, are almost identical with ours. There is no protection in freights which in any sense overcomes the tariff duties, as may be the case in a

good many sections of the country.

The Canadian habitant or the so-called French habitantand that constitutes the great bulk of the population after you get 10 or 20 miles from the Vermont and Canada border-may almost live on what an American would throw away. are extremely frugal, and because of this frugality they can easily underbid us. If the Senator ever undertakes to discuss this matter upon the broad assumption that prices are as high in Quebec as they are in this country, I hope he will take the pains to investigate this particular feature of the situation, because it is certainly true that the conditions there are so unlike ours that they are not to be used as a basis of comparison in framing tariff schedules.

I want to say in this connection, lest it be thought that I speak disparagingly of Catholics, that the influence of the Catholic clergy is of a most helpful character. Those men come down into our northern counties in Vermont and usually locate near a Catholic church. There is a Catholic church in my own little village, the only one in the county. These thrifty Canadians come and settle around us, and their chief adviser, financial as well as spiritual, is the priest. The priest is a man educated not only in Bible but in business. I do not believe there is another clergy anywhere that surpasses the Roman Catholic clergy in business ability, and they look well after the individual

members of their church.

I have said that I thought Vermont was an ideal spot to consider in illustrating the dairying industry. It is so, because in most States-for instance, in many Western States-prosperity is dependent upon diversified farming. The West depends upon wheat, upon flax, and upon barley, as well as upon But Vermont has come to be almost exclusively a dairying State; and as my colleague [Mr. Dilligham] very well said this morning, she ranks No. 1 in the States of the Union in the quantity per capita of her products in the dairying

There is something remarkable in the condition of Vermont with reference to her sister States. We have only 9,000 square miles of territory, and the statistics will show that we have only 2,500 and some odd square miles of farming land. Why, Mr. President, you could take all of our farming lands and put them into the State of Texas 105 times, and still have a good deal left. I was out in the State of Arizona not long since, and went down into the Grand Canyon. After I came back I said to the Senator from Arizona: "In what county is the Grand Canyon?" He said: "Coconino County." I said: "What is the area of Coconino County?" He said: "Eighteen thousand and over square miles.

Think of it, Mr. President. Here is a single county with about double the area of the entire State of Vermont; and when you come to think of the very small amount of farming acreage we have, it is wonderful that we maintain the standing we do. I think the statistics I have read this morning show that we stand tenth or eleventh of all the States in the Union, notwithstanding the fact that our entire area of tillable farm lands would make only 70 ordinary townships 6 miles square. If Vermont is prosperous it is because of her dairying. If North Dakota or South Dakota is prosperous, it may be because of wheat or barley or flax; so I say that I think Vermont is a typical State to illustrate the paragraph now under discussion.

I should like so say just one word in regard to the aggregate of this great industry. Very few people know that the product of butter, cheese, and cream in this country aggregates \$500,000,000 per annum, at least that is as I find it in the records. Two hundred million dollars of that is butter, \$5,000,000 cheese, \$118,000,000 milk, \$95,000,000 cream, \$33,000,000 con-

densed cream, and \$2,000,000 sugar of milk.

I want to say, what has not been mentioned as far as I remember up to this time, that this bill not only reduces the tariff on butter from 6 cents to 21 cents a pound, but it almost wipes out the entire duty. Does the Senator from Mississippi know that? If he will go with me to the Province of Quebec he will find that their cream, at a very slight expense, can be sent down just across the line into Vermont to our creameries there and be made into butter. What will be the result? It is true that you have left a duty of $2\frac{1}{2}$ cents on butter, but if you can bring Canadian cream down into Vermont free of duty and there have it made into butter you have practically destroyed protection on butter so far as the Province of Quebec is concerned. Perhaps that is one feature of this schedule which has not been noted by the Senator from Mississippi. I should like to have him explain, if he can, any remedy for that condition of things. If you can bring the cream across the line free to our creameries in Vermont, why have you not practically eliminated protection on Quebec butter?

Mr. WILLIAMS. I wish we had done it.

Mr. PAGE. Mr. President, the Senator says he wishes we had done it. Well, he would be destroying the leading industry of Vermont in so doing. We have always sold our butter, our cheese, our eggs, and other farm products to Manchester, Lawrence, Lynn, Worcester, Brockton, Salem, Peabody, Providence, Springfield, New Haven, and Hartford. We have enjoyed that market for the past 16 years. We ought to continue to enjoy it because it is legitimately ours, and there is no good reason under heaven why we should not have it. They do not pay an exorbitant price. They ought not to do so, and I do not think they do. I believe our Democratic friends have talked to them upon that proposition until they have almost made them believe that they were suffering. But the wage earners of New England are to-day receiving almost everywhere prices that permit them to pay the Vermont farmer a fair price for his butter. What is the justice in saying that you will take from the Vermont farmer his little pittance and give it to men who work shorter hours and receive much larger pay?

Mr. President, I want to say to the Senator from Mississippi that the great problem in Vermont to-day, and indeed everywhere in this country, is to keep the boys on the farm. are we to do it? We are now establishing agricultural high schools in Vermont, and are trying to give our boys an education that will enable them to carry on the farm in a better and easier way, and we hope that in this way we are going to maintain the equilibrium between urban and rural life about where it is. But let me say that we are not going to maintain a high grade of citizenship in this country if we destroy the prosperity of the farmer in an attempt-it will be a vain attempt, Mr. President-to build up the artisan at the expense

of the tiller of the soil.

Go where you will the enterprising boys are leaving the farm. Vermont has for half a century been sending out nearly, or quite one-half of the best of her sons to help build up other States.

A few years ago I was called upon to go out to Chicago to talk to the Sons of Vermont at one of their annual meetings, and I gathered statistics showing what part of the National Senate was made up of the native sons of Vermont. What do you think I found? Counting the Vice President, a native son of Vermont, we had thirteen times the number we were entitled to upon basis of population. Examining further I found that of those Senators there was only one, who came from a town having as many as 1,700 population; all the rest of them came from towns having less than 1,250. They were men who had grown up in little back hill towns, most of them away from railroads, men who in their boyhood had to break their own roads through the deep snows to the little red schoolhouse. They came from that class of boys who have contributed to the best life of this Nation-the farmers' boys

Mr. President, if we are to see this Nation prosper we must take care of the farmer; we must not say, as the Senator from New Jersey has just said, "In heaven's name, why not take from the farmer and give to the man who works in the quarry. The quarrymen in our State are living at a splendid rate and are earning from \$2.50 to \$5 a day, and even more. not make complaint. I do not believe they do in the State of the distinguished Senator from New Jersey. I happen to know that men there in an industry with which I am connected, the leather industry, are very prosperous. They get large wages. They are not obliged to ask, and I do not believe they do ask, the farmers of Vermont to surrender their butter market to Canada in order that they may buy that article a little cheaper.

Mr. MARTINE of New Jersey. I do not believe the Senator will gainsay it when I state that there is a universal complaint

on account of the high price of butter.

Mr. GALLINGER. And the high price of everything else. Mr. MARTINE of New Jersey. What is it worth? F what does it sell? The price is 60 cents a pound, is it not? Mr. PAGE. I think the Vermont farmer is getting all the

way from 30 to 35 cents a pound.

Mr. MARTINE of New Jersey. It sells at from 40 to 60 cents a pound.

Mr. WILLIAMS. The ruling price of butter in 1912 was in New Hampshire 30 cents; Vermont, 31 cents; Massachusetts, 34 cents; Rhode Island, 34 cents; Connecticut, 35 cents; New York, 31 cents; New Jersey, 37 cents; Maryland, 27 cents. Mr. MARTINE of New Jersey. All the pleasant words the

Senator has said and the wise words regarding the wisdom of keeping boys on the farm God knows I echo. I say a farmer's

life is the ideal life; I love it; I know everything about it. Unfortunately it has not been very profitable. I have in all my life lived as a farmer, except the past three years. As I have looked over the tariff list to find out where the benefits were coming to the farmer I found they were nil. It was simply a delusion, sentimental, as the Senator from Idaho [Mr. Borah] said in his address some days ago. He said if the farmers were getting no benefit they were deluded with the idea that they were getting it, and why take off the duty? I say the farmer has get no benefit from the protective tariff; that it was a process of delusion to the farmer.

Now, I want the farm boys to be induced to stay on the farm, because it is a dignified and, I hope it may be, a profitable occupation. But this thing confronted us: We were fed with the sentimental nonsense of protection for our products, when the fact was apparent that everything we bought we bought in a highly protected market, and we had to pay inordinate prices.

Now, I say you can not rehabilitate the farmers by offering this sort of stuff to them, but let the farmers and let the manufacturers stand as near as they can on their own footing. As a principle the idea of protection to me is a radical mistake.

Mr. GALLINGER. Mr. President— Mr. MARTINE of New Jersey. I do not believe there is any reason in God's kingdom why the Senator from Vermont should be taxed in order to hold me up or, on the contrary, why I should be taxed to hold him up.

Mr. GALLINGER. Mr. President, will the Senator permit

The PRESIDING OFFICER. Does the Senator from Vermont yield to the Senator from New Hampshire?

Mr. PAGE. Yes.

Mr. GALLINGER. I will ask the Senator from New Jersey, with the permission of the Senator from Vermont, what the purpose is and what the result will be of reducing the duty

Mr. MARTINE of New Jersey. I say the tariff is a tax, and you can not get away from that; and if the tariff does not tend to increase the price it defeats the object for which it is levied.

Mr. GALLINGER. But—
Mr. MARTINE of New Jersey. You tell us and the Senator from Vermont tells me that they must have a tariff on butter in order to pay better the farmers, and induce the farmers' boys to stay on the farm. I say that the tariff on butter must tend to increase its price.
Mr. GALLINGER.

The Senator has grown eloquent-

Mr. MARTINE of New Jersey. No.
Mr. GALLINGER. Or earnest, if not eloquent, in his desire to benefit the farmer. What does he propose to accomplish for the farmer by reducing the duty on butter?

Mr. MARTINE of New Jersey. I propose to make butter cheaper to the million mothers and fathers and the million

children in our land.

Mr. GALLINGER. The Senator is growing both eloquent and vociferous now; he was earnest before. Let us get back now to our mutton, or, more properly, to the butter question. The Senator is very solicitous for the American farmer. If you reduce the duty on butter do you not increase the exportations from Canada and other countries and thus reduce the price of the product of the Vermont farmer?

Mr. MARTINE of New Jersey. Butter is as much a necessity of life in our civilization as is sugar. If butter shall come in in increased quantity to feed the hungry man and the toiling millions of our land, then God speed it, whether it touches me

as a farmer or the Senator from Vermont. Mr. GALLINGER. Then the Senator is not anxious to in-

crease the prosperity of the American farmer?

Mr. MARTINE of New Jersey. Yes; I say the farmer can be increased in prosperity, not by a process of flattery and coddling, but let the farmer know that he is a man and that he must depend upon his own resources.

Mr. GALLINGER. Now, Mr. President—
Mr. MARTINE of New Jersey. The farmer is not a pauper, nor does the farmer ask ald of the men from New Hampshire and Vermont. You have worked that until you have worked it to the finest. You have deluded yourselves with the idea that the farmer was easily duped and could be permitted to go away satisfied.

Mr. GALLINGER. The Senator from New Jersey is as accurate as he was a moment ago when he said the Republican

Party put a duty of 10 cents on a pumpkin.

Mr. MARTINE of New Jersey. Well, 10 cents on products of

that class

Mr. GALLINGER. Yes, Mr. President, the Senator-Mr. MARTINE of New Jersey. You will not deny that you put a duty of 25 per centMr. GALLINGER. If the Senator will just wait one minute; the Senator's logic is too obscure for me to follow without reflection. He is going to benefit the American farmer by allowing the Canadian farmer to invade our markets with Canadian products. Now, if the Senator's intellect can work that out logically he is certainly a genius.

Mr. MARTINE of New Jersey. I am going to benefit the American farmer by benefiting humanity. It is the sheerest nonsense to attempt to delude any longer the farmers with the sort of claptrap that has been imposed on them in the way of a protective tariff. Their decree has gone forth, and it is pretty

well understood.

Mr. GALLINGER. The Senator from New Jersey's humanity in encouraging the strike in Paterson, which was organized and carried on by socialists and anarchists, did not help the laboring people, who lost \$3,000,000 in the struggle, and now they have gone back to their work.

Mr. MARTINE of New Jersey. I encouraged the strike in

Paterson? I aided disturbance and disorder?

Mr. GALLINGER. Yes; by your expressed sympathy.
Mr. MARTINE of New Jersey. Why, the farthest from it.
I have not been to Paterson for three years. How in the name of Heaven could I have aided it? I did not aid the strike in Paterson, nor have I aided a strike anywhere else.

Mr. WILLIAMS. Mr. President—

Mr. MARTINE of New Jersey. But I do say that conditions were rancorously wrong in Paterson, and I say—
Mr. WILLIAMS. I appeal to the Senator from Vermont not

to yield the floor longer.

Mr. MARTINE of New Jersey. I have the floor, and have had it for some time. I want to say that I realize and the world realizes that there has been something wrong in the conditions of labor. I have on my desk a telegram from Michigan, telling me of unfortunate and terrible conditions there. I have not promoted them either in Michigan or in Paterson, but I am standing for a general principle, I will say to the Senator, and if you have not found it out, God knows I can not

Mr. President-

The PRESIDING OFFICER. The Senator from Vermont refuses to yield further to the Senator from New Jersey

Mr. MARTINE of New Jersey. I was not aware of that fact. [Laughter.]

Mr. PAGE. The Senator in charge of this portion of the bill

has appealed to me not to yield further.

Mr. MARTINE of New Jersey. If the Senator from Vermont will permit me just one word more, I want to say if the

Senator from New Hampshire has not found out where I am-The PRESIDING OFFICER. Does the Senator from Vermont yield further to the Senator from New Jersey?

Mr. PAGE. I yield. Mr. MARTINE of New Jersey. I only want to say that if the Senator has not found out by this time he can take notice, from now on, that on general principles he will find the Senator from New Jersey for the under dog. That is where I am.

Mr. GALLINGER. I think we understand that. Mr. PAGE. Mr. President, the Senator from New Jersey has made one statement that I think I will refer to, and that is that the people of Vermont have been fooled; that they do not know what they want; that they do not know why they are prosperous; that they could just as well sacrifice their market and be happy as to have it as it is now.

Mr. President, Vermont only asks that the market that is legitimately hers be given to her; nothing more, nothing less. We do not want to unduly tax anybody. Vermont is paying her share of the taxes to support this Government; and if the New England market is legitimately hers, it should not be

taken from her.

Let me, since the Senator calls my attention to it, briefly refer to the fight two years ago over reciprocity. I received letters by the hundred from Vermont farmers saying to me, "Senator, we are enjoying a great measure of prosperity. Why destroy it?" They were opposed to reciprocity because it deprived them of the New England market. They were opposed to reciprocity, notwithstanding the fact that Canada was to give us something in return, but under this bill we are surrendering that market completely to Canada, and we get nothing in return.

Mr. President, when the Senator from New Jersey says that the Vermont farmer does not know what he is talking aboutthat he is being fooled on this tariff issue—he is making a great mistake. Almost every Vermont farmer reads; he takes his daily paper; and, unlike many of those who constitute the foreign element in the State from which the good Senator comes, the Vermont farmers are of the old original stock; they are native sons of native sons. They not only read, but they

think. They do not want any fine-spun theories introduced here to convince them that black is white and white black. They know they are now prosperous; they know that whereas they were making no money in 1895, under the Wilson Democratic tariff, they are now under the Dingley tariff receiving a fair quid pro quo for what they do and what they produce.

They have their own ideas, and we do not need try to convince them as to what is or what is not best for them; they are not fools, and they are not, as the Senator insists, being fooled. very few of them voted for Mr. Wilson, but they did so under a misapprehension as to the true facts in the case. They will tell you that they were assured that having a legitimate in-dustry, one that was on a competitive basis, an industry that was not a monopoly, an industry that did not belong to a trust, they need have no fear lest it be injured. Everything that a farmer raises, the Senator from New Jersey will admit, is competitive. He knows there is no trust there; that there is no

combination there; and that there is no monopoly there.

If dairying in Vermont is not on a competitive basis, then what industry is? If butter making in Vermont does not come within President Wilson's pledge, then what industry does? And if he did not mean that this class of industries should be protected, then what did he mean when he made his pledge with reference to industries which were on a competitive basis and not monopolies? I say that no industry can be named that will come within the promise and pledge of the President or that will come within the promise and pledge of Mr. UNDERWOOD, if it be not the dairy industry.

Well, Mr. President, I have talked a great deal longer than I ought to have done. I did not design to take so much time, and I would not have taken it if I had not yielded so much to my good friend from New Jersey, and I trust I may be for-

Mr. MARTINE of New Jersey. I thank you very much. Mr. PAGE. In closing I wish to say to my Democratic friends, as I stand here and look over to their side of the aisle, that I think there is one legitimate industry that they are now They are making a Republican State out of engaged in. Louisiana.

I remember a month or two ago the distinguished Senator from Mississippi [Mr. Williams], standing on the floor of the Senate, said, "Gentlemen, I know whereof I affirm; I live in the cane-sugar section, and I know all about it. I know that if you take the duty off sugar you will destroy the cane-sugar industry of Louisiana just as effectively as though the great simoom of the desert had moved over it." Those may not be his words, but that is the substance of what he said.

One of the finest protective-tariff speeches that I ever heard in this Hall was delivered by the late Senator from Louisiana, Gov. McEnery. He was a genuine protectionist. I perhaps betray no confidence when I say that he sent word to the Republican Senator in charge of the tariff bill in 1909 that whenever he was absent he might be paired in favor of protection. I think I am right in this statement.

Now, gentlemen, you confess that the great, the leading, the all-important industry of Louisiana is sugar. You know you are going to kill it. You know that for a hundred years every You know you avenue of trade in Louisiana has led to the upbuilding of this great industry, and millions of dollars are invested therein.

Gentlemen, you can not disturb Vermont. She is the star of Republicanism that never sets. She is the only State in the Union that never deflected from the straight line of Republicanism. Every other State, even Utah, has gone astray; Vermont never has.

But, gentlemen, you can disturb the politics of Louisiana and I believe you are to-day laying the foundation for one of the best Republican States in this Union. You may manage, by keeping the race issue well to the front to keep her Democratic in name for a little while longer, but when you destroy her leading industry, as you are destroying it to-day, you are making her in fact a good, staunch, strong Republican State,

and that I regard a strictly legitimate industry.

Mr. WILLIAMS. Mr. President, I am personally very fond of the Senator from Vermont, but his speech this morning, so far as I am concerned, has been love's labor lost. If the Senator from Vermont wanted to convince me of the fact that Vermont had hitherto obtained an undue proportion of our common prosperity by the prostitution of the taxing power in her behalf, I would have confessed it at the jump; and if the Senator Vermont had wanted to convince me that the Englishspeaking race in Vermont and everywhere else is superior in prosperity and in literacy to the inhabitants of Quebec or any other speaking race anywhere else, I would not have quarreled with him.

I hope, now, that we may return to the plebeian pursuit of voting on butter.

The PRESIDING OFFICER. Paragraph 200 is before the Senate.

Mr. PAGE. I have an amendment to offer, and if it is proper at this time I will offer it now.

Mr. WILLIAMS. I think the committee amendment is in order first.

Mr. PAGE. After the committee amendment has been considered I will offer my amendment.

The PRESIDING OFFICER. The question is on agreeing

the PRESIDING OFFICER. The question is on agreeing to the committee amendment, which will be stated.

The Secretary. On page 56, line 24, in paragraph 200, before the word "cents," strike out "3" and insert "2½," so as to make the paragraph read:

200. Butter and butter substitutes, 2½ cents per pound.

Mr. DILLINGHAM. On that I ask for the yeas and nays. The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. LANE (when Mr. Chamberlain's name was called). I was requested by my colleague, the Senator from Oregon [Mr. CHAMBERLAIN], to state that he is unavoidably absent to-day, but will be here to-morrow. He is paired with the Senator

from Pennsylvania [Mr. OLIVER].
Mr. JAMES (when Mr. Bradley's name was called). colleague [Mr. Bradley] is detained from the Senate by reason of illness. He has a general pair with the Senator from Indiana [Mr. Kern]. I will allow this announcement to stand

for the day

Mr. KERN (when his name was called). I transfer my general pair with the senior Senator from Kentucky [Mr. Bradley] to the Senator from Nebraska [Mr. Hitchcock] and vote. vote "yea."

While I am on my feet I will announce the unavoidable absence of the senior Senator from West Virginia [Mr. Chilton]. He is paired with the junior Senator from Maryland [Mr. JACK-

This announcement will stand for the day.

Mr. GRONNA (when Mr. McCumber's name was called). wish to announce that my colleague [Mr. McCumber] is absent on account of illness in his family. He is paired with the senior Senator from Nevada [Mr. Newlands]. I wish this announcement to stand for all votes to-day.

Mr. BRYAN (when Mr. O'GORMAN'S name was called). have been requested to announce that the junior Senator from New York [Mr. O'GORMAN] is unavoidably absent, and that he is paired with the senior Senator from New Hampshire [Mr. GALLINGER

Mr. REED (when his name was called). I have a pair with the senior Senator from Michigan [Mr. SMITH], which I transfer to the Senator from Oklahoma [Mr. Owen] and vote. vote "yea."

Mr. TOWNSEND (when the name of Mr. SMITH of Michigan was called). The senior Senator from Michigan [Mr. SMITH], who is paired with the junior Senator from Missouri [Mr. Reed], is absent from the Senate on important business. If he were present, he would vote "nay."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from New York [Mr. Root], which I transfer to the Senator from Oklahoma [Mr. Gore] and vote.

I vote "yea.

Mr. WILLIAMS (when his name was called). I transfer my pair with the senior Senator from Pennsylvania [Mr. Penbose] to the Senator from Indiana [Mr. SHIVELY] and vote. I vote yea.

The roll call was concluded.

Mr. SMOOT. I desire to announce that the junior Senator from Wisconsin [Mr. Stephenson] and the senior Senator from Delaware [Mr. DU PONT] are unavoidably detained from the Senate on account of illness. I will allow this notice to stand for the day

Mr. GALLINGER (after having voted in the negative). will ask whether the junior Senator from New York [Mr.

O'GORMANI has voted?

The VICE PRESIDENT. He has not.

Mr. GALLINGER. I am paired with that Senator. I transfer the pair to the junior Senator from Maine [Mr. BURLEIGH] and will let my vote stand.

The result was announced—yeas 38, nays 30, as follows:

YEAS-38. Lewis Martin, Va. Martine, N. J. Myers Overman Hughes Ashurst Ransdell Reed Robinson Shafroth Sheppard Bacon Bryan Clarke, Ark, Fletcher James Johnson Kern Lane Hollis Lea Pittman

Shields Simmons Smith, Ariz. Smith, Ga.	Smith, Md. Smith, S. C. Stone Swanson	Thomas Thompson Tillman Vardaman	Walsh Williams
	N.	AYS-30.	
Borah Brady Brandegee Bristow Burton Catron Clapp Clark, Wyo.	Crawford Dillingham Gallinger Gronna Jones Kenyon La Follette Lodge	McLean Nelson Norris Page Perkins Poindexter Sherman Smoot	Sterling Sutherland Thornton Townsend Warren Weeks
	NOT Y	VOTING-27.	
Bankhead Cummins Bradley du Pont Burleigh Fall Chamberlain Goff Chilton Gore Colt Hitchcock Culberson Jackson		Lippitt McCumber Newlands O'Gorman Oliver Owen Penrose	Root Saulsbury Shively Smith, Mich. Stephenson Works

So the amendment of the committee was agreed to.

Mr. PAGE. Mr. President, I now move to amend, in paragraph 200, page 56, line 24, by striking out the figures "2;" and inserting the figure "4." That, Mr. President, I will state is the Canadian rate against us. The present rate is 6 cents, and this is 2 cents below the present rate.

Mr. WARREN. I desire to ask the Senator if there is anywhere in the bill any provision for a countervailing duty against Canada as against the 4 cents customs duty which she

levies against our butter?

Mr. WILLIAMS. Mr. President, I should like to ask the Senator from Vermont a question. Does the Senator by his amendment confess that the present duty is 2 cents too high?

Mr. PAGE. I thought I would make the duty exactly as it

is on the other side in Canada.

Mr. WILLIAMS. But does the Senator confess by his amendment that in his opinion the present duty is 2 cents too

No, sir; we ought to have a duty of 6 cents.

Mr. WILLIAMS. I merely wanted to know.
The VICE PRESIDENT. The Chair is of opinion that the The VICE PRESIDENT. The Chair is of opinion that the amendment proposed by the Senator from Vermont [Mr. Page] is not now in order, but that it must be presented when the bill is in the Senate.

Mr. PAGE. Mr. President, I have been listening with a great deal of intense interest to the decisions of the Chair, and I think the Chair has ruled on many occasions since this bill was taken up for consideration that in all cases committee amendments must be first considered; otherwise I should have offered my amendment at another time.

Mr. WILLIAMS. I ask unanimous consent, if necessary, that the amendment proposed by the Senator from Vermont

may be voted on.

Mr. GALLINGER. The Senator from Vermont, Mr. President, had he understood the procedure would have offered his amendment to the committee amendment. He failed to do that, and I think he ought to be permitted to have a vote on his amendment.

The VICE PRESIDENT. The Chair thinks the Senator from Vermont did not understand the Chair. The Chair asked the Senator to send his amendment forward, so that the Chair might determine whether it was an amendment to the com-mittee amendment. However, in the absence of objection, the question will be put on the amendment.

Mr. PAGE. I do not ask for a yea-and-nay vote on the

amendment, Mr. President.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Vermont. [Putting the question.] The "noes" seem to have it.

Mr. SHERMAN. Mr. President, I rise, if I have recognition, to make an inquiry. I should like to learn-it will not require much time-from what source were the figures on the production of butter and the substitutes for it obtained? I should like to have an expert inform me, or I should like to have such information as the Senator from Mississippi has.

Mr. WILLIAMS. I suppose they were obtained from the statistical records. I did not see the expert when he was arranging them from the published statistics of the United States

Government

Mr. SIMMONS. They are obtained generally from the cen-

sus reports.

Mr. WILLIAMS. From the statistics which are gotten up by the Census Bureau.

Mr. SHERMAN. The total production—
Mr. WILLIAMS. But what is the relevancy of the question? ably confused.

Mr. SHERMAN. I want to find out whether we are producing a surplus or whether we have to import in order to supply our own population.

Mr. WILLIAMS. If the figures are correct-and I take it for granted they are—then in 1910 the production of butter in the United States was two hundred and two and a half million dollars in round numbers, and the imports of butter were one and a third million dollars in round numbers. The exports of butter were a little over \$1,000,000 in round numbers.

Mr. SIMMONS. They were \$1,800,000 in 1912.

Mr. WILLIAMS. I was quoting 1910. To give the exact figures, they were \$1,135,743 for the year 1910—I give the year 1910 because I have not the production here of the year 1912 but in 1912 the imports were a little over a million dollars, and the exports were one and three-quarters of a million dollars in round numbers-\$1,840,000, a little over a million and threequarters dollars.

Mr. WARREN. Mr. President, I desire to ask is the Sena-

tor from Mississippi quoting pounds or dollars?

Mr. WILLIAMS. I am quoting dollars,

Mr. WARREN. In both cases?

Mr. WILLIAMS. In both cases. Mr. WARREN. I should like to get the number of pounds and the value in dollars in both cases,

Mr. WILLIAMS. I beg the Senator's pardon. In one case I should have quoted pounds, and in the other case I should have quoted dollars. Now, I will quote dollars in both cases.

For 1910 the imports were \$301,000, in round numbers, and the exports were one million one hundred and thirty-five thousand and some odd dollars. The total production was \$202,-000,000, and the consumption was \$201,652,089.

Mr. SHERMAN. That is for the year 1910? Mr. WILLIAMS. That is for the year 1910. I repeat I quoted that year because I have not before me the consumption for the year 1912.

Mr. SHERMAN. The reason I made the inquiry was because the Statistical Abstract shows in 1910 1,619,000,000 pounds of butter, and the Senator quoted a while ago the price in some States; and I think it makes about an average price in the United States of 24 cents a pound. It is a little short of a quarter of a dollar.

Mr. WILLIAMS. How much does the Senator say it was? Mr. SHERMAN. Twenty-four cents in several of the States

which the Senator from Mississippi quoted.

Mr. WILLIAMS. Has the Senator the Statistical Abstract

containing those figures?

Mr. SHERMAN. Yes, sir; and I want to get this correct as we go along. In the Statistical Abstract the total factory butter and farm butter make the figures I have given. As I figure it out, by the average value of a pound of butter in 1910 the total production on the farm is very nearly the total in dollars as given in the handbook. I thought, possibly, that one or the other had been omitted. It is of some importance in the final settlement of the question.

I will say further that the average price of butter for 1910 in the United States was about 24 cents; in the neighborhood of that. It is given in the same abstract. That would make the total production, measured by dollars, in the neighborhood

of double as much as that stated in the handbook, if I am right.
Mr. WILLIAMS. Well, if the Senator is right, it would;
but what has that got to do with it?

Mr. SMOOT. The Senator is right. Mr. WILLIAMS. It may be so, but I do not see the relevancy to the subject matter.

Mr. SHERMAN. What is the relevancy of putting it into

the handbook?

Mr. WILLIAMS. I suppose some one irrelevantly made some mistake either in printing or transcribing or copying or something else, if it is a mistake. I do not know whether it is

Mr. SIMMONS. Is not the Senator from Illinois talking about pounds?

Mr. SHERMAN. No, sir. Mr. SIMMONS. In giving the production, is not the Senator

speaking of the production in pounds?
Mr. CLARK of Wyoming. Of both.

Mr. SHERMAN. I am making no complaint about the error,

but I am trying to find out whether there is an error.

Mr. SIMMONS. The handbook does not give the production in pounds at all; the handbook gives the production in dollars.

Mr. SHERMAN. I am not complaining about it. Mr. SIMMONS. I think that is where the Senator is prob-

Mr. WILLIAMS. That may be so. I do not know whether it is a mistake or whether it is not, and I do not know what

it has to do with this subject.

Mr. SMOOT. This is what the Senator from Illinois called attention to: and I think if the Senator from Mississippi will notice the figures he will see that the amount in pounds multiplied by 24 cents, the average price, will be about twice the amount of the production as given in the handbook; in other words, in 1910 there were 1,619,415,000 pounds. That, at 24 cents a pound, would be about \$400,000,000; whereas the production given in the handbook for that same year says in dollars and cents that the production was only \$202,000,000. That is what the Senator from Illinois is calling attention to; and, of course, one or the other contention is wrong.

Mr. SIMMONS. Where does the Senator get his authority for the statement-I am not questioning it, because I do not know-but where does he get authority for the statement that the average price of butter in this country is 24 cents a pound?

Mr. SHERMAN. I got it out of the Statistical Abstract of

1912, the same book to which I have already referred.

Mr. WILLIAMS. For 1912?

Mr. SHERMAN. For 1912. Mr. WILLIAMS. I was gi I was giving the figures for 1910, and the Senator was giving the price for 1912.

Mr. SHERMAN. It also contains the price in 1910.

Well, what was that? This is the Statistical Abstract. Mr. WILLIAMS. Mr. SHERMAN.

I say, what was the price in 1910? Nearly 24 cents. The relevancy of it is Mr. WILLIAMS.

Mr. SHERMAN. this: It makes a good deal of difference if we have \$400,000,000 worth of butter for the domestic production and our people consume it all, or whether we have a production of \$200,000,000. Of course, the matter of \$200,000,000 in framing a tariff bill is a mere bagatelle.

Mr. WILLIAMS. Mr. President, I frankly confess-Mr. SHERMAN. I say that I presume the matter of \$200,000,000 would be an irrelevant trifle in the framing of a tariff bill dealing with large subjects.

Mr. WILLIAMS. It might not be irrelevant to the fellow who had the millions, but it is irrelevant to this debate. What has it got to do with this question?

Mr. SHERMAN. The Senator said it was irrelevant awhile

ago, and I am trying to get it straightened out.

Mr. WILLIAMS. I do not know whether our figures are right or whether the figures of the Senator are right. The truth is, if these figures are right, if we produce about \$202,-000,000 worth of butter and consume about \$201,500,000 worth, we must draw on somebody for the balance; but it does not cut any figure. The salient point involved in the debate is whether butter ought to be taxed 6 cents a pound.

Mr. SMOOT. Mr. President, the mistake that has been made by the man compiling the handbook is that he has taken merely the butter that is manufactured in factories and not the butter made in the home. The price of the factory butter with the amount produced in the factory would be about the same as

stated in the handbook.

Mr. WILLIAMS. That may be the reason, because the average unit of value in this statement is 21.7 cents as for 1910, and for 1912 it is 231 cents, so that the unit value does not seem to agree with your unit value; but however that may be, I do not see any use in consuming the time of the Senate and of the country in disputing as to whether these figures are right or wrong. It has nothing to do with the question.

Mr. TOWNSEND. Mr. President, will the Senator from

Illinois yield to me?

Mr. SHERMAN. I only want to add——
Mr. WILLIAMS. They were collected from the Statistical Abstract, issued by the Census Bureau, and if some one made a mistake in transcribing the figures it merely proves that he was not a statistical pope; that is all.

Mr. TOWNSEND. Mr. President, I am more confused than ever over the statement of the Senator from Mississippi.

Mr. WILLIAMS. The Senator is certainly not confused by

any statement of mine, for I have made none.

Mr. TOWNSEND. The Senator has made the statement that it did not make any difference what those figures were in the handbook, or whatever it is called.

Mr. WILLIAMS. Oh, yes.
Mr. TOWNSEND. That is what the Senator has said, and
yet argument after argument has been made on this floor by the supporters of this bill supporting a rate or rejecting it, according as the figures given in this book show we are exporting or importing commodities.

Mr. WILLIAMS. But there is no quarrel about the exporting and importing proposition; that is relevant; the quarrel is about the amount of production.

Mr. TOWNSEND. Now, Mr. President, I should like to finish my statement. That argument has been made time after time on the floor of the Senate, and reference has been made to the statistics which have been presented to us as a basis for that argument. Senators have said that we do not need a duty, for the reason that we were exporting large quantities of a product, although that excuse has not maintained uniformity in the treatment of this bill; it has been simply a convenient argument when no other was at hand; but I submit that the inquiry of the Senator from Illinois seems to be entirely relevant as to whether or not the information which has been presented to the Senate is reliable and dependable.

Mr. SHERMAN. Mr. President— Mr. WILLIAMS. Mr. President, of course we have made arguments deducing results from a comparison of exports and imports, but no argument has ever been made by anybody of whom I have ever heard-it certainly could not be made by anybody with any brains at all-basing a plea for an increase or a decrease of duty on the amount of production.

Mr. TOWNSEND. But, Mr. President— Mr. WILLIAMS. Now, I am trying to find the place in the book prepared by the Senator from Utah and see what figures he gives

Mr. SMOOT. I did not have the figures for 1912 at all.

Mr. WILLIAMS. The Senator tells me that they are not

contained in the book prepared by him.

Mr. TOWNSEND. This book of information which is presented to us attempts to show the amount of production, and it certainly is relevant when you make the comparison between the amount of imports and the amount of exports and the amount of production all told. Two hundred thousand dollars worth of exports from a total production of four millions is quite a different proposition from the same amount of exports from a total production of two millions from any viewpoint that you might take of the matter.

Mr. SHERMAN. Mr. President-Mr. WILLIAMS. Now, Mr. Pre

Mr. WILLIAMS. Now, Mr. President—
The VICE PRESIDENT. Does the Senator from Illinois

yield to the Senator from Mississippi?

Mr. WILLIAMS. Just to refer to the fact as a fact in an abstract way—for it has nothing to do with anything—that I find from the report of the Secretary of Agriculture for the year 1912 that the farm value of butter is stated at \$830,000,000. suppose this is a case where the farm value is stated in one place and the factory value is stated in another. I do not know.

Mr. SHERMAN. Mr. President, I am simply trying to get this matter straightened out. I pass now from the idea that this might be irrelevant to the question of what bearing it would have on fixing the duty and determining whether it should remain at 6 cents a pound or be reduced to 21 cents. That proposition has already been voted on; but the Senator from Vermont [Mr. Page] has offered an amendment, and the question then recurs What is a fair rate of duty from a protective viewpoint? I consider that it is entirely relevant to know whether in 1910 we produced in the country somewhere near \$400,000,000 worth of butter or produced, as the handbook says, \$202,000,000 worth. The relevancy consists in this: If \$202,000,000 worth measures the total production of butter on the farm and factory in the United States, with the price running from 21 to 24 cents a pound, and still we have only \$300,000 of exports of all that value in a year, the question whether the consuming capacity of our country is not much greater than would ap-

Mr. SIMMONS. Mr. President, the Senator has the im-

ports confused with the exports.

Mr. SHERMAN. I beg pardon; I do not think I have.
Mr. SIMMONS. The Senator said if we had \$400,000,000
worth of production and only about \$300,000 worth of exports.

Mr. SHERMAN. Yes, sir. Mr. SIMMONS. The facts are, as shown by the handbook which the Senator has before him, that our imports-

Mr. SHERMAN. No; I should have said exports. I am wrong as to that. The exports amounted to \$135,000, as quoted.

I thank the Senator from North Carolina.

Mr. SIMMONS. Yes; and the imports were \$300,000. It seems to me, if the Senator will pardon me, if there is a mistake in this handbook, and if, as a matter of fact, we are producing in this country \$400,000,000 worth of butter, or \$430, 000,000 worth, instead of \$202,000,000 worth of butter, then the small amount of imports shown here would indicate that the duty was more prohibitive than if the production given in the

handbook were correct instead of the amount of production claimed by the Senator being correct.

Mr. WILLIAMS. Especially when the exports are three

times greater than the imports.

Mr. SIMMONS. And, as the Senator from Mississippi says, especially when the exports are many times more than the im-

Mr. WILLIAMS. Over three times greater. Mr. SIMMONS. Much more than three times. According to the contention of the Senator from Illinois we have a production of \$400,000,000 worth of butter every year, and we import only about \$300,000 worth. If there ever was a case of an absolutely prohibitive duty, that seems to be one. It seems to me that the Senator's argument is rather against his contention than for his contention.

Mr. SHERMAN. I will now impose upon the time of the Senate sufficiently long to complete what I started to say. The

Mr. SIMMONS. I hope before the Senator does so he will correct the mistake he made when he gave the imports for

Mr. SHERMAN. I would have corrected it before I got through, because I have the figures before me. I am greatly obliged to the Senator for saving the time. The imports for 1910 were, in round numbers, \$300,000 and the exports about \$1,100,000, omitting some odd figures. If our total production of butter, measured by dollars, instead of being \$202,000,000, is in the vicinity of \$400,000,000, according to my way of thinking it demonstrates that the capacity of the hungry mouths of which the Senator from New Jersey [Mr. MARTINE] spoke awhile ago is much greater, and the supply required to fill them would be much greater than it otherwise would be. So, if there is \$400,000,000 worth of production of butter in a single year and we export but \$1,135,000 worth of it, then the 100,000,000 people in this country using that \$400,000,000 worth have not yet reached the full point of their consuming capacity.

It is argued here, in order to justify this reduction, that but-ter must be brought across from Canada in the ordinary marketing way, or it must be brought in cold storage from South America or from some place in the North or the South Temperate Zone where butter can be produced. It must be brought in here at this lower duty of $2\frac{1}{2}$ cents a pound at the customshouse in order to fill out the demand of the 100,000,000 people, in round numbers, who are using it. I want to follow this up by inquiring of the Senator from Mississippi if he believes that an increase in the imports will reduce the price to the people who buy butter? That question would admit of an answer with very little consumption of time. I will ask any Senator on the

other side that question. It is an open field.

Mr. WILLIAMS. What is the Senator's question? The Senator must pardon me, but he looked so earnest that I was watching him and not listening to what he said.

Mr. SHERMAN. That is all right. A hundred million people, in round numbers, are eating butter in the United States.

Mr. WILLIAMS. I do not know about that.

say that everybody in the United States eats butter.

Well, between ninety-six and a hundred Mr. SHERMAN. million. Is the object of reducing the duty on butter to 21 pound to reduce the price of the butter that our 96,000,000 or 100,000,000 people eat?

Mr. WILLIAMS. I should say so; but I should not say that all the babies that are nursing are eating butter. A good part of the population does not eat butter and a good part of it does.

Mr. SHERMAN. I like to get information as I go along, and I have it now for the first time at-this extra session. want to ask another question, without attempting to revive the discussion on peanut oil, because I was heckled on both sides of the Chamber in regard to that.

Mr. WILLIAMS. Is the Senator going back to peanut oil? Mr. SHERMAN. No; I shall not go into it at all. But 126,-000,000 pounds of oleomargarine went out on the United States

Mr. WILLIAMS. What is the question of the Senator?

Mr. SHERMAN. One hundred and twenty-six million pounds of oleomargarine went out on the market, and about amount, I think-I am quoting from memory now-139,000,000 pounds in 1910 or 1911. It ranges that way from year to yearfrom one hundred and twenty to one hundred and thirty-nine or one hundred and forty million pounds of oleomargarine every year. That is added to the supply, and it is included under these words, "Butter and butter substitutes." So I take it that this includes the total supply either of natural butter or of anything that may be used for butter.

Mr. WILLIAMS. What is the Senator's question?

Mr. SHERMAN. That includes the total of butter and oleomargarine.

Mr. WILLIAMS. I know, but I understood the Senator to say that he wanted to ask me another question, and I have been waiting for the question. Mr. SHERMAN. I fin

I find it necessary to state the facts as I go along, in order that the Senator may understand the ques-

[Laughter.]

Mr. WILLIAMS. That is very generous of the Senator; but, really, I might have managed to guess at the meaning of what he said even if he had not made so much preamble.

Mr. SHERMAN. That is all right. We may often enter-

tain, if we do not instruct.

Mr. WILLIAMS. Yes. The Senator does both. Mr. SHERMAN. I want to know whether the manufacture of oleomargarine, which is an edible substance used in place of butter, might not be cheapened by cheapening the ingredients that go into the manufacture of oleomargarine?

Mr. WILLIAMS. That is going back to peanut oil again, I believe. Still, I have no hesitancy in answering that I think

it could.

Mr. SHERMAN. All right. Then why do you want a duty of 6 cents a gallon on the oil and but 21 cents a pound on the butter? [Laughter.]

Mr. WILLIAMS. I think one reason of it is that a great many people are of the Senator's school of persuasion, and think we ought to encourage butter at the expense of the other

Mr. SHERMAN. Mr. President, I have long ceased to hunt for consistency in a tariff bill. It does not exist. It is one of the jewels not found in the economic dictionary. But if I turn to a census of the milk-producing cows of this country-North and South, East and West—and put it alongside of the 1,619,000,000 pounds of butter and substitutes for butter, and then take the capacity of our own people and compare it with our imports and exports, I find that we are now just about using in this country the full producing capacity of the farmer's cow in field, factory, and elsewhere. That is the condition for which those who believe in the protective idea are constantly laboring in this country, so that our consumption of the domestic product may about equal the domestic production. have gotten to that ideal condition here; and Senators on the opposite side of the Chamber now, for the first time, have frankly avowed that they are throwing open to the competition of the butter producers of the world the production of the dairyman and the farmer of the United States, for the express pur-Then they object to my trying, in pose of reducing the price. my feeble way here some weeks ago, to reduce the price of a substitute that the worker in the city, and the mine worker, and the shop worker, and the railroad employee are trying to feed their families on in this country.

I have been through this fight on butterine and butter a great many times, and I have come to the conclusion that the best way to meet this question is to produce just as much butter in the United States as we can, multiply cows, raise the duty on butter, and let the cow and the American farmer have a little better chance to live in the world. It is only during about the last 10 years that the farmer has made any money. Just about the time he begins to get the mortgage off the place, just about the time there is something to live for, along comes the tariff

reformer.

I want to tell you now that you can not write a tariff bill and you can not govern this country by department experts and adding machines. Yet that is what you are trying to do, be-

cause that is the way this bill was written. If we have reached that point, we might just as well now, since the evidence is in, take a vote as quickly as possible, because it is evident that nothing that can be said here will demonstrate the fallacy of the theories on which this bill is framed. It has got to be tried. It has got to be applied to the people who are producing the products that feed the multitudes of this country. After it has been tried we will know. About every so often we have to make this experiment, and we are facing the making of the experiment on butter. It may be considered a mere trifle, but bear in mind that \$400,000,000 worth of butter is equal to half the wheat crop of the United States. It is just about equal to half of it if you add the 126,000,000 pounds of oleomargarine for good measure. That costs, figured at the jobbers' prices, about 111 cents a pound; so we know just about what the production is.

With the cattle supply the dairy goes along, not exactly as a by-product, but sometimes in that way. So, after all, in the great dairying area of the country wherever there is a farmer who sells milk, wherever he takes his cans to the railway station

in the morning to contribute his mite to the city's supply, wherever there is a produce market for butter-a part of this \$400,000,000 worth of 1910-he is interested in this matter.

I will tell you why the jobbers' price of butter remains at from 21 to 24 cents a pound, while I pay 40, 50, 60, and 65 cents the greater part of the year, and so do the rest of you who are now dwellers in cities. I will tell you why the price is where Remember that the farmer or the dairyman who produces the milk has it as his finished product, not his raw material. I will tell you why the price is keeping up as it is. It is because, without any expense, we are using it at home; we are using it in our own country. Our own people are taking practically the entire amount of the American production of this article. If we have to take out the toll for shipping to some other country, if we have to pay freight to the seaboard, and then the ocean freight to some other place, and pay the storage charges in transit, every dollar that is taken out by the inspector of the market or is tolled out by the common carrier comes out of the pound of butter produced by the farmer or the dairyman. Ultimately, the consumer pays some of it, and the producer pays the rest of it.

The added price between 24 cents and 65 cents to you or me consists of the carrier's charge, the inspector's charge, the commissions charged by those who handle the butter, and the profit of the retail grocer; so that by the time we get it, it is true, something is added. In the aggregate, however, we ate in 1910 practically the entire \$400,000,000 worth of production of this country, save the \$1,135,000 worth; and from that, if you take our domestic product, you must also subtract the \$300,000 of imports, leaving practically only \$835,000 worth to be our net

export after deducting our imports.

Now, we are reaching the condition where we are using our product. We are using it here, where we can get it at the most advantageous rates. About the time that happens, as suggested a bit ago, about the time the farmer is beginning to make something out of it, and is beginning to live, along comes this cry of "High prices! Let us 'ower them. Bring it in from Canada; bring it in from South America; bring it in from Mexico"—if they ever quit their troubles there, so that they have time enough to milk their cows—"bring it in from any

place!

The result will be just what the Senator from Mississippi at last frankly states; it will be a reduction of the price. It has not been many quarterings of the moon since in the crowded city, where the wageworkers assembled-where many nationalities speaking many strange tongues were found-they were told that prices were beyond their reach. They were told they were suffering from an era of high prices. They were told they could not eat butter. They were told that it was a luxury; that they could not have any of the food that came off the farm, save the barest necessities of life, because the prices were so high. "We intend to revise the tariff. We intend to smite the infamous act of 1909 hip and thigh. We intend to operate on it if you will give us a chance, and with our economic scalpel we will cut it to the bone." What for? "To lower prices. The farmer is rolling in wealth. He is buying automobiles. He is getting insolent and husky in his sordid pride. He is too wellto-do. We will lower prices, and we will give you something cheaper to eat in the city."

It is the same old tale we have all heard for 20 years arraying class against class, one occupation against another: "Reduce the price to the farmer, so that the wageworker may

get the product cheaper."

All right. The people, some of them, took it for granted, and now we are here to revise the tariff, pursuant to the mandate of the people. What people? The majority? No. I am not going to inflict anything on you about the caucus. I never have been a caucus man in my life. I have stayed out of caucuses many and many a time. I have been put on the mat in them many, many times, too. I will never go into another caucus on legislation again. That has passed away. The day of the direct primary has come, and that is the only mandate I ever get from anybody. I will obey it, or I will resign voice of the people demanded this revision, it is said. I will obey it, or I will resign.

Did it? What proportion of the people? Forty one per cent! And then, when we actually got this august body into working order and its mechanism began to revolve, instead of the 41 per cent we had 21 per cent ruling by caucus action; and that is legislation by the people; the voice of the people is the voice of God! The voice of a Democratic caucus! Heavens, what a degeneration! Twenty-one per cent legislating; and then it is irrelevant for me to inquire about a mere bagatelle of a couple

of hundred millions!

Ah, indeed, we are grown to be a mighty people. I have the information.

Mr. WILLIAMS. Mr. President, I never expected to see the day when so much physical eloquence should be evolved out of so soft a substance as butter. I suggest, now, that we go on with the reading of the bill.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Vermont [Mr. Page].

Mr. GALLINGER. On that I ask for the year and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. LANE (when Mr. Chamberlain's name was called). I wish to announce that the senior Senator from Oregon is absent from the city. He is paired with the junior Senator from Pennsylvania [Mr. OLIVER]. I ask that this announcement may stand for the remainder of the day.

Mr. KERN (when his name was called). I transfer my pair with the senior Senator from Kentucky [Mr. Bradley] to the senior Senator from Nebraska [Mr. Hitchcock] and will vote.

I vote "nay."

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. Smith] to the senior Senator from Oklahoma [Mr. Owen] and will vote. I

vote "nay."

Mr. TOWNSEND (when the name of Mr. SMITH of Michigan was called). I desire to make the same announcement as before with reference to the senior Senator from Michigan [Mr. SMITH], and desire to have that announcement stand for the day.

Mr. THOMAS (when his name was called). I transfer my pair with the senior Senator from New York [Mr. Root] to the junior Senator from Oklahoma [Mr. Gore] and will vote. I

vote "nay."

Mr. WILLIAMS (when his name was called). I transfer my pair with the senior Senator from Pennsylvania [Mr. Penrose] to the senior Senator from Maine [Mr. Johnson] and will vote. I vote "nay."

The roll call was concluded.

Mr. GALLINGER (after having voted in the affirmative). have a general pair with the junior Senator from New York [Mr. O'GORMAN]. I transfer that pair to the junior Senator from Maine [Mr. Burleigh], and will allow my vote to stand.

The result was announced—yeas 29, nays 38, as follows:

	XE	AS-29.		
Borah Brady Brandegee Bristow Burton Catron Clapp Clark, Wyo.	Dillingham Gallinger Gronna Jones Kenyon La Follette Lodge McLean	Nelson Norris Page Perkins Poindexter Sherman Smoot Sterling	Sutherland Thornton Townsend Warren Weeks

	NOT V	OTING-28.		
Bankhead Bradley Burleigh Chamberlain Chilton Colt Crawford	Culberson Cummins du Pont Fall Goff Gore Hitchcock	Jackson Johnson Lippitt McCumber Newlands O'Gorman Oliver	Owen Penrose Root Saulsbury Smith, Mich. Stephenson Works	

So Mr. Page's amendment was rejected.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, in paragraph 209, page 58, line 4, after the words "ad valorem," to strike out the words "dried blood, when soluble, 11 cents per pound," so as to make the paragraph read:

209. Eggs, dried, 10 cents per pound; eggs, yolk of, 10 per cent ad valorem.

The amendment was agreed to.

The reading of the bill was resumed, and the Secretary read paragraph 210, on page 58, as follows:

210. Hay, \$2 per ton.

Mr. POINDEXTER. Mr. President, I offer an amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

appears in paragraph 210, page 58, line 6, and insert "\$3," so that if amended the paragraph 210. that if amended, the paragraph will read:

210. Hay, \$3 per ton.

Mr. POINDEXTER. Mr. President, the rate proposed by this amendment would be a reduction of 25 per cent on the existing

It strikes me that is a pretty substantial change to be made all at one time.

The principal competitor of the American farmer in the hay market is, of course, the Canadian farmer. It is a significant circumstance in that connection that the principal hay production in the United States is in the States along the Canadian border. The Canadian farmers are protected by a rate of duty of \$2 per ton. The rate of the Payne-Aldrich bill is \$4 per ton. The rate of the Dingley bill was \$4 per ton. The rate under the Wilson bill was \$2 per ton.

Mr. LODGE. What does the Senator say is the Canadian

Mr. POINDEXTER. Two dollars per ton.

We have arrived at about the same stage in the production and consumption of hay as was described by the Senator from Illinois [Mr. Sherman] in regard to the production and consumption of butter; that is, we produce just about the amount we consume. I admit that \$3 per ton duty, which would average about 25 per cent ad valorem, is a substantial duty. It is a protective duty. I have no hesitation whatever in offering this amendment when I compare the rates on agricultural products with the rates fixed in this bill on manufactured products which the farmer is compelled to buy and consume, rates that range from a mere revenue duty up to as high as 169 per cent ad valorem.

Just at this moment I was very much struck, in examining this handbook prepared by the Finance Committee, or under its direction, to note that one class of farmers, located principally in Southern States, raisers of tobacco, are protected by a rate on some kinds of tobacco, principally wrapper tobacco, of 169 per cent ad valorem, a practically prohibitive rate. It is quite a significant circumstance that that article is one of the chief products in this country which is controlled by a trust. The legal department of the Government for a number of years has been engaged in an effort to dissolve this trust, so as to restore competition in the United States in tobacco. Yet this bill, which is supposed, among other objects, as I have heard them stated by the framers of the bill, to remove one of the causes of private monopoly in this country in the shape of prohibitive tariffs, selected that article which is the most conspicuous subject of a trust and levied upon it a higher rate of duty than is contained in the Payne-Aldrich law. As stated in this handbook, the equivalent ad valorem on the imports of tobacco in this country in 1912 was a lower ad valorem than is levied in this bill.

Now, Mr. President, there is no opportunity for the raisers of hay in this country to form a private monopoly. The price to the consumer will always be regulated and the consumer will always be protected by competition among American farmers. The same thing is true of the great mass of agricultural products. So there are not the objections to a moderately high rate upon hay and upon wheat and other products of the farm which can be urged and are urged with propriety against manufactured products which have been controlled and are controlled by private monopoly.

In connection with this amendment, Mr. President, I ask leave to submit and have printed a statement showing the production of hay by States in the United States, which was prepared by the distinguished Senator from North Dakota [Mr. Gronna]. I will state so much of the table as relates to our imports and exports as a whole and to our total production in the United States. In 1912 there were produced in the United States 72.691,000 tons of hay, the farm value of which was \$856,695,000.

We imported in 1912 699,214 tons, and we exported in 1912 59,730 tons, the value of our imports being \$6,472,376 and of our exports \$1.039,040. The revenue from the imports in 1912 was \$2,796,854,61.

The remainder of the statement I will not read, but will have printed in connection with my remarks.

Mr. BRISTOW. Will the Senator state the hay-producing

Mr. POINDEXTER. The largest hay-producing State in the Union is the State of New York, which produced 5,900,000 tons in 1912. Among the other principal hay-producing States were

in 1912. Among the other principal nay-producing States were Iowa, 4,952,000 tons; Missouri, 4,143,000 tons; Ohio, 4,026,000 tons; Michigan, 3,185,000 tons; Illinois, 3,266,000 tons; Pennsylvania, 4,537,000 tons; and California, 3,825,000 tons.

Over a million tons in that year were produced in each of the following States: Montana, Colorado, Utah, Idaho. Idaho produced 1,938,000 tons; the State of Washington, 1,707,000 tons; the State of Oregon, 1,738,000 tons; West Virginia over a million tons. Nebraska over a million tons. Kentucky over a million tons. lion tons, Nebraska over a million tons, Kentucky over a million

tons, Tennessee over a million tons, Maine more than a millionnearly a million and a half tons; Vermont a little over a million and a half tons.

Mr. JONES. Mr. President-

The VICE PRESIDENT. Does the Senator from Washington yield to his colleague?

Mr. POINDEXTER. Certainly.

Mr. JONES. I call my colleague's attention to the fact, which probably appears in his table, that the present duty is not a prohibitive duty at all; that in 1912 we imported, as he has just stated, over 699,000 tons of hay, while in 1910, with the same rate, we imported only 96,000 tons. So the imports in 1912, at the \$4 rate, were more than seven times what they were in 1910, showing that the \$4 rate is by no means a prohibitive rate, and that as a matter of fact it is not too high a rate. In 1905 we imported 46,000 tons. So the increased importations are sevenfold under the present duty of \$4 a ton.

Mr. POINDEXTER. That is very true, and it illustrates the fact that a \$3 rate will be still more a competitive rate than the existing rate of \$4; in other words, I think it will be a rate which conforms to the competitive principle which has been advocated by many Senators on the Democratic side and a rate which will approximately put the American producer and the foreign producer upon an equal footing in the home market when you make allowance for the difference in the cost of transportation.

The table submitted by Mr. Poindexter is as follows:

Production in 1912.	Tons.
Maine	1, 428, 000
New Hampshire, Vermont	626, 000
Vermont	1, 515, 000
Massachusetts	2210. (1011)
Rhode Island	66, 000
Connecticut	436, 000
New York	5. 900, 000
New Jersey	521 000
Pennsylvania	4, 537, 000
Delaware	96, 000
Maryland.	575, 000
Virginia	889, 000
West Virginia	1 000 000
North Carolina	381, 000
South Carolina	223, 000
Georgia	
Florida	54,000
Ohio	4, 026, 000
Indiana	2, 582, 000
Illinois	
Michigan	
Wisconsin	3, 600, 000
Minnesota	2, 541, 000
Iowa	4, 952, 000
Missouri	4, 143, 000
North Dakota	510,000
South Dakota	672,000
Nebraska	
Kansas	2, 444, 000
Kentucky	1,002,000
Tennessee	1 154 000
Alabama	261, 000
Mississippi	
Louisiana	234, 000
Texas	542, 000
Oklahoma	481, 000
Arkansas	352, 000
Montana	1 910 000
Middle	1, 210, 000
Wyoming	859, 000
Colorado	1, 905, 000
New Mexico	
Arizona	
Utah	1, 023, 000
Nevada	681, 000
Idaho	
Washington	1, 707, 000
Oregon	1, 738, 000
California	3, 825, 000

Mr. GALLINGER. Mr. President, just a word more. If the figures are correct in the handbook, we imported last year \$6,472,757 worth of hay and exported \$1,839,040 worth. We im-

ported almost four times as much as we exported.

Mr. President, I confess that in view of that fact there does not seem to be any crying necessity for reducing the duty on hay. Hay is a very important product in all the States bordering on Canada. I know, as a matter of fact, that in my own State to-day there is scarcely any market for hay, and the reason why, as has been stated to me personally, is that they are waiting for Canadian hay. A gentleman with whom I myself have dealt somewhat in this line informed me that he saw no reason why he should buy American hay at the present rate when the duty was to be reduced \$2 a ton, and, as he understood it, that \$2 reduction of duty would reduce the price of hay to that extent.

I think he will be mistaken on that point, but he said that he was not going to buy any hay until the tariff law which was under consideration should go into effect.

Mr. BRISTOW. Mr. President—

The VICE PRESIDENT. Does the Senator from New Hampshire yield to the Senator from Kansas?

Mr. GALLINGER. I do.

Mr. BRISTOW. Let me inquire if this is one of the products where the benefit of the increased price, if there is any, will go direct to the farmer who produces the hay by his own labor?

Mr. GALLINGER. Certainly. I know tens, and perhaps scores, of farmers in New Hampshire who have their last year's I know tens, and perhaps crop in their barns because there is not any market for it, and the reason that is given to them why there is not any market is, as I have stated, that purchasers expect Canadian hay to come in under the new tariff law, and that they will be able to buy

it cheaper than they can buy American hay.

I had hoped that, in view of the fact that our imports already so largely exceed our exports, the rates in the existing law would not be disturbed. It affects a great many small farmers. suppose it is a forlorn hope, but I will venture the hope that the modified rate the Senator from Washington has put in his amendment may at least be agreed to. I know of no reason why we should be legislating for Canada and against our own

I had a letter from Canada not long ago in which my correspondent said that they were delighted with the outlook, and my intelligent correspondent suggested that they could hardly believe that such good fortune was coming to them. I really hope that the American farmer, as far as the hay product is concerned, may be considered rather than the Canadian farmer.

Mr. SIMMONS. I wish to inquire of the Senator from New Hampshire whether he is insisting upon the retention of the present duty on hay on the ground that it measures the differ-

ence in the labor cost in this country and in Canada?

Mr. GALLINGER. Mr. President, I do not know how that may be. I do know this, that there are men in New Hampshire who are raising hay, and for which they are getting, or did get last year, \$16 a ton in the barn, 6 miles from market. know that during a visit to Canada at the same time I inquired of a Canadian farmer, who raises equally as good hay as the American farmer, what he was getting for hay, and he said from \$8 to \$10 a ton. In that case it more than measured the difference, but I do know how as a general rule it would work out. But the proposition is to reduce the duty to \$3.

Mr. SIMMONS. I would suppose that on account of the character of hay, it being rather light but at the same time very bulky, the freight rates would be tolerably high, and that competition, if it exists at all, would not exist far beyond the

border line on either side

Mr. GALLINGER. It is baled now, and it is not so very

Mr. SIMMONS. It always has to be baled, and even when it is baled it is light in proportion to its bulk.

Mr. GALLINGER. Yes.

Mr. SIMMONS. I have noticed as we have gone on with

these schedules that when we were discussing a product that is imported here from Europe we have been always told that we need a duty because wages in Europe are so much lower than they are in this country, and the Republican Party seems to have committed itself to the idea that duties ought to be framed so as to measure the difference in the labor cost here and in competing countries, allowing a profit for the manufac-I was curious to know, when we come to discuss competition between border products in this country and in Canada, whether the claim for protection was upon the same basis, the difference in labor cost, and especially I was anxious to get that information because I have heard it stated on the other side of the Chamber several times during these debates that there is practically but very little, if any, difference between labor cost in this country and in Canada.

Mr. GALLINGER. I have heard the same thing a good many times in this Chamber, but it is not correct; certainly not as to work on the farms. It is my privilege to go to Canada almost every summer. I regret that our Democratic friends are going to deprive me of that privilege this year. I have intimate knowledge of many matters relating to Canada both as to manufacturing and agricultural industries of that great country, and I chance to know that the wages on the farm are not as high

there as here

Mr. SIMMONS. Does the Senator think it costs \$4 more to make a ton of hay in Canada, just across the border and within 50 or 100 miles of the border, than it does in this country?

Mr. GALLINGER. I have not argued that. I am not sure as to that. I know that they do sell hay very much cheaper than

Mr. SIMMONS. On account of the difference in the cost of labor?

Mr. GALLINGER. The difference of \$4 may not be fully covered. But the difference in labor, in the value of the land, and the condition of living, as well as various other things, may well be taken into account.

WILLIAMS. Mr. President, if the Senator from New Hampshire will permit an interruption-

Mr. GALLINGER. I yield to the Senator. Mr. WILLIAMS. I think he will probably agree with me when I make the statement that wages are somewhat lower in the French Provinces in Quebec than they are across the line westward.

Mr. GALLINGER. And in Ontario in agricultural pursuits.

Mr. WILLIAMS. In Ontario they are lower, too.
Mr. GALLINGER. Yes; certainly in the eastern part of the

Mr. WILLIAMS. But the wages in English-speaking Provinces of Canada are higher when you get clear out to the Pacific coast than they are in the States just adjoining them. In between these two extremes the wages are virtually equivalent to one another.

Now, that brings me to this consideration. It has frequently been said that wages were the cause of the standard of living. They are, as a matter of fact, a result of a standard of living. The French in Quebec have a different standard of living from the English-speaking people across the border and from the English-speaking people in the Provinces of Canada. They are much more saving; they live a much more simple life; are satisfied with very much less profits; and so as a result of the standard of living wages are somewhat lower, not be-

Mr. GALLINGER. The Senator must remember that the French-Canadian, who has a lower standard of living, is not only invading our eastern States but he is likewise pushing westward. I am familiar with a city in Canada that in my boyhood had scarcely a French-Canadian in it, and now the population is almost one-half French-Canadian.

Mr. WILLIAMS. Yes; but the Senator will admit that as he goes westward or as he goes southward and separates himself from his old environment he acquires an appetite for larger

wages, and demands them.

GALLINGER. Undoubtedly, Mr. President; but I do really think that when we have imported practically four times as much hay in the last year as we exported we ought to be satisfied with that condition, and that we ought not to deprive the small American farmers along the Canadian frontier of the market they have had at home for their hay heretofore by opening the markets of a foreign country to our consumers.

I can not see that any good will come from it, and I do see a great deal of harm to the farmers, who need to be reasonably

protected.

Mr. SIMMONS. Does not the Senator from New Hampshire think that \$6,000.000 of imports, in view of the fact that we produce nearly \$700,000,000 of this product, is rather a small

importation?

Mr. GALLINGER. Mr. President, I very likely am oldfashioned, and very likely my views on the tariff question are somewhat old-fashioned, but I can not for the life of me see what advantage we are to get by adding to the imports of hay from our northern neighbor, thus displacing that amount of hay from the farmers along the border on our side. It will not largely decrease the value of the hay, but it will tend

to displace a very considerable part of the American product.

Mr. SIMMONS. The Senator calls attention to the importations of 1912 being six and a half million dollars. I call his attention to the fact that for the year 1910 they were less

than a million dollars.

Mr. GALLINGER. Yes.

Mr. SIMMONS. I presume that last year's importations were somewhat abnormal. There may be some explanation of

that, but I do not know what it is.

Mr. GALLINGER. That shows the enormous increase in two years, even with a \$4 rate. It might be said that it was because of the shortage of the crop. The crop, as I remember, was not short in 1912; it certainly was not in the New England States; so that that would not account for it; but there was an enormous increase in the importations of hay in 1912.

Mr. SIMMONS. Let me call the Senator's attention to the

further fact that in 1896, when we had a duty of only \$2 a ton on hay, the same as is proposed in this bill, the importations that year were less than one-half what they were last year.

Mr. GALLINGER. Yes; the Senator is correct in that statement; but I think what we want to face, what we want to look at, is the great increase in the last two years.

Mr. WARREN. Mr. President, will the Senator from New Hampshire allow me right there?

Mr. GALLINGER. I will yield the floor.

Mr. WARREN. I do not wish to take the Senator from the floor: I only desire to make a brief observation. The Senator from North Carolina has alluded to the imports of hay in 1896. The fact of the matter is that the farmers are great consumers as well as producers of hay, when you come down to that. It is true that others buy hay, but the farmers are the principal consumers; and in 1896, under the Wilson-Gorman Tariff Act, the farmers were unable to buy hay to feed and carry through their live stock; and so they shipped their stock, down to yearlings and lambs, into the market rather than buy the hay. That very largely accounts for that difference.

Mr. GALLINGER. There is one other point to which I desire to refer. I do not know how much significance it has, but the enormous growth of the automobile industry is putting the horse, to a considerable extent, out of commission and lessening the market for the farmer so far as hay is concerned. I really feel that our friends on the other side ought to yield their ironclad determination to put this bill through in the form it came from their caucus and let the duty stand at \$3 a ton, which is a 25 per cent reduction from the rate in the present

Mr. PAGE. Mr. President, the Senator from North Carolina has referred to the difference in the cost of production. not know what that difference is in actual labor, but I do know that the Vermont farmer seeks to keep his farm in a good condition by fertilization. A good farmer will turn over his meadow and stock down his land once in five years, or onefifth of it each year. He takes good care of his farm and he keeps up its value. The Canadian farmers, or many of them, simply take the fertilization out of the soil and sell it year after year. On the farms bordering on the St. Lawrence River on either side you will find a good strong clay soil, one that will stand this bad usage for many years. They are our competitors in the hay market.

We certainly ought to protect the American farmer as much as we can, because the Canadian not only has the advantage of cheaper land, but is willing to wear cut his land and take out the fertilization and sell it in hay, while the Vermont farmer is trying to keep his farm in good condition. I believe

he should be encouraged.

Mr. WILLIAMS. Mr. President, if the Senator will pardon

The VICE PRESIDENT. Does the Senator from Vermont yield to the Senator from Mississippi?

Mr. PAGE. Certainly.

Mr. WILLIAMS. Talking to one another as two farmersand the Senator from Vermont and I are about the only two farmers in the body-does the Senator mean to tell me that the Vermont farmer, taking care of his land and fertilizing it, does not obtain an increased quantity of hay per acre at a decreased

Mr. PAGE. As compared with the Canadian farmer, I do He gets a better crop, but not at a less cost. not think so. The Canadian farmer is subjected to very little expense, except harvesting his crop. He is not a good farmer. He is taking fertilization out of the farm and selling it in hay.

Mr. WILLIAMS. Then it must follow that your Vermont farmer is such a poor farmer that he puts more money into fertilizing his land and taking care of it than it pays him

to put into it.

Mr. PAGE. No, Mr. President; not at all.
Mr. WILLIAMS. Then if he is a good farmer and is farming intelligently he must make money by his intelligence, and if his competitor is inferior and unintelligent and is wasting his land and not fertilizing it, but taking the substance of his land out in the crop every year, then he ought not to be much of a competitor and ought not to amount to much.

Mr. PAGE. He is a competitor to-day and will be for a few years until he has exhausted the fertility of his soil. American farmer puts back into his land a part of what he takes from it, and therefore he is not able to produce so cheaply as his Canadian competitor who is each year selling the

fertility of his land as hay.

Mr. WILLIAMS. Oh, the lands of Quebec, if I am not mistaken, have been longer in cultivation than those in Vermont.

Mr. PAGE. They have been; but they do not cultivate the lands there as they do in Vermont. They simply take the fertilization out of the soil and they sell it in competition with our farmers who are trying to be good farmers and trying to keep their farms in good condition.

Mr. WILLIAMS. Does the Senator mean to tell me that the Quebec farmer who does not take care of his land and

takes the substance out of his land in his crop can raise as much hay as the Vermont farmers do when they are taking care of their lands?

Mr. PAGE. No; I do not.

Mr. WILLIAMS. Now, does the Senator mean to tell me that the Vermont farmers, in spite of their superiority and intelligence in cultivating their lands in the proper way, get less profit out of them than the Canadian farmer who does not know how to take care of his land?

Mr. PAGE. I do say, Mr. President, that the Canadian farmer oftentimes puts nothing into his farm. He merely harvests the grass. He does not plow very much and does not fertilize the soil very much. His costs are low, his expense for harvesting is about \$2 per ton, and he can underbid the American farmer who does farming in a legitimate and proper manner.

Mr. WILLIAMS. Now, I ask the Senator this question: What is the Senator's experience and observation, or both, in regard to the number of acres of land that you can mow in a

day with one hand, one mower?

Mr. PAGE. Our Vermont farmers, who get up at 3 or 4 o'clock in the morning, usually go around a 4 or 5 acre patch

and cut it down before noon.

Mr. WILLIAMS. Well, we do a little bit better in Mississippi; we sometimes mow 6 acres. The question I want to ask the Senator is, Does the Canadian farmer get over any more land than the Vermont farmer?

Mr. PAGE. Probably not.

Mr. WILLIAMS. If the Vermont farmer's land is well cultivated and produces fine crops of hay, and the Canadian farmer's land is not well cultivated at all, and he merely gets what he finds growing wild, and he does not fertilize his land or take care of it, and he can not get over any more land than your farmer can, then the product of his labor through the day running a machine would be about 50 per cent of what yours would be, would it not?

Mr. PAGE. Yes; allowing the Senator's viewpoint to be correct, but possibly we do not clearly understand each other.

Mr. WILLIAMS. Then he would have to be hired at half

as much before you even equalized the labor cost?

Mr. PAGE. The Senator from Mississippi is a farmer, and, being so, I can appeal to him with some little confidence that I will get the facts. He knows that the farmer who plows, who draws on the manure, and who then thoroughly harrows his land to but it in good condition for the seed, puts much more money into the preparation of the soil, the cost of fertilizers, and the cost of seeding down than he does into cutting his hay and hauling it to the barn.

Mr. WILLIAMS. I should hate to say that. I would regard that as very unintelligent farming; that would be farming for

fun and not for profit.

Mr. PAGE. It is a fact, Mr. President, that the cost of plowing, of harrowing, of fertilization, and of seeding is more than the cost of cutting and getting in the hay, which is about all the Canadian does, and I think the Senator ought to affirm what I say about that if it is true.

Mr. WILLIAMS. I can not do that; that would lead to

bankruptey.

Mr. WALSH. Mr. President, our friends on the other side seem to be so enamored of high duties that they seem disposed to insist upon a duty when there does not seem to be any reason for it at all. No one has heard any reason advanced why there should be a duty of \$4 rather than \$2 a ton on hay. It is not suggested that the former figure measures the difference in the cost of production; it is not suggested either that the imports would increase materially under the reduced rates; in fact, there are no figures to justify such a conclusion as that. The slightest attention to the statistics will disclose that there are never any importations of hay into this country at all except in seasons when the supply in this country is abnormally low.

The distinguished Senator from New Hampshire [Mr. Gal-LINGER] is in error in saying that there was the usual production of hay last year. In 1912 the production was, as a matter of fact, quite large, but the importations for 1912 came from the production of 1911, and in 1911 the production was notably low. We produced in 1911 only 47,000,000 tons, as against 64,000,000 tons in 1910 and 72,000,000 tons in 1912. Accordingly in 1912 we had an unusually large importation-699,213 tons; but I might say in that connection that even 699,213 tons was only about one five-hundredth of the total production and could not possibly have affected the price except locally; nationally it could not have exerted any influence upon the price at all.

Now come to 1910. The importations for that year will give

an index to the production in 1909.

The figures are given here at 64,000,000 tons; that is to say, whenever there is a normal production of hay in this country you do not have any importations. Look at it-96,000 tons out of a total of 64,000,000 tons-a perfectly negligible quan-

tity of imports in 1910.

What does that mean? It simply means that when there is a famine here and our people have got to get hay anywhere they can, it will come into this country in order to save the beasts that eat it from starvation, no matter what the tariff is. The effect of a duty upon hay is simply to make the price of hay high when it is already abnormally high. When the price is not high, when the ordinary conditions prevail, the duty can not possibly have any effect upon the price of hay at all.

Mr. GALLINGER. Mr. President, there is force in the Sen-

ator's suggestion, and yet, if there was a crop in 1911, doubtless that enabled the consumers to have a start until the new crop

of 1912 came in, which would come in at the midyear.

Mr. WALSH. The suggestion of the Senator from New Hampshire scarcely affects the case. I apprehend, Mr. President, that the most urgent demand for hay comes from those who are obliged to buy in order to keep their stock alive

Mr. GALLINGER. Undoubtedly.

WALSH. Undoubtedly-within a very limited region along the border some advantage may accrue to some farmers in years of scarcity. So far as the great interior of this country is concerned, a duty on hay is like a duty on potatoes, with reference to which I will say a word presently. not make any difference at all; but, as a matter of course, with reference to a little region along the border, in years of famine here the farmer will get a little higher price for his hay. But look at the situation over that great extended area, the boundary line of my State, 700 miles in length, and 400 miles along the northern line of North Dakota and 200 miles more on the line of the State of Minnesota-whenever a famine year comes the farmers in our section of country are obliged to buy hay wherever they can get it. If they can get it across the line, they want to go there and get it, and on that hay you impose a duty of \$4 a ton, and we are endeavoring to reduce that duty to \$2.

Mr. GALLINGER. Well, Mr. President, of course the States bordering on Canada are insignificant in almost all respects compared to the great States of the Northwest and the Rocky Mountain region-certainly so in area-but we are neverthe less contributing what we can to the Government of the United States, and we do feel that our industries are entitled to consideration. It is not quite the rule always to legislate in a way that will cover every portion of our great land; and when you come to consider the States of Maine, New Hampshire, Vermont, New York, Ohio, and Michigan, bordering on Canada, and then the States farther west than that, while in one sense they are insignificant yet in another sense they are extremely important. It is for those States that I appeal; and I really think that we are entitled to a good deal of consideration.

Mr. WALSH. Mr. President, I appreciate the soundness of the suggestion made by the distinguished Senator from New Hampshire, and I trust that nothing that I have said would give him any impressions that I was regardless of his section.

Mr. GALLINGER. Not at all. It was once my privilege to travel through the State that the Senator from Montana so ably represents, and I remember calling my wife's attention to the fact that we had traveled through that State a distance that would have carried us from Concord, N. H., to the city of Washington. Then I understood better than I ever did before the tremendous importance of that section of our country. I appreciate what the Senator says, and there is force in it.

Mr. WALSH. I was simply desirous of inviting the attention of the Senator and of the Senate to the fact that the increased duty for which the Senator asks does the farmers of his State a benefit only in years of famine, when the prices are abnormally high, anyway; and that if you regard that consideration you put us in a situation, with a thousand miles of boundary line, where we shall be denied the opportunity in seasons of famine to go where we can get the hay cheapest so as to save

our stock.

Mr. GALLINGER. Mr. President, I simply want to add a word, though perhaps it is unnecessary. When the plea was made that the great arid and semiarid regions of this country were entitled to some help from the Treasury of the United States to irrigate their lands and to enable them to produce perhaps twenty times as much as they were producing, the bill for that purpose received the vote of every Senator from New It was of no earthly account to us; but we were very glad to give our help to enable those great States, suffering as they were for want of moisture, to redeem their land and to multiply their products perhaps ten or twenty times.

I am glad that I, for one, have never yet drawn the provincial line in any vote I have ever cast in the Senate; and I

am not going to do it now.

Mr. WALSH. Mr. President, with the permission of the Senate, I can not allow the remarks of the Senator from New Hampshire to pass without an acknowledgment of the entire truth of the statement made by the Senator, that in the great struggle of which he speaks we were deeply indebted to the assistance of many distinguished representatives from New England. I cheerfully make here an acknowledgment of the great national view they took of that question. I likewise do not desire to have it pass without remarking that we, by the development of the West, have afforded a market for the products of New England; and while they were performing a great national service in that matter, they were not wholly regardless of their own interests.

Mr. GALLINGER. That is true, Mr. President; just as we have reciprocally, by developing our manufacturing industries, made a market for the products of the Senator's own section of

Mr. THORNTON. Mr. President, I was not in the Senate Chamber during the first part of the discussion of this paragraph, but I gather from what I have heard since I have returned that an amendment has been offered increasing the duty on hay to \$4 per ton.

SEVERAL SENATORS. Three dollars.
Mr. THORNTON. My position on this subject ought to be pretty well understood by this time. I am always willing to vote for a sufficient duty on farm products at least to equalize the conditions between the farmers of this country and the farmers of foreign countries; and Canada is just as much a foreign country to me as England or Germany or France.

I understood the Senator from Montana [Mr. Walsh] to say awhile ago that nothing had been suggested in the discussion to show that it would take a duty of \$3 a ton to put the American farmer on an equal footing with the Canadian farmer in this respect. I should like to know if that is conceded. I thought I understood the Senator from Montana to He was here and heard all the discussion.

Mr. GALLINGER. If the Senator will permit me, a duty of \$2 a ton is imposed on American hay by the Canadian Government, so that this is an advantage to the American farmer

of only \$1 in duties.

Mr. THORNTON. There is a duty of \$2 imposed by Canada, or \$3?

Mr. GALLINGER. Two dollars.
Mr. THORNTON. We give a duty of \$2, too.
Mr. GALLINGER. Our present rate of duty is \$4 and the
Canadian tariff rate is \$2. The present proposition is to make our tariff \$3, as against the Canadian tariff of \$2.

Mr. THORNTON. The Canadian tariff on American hay

Mr. GALLINGER. Yes.

Mr. THORNTON. And what is proposed here is an American tariff on Canadian hay of \$2?

Mr. GALLINGER. That is what the committee proposes; but the amendment offered by the Senator from Washington [Mr. Poindexter] proposes a duty of \$3.

Mr. THORNTON. I should like to ask the Senator before

he takes his seat, then, whether it has been shown that there is the difference in the cost of production that would justify it?

Mr. GALLINGER. From personal observation which has covered a large number of years and an acquaintance with a great many farmers in Canada, I have no doubt of it at all. We have no statistics to show it; but that is my judgment, based upon personal observation.

Mr. WILLIAMS. It seems to be the Canadian judgment that the Canadian farmer needs a duty of \$2 to be able to compete

with you.

Mr. GALLINGER. Yes; of course the Canadian has tried to protect his own industry, and we ought to adequately protect

Mr. THORNTON. Mr. President, there seems to be a doubt about this. In case of doubt, I certainly propose to vote with the committee. If it were a plain case, I would not hesitate to vote against the committee.

Mr. CATRON. Mr. President, it occurs to me that one portion of this country is being overlooked in looking out for this hay matter. There is a foreign country south of us along the borders of New Mexico, Arizona, and Texas. In New Mexico we produce a large amount of alfalfa hay. Our principal market for what we do not use ourselves is El Paso. We have entered into a treaty with Mexico in reference to the building of the Elephant Butte dam, under which we agree to give them 40,000 acres of water from that dam down the Rio Grande

That water will be distributed in the valley of the Rio Grande along down our border. In the valleys of New Mexico we can raise four crops of alfalfa hay a year, at an average of about a ton and a half an acre. In Mexico they will get the water free, while our people will have to pay \$4 an acre for it each year. That is the stipulation in regard to the people in New Mexico who will get the water under the Elephant Butte dam project, while the people in Mexico will get the water free. The people in Mexico can raise six crops a year, being much farther south than we are, and closer to El Paso, our market. We can put hay into El Paso and sell it at about \$10 a ton. The Mexican people will be able to put it in there and sell it at from \$5 to \$6 or \$6.50 a ton, and make more profit than we can possibly make at \$10 a ton.

If either one of these propositions is enacted—that is, the \$2 duty proposed by the House, or the \$3 duty proposed here nowit will practically wipe out the production in New Mexico of hay, which is our most valuable product from the soil, and will turn over our entire market to the Mexican people, as soon as

they may get rid of their troubles.

To use an expression that we use a good deal in the West, we are being "cinched" by this bill, because it allows the Mexican cattle to come over free and compete with our cattle raisers; it allows their sheep to come over free and compete with our sheep raisers; and it reduces the duty on lead and zinc one-half, even by the amendment put in by the Senate, and allows those articles to come over and compete with our labor. The fact is that nearly every industry we have in New Mexico-In fact, every industry—will, in my judgment, be almost paralyzed if this bill is enacted into law, and especially the industry of raising alfalfa hay. That will go down with this duty on it, especially the \$2 duty provided by the House.

The VICE PRESIDENT. The question is on the amendment

proposed by the Senator from Washington [Mr. Poindexter].

Mr. POINDEXTER. On that I ask for the yeas and nays. The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. LANE (when Mr. Chamberlain's name was called). The senior Senator from Oregon is still absent. He is paired, as I have heretofore stated.

Mr. KERN (when his name was called). I transfer my pair with the senior Senator from Kentucky [Mr. Bradley] to the senior Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "nav.

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the senior Senator from Oklahoma [Mr. Owen] and will vote. I vote "nav."

Mr. SUTHERLAND (when his name was called). I have a pair with the senior Senator from Arkansas [Mr. Clarke], who is absent. On that account I withhold my vote. I will allow this announcement to stand for the remainder of the day.

Mr. THOMAS (when his name was called). I again announce the transfer of my pair with the senior Senator from New York [Mr. Root] to the junior Senator from Oklahoma [Mr. GORE] and will vote. I vote "nay."

Mr. WILLIAMS (when his name was called). I have a pair with the senior Senator from Pennsylvania [Mr. Penrose]. If he were present, I should vote "nay."

The roll call was concluded.

Mr. JAMES. I have a general pair with the junior Senator from Massachusetts [Mr. Weeks]. He has not voted, and I therefore withhold my vote.

Mr. HOLLIS. I desire to announce that the junior Senator from Delaware [Mr. SAULSBURY] is paired for the day with the

junior Senator from Rhode Island [Mr. COLT].

Mr. GALLINGER (after having voted in the affirmative). I will inquire whether the junior Senator from New York [Mr. O'GORMAN] has voted?

The VICE PRESIDENT. He has not.

Mr. GALLINGER. I am paired with that Senator. fer that pair to the junior Senator from Maine [Mr. Bur-LEIGH], and will allow my vote to stand.

The result was announced—yeas 26, nays 37, as follows: YEAS-26.

Borah Brady Brandegee Bristow Burton Catron Clapp	Clark, Wyo. Crawford Dillingham Gallinger Gronna Jones Kenyon	Lodge McLean Nelson Norris Page Perkins Poindexter	Sherman Smoot Sterling Townsend Warren

So Mr. Poindexter's amendment was rejected.

The reading of the bill was resumed

The next amendment of the Committee on Finance was, in paragraph 213, page 58, line 11, after the word "bushel," to insert "of 57 pounds," so as to make the paragraph read:

213. Garlic, 1 cent per pound; onions, 20 cents per bushel of 57

The amendment was agreed to.

The next amendment was, in paragraph 214, page 58, line 13, after the word "packages," to strike out "15" and insert "10,"

214. Peas, green or dried, in bulk or in barrels, sacks, or similar packages, 10 cents per bushel of 60 pounds.

Mr. GRONNA. Mr. President, I believe it is a mistake to reduce the duty on this article to 10 cents a bushel. The rate in the present law is low, being only 25 cents a bushel. The House reduced that to 15 cents, and the Senate committee has reduced it to 10 cents a bushel.

I shall occupy the floor but a moment. I want to call attention to the fact that in the United States this is a growing We have nearly 100,000,000 people, and for the year 1909-I do not happen to have the production for the later years-we produced a little more than 7,000,000 bushels, while Canada, right across the line, with 8,000,000 people, produced more than four and one-half million bushels. The same is true with regard to beans. We imported during the year 1912 a great quantity of peas of all kinds. I want to read just a few of the figures.

Of green peas in bulk we imported 58,924 bushels, of the value of \$124,484, and they brought a revenue of \$14,671.27. Of peas for seed we imported 66,906 bushels, of a value of \$238,010, and they brought a revenue of \$26,762.40. Of dried peas we imported 725,289 bushels, of a value of \$1,262,308, bringing us a revenue of \$181,318.77. We imported 170,549 bushels of split peas, of a value of \$271,295, and it brought revenue of \$76,747.33. We also imported a small quantity of peas in packages, amounting to 20,877 pounds, of a value of \$1,609, which brought a revenue of \$208.77. The total amount of revenue for 1912 was \$299,708.51.

It seems to me, Mr. President, that the committee must have overlooked the fact that we are now importing a large quantity of beans and peas. There are only a few States which produce this crop. Taking the production of beans, I find that the States of Maine, New York, Michigan, Wisconsin, Minnesota, Kentucky, Colorado, New Mexico, and California are practically the only States which produce beans in any quantity. I find that some States produce quite an amount of peas, but not a great number of States are engaged in the industry. We can not afford to produce them in my part of the country; labor is too high. I have personally tried to experiment with the production of beans and peas, but it is a losing proposition.

The States that I have named are going to be injuriously affected. The Government is going to lose a great deal of

It seems, Mr. President, that we ought at least to leave the rate as fixed by the House. A bushel of beans generally sells for about \$3; 5 cents a pound. Ten cents a bushel is certainly a low rate. I believe that this is one item where the Senate committee can afford to adopt the House rate. It is true there is not very much difference. I believe that the old rate ought

Mr. President, I do not intend to make a speech on this paragraph, but I wish to ask permission to have some tables printed showing the production in all the countries of the

The VICE PRESIDENT. Is there objection? The Chair hears none, and permission is granted.

The tables referred to are as follows:

Mr. TOWNSEND. Beans are not included in this paragraph? 1

Mr. GRONNA. Not in this paragraph. Mr. TOWNSEND. We have passed over the item in refer-

Mr. CRAWFORD. We are on paragraph 214.

The VICE PRESIDENT. The question is on the amendment in paragraph 214, page 58, line 13.

Mr. WILLIAMS. The Senator will find in paragraph 202 "beans and lentils, not specially provided for, 25 cents per bushel of 60 pounds."

Mr. GRONNA. That is correct. Mr. WILLIAMS. Then, under paragraph 484 you will find mention of beans-drugs, such as barks, beans, and so forthon the free list.

Mr. GRONNA.

ence to beans?

Mr. TOWNSEND. Mr. President, briefly I wish to call attention to the question of the duty on beans, as suggested by the Senator from North Dakota. There is one thing that perhaps will bring the question of duties directly to the minds of Senators in connection with this particular item as clearly as anything else can do.

The present duty on beans is 45 cents a bushel, and it is proposed to reduce it to 25 cents, I understand. I suppose that is done for the purpose of cheapening the product to the consumer. The object is to present to the people a cheaper food product, and it is claimed that by reducing the duty from 45

cents to 25 cents we will do that.

I noticed a peculiar fact in looking over some retail prices and wholesale prices, if I may so term the price which the farmer receives for his product, in reference to beans. The fact of the matter is that for years the price of beans to the consumer, the man who went to the grocery store to buy beans, has been 10 cents a quart for them. That was true whether beans were worth \$1, \$2, or \$2.50 a bushel. I took some particular pains to inquire into this matter to see whether that is true generally, and I have found no exception to that rule. The poor man, for instance, who goes and buys a quart or two quarts of beans at a time pays 10 cents a quart for the beans, whether the farmer get \$1 or \$2 or \$2.50 for a bushel of beans which he sells to the same groceryman.

It has been thought at least that this duty of 45 cents a bushel has been instrumental in increasing the production of beans in the United States. Michigan and several other States produce a large quantity of beans. The Senator from North Dakota says they can not be grown on the soil of North Dakota because of the prohibitive cost of labor. We can grow beans in Michigan and many other States. They are a valu-

able addition to the property value of the country.

I submit, Mr. President, unless there is some probability that the consumer of beans is going to get the product cheaper it is a mistaken policy to reduce the tariff on beans so as possibly to encourage the importation of beans from abroad, I repeat, there is some suggestion based upon even some kind of a probability that the retail price is going to be cheapened to the consumer.

Mr. WILLIAMS. Will the Senator pardon me? Beans come under paragraph 202, and have been passed over and will be

dealt with by the Senate.

Mr. TOWNSEND. I realize that.

Mr. WILLIAMS. I want to appeal to the Senator not to

take up time, as the paragraph has been passed over.

Mr. TOWNSEND. I have not taken up much of the time of the Senate, and I do not propose to do it now; but the Senator from North Dakota discussed the question of beans. I confess paragraph 204 was passed over without my attention having been called to it. I am not going to offer an amendment because I know what the fate of it would be. I simply wanted at this time to call attention to one of the inconsistencies of the bill. A subject has been taken for reduction which there is not the slightest probability will result in a benefit to the consumers of the country

The VICE PRESIDENT. The question is on agreeing to the

amendment of the committee.

The amendment was agreed to.

The next amendment was, in paragraph 214, page 58, line 14, before the word "ceuts," to strike out "25" and insert "20," so as to read:

Split peas, 20 cents per bushel of 60 pounds.

The amendment was agreed to.

The next amendment was, in paragraph 214, page 58, line 16, before the word "cent," to strike out "1" and insert "1,"

Peas in cartons, papers, or other similar packages, including the weight of the immediate covering, & cent per pound.

The amendment was agreed to.

The next amendment was, in paragraph 215, page 58, line 17, after "azalea indica," to strike out "and all other decorative greenhouse plants," so as to read:

Orchids, palms, azalea indica, and cut flowers, preserved or fresh, 25 per cent ad valorem.

Mr. BRANDEGEE. Mr. President, I should like to ask the Senator in charge of this schedule why these changes were made. I notice the law provides "and all other decorative or greenhouse plants," and so forth, 25 per cent; and then—
Mr. WILLIAMS. That was transferred. If the Senator

will turn to paragraph 216, he will find inserted there the words "or greenhouse" before the word "stock."

Mr. BRANDEGEE. Does that cover both decorative plants and greenhouse plants?

Mr. WILLIAMS. We thought so. The greenhouse people

told us it ought to be there and not in the other place.

Mr. BRANDEGEE. That puts it under a lower rate of duty, What is the significance of the change made in the phraseology? The old law provided that azaleas should come in at 25 per cent ad valorem, and a change is made so that azalea indica comes in at that rate, but nothing is said about other

Mr. WILLIAMS. From the same authority we gather that this would cover the azalea. It was intended to cover the flowering plant

Mr. TOWNSEND. The Senator said they consulted a greenhouse authority. What greenhouse authority did the committee

Mr. WILLIAMS. I do not know the people's names. There were several of them before us. I have the names over at the office. I will give them to the Senator some day, if he wishes them.

The VICE PRESIDENT. The question is on the amendment of the committee.

The amendment was agreed to.

The Secretary concluded the reading of paragraph 215.
Mr. JONES. Mr. President, I understand the committee is considering an amendment which I called to the attention of the chairman of the committee with reference to the admission of flowering bulbs free of duty. If that is the case, I will not offer the amendment here, but will wait until the committee has had time to consider it.

Mr. SIMMONS. I have examined the amendment of the Senator from Washington, and I will ask that the paragraph be passed over.

The VICE PRESIDENT. Paragraph 215 goes over, then,

with the committee amendment agreed to.

The next amendment of the Committee on Finance was, in paragraph 216, page 59, line 12, after the word "nursery, insert "or greenhouse," so as to make the paragraph read:

216. Stocks, cuttings, or seedlings of Myrobolan plum, Mahaleb or Mazzard cherry, Manetti multiflora and briar rose, Rosa Rugosa, 3 years old or less, \$1 per thousand plants; stocks, cuttings, or seedlings of pear, apple, quince, and the St. Julien plum, 3 years old or less, \$1 per thousand plants; rose plants, budded, grafted, or grown on their own roots, 4 cents each; stocks, cuttings, and seedlings, of all fruit and ornamental trees, deciduous and evergreen shrubs and vines, and all trees, shrubs, plants, and vines commonly known as nursery or greenhouse stock, not specially provided for in this section, 15 per cent ad valorem.

The amendment was agreed to.

Mr. POINDEXTER. Mr. President, going back to paragraph 215, the matter which my colleague called to the attention of the chairman of the Finance Committee, for the information of the Senator from North Carolina, I should like to make a very brief quotation from a letter which I have from the Chief of the Bureau of Plant Industry.

The proposition of the senior Senator from Washington [Mr. Jones] is to amend this paragraph so as to permit the free importation of seed bulbs. The only attempt with any promise of success in the United States to grow bulbs, of which we import a million dollars worth a year from Holland, is in the State of Washington near the city of Bellingham. Though meeting with success, it is in every essential element an infant industry. Though just beginning, it has an excellent prospect of becoming an established industry of great value to the farmers in that section. For the purpose of facilitating and encouraging it, it is proposed to allow these farmers entering upon this new enterprise to get the mother bulbs, which require a cycle of years to mature, free of duty.

I am saying this that the Senator from North Carolina, who, I understand, is going to consider this proposition, may have in mind the object of the proposed amendment.

In this connection, very briefly, I will read from the letter which I referred to from the Bureau of Plant Industry:

So far as known hyacinth bulbs are propagated in this country only at the bulb garden established by this department, near Bellingham,

although hyacinths are the most important of the so-called Holland bulbs, because the areas in which the soil and climatic conditions are suitable for growing them are extremely limited, and wherever they can be grown successfully the land becomes very valuable.

Answering the last paragraph of your letter I will say that the department established a bulb propagating garden in the autumn of 1908 on 10 acres of land near Bellingham, Wash. which was furnished by the chamber of commerce of that city, with the necessary buildings and improvements, rent free, the cooperative agreement to run for a period of 10 years, and the department to furnish the necessary bulbs, labor, and expert management. The object of the department in establishing the garden was twofold, namely: (1) To propagate Holland bulbs for the congressional distribution in lieu of importing large quantities of these bulbs from Holland annually; and (2) to make the propagation of these bulbs a demonstration that Holland bulbs can be successfully grown on a commercial scale in the Puget Sound region with a view to establishing a new and profitable industry.

I am pleased to be able to report that results so far obtained are very encouraging, and there is every reason to believe that in a few years the garden established by the department will furnish all the bulbs required for the congressional distribution and sufficient data will have been accumulated to enable the department to publish explicit and detailed instructions for the information of anyone who desires to grow these bulbs commercially. However, several years will be required to complete the cycle of operations involved in treating the "mother" bulbs and bringing the young bulblets to maturity, and there are many minor questions of importance to be worked out, such as special methods of treatment, cultivation and handling, use of machinery, and so forth, so that it is now entirely too soon to make any statement regarding the work, except that the progress made has been very satisfactory and

We therefore think that prospective bulb growers in this country will want the duty retained on all the so-called Holland bulbs except, possibly, mature "mother" bulbs imported solely for propagation, and that if bulbs for propagation purposes are admitted duty free such importations should be surrounded by such rigid restrictions as will prevent importations for other purposes without payment of duty. If such an arrangement can be enacted into law it will undoubtedly encourage the establishment of a new industry in this country. It is understood that bulbs valued at approximately \$1,000,000 are imported annually from Holland, and it is believed that most of these bulbs can be propagated and grown in this country, provided that our growers can meet the competition of cheap labor in Holland.

As a suggestion, Mr. President, I will offer, and ask that it may lie over, the following amendment to be inserted at the close of paragraph 215:

Provided, That mature "mother" bulbs imported specifically for propagation and not to be used for any other purpose shall be admitted free of duty.

I ask to have the amendment printed. The VICE PRESIDENT. It will be so ordered.

Mr. JONES. I desire to say to my colleague that I have suggested exactly that amendment to the chairman of the committee, and have also handed to him a similar letter from the .

department.
Mr. POINDEXTER. I was not aware of that and only ask

that it be considered in that manner.

Mr. JONES. I am glad, however, that my colleague read the letter into the RECORD.

The reading of the bill was resumed, and the Secretary pro-

ceeded to read paragraph 217.

Mr. GRONNA. Mr. President, before we proceed to vote upon that paragraph, I wish to offer the amendment which I send to the desk

The VICE PRESIDENT. The amendment proposed by the Senator from North Dakota will be stated.

The Secretary. On page 59, after line 13, it is proposed to insert as a new paragraph the following:

2161. Potatoes, 15 cents per bushel of 60 pounds.

Mr. GRONNA. Mr. President, the Canadian rate of duty on potatoes is 20 cents a bushel. The rate in our present tariff law is 25 cents a bushel. That is the same as the Dingley The Wilson rate was 15 cents per bushel.

In 1912, according to the figures that I have been able to obtain, we imported 13,740,482 bushels of the value of \$7,175,376, which brought a revenue to the Government of \$3,434,525. exported in 1912 1,237,276 bushels of potatoes of the value of \$1,414,297. The total production in the United States was

\$1,414,297. The total production in the United States was 420,647,000 bushels, and the farm value was \$212,550,000.

It is true there are only a few States that produce potatoes in quantities of more than 10,000,000 bushels—such States as Maine, New York, Pennsylvania, Ohio, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Washington, Oregon, and California. Those are the States producing the largest amount of potatoes.

I do not wish to delay the proceedings of the Senate further, but I will ask to have a statement which I send to the desk printed in connection with my remarks.

The VICE PRESIDENT. If there be no objection, that will

be done.

The statement referred to is as follows:

POTATOES.

Canadian rate: 20 cents per bushel. Payne rate: 25 cents per bushel.

Dingley rate: 25 cents per bushel. Wilson rate: 15 cents per bushel. Imports 1912: 13,740,482 bushels; value, \$7,175,376; revenue, 4,34,535. Exports 1912: 1,237,276 bushels; value, \$1,414,297.

Production, 1912.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from North Dakota [Mr. Gronna]. [Putting the question.] The "noes" seem to have it.

Mr. BRISTOW. Mr. President, it seems to me that we ought

to have a roll call on this amendment. Starch and dextrine and manufactured products made from potatoes have the Payneand manufactured products made from potatoes have the Payne-Aldrich rate, or approximately the Payne-Aldrich rate, and still the product of the farmer, potatoes, are put on the free list in the bill. There is not any item in this bill which illustrates its discriminatory character against the agricultural classes more than this. For that reason I think we ought to have a record vote; and so, Mr. President, I ask for the yeas and

The yeas and nays were ordered. Mr. WILLIAMS. Mr. President, the Senator from Kansas is partially mistaken in his statement. Potatoes do bear in this bill a countervailing duty. A duty is put on them, and so long as Canada keeps her duty on potatoes our duty will remain. The Senator from Kansas is otherwise right, but potatoes are not placed absolutely on the free list in this bill.

Mr. BRISTOW. No; but the countervailing duty does not apply to manufactured products; it applies only to potatoes.

Mr. WILLIAMS. I understand that; but the Senator made the statement that potatoes were put upon the free list, and I wanted it understood just what we did with them.

The VICE PRESIDENT. The Secretary will call the roll.

Mr. WALSH. Mr. President, before the roll is called, in view of the course the discussion has taken, and particularly in view of the remarks of the Senator from Kansas [Mr. Bristow], I desire to say just a word.

The Senator called our attention in the discussion to the duty on dextrin and stated that potatoes were on the free list, while, as a matter of fact, there is a countervailing duty on them; but for the present let us consider that potatoes are on the free The Senator seems to think that that is the most striking evidence of the discrimination in this bill against the American

Mr. BRISTOW. I will say one of the most striking evidences of discrimination.

Mr. WALSH. Very well; one of the most striking,

Now, Mr. President, as a matter of fact the duty upon potatoes can not possibly affect the interest of any farmer in this country except the farmer living along the Atlantic seaboard. It is utterly impossible, by reason of the character of the product and the freight rate that it carries, to produce potatoes and to transport them so that they can come into competition with the product of any foreign country at all. I have taken pains to inquire about the production of potatoes of my own State, and it is disclosed that, although the soil of that State produces potatoes, as you will see from the returns of the Agricultural Department, with the most marvelous fecundity, we can not ship them beyond the borders of our own State, even omitting the consideration of the freight rate.

You must bear in mind that potatoes are harvested on the very eve of winter. In order to preserve them for transportation it is necessary to put them in a heated warehouse; and

when you come to transport them you must provide refrigerator cars, or some other cars especially fitted, in order to protect them from the frost. The consequence of this is

Mr. BRISTOW rose.

Mr. WALSH. Just a moment. The consequence of this is that none of the interior States, or the Western States at least, can by any possibility get any advantage from a duty upon potatoes

Mr. BRISTOW. Mr. President, if the Senator will yield a moment, I will say that he may be right as to potatoes that are grown in Montana, but the potatoes that are grown in Kansas are shipped and consumed largely before the potatoes in Montana are matured. The very distinguished Senator from Minnesota [Mr. Nelson] who sits behind me, says that in this city he has many times eaten potatoes that were grown in Europe.

Mr. WALSH. I have taken the pains to write to the railroad companies operating in the State of Kansas touching shipments of potatoes from that State. I have not yet been able to get a reply to an inquiry I addressed to them in substance like a

reply to an inquiry I addressed to them in substance like a letter sent by me to the railroads operating in Montana.

Mr. BRISTOW. I will state to the Senator, if he will pardon me, that carloads, and I may say hundreds of carloads, of potatoes are shipped out of Kansas to the north, to Minneapolis and St. Paul, those being a portion of our market, every year when the crop is abundant, as it usually is along the Kansas Nicola hettowa and sullays, and we market them before the every River bottoms and valleys, and we market them before the excessive hot weather comes on, they being early potatoes. So the rule which the Senator would apply to Montana-grown potators and apply to Montana-grown potators with the great way and apply to the great way and apply to Montana-grown potators. tatoes is purely a local rule, which does not apply to the great Mississippi Valley.

Mr. WALSH. The conditions, Mr. President, will be accurately disclosed in a letter which I received from the general freight agent of the Chicago, Milwaukee & St. Paul Railroad. He says:

CHICAGO, MILWAUKEE & ST. PAUL RAILWAY CO., FREIGHT TRAFFIC DEFARTMENT, Chicago, August 8, 1973.

Chicago, August 8, 1913.

United States Senate, Washington, D. C.

Dear Sir: Replying to your letter of the 4th instant in which you ask for certain statistics with reference to the movement of potatoes from Montana during the last three years, I have had this checked up carefully and find that the total movement of potatoes leaded at points in Montana is very light so far as this company is concerned.

This company loaded during the year 1911, 37 carloads, or 1,313,637 pounds; during the year 1912, 91 carloads, or 3,290,153 pounds; for first six months, 1913, 28 carloads, or 974,130 pounds.

Of the total of 156 cars loaded all were destined to points within the State of Montana except one car forwarded in March, 1912, from Alberton to Hettinger, N. Dak., which is a small local station on this company's line not far from the Montana State line. There has been practically no surplus of potatoes from Montana to interstate destinations.

I know there has been a surplus there because they have been feeding them to the hogs, and getting rid of them in anyway they could.

Had there been a demand, the same facilities would, of course, have been furnished for the movement from Montana as are usually furnished from other shipping territory; that is, in cold weather potatoes are generally handled in refrigerator cars for protection from frost, or in cars equipped with heaters, the movement being in ordinary equipment during warm weather.

As to the present rates, they are as follows:

To St. Paul (minimum 40,000 nounds), from—

Cents.

Cents.

If we could only get 75 cents a hundredweight we would get rich growing potatoes in Montana.

Missoula and Garrison_____ Harlowton and Lewistown____ _____per hundredweight__ 57

I trust this information is what you wished and would explain further that not only has there been no movement to St. Paul or Chicago, but the market condition, because of nearby supply, has been such that I do not understand there was any possibility of a movement.

With kindest personal regards, I am,
Yours, very truly,

H. E. PIERFONT.

Mr. BRISTOW. Mr. President, the freight rates on agricultural products out of Montana may be very exorbitant, I do not doubt that they are, for that is the experience of most Western States. I think all of the Western States have been handicapped by the very excessive rates of transportation to markets on western products. I believe that has been the universal experience.

The shipment of potatoes in the early season, as well as in the late season, is a very important factor in our civilization. In Kansas in the early season we buy potatoes grown in Texas and Louisiana, which are shipped from those Southern States to the North. That is becoming a very important business in certain southern sections of the country. Later in the season, I think that potatoes grown in the mountain States-I know we consume in Kansas very large quantities of Colorado potatoes-later in the season, after the early supply is exhausted-and indeed the climate is such that potatoes grown in the South during the latter season of the year are not good, they are not palatable-we draw for our supply of potatoes upon the mountain States and the lofty altitudes. It is one of those industries in which the farmers of the country are universally interested, and since the manufactured products made from potatoes carry a duty as high as the present law, or approximately such, it seems to me it is grossly unfair to take off all the duty on the potatoes which the farmer himself

Mr. GALLINGER. Mr. President, for the second time the Senator from Montana [Mr. WALSH] has suggested that a duty can do his section of the country no good; that it can only benefit the seaboard, or largely so. If that were so, it is a new theory to me that we must not impose a duty unless it benefits every section of the country. If that were so, we would not have any duties in this bill, because I apprehend there is not a single duty that advantages every section of the country. It is to the advantage of my section of the country that we should have free sugar; and yet I shall vote for a duty on sugar. As I said a little while ago it would be to the advantage of our section of the country to have free wheat, free oats, free corn, and all the staple agricultural products free, because we are dependent upon the great West for those products; but I shall vote for a duty on all those products.

Mr. President, the Senator from North Dakota [Mr. Gronna] is the most industrious man in the Senate in preparing statistics on agricultural products, and we owe him thanks for the work he has done. He has submitted a table on potatoes which is of great interest. It shows that we imported last year—I believe there was a short crop last year, and, of course, we must make some allowance for that—we imported 13,742,482 bushels and exported last year 1,237,276 bushels; in other words, we exported one-tenth as many bushels of potatoes as we

From that table it appears that the entire production in the United States last year was 420,647,000 bushels; and of that amount Maine, New York, Pennsylvania, Ohio, Illinois, Michigan, Wisconsin, Minnesota, Iowa, and Washington produced more than one-half. Almost every one of those States will come in competition with our northern neighbor if potatoes are put on the free list. I for one do not believe that the countervailing duty is going to be of very much account, because the moment Canada finds that our markets are open to her agricultural products she will remove the duty on the products that we may send into Canada, because she can outsell us, and will outsell us; she will invade our markets and strike a serious blow at the manufacturing industries of our country.

Mr. President, I suppose it is useless-of course I know it is useless-to appeal to the other side; but I am again going to express the hope that reason and generosity will combine in the minds of our Democratic friends, and that they will see the justice of voting for the amendment which the Senator from

North Dakota has submitted.

Mr. GRONNA. Mr. President, I want to ask the indulgence of the Senate for just a moment, to add a word in connection with what has been said by the Senator from Montana [Mr. Walsh]. It is true, as the Senator has stated, that the freight rate is against us in the West; but I want to call the attention of the Senate to the fact that if a bill offered by the junior Senator from Georgia [Mr. SMITH] were enacted into law there would be a possibility of all the States doing some business in the way of producing potatoes. If we had in the Agricultural Department, as his bill provides, a division of markets, the people of Washington would not need to pay \$2 a bushel for potatoes when potatoes are rotting in the fields of North Dakota.

As the Senator from Montana has so well said, the freight rates are high; but the Senator, I think, will agree with me that, if we make it a business to produce potatoes to a large extent that difficulty can be overcome, because we have always found that the railroads will meet us half way.

Potatoes are a perishable product, but if the farmers had a place to which to ship their potatoes, knowing that they would get some return, the business would be carried on by the people of every State. The trouble is that when you consign a carload of potatoes to a commission house, very often you will get a letter in return asking you kindly to remit for the freight. There is no way in which the farmer can dispose of this per-ishable product and be sure of fair returns, and for that very reason the American people, those who live in the cities, are

paying four and five times as much as they ought to pay. The farmer lets his potatoes decay in the ground rather than to take them out, because the high price of labor will not justify his doing so. But, as I said before, if a system of distribution such as the bill of the Senator from Georgia proposes to establish, a division of markets, in the Department of Agriculture, I believe the whole problem would be solved.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary proceeded to call the roll.

Mr. LANE (when Mr. CHAMBERLAIN'S name was called). make the same announcement with reference to the senior Senator from Oregon.

Mr. GALLINGER (when his name was called). general pair with the junior Senator from New York [Mr. O'GORMAN]. I transfer that pair to the junior Senator from

Maine [Mr. Burleigh] and will vote. I vote "yea."

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. Smith] to the senior Senator from Oklahoma [Mr. Owen] and will vote. I vote "nay.

Mr. THOMAS (when his name was called). I again announce the transfer of my general pair with the senior Senator from New York [Mr. Root] to the junior Senator from Oklahoma [Mr. Gore] and will vote. I vote "nay."

Mr. WILLIAMS (when his name was called). I have a general pair with the senior Senator from Pennsylvania [Mr. Pen-ROSE] and therefore withhold my vote. If at liberty to vote, I should vote "nay."

The roll call was concluded.

Mr. JAMES. I transfer my pair with the junior Senator from Massachusetts [Mr. Weeks] to the junior Senator from Tennessee [Mr. SHIELDS] and will vote. I vote "nay."

Mr. KERN. I transfer my pair with the senior Senator from Kentucky [Mr. Bradley] to the senior Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "nay."

The result was announced—yeas 23, nays 35, as follows:

	YE	AS-23.	
Brady Brandegee Bristow Catron Gallinger Gronna	Jones Kenyon La Follette Lodge McLean Nelson	Norris Page Perkins Poindexter Ransdell Sherman	Smoot Sterling Thornton Townsend Warren
	NA	YS-35.

Colt Crawford Culberson Cummins Dillingham du Pont Fall Goff Gore Hitchcock	Jackson Lippitt McCumber Newlands O'Gorman Oliver Owen Penrose Root Saulsbury	Shields Smith, Mich. Stephenson Sutherland Weeks Williams Works

So Mr. Gronna's amendment was rejected.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, in paragraph 217, page 59, line 16, after the word "section," to strike out "20" and insert "15," so as to read:

217. Seeds: Castor beans or seeds, 15 cents per bushel of 50 pounds; flaxseed or linseed and other oil seeds not specially provided for in this section, 15 cents per bushel of 56 pounds.

Mr. GRONNA. Mr. President, I wish to offer an amendment to this paragraph. I shall not ask for a yea-and-nay vote on it, because I observe that quite a number of the Senators have

The VICE PRESIDENT. The amendment will be stated. The Secretary. On page 59, paragraph 217, line 16, it is proposed to strike out "15" and insert "20" in lieu of the amendment proposed by the committee.

The VICE PRESIDENT. The Chair holds that that amend-

ment is not in order.

Mr. GRONNA. Mr. President, I wish to say a word on this matter. I realize that the House provision was for a rate of duty of 20 cents, and the Senate has amended it to read "15

The VICE PRESIDENT. The same purpose will be served by rejecting the committee amendment.

Mr. SHIVELY. Precisely the same purpose.

Mr. GRONNA. Yes; I understand that.

We produced last year in the United States practically onethird of the world's crop of flax. The world's production in 1911 was 98,622,000 bushels. Last year the production in the United States was 28,073,000 bushels. Only a few of the Western States produce flax. North Dakota is the largest producer. Among the others that produce flax are Montana, Wisconsin, Minnesota, Iowa, Missouri, South Dakota, Nebraska, Kansas, Oklahoma, and Colorado. The imports last year were nearly 7,000,000 bushels, of the value of \$13,048,513, and they brought a revenue of \$1,718,065.31.

Mr. SHIVELY. Mr. President—
The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Indiana?

Mr. GRONNA. Yes. Mr. SHIVELY. For what year is the Senator giving the statistics?

Mr. GRONNA. I am giving the statistics for 1912. The imports for 1912 were, to be exact, 6,872,261 bushels. I said that in round numbers they were 7,000,000 bushels.

Flax can not be called a basic necessity. It is not an article of food. While a duty of 15 cents has been left, I can see no

reason why it should be reduced at all.

The Linseed Oil Trust, which, I believe, belongs to the Standard Oil Trust, controls this industry; and whatever we save to this great monopoly we take out of the Treasury of the United States. There can be no question about that. It simply takes from the American farmer that much money and puts it into the pocket of the Standard Oil Trust.

Why a reduction should be made in the duty carried in this paragraph is more than I can understand. I do not understand by what logic it can be argued that if you are to have a duty at all the present duty should be cut practically in two.

Of course, I have no personal feeling against the Standard Oil Trust, but I prefer to give the advantage, if there is any advantage, to the American farmers and distribute it among from seven to ten millions of people rather than to this great monopoly. It certainly will result in a great loss to the Treasury of the United States. It will result in a great reduction in the revenue we shall receive. It will not reduce the price of oil. The farmer, when he buys his oil from the Standard Oil Trust, pays all the way from \$1 to \$1.35 a gallon. Last year he sold his flax, which is an expensive crop to produce, at the rate of about \$1.25 a bushel. A bushel of flaxseed will make at least 3 gallons of oil; and then the by-product is sold for a very large sum of money, made into oil cake, and exported.

I shall not delay the Senate further. I simply ask to have printed in connection with my remarks a short table showing the production in different States and the different countries of

the world.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and that order will be made.

The matter referred to is as follows:

FLAXSEED.

Canadian rate: 10 cents per bushel.
Payne rate: 25 cents per bushel.
Dingley rate: 25 cents per bushel.
Wilson rate: 20 cents per bushel.
Imports 1912: 6,872,261 bushels; value, \$13,048,513; revenue,
\$1,718,065.31.
Exports 1912: 4,323 bushels; value, \$12,160.
Production 1912: 28,073,000 bushels.

Production by States.	Bushels.
Wisconsin	125, 000
Minnesota	4, 121, 000
Iowa	402,000
Missouri	72,000
North Dakota	12, 086, 000
South Dakota	5, 323, 000
Nebraska	19,000
Kansas	300,000
Oklahoma	9,000
Montana	5, 520, 000
Colorado	96, 000
W14' 3 t- 1011 - 00 000 000 bankala	

World's production in 1911: 98,622,000 bushels.	
Production of principal countries.	Bushels.
United States	19, 370, 000
Canada	
Argentina	
Uruguay	660, 000
Austria-Hungary	901, 000 300, 000
Belgium	
Italy	341, 000
Netherlands	
Roumania	
Russia in Europe	20, 544, 000
Russia in Asia	1, 005, 000

Mr. BRISTOW. Mr. President, it seems to me we ought to have a roll call on the amendment of the committee. Like the Senator from North Dakota, I can not see why it is necessary to reduce this duty, which is a revenue duty which the Linseed I amendment and then let the matter go over until to-morrow.

Oil Trust pays. Everybody admits that it will not affect by a penny the price of linseed oil. The price is fixed by a combination and a trust. You may put it on the free list, and it will be sold for exactly the same price. Every cent that is taken out of the Treasury will simply go into the pockets of the combination that controls this commodity.

I ask for the yeas and nays on the committee amendment,

The yeas and nays were ordered.

Mr. SMOOT. Mr. President, what is the question?
The VICE PRESIDENT. The question is on agreeing to the committee amendment. The Secretary will call the roll.
The Secretary proceeded to call the roll.

Mr. GALLINGER (when his name was called). I have a pair with the junior Senator from New York [Mr. O'GORMAN]. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH] and will vote. I vote "nay."

Mr. JAMES (when his name was called). I transfer my pair with the junior Senator from Massachusetts [Mr. Weeks] to the junior Senator from Tennessee [Mr. Shields] and will vote. I vote "yea."

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the senior Senator from Oklahoma [Mr. Owen] and will vote. I vote "yea."

Mr. THOMAS (when his name was called). I again announce the transfer of my pair with the senior Senator from New York [Mr. Root] to the junior Senator from Oklahoma [Mr. Gore] and will vote. I vote "yea."

Mr. WILLIAMS (when his name was called). my pair with the senior Senator from Pennsylvania [Mr. Pen-ROSE] to the senior Senator from Tennessee [Mr. Lea] and will vote. I vote "yea."

The roll call was concluded.

Mr. KERN. I transfer my pair with the senior Senator from Kentucky [Mr. Bradley] to the senior Senator from Network [Mr. Bradley] and will vote. I vote "yea." braska [Mr. HITCHCOCK] and will vote. I vote "yea.

Mr. STONE. I should like to inquire whether the senior Senator from Wyoming [Mr. Clark] has voted?

The VICE PRESIDENT. He has not.

Mr. STONE. I have a pair with that Senator, and therefore withhold my vote.

The result was announced-yeas 36, nays 22, as follows:

	YE	AS-36.	
Ashurst Bacon Bryan Fletcher Hollis Hughes James Johnson Kern	Lane Lewis Martin, Va. Martine, N. J. Myers Overman Pittman Pomerene Ransdell	Reed Robinson Shafroth Sheppard Shively Simmons Smith, Ariz. Smith, Ga. Smith, Md.	Smith, S. C. Swanson Thomas Thompson Thornton Tillman Vardaman Walsh Williams
	NA	YS-22.	
Brady Brandegee Bristow Catron Crawford Gallinger	Gronna Jones Kenyon La Follette Lodge McLean	Nelson Norris Page Perkins Poindexter Sherman	Smoot Sterling Townsend Warren
	NOT V	OTING-37.	
Bankhead Borah Bradley Burleigh Burton Chamberlain Chilton Clapp Clark, Wyo. Clarke, Ark.	Colt Culberson Cummins Dillingham du Pont Fall Goff Gore Hitchcock Jackson	Lea Lippitt McCumber Newlands O'Gorman Oliver Owen Penrose Root Saulsbury	Shields Smith, Mich, Stephenson Stone Sutherland Weeks Works

So the amendment of the committee was agreed to.

The reading of paragraph 217 was continued, as follows:

Poppy seed, 15 cents per bushel of 47 pounds; mushroom spawn, and spinach seed, 1 cent per pound; canary seed, ½ cent per pound; caraway seed, 1 cent per pound; anise seed, 2 cents per pound.

Mr. SMOOT. I ask that the items "canary seed," "caraway seed," and "anise seed" may go over until to-morrow.

Mr. WILLIAMS I may go over deal rether the Senator

Mr. WILLIAMS. I would a good deal rather the Senator would make his motion, if he has one to make, and let us get rid of this paragraph to-day. We have been all day long on six or seven paragraphs of the bill.

Mr. SMOOT. I shall take very little time, and it will not take very long in the morning. I simply want to be heard on

these three items. It is now after 6 o'clock.

Mr. SIMMONS. Will the Senator let vs have a vote on the

other committee amendment in the paragraph?

Mr. SMOOT. I simply ask that these items be passed over for to-day, and we will take them up the first thing in the

morning.

Mr. WILLIAMS. We can take a vote on the committee

Mr. SIMMONS. Yes. Mr. SMOOT. Very well.

The next amendment was, in paragraph 217, page 59, line 25, after the word "section," to strike out "10 per cent ad valorem" and insert "5 cents per pound," so as to read:

Seeds of all kinds not specially provided for in this section, 5 cents per pound.

The amendment was agreed to.

The Secretary concluded the reading of paragraph 217.

Mr. SIMMONS. The bill can now be temporarily laid aside.

EXECUTIVE SESSION.

Mr. BACON. I move that the Senate proceed to the con-

sideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 7 minutes spent in executive session the doors were reopened, and (at 6 o'clock and 10 minutes p. m.) the Senate adjourned until to-morrow, Saturday, August 16, 1913, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate August 15, 1913.

PROMOTIONS IN THE ARMY.

CORPS OF ENGINEERS.

Lieut, Col. George A. Zinn, Corps of Engineers, to be colonel from August 12, 1913, vice Col. William T. Rossell, who accepted an appointment as Chief of Engineers, with the rank of brigadier general, on that date.

Maj. William W. Harts, Corps of Engineers, to be lieutenant colonel from August 12, 1913, vice Lieut. Col. George A. Zinn,

promoted.

Capt. Francis A. Pope, Corps of Engineers, to be major from August 12, 1913, vice Maj. William W. Harts, promoted.

First Lieut. James J. Loving, Corps of Engineers, to be captain from August 12, 1913, vice Capt. Francis A. Pope, promoted. Second Lieut. Paul S. Reinecke, Corps of Engineers, to be first lieutenant from August 12, 1913, vice First Lieut. James J. Loving, promoted.

APPOINTMENT IN THE ARMY.

COAST ARTILLERY CORPS.

Charles Linnell Austin, of Pennsylvania, midshipman, United States Navy, to be second lieutenant in the Coast Artillery Corps, with rank from August 13, 1913.

APPOINTMENTS AND PROMOTIONS IN THE NAVY.

Lieut. Wilfred E. Clarke to be a lleutenant in the Navy from the 30th day of March, 1913, to correct the date from which he

takes rank as previously confirmed.

Frank B. Lord to be a member of the Excise Board for the District of Columbia.

HOUSE OF REPRESENTATIVES.

FRIDAY, August 15, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Impress us, O God our heavenly Father, with the eternal possibilities which Thou hast wrapped up in us and with the great responsibilities Thou hast laid upon us as individuals, that we may unfold them to full and symmetrical proportions unto the image of Thee, who didst breathe into us the breath of life and made us living souls, that we may reflect Thy glory in our characters after the similitude of the world's Great Exemplar, the author and finisher of our faith. For Thine is the kingdom and the power and the glory forever. Amen. The Journal of the proceedings of Tuesday, August 12, 1913,

was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was

S. 2689. An act amending an act entitled "An act to increase the limit of cost of certain public bulldings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes," approved March 4, 1913.

SENATE BILL REFERRED.

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appro-

priate committee, as indicated below:

S. 2689. An act amending an act entitled "An act to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes," approved March 4, 1913; to the Committee on Public Buildings and Grounds.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

A message, in writing, from the President of the United States was communicated to the House of Representatives by Mr. Latta, one of his secretaries, who also informed the House of Representatives that he had approved and signed joint resolution of the following title:

On August 12, 1913: H. J. Res. 118. Joint resolution making appropriations for certain expenses incident to the first session of the Sixty-third Con-

ADJOURNMENT UNTIL TUESDAY, AUGUST 19.

Mr. UNDERWOOD. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet on

Tuesday next, August 19.

The SPEAKER. The gentleman from Alabama [Mr. Under-WOOD] asks unanimous consent that when the House adjourns to-day it adjourn to meet on next Tuesday. Is there objection? [After a pause.] The Chair hears none.

PRIVATE BILLS.

Mr. DENT. Mr. Speaker, I -move that the House resolve itself into the Committee of the Whole, for the purpose of

calling up bills on the Private Calendar.

The SPEAKER. The gentleman from Alabama [Mr. Dent] moves that the House resolve itself into the Committee of the Whole House, for the purpose of considering bills on the Private Calendar.

Mr. FERRIS. Mr. Speaker, a parliamentary inquiry. The SPEAKER. The gentleman will state it.

нетсн нетсну.

Mr. FERRIS. Mr. Speaker, unanimous consent for a special order was obtained to consider to-day, August 15, House bill 7207, known as the Hetch Hetchy-San Francisco waterworks bill. Now, I take it, inasmuch as the caucus is pending, that this bill will probably be one of too long duration to be taken up to-day, but I would not like anything to intervene that would displace the bill, and therefore I ask unanimous consent that next Tuesday, if necessary, be set apart as a day certain on which to take up this bill.

The SPEAKER. Pending the motion of the gentleman from Alabama [Mr. Dent], the gentleman from Oklahoma [Mr. FERRIS asks that next Tuesday be substituted for to-day for the consideration of the Hetch Hetchy bill, and that the order be made similar to the one with reference to to-day. Is there

objection?

Mr. MANN. Reserving the right to object, Mr. Speaker, I

would like to make a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MANN. Under the unanimous-consent agreement, is not the order now before the House the question of the considera-

tion of the Hetch Hetchy bill?

The SPEAKER. Unless the request of the gentleman from Oklahoma [Mr. Ferris] to change it to next Tuesday is agreed to. The gentleman from Oklahoma [Mr. Ferris] asks unanimous consent to change the special order, hitherto obtained, with reference to the Hetch Hetchy bill, so that Tuesday next will be set apart, and so forth, instead of the 15th of August, for the consideration of the same, and that it shall be a continuing order. Is there objection?

Mr. MANN. I object.

Mr. FERRIS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 7207.

The SPEAKER. The gentleman from Oklahoma moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 7207, the Hetch Hetchy bill. That motion takes precedence of the motion of the gentleman from Alabama [Mr. Dent].

Mr. FERRIS. I have no objection to stating that I shall

move that the committee rise after going into committee.

make the motion in order to preserve our status.

The SPEAKER. The question is on the motion of the gentleman from Oklahoma [Mr. Ferris].

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. MANN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The Chair will count. [After counting.]

There are 151 gentlemen present, not a quorum.

ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, as there is a Democratic caucus at 2 o'clock, and it would probably take an hour to get a quorum here, I move that the House adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 15 minutes p. m.) the House, under its previous order, adjourned until Tuesday, August 19, 1913, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

 A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on examination and survey of the Gasconade River from Gascondy to Arlington, Mo. (H. Doc. No. 190); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

2. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report of preliminary examination, plan, and estimate of cost of improvement of waterway from Columbia and Camden to Charleston, S. C. (H. Doc. No. 191); to the Committee on Rivers and Harbors and

ordered to be printed.

3. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of North Fork of Coquille River, Oreg., for a distance of 18 miles up the stream from the mouth (H. Doc. No. 192); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

4. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report of preliminary examination of Red River, Tex. and Okla., from the mouth of the Washita River to the mouth of the Big Wichita River (H. Doc. No. 193); to the Committee on Rivers and Harbors and

ordered to be printed.
5. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Sabine River as far as practicable above Orange, Tex. (H. Doc. No. 194); to the Committee on Rivers and Harbors and ordered to be printed.

6. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Milton Harbor and Mill Creek, N. Y. (H. Doc. No. 195); to the Committee on Rivers and Harbors and ordered

to be printed, with illustration.
7. A letter from the Acting Secretary of War, transmitting. with a letter from the Chief of Eugineers, report on survey of waterway from New York Bay to Delaware River and from Delaware River to Chesapeake Bay (H. Doc. No. 196); to the Committee on Rivers and Harbors and ordered to be printed.

8. A letter from the Acting Secretary of War, transmitting with a letter from the Chief of Engineers, report of preliminary examination of East Fork of Coquille River, Oreg., for a distance of 8 miles up the stream from the mouth (H. Doc. No. 197); to the Committee on Rivers and Harbors and ordered to

be printed.

9. A letter from the Acting Secretary of War, transmitting, with a letter from the Acting Chief of Ordnance, United States Army, submitting, as required by law, the report of the commanding officer of Watertown Arsenal of "tests of iron and steel and other materials for industrial purposes" made at that arsenal during the fiscal year ended June 30, 1913; to the Committee on Military Affairs and ordered to be printed, with illustrations.

10. A letter from the Secretary of the Treasury, transmitting a copy of a communication from the Acting Secretary of War, submitting an estimate of appropriation to replace ordnance, medical, and signal stores lost by the National Guard of Ohio during the recent floods (H. Doc. No. 198); to the Committee

on Appropriations and ordered to be printed.

11. A letter from the Secretary of the Treasury, transmitting a copy of a communication from the Acting Secretary of War, submitting an estimate of appropriation required to cover a deficiency in the appropriation for regular supplies, Quartermaster's Department, for the fiscal year 1913 (H. Doc. No. 199); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. SHARP, from the Committee on Foreign Affairs, to which was referred the bill (H. R. 7384) to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, an Italian subject, reported the same without amendment, accompanied by a report (No. 45), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. MONTAGUE, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 6582) to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia, reported the same with amendment, accompanied by a report (No. 46), which said bill and report were referred to the House Calendar.

Mr. DECKER, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 5891) authorizing the construction of a bridge across White River at New-port, Ark., reported the same with amendment, accompanied by a report (No. 47), which said bill and report were referred to the House Calendar.

Mr. RAYBURN, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 3406) to authorize the construction of a bridge across the Sabine River at Orange, Tex., reported the same without amendment, accompanied by a report (No. 48), which said bill and report were referred to the House Calendar.

Mr. STEVENS of Minnesota, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 1681) to extend the time for constructing a bridge across the Red Lake River, in township 153 north, range 40 west, in Red Lake County, Minn., reported the same without amendment, accompanied by a report (No. 49), which said bill and report were referred to the House Calendar.

Mr. BARKLEY, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 6378) to authorize Robert W. Buskirk, of Matewan, W. Va., to bridge the Tug Fork of the Big Sandy River at Matewan, Mingo County, W. Va., where the same forms the boundary line between the States of West Virginia and Kentucky, reported the same with amendment, accompanied by a report (No. 50), which said bill and report were referred to the House Calendar.

Mr. LAFFERTY, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (S. 1353) to authorize the Board of County Commissioners of Okanogan County, Wash., to construct and maintain a bridge across the Okanogan River at or near the town of Malott, reported the same without amendment, accompanied by a report (No. 51), which said bill and report were referred to the House Calendar.

Mr. STEVENS of Minnesota, from the Committee on Inter-Mr. STEVENS of Minnesota, from the Committee on Their state and Foreign Commerce, to which was referred the bill (H. R. 1985) to authorize the county of Aitkin, Minn., to construct a bridge across the Mississippi River in Aitkin County, Minn., reported the same without amendment, accompanied by a report (No. 52), which said bill and report were referred to the House Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 3086) granting a pension to Caroline Langen-kamp; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 7452) granting a pension to William L. Lehman; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 7393) granting an increase of pension to Edmund P. Miller; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 7450) granting a pension to Charles Arpin; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. EDWARDS: A bill (H. R. 7468) providing for a mili-

tary highway between the city of Savannah, Ga., and Fort Forsyth; to the Committee on Pensions.

Screven, Tybee Island, Ga.; to the Committee on Military Affairs

By Mr. CARAWAY: A bill (H. R. 7469) to authorize the construction, maintenance, and operation of a bridge across the Little River at or near Lepanto, Ark.; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 7470) to authorize the construction, maintenance, and operation of a bridge across Black River at or near the section line between sections 8 and 9, in township 20 north, range 5 east, being a short distance south and east of the town of Corning, Clay County, Ark.; to the Committee on Interstate and Foreign Commerce.

By Mr. WOODS: A bill (H. R. 7471) for the acquisition of a site and the erection of a building at Algona, Iowa; to the Committee on Public Buildings and Grounds.

By Mr. BYRNES of South Carolina: A bill (H. R. 7472) authorizing the city of Beaufort, a municipality chartered under the laws of the State of South Carolina, to construct, maintain, and operate a bridge and approaches thereto across Beaufort River, in Beaufort County, S. C.; to the Committee on Interstate and Foreign Commerce.

By Mr. GRIEST: A bill (H. R. 7473) to provide 1-cent postage rate on local letters, and reduce the rate of postage on firstclass mail matter; to the Committee on the Post Office and Post Roads

By Mr. HAYES: Joint resolution (H. J. Res. 119) allowing the importation free of payment of duty, customs, fees, or charges, of all mosaics or mosaic work for the Memorial Church at Leland Stanford University, California; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions

were introduced and severally referred as follows:
By Mr. ANTHONY: A bill (H. R. 7474) granting a pension

to Robert Longbothom; to the Committee on Pensions.

Also, a bill (H. R. 7475) granting a pension to Lucinda Randall; to the Committee on Pensions.

Also, a bill (H. R. 7476) granting a pension to John R. Martin; to the Committee on Pensions.

Also, a bill (H. R. 7477) granting a pension to Evaline Welch; to the Committee on Invalid Pensions.

By Mr. BOOHER: A bill (H. R. 7478) granting an increase of pension to Thomas C. Lyon; to the Committee on Invalid Pensions.

By Mr. BORLAND: A bill (H. R. 7479) granting a pension

to Mary M. Walters; to the Committee on Invalid Pensions. By Mr. CULLOP: A bill (H. R. 7480) granting a pension to Josephine Chambers and minor son; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7481) granting an increase of pension to Jane Davenport; to the Committee on Invalid Pensions.

By Mr. DAVIS of West Virginia: A bill (H. R. 7482) granting an increase of pension to Sampson M. Wade; to the Committee on Pensions.

By Mr. FRENCH: A bill (H. R. 7483) granting an increase of pension to Mary A. Richey; to the Committee on Invalid

By Mr. GARD: A bill (H. R. 7484) for the relief of Stanley J. Morrow; to the Committee on Claims.

Also, a bill (H. R. 7485) for the relief of David W. Stockstill; to the Committee on War Claims.

By Mr. GRIFFIN: A bill (H. R. 7486) for the relief of George W. Watts; to the Committee on War Claims.

By Mr. KAHN: A bill (H. R. 7487) granting an increase of pension to George Brockhagen; to the Committee on Invalid Pensions.

By Mr. REILLY of Connecticut: A bill (H. R. 7488) granting an increase of pension to Margaretha Auten; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7489) granting an increase of pension to F. O. Mansfield; to the Committee on Invalid Pensions.

By Mr. SHERWOOD: A bill (H. R. 7490) granting an increase of pension to Henry Weitzel; to the Committee on Invalid Pensions.

By Mr. WALLIN: A bill (H. R. 7491) granting a pension to William R. Hall; to the Committee on Invalid Pensions, By Mr. WALSH: A bill (H. R. 7492) granting a pension to Wesley C. Beatty; to the Committee on Pensions,

Also, a bill (H. R. 7493) granting a pension to Thomas

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. DAVIS of West Virginia: Petition of sundry members of Follansbee Lodge, No. 1, Amalgamated Association of Iron, Steel, and Tin Workers, favoring the passage of legislation to restore order and civic liberty in the town of Winton, W. Va.;

to the Committee on Labor.

By Mr. GORDON: Petition of the council of the city of Cleveland, Ohio, favoring Government ownership of the telegraph and telephone; to the Committee on Interstate and Foreign Commerce.

Also, petition of the council of the city of Youngstown, State of Ohio, and the council of the city of Schenectady, of the State of New York, favoring the national ownership of the telegraph and telephone systems; to the Committee on Inter-state and Foreign Commerce.

By Mr. GRIEST: Petition of Fulton Grange, No. 66, Patrons of Husbandry, protesting against the repeal of the administration feature of the parcel-post law; to the Committee on the Post Office and Post Roads.

By Mr. HAMLIN: Papers to accompany bill (H. R. 7449) for the relief of Harriett Randle; to the Committee on War Claims.

By Mr. HAYES: Petition of the board of education of San Francisco, Cal., favoring the passage of Senate joint resolution

5; to the Committee on Education. Also, petition of Charles T. Jacobs, of San Jose, Cal., favoring the passage of the Page bill; to the Committee on Education.

By Mr. HOWELL: Petition of sundry citizens of Utah, protesting against mutual life insurance funds in the income-tax

bill; to the Committee on Ways and Means.

Also, petitlons of sundry life insurance companies of the United States, protesting against mutual life insurance funds in the income-tax bill; to the Committee on Ways and Means.

Also, petition of the fruit dealers of Salt Lake City, Utah, protesting against the provisions of the tariff bill relating to bananas; to the Committee on Ways and Means.

Also, petition of D. C. Watson, of Ogden, Utah, protesting against H. R. 4653, by Mr. Sabath; to the Committee on Interstate and Foreign Commerce.

Also, petition of Miss Mathilde Dorenge, of the Salt Lake City High School, of Utah, protesting against a duty on books

in foreign languages; to the Committee on Ways and Means.

By Mr. WALLIN: Papers to accompany bill granting a pension to William R. Hall; to the Committee on Invalid Pensions.

By Mr. WILLIS: Petition of the Ohio Retail Jewelers' Association, favoring the passage of H. R. 2972, to regulate the sale of gold-filled watch cases; to the Committee on Interstate and Foreign Commerce.

By Mr. WILSON of New York: Petition of Capron Camp, No. 22, of the State of New York, favoring the efforts of the watchmen, messengers, and gatemen at Ellis Island, Immigration Service, to improve their condition regarding compensation; to the Committee on Ways and Means.

Also, petition of the Allied Printing Trades Council of the State of New York, protesting against the proposed reduction in tariff rates on printed matter; to the Committee on Ways and Means.

By Mr. YOUNG of North Dakota: Petition of W. A. Scott, Fargo, N. Dak., protesting against exempting mutual life insurance companies from the income-tax bill; to the Committee on Ways and Means.

SENATE.

SATURDAY, August 16, 1913.

The Senate met at 11 o'clock a. m. Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. The Journal of yesterday's proceedings was read and approved.

CALLING OF THE ROLL.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum. There are very few Senators here.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst
Bacon
Bankhead
Borah
Brady
Brandegee
Bristow
Bryan
Burton

Catron Clarke, Ark. Crawford Cummins Dillingham Fall Gallinger Gronna Hollis

James Johnson Jones Kenyon Kern La Follette Lane Lodge McLean

Martin, Va. Martine, N. J. Nelson O'Gorman Overman Owen

Pomerene	Shively
Ransdell	Simmons
Robinson	Smith, Ariz.
Saulsbury	Smith, Ga.
Shafroth	Smith, Mich.
Sheppard	Smith, S. C.
Sherman	Smoot

Sterling Sutherland Swanson Thomas Thompson Thornton Tillman

Townsend Vardaman Walsh Williams

Mr. JAMES. My colleague [Mr. Bradley] is detained from presence here by reason of illness. He is paired with the Senator from Indiana [Mr. Kern]. I will allow this announcement to stand for the day.

Mr. GALLINGER. The junior Senator from Maine [Mr. BURLEIGH] is detained by illness, and probably will not return during the present session. I regret to say that he is unpaired.

I wish to announce that the senior Senator from Oregon [Mr. CHAMBERLAIN] is unavoidably absent, and that he is paired with the Senator from Pennsylvania [Mr. Oliver].

Mr. GRONNA. My colleague [Mr. McCumber] is necessarily absent, due to illness in his family. He is paired with the senior Senator from Nevada [Mr. Newlands].

Mr. SMOOT. I desire to announce that the senior Senator from Delaware [Mr. DU PONT] and the junior Senator from Wisconsin [Mr. Stephenson] are detained from the Senate on account of sickness. I will allow this notice to stand for the day.

The VICE PRESIDENT. Sixty-two Senators have answered on the roll call. A quorum is present.

MEMORIAL.

Mr. JONES. I present a memorial adopted at a meeting of the wholesale commission merchants and fruit dealers of Seattle, Wash., remonstrating against an import duty on bananas. I move that the memorial lie on the table.

The motion was agreed to.

THE TARIFF-RAW WOOL.

Mr. PITTMAN. Mr. President, I desire to give notice that on next Thursday, the 21st instant, at the close of the morning business, I will address the Senate on the pending tariff bill, particularly with reference to raw wool.

INTERNATIONAL STATISTICAL INSTITUTE.

Mr. O'GORMAN. From the Committee on Foreign Relations I report back favorably with amendments Senate resolution 141, in reference to the invitation of the Austrian Government to send official delegates to the Fourteenth International Statistical Institute, to be held at Vienna September 7 to 18, 1913, and I submit a report (No. 102) thereon. I ask unanimous consent for its immediate consideration. It provides that we shall appoint, I think without expense, one or two representatives

The VICE PRESIDENT. The Senator from New York asks unanimous consent for the present consideration of the resolution. It will be read.

The Secretary read the resolution submitted by Mr. O'GORMAN July 24, 1913, as follows:

Whereas the Government of Austria has invited the Government of the United States to be represented by official delegates at the fourteenth session of the International Statistical Institute to be held at Vienna September 7 to 13, 1918: Therefore be it Resolved, That the Department of State is authorized to accept this invitation and appoint one or more official delegates to represent the United States at this session of the International Statistical Institute: Provided, Such arrangement can be made without requiring any special appropriation for the purpose.

Mr. O'GORMAN I may state that the comparities reported as

Mr. O'GORMAN. I may state that the committee reports an amendment authorizing the President of the United States to accept the invitation instead of the Department of State. The Secretary perhaps had better read the report.

Mr. SIMMONS. I hope the Senator will not require the report to be read, but let it be printed. I suggest to the Senator, if it leads to debate

Mr. O'GORMAN. It will not. I am not anticipating one

minute of discussion on it.

Mr. SIMMONS. If there is any debate, I hope the Senator will withdraw it.

Mr. O'GORMAN. There will be no debate. The convention is to take place in about three weeks, and it is necessary, if the President be authorized to accept the invitation, that he receive the authorization at once. The report is not long; it is very short.

Mr. GALLINGER. I will simply inquire of the Senator precisely what subjects are to be taken up at this session of the International Statistical Institute. Mr. O'GORMAN. I will say that I know no more about it

than the report itself indicates.

Mr. GALLINGER. Of course, there can be no objection to it,

Mr. O'GORMAN. It is a matter of courtesy. Mr. SMOOT. I wish to ask the Senator from New York one question. The wording of the resolution evidently carries the idea that there shall be no expense to the Government, and I understood the Senator to say that that is his understanding.

Mr. O'GORMAN. That is my understanding. Mr. SMOOT. Although I think the wording is that there shall be no expense provided for by a special appropriation. Let the Secretary report the amendments.

The VICE PRESIDENT. The amendments will be stated. The Secretary. The committee recommend that the resolu-

In line 1 strike out the words "Department of State" and insert in lieu thereof the words "President of the United States," and in line 5 strike out the word "special," so that the resolution will read:

Whereas the Government of Austria has invited the Government of the United States to be represented by official delegates at the fourteenth session of the International Statistical Institute to be held in Vienna September 7 to 13, 1913: Therefore be it

Resolved, That the President of the United States is authorized to accept this invitation and appoint one or more official delegates to represent the United States at this session of the International Statistical Institute: Provided, Such arrangement can be made without requiring any appropriation for the purpose.

Mr. SMOOT. Of course, the amendment reported by the committee strikes out the word "special." That is what I was going to speak of, and ask the Senator to accept that amendment. Of course, if there is a request for an appropriation hereafter the Senator will see to it that such a request is not to be

The VICE PRESIDENT. Is there objection to the present

consideration of the resolution?

I ask the Senator from New York if the idea Mr. JONES. is that the President shall inquire around and see if he can find some private individual willing to spend his money to serve on this commission?

Mr. O'GORMAN. I assume that there are citizens of this country who are particularly interested in this work who will be very glad to receive a designation from the President to attend the conference; of course, at their own expense or that of

Mr. JONES. Do the delegates from the other countries have their expenses paid by their Governments or are they selected

in the same way

Mr. O'GORMAN. I do not know, but I may say to the Senator from Washington what is well known generally in this Chamber, that it frequently happens in accepting invitations of this character the resolutions provide that the President may send commissioners or representatives without expense to the Government.

Does the Senator think that is a good custom? Mr. JONES. Mr. O'GORMAN. I think so. For instance, there may be an international architectural conference, and at such a conference the architectural societies of the country would indicate one or two of their members, and the suggestion would be made that they be designated, and they would go at their own expense or at the expense of their society. Such resolutions come in very

The VICE PRESIDENT. Is there objection to the present consideration of the resolution? The Chair hears none. The question is on agreeing to the amendments proposed by the com-

The amendments were agreed to.

The resolution as amended was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. THOMPSON:

A bill (S. 2998) granting an increase of pension to Sarah A. Burch (with accompanying paper); to the Committee on Pensions.

By Mr. RANSDELL:

A bill (S. 2999) to foster commerce between the United States and foreign countries by facilitating the reexportation in bond from ports of the United States of goods imported into the United States, duly entered for warehousing, and stored in bonded warehouses; to the Committee on Finance.

By Mr. GALLINGER :

A bill (S. 3000) for the relief of Ten Eyck De Witt Veeder. commodore on the retired list of the United States Navy; to the Committee on Naval Affairs.

CONDITIONS IN MEXICO.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from yesterday.

Mr. GALLINGER. I will inquire if that is the resolution

introduced by the Senator from Pennsylvania [Mr. Penrose]?
The VICE PRESIDENT. It is.
Mr. GALLINGER. The Senator from Pennsylvania is not to

be present to-day, and I ask unanimous consent that it be passed over without prejudice.

The VICE PRESIDENT. Both resolutions? There are two of them.

Mr. GALLINGER. By the Senator from Pennsylvania? The VICE PRESIDENT. Yes.

Mr. GALLINGER. Yes; whatever resolutions were offered by the Senator from Pennsylvania. I know nothing about others. The VICE PRESIDENT. The resolutions will be passed over,

PROTECTION OF AMERICAN CITIZENS IN MEXICO.

The VICE PRESIDENT. The Chair lays before the Senate the following resolution coming over from a previous day.

Mr. SIMMONS. Is that the resolution offered by the Senator from Washington [Mr. Poindexter]?

The VICE PRESIDENT. It is.

Mr. SIMMONS. I see that that Senator is not in his seat, and

Mr. GRONNA. The Senator from Washington is not in his seat just now. I ask unanimous consent that the resolution be passed over without prejudice.

The VICE PRESIDENT. The resolution will go over without

prejudice. The morning business is closed.

Mr. BACON. What became of the last resolution?

The VICE PRESIDENT. It went over.

THE TARIFF.

Mr. SIMMONS. I ask unanimous consent that the Senate

proceed to the consideration of House bill 3321.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. McLEAN. Mr. President, for the peace of mind of the Senators who for exterior reasons may be compelled to remain on the inside of this Chamber during my remarks I will say that I intend to occupy less time than my notes indicate.

I desire to call the attention of the Senate to a few items in the history of the plumage trade, and to that particular phase of the plumage trade which is involved in the pending tariff I do this because I assume that it is a subject with which but few Senators are familiar and because I am encouraged to believe that every Member of this body is in sympathy with the general purposes of the amendment which I have offered.

As far back as 1876, Prof. Newton, of the Royal Society for the Protection of Birds and author of the British sea-birds pres-

Like others of my brother naturalists, I have been long aware by report of the enormous sales of birds' feathers which are being constantly held in London, but the particulars of them do not, except by accident, come before us. Chance has thrown in my way a catalogue, or portion of a catalogue, of one of these auctions, and its contents are such as to horrify me, for I had no conception of the amount of destruction to which exotic birds are condemned by fashion—an amount which can not fall speedily to extirpate some of the fairest members of creation, for I must premise, for the benefit of your nonornithological readers, that it is chiefly, if not solely, at the breeding season that the most beautiful, and therefore the most valuable, feathers are developed in birds.

The trade to which this statement refers was sustained by the wholesale destruction of the rarest and most beautiful birds in the world, wherever they might be found, and since that time the plumage trade has increased in its activity as the birds have decreased in numbers, until to-day it extends into every nook and corner of the earth where a bird of bright plumage may be found.

In 1886 the first Audubon society in this country was formed in Massachusetts, and the purpose of this society, together with that of the ornithologists' union, formed that same year, was to discourage buying and wearing for ornamental purposes the feathers of any wild bird, and to further otherwise the protection of our native birds. We would awaken the community to the fact that this fashion of wearing feathers means the cruel slaughter of myriads of birds, and that some of our finest birds are already decimated.

In 1887 Mr. W. E. D. Scott, the naturalist, called the attention of the people of this country to the wholesale slaughter of the American plumage birds, this list including such birds as the plover, terns, sandpipers, and other varieties of the smaller game and insectivorous birds. Later I shall refer to some of the articles published by Mr. Scott.

In 1893 Mr. W. H. Hudson, the author of "The Naturalist in

La Plata," said :

How long will women tolerate a fashion which involves such wholesale, wanton, and hideous cruelty as this? * * * If in every pulpit in the land this shocking story of the egrets were told, surely for once humanity would prove stronger than fashion. * * Let it be clearly understood, once for all, that the feathered woman is a cruel women; that for the sake of a passing fashion, which pleases no rational being and should disgust all who can think and feel and understand, she brings dishonor upon her sex and robs nature of its beauty without adding to her own.

Lord Lilford, president of the British Ornithologists' Union from 1867 to 1896, in his book, "Birds of the British Islands,"

Here it would seem appropriate to notice the wanton destruction of this and many kindred species that has been carried on all the world over for many years past for no other purpose than the supply of the dorsal plumes for the supposed ornamentation of feminine and military headgear. In "the trade " these feathers are known as osprey, and the thoughtless fashion for them has caused the almost entire extinction of more than one species. I am delighted to believe that in this country, at least, a very considerable check has been put upon this atrocious business by the action of the Ladies' Society for the Protection of Birds, an association that can not be too widely made known or too highly commended. I would strongly urge all ladies who may honor me by reading these notes, to enroll themselves as members of this really beneficent society, whose only object is the preservation from wanton destruction of some of the most interesting and beautiful of organized creatures.

In 1899 Prof. Newton, in the Public Ledger, again tried to impress upon the British public the need of bird protection, and in speaking of the egret he said:

It is a fact known to everyone who will take the trouble to inquire that all these egrets are shot down at their breeding places while they are building their nests or rearing their young, and that if so be that the latter are hatched, they die of hunger on their parents' death, the breeding places being absolutely devastated by the plume hunters. The personal experience on this point of Mr. W. E. D. Scott, a competent and unimpossioned witness, has never been and can not be refuted as regards the Atlantic and Gulf coasts of North America, where these settlements of the birds are all but extinguished; but the same thing goes on all over the world wherever egrets are found in numbers sufficient to make their destruction a profitable enterprise.

In 1898 Lord Wolseley, commander in chief of the British army, forbade the wearing of osprey plumes by the army officers, giving it as his reason that the plumes were taken from

the birds in the nesting season.
In 1902 the Government of India issued an ordinance prohibiting the exportation from British India of skins and feathers of all birds except the feathers of ostriches, and skins and feathers "exported bona fide as specimens of natural history."

If India 11 years ago could take this step, it seems to me the United States should be willing to prohibit their importation to-day.

A strong attempt was made by the feather trade to secure a modification of this ordinance; but as it was based upon a most thorough investigation the request of the feather trade was denied.

In 1906 Queen Alexandra of England took the matter up publicly and stated that she never wore egret plumes herself, and would certainly do all in her power to discourage the cruelty practiced on the beautiful birds.

In 1908 Lord Avebury introduced into the House of Lords a bill to prohibit the importation of plumage. It passed the House of Lords July 21, 1908, and was introduced into the House of Commons July 22, but did not reach its second reading before the close of the session. Similar bills have been introduced into the House of Commons since that time, but have failed to come to a vote.

The foregoing facts and quotations I have taken from a publication issued by the Royal Society for the Protection of Birds, published in London in 1911, entitled "Feathers and Facts."

The efforts of the feather traders to deceive the public and block legislative interference in England should throw considerable light on the present situation in this country. again from the authority to which I have just referred:

again from the authority to which I have just referred:

The trade have been slow in taking serious steps to defend themselves, and the history of the defense is somewhat curious. Feathers having been proclaimed the fashion, it is evident that the feather importers relied on the belief that the voice of fashion was stronger than the voice of either science or humanity. Some little time, however, after the formation of the Society for the Protection of Birds and of the Shelborne Society, when women all over the country were being made acquainted with the facts concerning the "osprey" or egret plume, the remarkable fraud of the "artificial osprey" came into existence. The egret feather was no longer to be labeled "real." Milliners' and drapers' assistants were instructed to assure lady customers that these delicate sprays were manufactured by the million out of quills and other material by an army of factory workers, who carned their living by this pleasant and artistic work. That the lie was detected and proclaimed by every naturalist who took one of the so-called artificial plumes in his hand made no difference whatever to the persistence and assurance with which it was affirmed and repeated.

The fraud flourished until the time of the House of Lords committee in 1908, when it became evident that the force of mere assertion and repetition, which had proved so successful with the uncritical public, would not stand investigation before a serious tribunal. The invention of "artificial ospreys" was suddenly discarded for that of "moulted feathers." The "artificial" ospreys was admitted to be real, but it was no longer cruel to wear real plumes—they had been simply "picked up." That is, they had simply been picked out of the nests after the birds had raised their young and left them.

FICTION VERSUS FACT.

FICTION VERSUS FACT.

The possibility of an imitation osprey was never denied by the society; that such a thing might be made by ingenious manufacturers was pretty certain, though it could never stand the simple tests which at once reveal the true feather.

The aim of the Royal Society for the Protection of Birds has been from the first to seek out facts. It investigated the facts concerning the ostrich feather and came to the conclusion that, although cruelty might be practiced, it was not necessarily involved in the procuring of the plumes and that the business stands on a wholly different plane from that which is dependent upon the killing of countless wild birds. When the "artificial osproy" was heralded in the papers and in the milliners' shops the society asked again and again to be furnished with an artificial plume and to be directed to the factory where such things were made. As neither request was ever complied with, and as it was proved that the feathers of the heron and egret were being widely sold as artificial, it was only possible to form one conclusion.

When, shortly after the House of Lords committee made its report, a letter signed "Leon Laglaize" was being circulated the society took the same course. The letter did not commend itself to serious attention, since it was issued without the name of recipient or publisher and contained a statement with regard to herons' nests which was obviously untrue. Nevertheless the society wrote to the British representatives in the country concerned and published their replies in full. The proceeding of the trade in quoting a short extract from this evidence and suppressing the rest needs no comment.

VENEZUELA.

Mr. Downham, representing the plumage trade in 1908, says:

"The Royal Society for the Protection of Birds has published, with one exception, nothing more than empty contradictions from people who have no experience or knowledge of the particular country or the conditions under which the feathers are collected. * * The one exception, confirming the evidence obtained by the trade, is comained in a letter from His Britannic Majesty's minister in Venezuela, under date of January 14, 1909, directed to the Royal Society for the Protection of Birds, and although it does not fully agree with all that has been published by the trade on the subject, it is undoubtedly a report which has been issued only after very careful investigations." (The Feather Trade, p. 30.)

HIS BRITANNIC MAJESTY'S MINISTER'S STATEMENT.

One portion of this report which "does not fully agree with all that has been published by the trade" is His Majesty's minister's verdict upon the evidence furnished to him and by him to the society:

"From the evidence before me I have no manner of doubt that the vist majority of the egret plumes exported to Europe are obtained by the slaughter of the birds during or about the breeding season, and that no effective regulations exist or, indeed, owing to local conditions, can exist for the control of this slaughter, and that the letter of Mr. Leon Laglaize of July 29, 1908, gives a completely erroneous impression of the conditions under which the industry of collecting the plumes is conducted in Venezuela."

ALL THE BIRDS OF BRIGHT PLUMAGE ARE IN DANGER.

The plumes of the egrets and herons form but a fraction, though a significant fraction, of the whole trade. With regard to the thousands of birds whose skins and wings are brought into the mart no allegation of "artificial" or "moulted feathers" can be maintained; no person has dared to invent such a fable.

Efforts, too, may be made to prevent the detail of sales from being made public. It may be argued that birds are catalogued for which there is known to be no market; that the names by which they are catalogued are not the correct names; that certain birds can not be nearing extermination because there are still recesses of forest and swamp which the hunters have not yet penetrated. But unanswerable facts remain. facts remain.

RARE SPECIES.

RARE SPECIES.

The arguments advanced by the trade amount to this: If a very small number of a given species are offered for sale, they come "accidentally." "If." says Mr. Downham.

If rare birds come to the salesrooms from time to time it is because those who killed them, and who would have killed them in any case for sport or food, have sent the skins on the off-chance of their purchase by collectors.

Readers of The Feather Trade may picture the native of New Guinea, or the traveler in Mexico, cooking his blue bird of paradise or his quetzal, and carefully saving the skin to forward to Houndsditch in the hopes of a bid from the Natural History Museum. But Houndsditch, it would scem, does not know them when they come. Mr. Buckland cites an instance of 12 of the rare blue, or Prince Rudolph bird of paradise, being found by him amongst the skins in Cutler Street; "10 birds of paradise, blue, dull," being the catalogue description afforded of female and unfledged male birds. (Journal of the Royal Society of Arts, December, 1999.)

These are the birds, presumably, that come by units. Should they be represented by, say, a couple of hundred in a year of such a rare species as the lyre bird, we are asked to believe that so small a number proves—not that the bird is being extirpated and larger numbers can not be obtained—but that as the trade has secured so few it can not be the plume hunters who are endangering the species.

Should, however, some species be represented by thousands or tens the stream of the species are the stream of the species of the species

THE "WASTE MATERIAL" THEORY.

Should, however, some species be represented by thousands or tens of thousands, suggesting to scientific men the shooting out of whole colonies, the upholders of the feather trade argue, with equal facility, that if so many birds are to be had there must be plenty left behind. If it is proved that birds are being recklessly killed in one district, it is held to be a satisfactory answer that there are unexplored wilds where the hunter has not penetrated yet. When American bird lovers passionately denounce the traders who have fliched from them their herons and ibises and spoombills, Mr. Downham, of The Feather Trade, seeks to soothe them with the assurance that he had read in a recent book of the existence of herons and spoombills in Spain. According to this ingenious spokesman of the trade, it is never, under any circumstances, the trade that is at fault, never the trade which kills, at most it is merely the dog which trots behind and picks up the birds, getting the feathers by way of reward. When man opens up a new land, we are assured, he naturally shoots "all that runs or flies," and the plume hunter follows in his wake in order to utilize "waste material" in making ornaments "which some women insist upon wearing." In the forest and the swamp, and on the remote island, where there is no one to see and to note, in Guiana and Papua and Brazil and the Congo, and the islands of the Pacific, the plume-hunter's ravages are but an economic salvage of waste material.

Could the veriest child credit such absurdities? This, we are to suppose, is why the plume hunter is held at bay by force of arms and by

stringent laws in civilized lands; this is why such reports as the following constantly come from countries where naturalists write of the facts within their own experience.

EVIDENCE FROM SALE ROOM AND CATALOGUE,

Shortly after the importation of plumage prohibition bill had passed through the House of Lords in 1908 the trade stopped detailed advertisements of their sales and ceased to publish any reports on them in the Public Ledger. They now contend that figures from catalogues are misleading, as the same consignment of birds may be offered many times. Humming birds, which continue to appear in cratefuls, have been unsalable, according to Mr. Downham, for 20 years; yet at the sale on Pebruary 7, 1911, one firm catalogued no fewer than 20,820 of these birds. In 1905 a different firm put up 12,500. If this is the supply in the market of birds which are not wanted and not used, and have not been wanted for 20 years, it is difficult to imagine the reckless slaughter which must be perpetrated and the numbers that must be killed of birds which are in active demand.

NOT WANTED.

The fact that a particular bird is not wanted for the time being is no proof of its safety. As in the case of the grebe, it may suddenly be again declared "fashionable." It is stated also by Mr. Downham that some birds are brought into the market merely as an experiment. They are killed, not because there is a demand for them, but on the chance that the demand may be created. This again shows the danger in which every species of finely plumaged birds stands until legislation interferes.

in which every species of finely plumaged brus stands.

Interferes.

Visitors (there are very few, and they are not welcomed) to the Cutler Street warehouse can see for themselves the piles of brilliant bodies of trogons from Guatemala, cocks of the rock from Guiana, toucans, with their wonderful beaks sliced through to form a "hande" for the adjacent breast plumes; orioles, bright-hued finches, tanagers, crowned pigeons from New Guinea, cam skins, wings of sea swallows, hundreds and thousands of quills, and tumbled in among the "various bird skins" which have no names will be found little flycatchers and cuckoos and sober-plumaged bodies that seem to offer no special target for the hunter. Very possibly in this mixed bag many a strange and rare species is "knocked down" without recognition, for plume dealers are not ornithologists. (Feathers and Facts, pp. 16-25, 27.)

GAME BIRDS AND POULTRY.

GAME BIRDS AND POULTRY.

The trade dwells a good deal on the use made of game birds and of poultry. This suggests the need of precaution in any legislation. The Goura pigeon of a single land, the Impeyan pheasant of the Himalayas, the Arqus pheasant, the Chinese pheasant are included in the milliner's idea of "game." In 1899 the Society for the Protection of Birds in China (Shanghai) memorialized the British Government on the subject of "the great and rapidly increasing destruction at present overtaking the pheasant in China."

The trade to which we refer is that which, originating in the expencies of fashion, calls for the export of the entire skin of the pheasant, and its ravages, even at its present initial rate, are sufficient to threaten the species with extinction. The necessities of such a trade recognize no "close season." Feathers and skins taken in breeding time are well suited to the requirements of the market. (Celestial Empire (Shanghai), Sept. 11, 1890.)

SHORE BIRDS.

There are included in the Limicolæ several species that are game birds in name only, their bodies being so small that they possess no value whatever for food purposes. Thousands and thousands of these beautiful and graceful creatures have been slaughtered solely for their plumage, their diminutive bodies not being considered of enough value to send to the market. (Report of National Audubon Association, 1906.)

THE WILLOW GROUSE.

In "A Russian Province of the North," by Alexander Platonovich Engelhardt, governor of the Province of Archangel, translated by H. Cooke, His Majesty's consul at Archangel, the author writes of willow grouse ("Koropatki"): "We brought back on the Nordenskiold a cargo of 600 poods, or nearly 10 tons, of these wings. They are exported from Archangel to serve as trimmings for ladies' hats. The white plumage has this special advantage, among others—that it can be dyed any color, and in this way be converted into the feathers of parrots or any other bird, for selling purposes." "The glossy skins of black-throated divers' aecks are, also, to my knowledge," says Mr. Harvie-Brown, the well-known ornithologist, "sold in vast quantities at Archangel for trimmings. Is it not shameful that such birds, even if still abundant as 'Koropatth,' should be killed simply for their plumage?"

All these birds were killed in the nesting season for their plumage.

Twenty-two thousand pounds of grouse wings means at least 200,000 game birds killed for their feathers and the bodies thrown away.

Before I come to some items relating more particularly to the destruction of birds in America, I want to call the attention of the Senate to the claim made by the trade in London that the protection of the plumage birds will throw many people out of employment:

THE PLUMAGE IMPORTATION BILL. A .- THE LABOR QUESTION.

It was the favorite contention of the trade that-

the bill, if passed—the bill pending in the House of Lords—would throw out of employment thousands of British workpeople—

That was in the hearing before the committee of the House of Lords-

without protecting the life of a single bird." (The Feather Trade, p.

To which statement Mr. Downham adds:

"We have thousands of workmen and workwomen to consider."

BRITISH LABOR.

The question of the thousands of workpeople may be considered first. Is taken from the bird when Fashion has never shown the slightest inclination to consider the case to starve is false and absurd.

of workpeople injured in a change of materials or of trimmings. It has not even considered the case of the manufacturers. The fancy feather trade is, however, happily one in which the industrial question is very little involved, as the material gives less labor to the working class than probably any other kind of trimming that could be, and would be, employed in its place. The profit does not go to pay the wages of a large number of hapds; it goes to the few firms who conduct the business. This was brought out very clearly in the examination of trade witnesses before the House of Lords committee. It was then shown that of the imported feathers 80 per cent go out of England to be made up in foreign factories; with 80 per cent of the goods English labor has, therefore, nothing to do. The remaining 20 per cent give employment, during a portion of the year only, to young women who are engaged at other times in manipulating ostrich feathers and making artificial flowers. One trade witness said:

"The trade does not go on always; it is mostly in the fall of the year when these birds are employed. In the summer season our firm makes artificial flowers, and other people employ themselves with ostrich feathers."

Should the plumage of wild birds be no longer obtainable, ostrich

artificial nowers, and other people employ themselves with ostrich feathers."

Should the plumage of wild birds be no longer obtainable, ostrich feathers and poultry feathers will remain; and there can be no doubt that the use of artificial flowers and berries, and of ribbons and fancy ornaments would increase and would give more employment in the labor market than is now given by the importation of wild-bird plumage. Said Lord Avebury, in questioning Messrs. Sciama's representative at the committee:

"Q. 270. You say that the bill would diminish the demand for labor in this country, but as it would replace a certain quantity of feathers which are grown abroad by a certain quantity of articles which are made in this country. clearly it must tend to increase the demand for labor in this country?"

What had Mr. Dowham to say about his thousands of workmen and workwomen? He said:

"On the question of labor, there may not be so much difference one way or the other, but I can not admit that it would increase under the bill."

OSPREY AND HORSEHAIR.

To make up the tale of workpeople, the trade now propose to include in the list of those whose employment will be gone the men who handle the goods in the docks and the assistants in the feather departments of drapers' shops. Perhaps there should also be included the purveyors of the horsehair that comes over as top dressing for smuggled bird skins. (See p. 63.) On the other hand might be urged the increased work afforded, not only to the young laddes in the artificial-flower side of retail businesses but the workers in all those factories (in the air) which the trade not long ago swore were engaged in the manufacture of artificial ospreys. If, as a witness for the trade stated to the committee on July 8, 1908, "ospreys" can be made so perfectly from horsehair that no one but an expert can tell the difference, by all means let cases of horsehair be imported, without destroying the underlying strata of bird skins and egret plumes.—(Feathers and Facts, pp. 30, 31, and 32.)

Let us now take a look at the plumage trade and the opposi-

Let us now take a look at the plumage trade and the opposition it has aroused in other countries. Australia, after a long struggle against the bird killers, now prohibits the exportation of plumage birds under heavy penalties.

In November, 1910, a memorial was presented to the British colonial secretary from the British colonies of South Africa and New Zealand and Australia stating, in substance, that the home Government should aid these colonies in their efforts to protect birds by enacting the importation bill which had passed the House of Lords.

It is believed that England will be unable to resist this urgent plea from her colonies any longer and that the House of Commons at its next sitting will concur with the House of Lords and put an end to this inhuman and uncivilized traffic.

At the International Ornithological Conference, held in Berlin in 1910 to consider the necessity of protection for the birds "killed for their plumage," 14 nations were represented, including the United States, England, and Germany.

As I have said, in 1902 the Government of India made the

export of skins and plumes from India illegal.

Naturalists and others interested in the matter saw with surprise that in spite of this prohibition the feathers of birds peculiar to the East Indies and of others strongly suspected to come from thence continued to be offered for sale in Mincing Lane.

HOW BIRD FEATHERS COME FROM INDIA.

The explanation of this was furnished by the board of customs to the House of Lords committee in 1908. It then appeared that between December 20, 1907, and February 15, 1908, 23 cases of dead bird skins from India were imported as cowhair or horsehair; that in March 6,400 further skins were imported, hidden under a layer of horsehair and described as horsehair; that "osprey" feathers from India were sent by parcel post, declared as dress material; that smuggling was also carried on by way of Straits Settlements in order to evade examination by the customs officers. (See Feathers and Facts, p. 63.)

The gentlemen who appeared before the Finance Committee endeavored to excuse their shameful traffic to-day by denying that they deal in egret plumes.

I want to call your attention to what they said when they did deal in egret plumes, and then I want any Member of this

body to believe anything they say to-day if he can.

In the publication known as The Feather Trade, page 117, it is boldly stated that the claim that the plumage of the egret is taken from the bird when it is alive and the young ones left

Other statements found in The Feather Trade I quote as follows:

It is no doubt true that the egret at one time existed in very large numbers in Florida. The birds exist still in numerous swamps known as the "Everglades," but there had never been any supply of importance from those parts. * * American commercial development is entirely responsible for the disappearance of the white heron from its old-time haunts; the feather trade is not. (The Feather Trade, pp. 40, 102)

40, 102.)
They were not exterminated; they migrated. You might just as well say that because you do not see foxes on Hampstead Heath foxes are exterminated (Mr. Downham, before the House of Lords committee,

The egret * * thrives to-day in the remote Everglades of Florida and in Southern States. Naturally enough these egrets are not to be encountered in the beaten paths of the United States tourist. (The Feather Trade, p. 14.)

There were never many egrets in Florida. You can soon exterminate a small number of birds in a small part of the country. If there were egrets in the Isle of Wight they would soon be exterminated. (Mr. G. K. Dunstall, representing the feather trade before the House of Lords committee, 1908.)

The tale about the birds being shot at breeding time is a fairy myth. (Mr. Weiler, before the House of Lords committee, 1908.)

In reply to these statements I desire to call the attention of the Senate to the report of Mr. W. E. D. Scott, member of the American Ornithologists' Union, published in the Auk in 1887. Mr. REED. Mr. President-

The VICE PRESIDENT. Doés the yield to the Senator from Missouri? Doés the Senator from Connecticut

Mr. McLEAN. Certainly. Mr. REED. I wish to ask, for information, where are these aigrets now principally obtained?

Mr. McLEAN. In South America.

Mr. REED. What is the bird from which they are obtained?

Mr. McLEAN. The white heron.

Mr. REED. Is it of any use on earth except for its feathers?

Mr. McLEAN. It devours a great many injurious insects. Mr. REED. I am asking if it is of any use to man except

for the feathers it produces?

Mr. McLEAN. I think there has been a decision by the Supreme Court of Ohio to the effect that the heron is a game bird.

Mr. REED. I wish to know if it is of any value, not whether somebody has passed a law about it.

Mr. McLEAN. It devours injurious insects, and that is

largely its value, outside of its beauty.

Mr. REED. Why, the heron is a fish-eating and frog-eating bird, is it not?

Mr. McLEAN. They do feed on fish to some extent.

Mr. REED. If you have a bird that is not of any use except for its feathers, and has no occupation but eating fish which furnish food, just of what value is that bird except for its feathers? What does the Senator think God Almighty made it for, anyway? Certainly a heron is not an ornament.

Mr. McLEAN. The reports of recent investigations show that the heron eats a great many injurious insects, and I think the opinion of naturalists has changed very much in recent years with regard to the economic value of the heron, as I will show later on in my remarks.

Mr. REED. Why should the heron be permitted ruthlessly to destroy the innocent insects and the innocent fish?

Mr. McLEAN. I will leave that question to the Senator to answer for himself. The annual loss to agriculture caused by insects is enormous.

Mr. REED. I really honestly want to know why there should be any sympathy or sentiment about a long-legged, long-beaked. long-necked bird that lives in swamps and eats tadpoles and fish and crawfish and things of that kind; why we should worry ourselves into a frenzy because some lady adorns her hat with one of its feathers, which appears to be the only use

Mr. McLEAN. I have stated to the Senator the use and economic value of the heron, which is admitted now, although it was denied years ago. But the egret is not involved in this proviso. Beyond that, I want to call the attention of the Senator to the fact that more than 5,000,000 of these birds have been destroyed, millions of them in Florida, all killed in the nesting season, when the young were, say, half grown; and the manner of the destruction of the adult birds for their plumage destroys millions of young birds, which die by slow starvation. Murder has been committed in this trade in our own country. It seems to me it is worth while, if these birds are to be destroyed, that in civilized nations they should be destroyed in a civilized way. If they are useless, let them be killed in a proper way, and not by slow starvation.

Mr. REED. But the point I am getting at is the use of the bird. Now, I know very little about aigrets. I have a faint, protoplasmic notion as to their cost.

Mr. McLEAN. I should hope that might insure the Senator's sympathy with the proposed legislation.

Mr. REED. If the Senator is introducing this bill not to protect the birds but to protect the pocketbooks of the male population of this country he will arouse a great wave of sympathy by which even I might be swept away; but if it is on account of the birds, I wish to ask the Senator if it is not true that the only time they are of any value is at the time the egrets can be obtained, which is the time they are killed? If the young are then left to starve it would seem to me the proper idea would be to establish a foundling asylum for the young, but still to let humanity utilize this bird for the only purpose that evidently the Lord made it for, namely, so that we could get egrets for bonnets for our beautiful ladies.

Mr. McLEAN. I will say to the Senator that I think the feathers are worth twice their weight in gold at the present

Mr. REED. Then, I insist, if that be true, that we ought not to be prohibited from having the use of them.

Mr. GALLINGER. Mr. President, will the Senator permit me for a moment?

Mr. McLEAN. Certainly.

Mr. GALLINGER. The Senator from Missouri asks of what use they are. The egret is a most beautiful bird. I do not know of what use a painting is except to look at and admire. very sure that we might as well and with equal propriety and esthetic taste look at a beautiful bird and admire it, and that they ought to be permitted to live for that purpose if for no other.

Mr. REED. Why, Mr. President, these birds come from a country where there is nobody to look at them, for the most part. Certainly we in this country can not look at them, and do not know why we should protect the denizens of distant climes. The Indians of South America have not enough esthetic taste to admire them-nay, more, they have not enough humanity, according to the Senator's statement, to prevent them from slaughtering these birds in what he claims is a cruel and unusual manner.

Mr. GALLINGER. If the Senator from Connecticut will permit me to say just one word more: The usefulness of these birds in the destruction of insects is beyond computation. This may not be an accurate statement, but I read in a scientific journal not long ago that if the birds of the world were exterminated the human race would go out of existence in a very short time.

Mr. REED. But, Mr. President, if the Senator from Connecticut will pardon me, and then I will not interrupt him further, of what interest is it to the people of the United States to protect birds that kill insects in South America, if they do kill insects? It appears that this bird, if it eats insects at all, does so in such small quantities that it took science a great number of years to determine the fact. Pretty nearly all of us know what a heron is. Every boy that has every tramped through the swamps hunting ducks has been disturbed occasionally by a discordant cry, and the sight of long and ungainly legs, and still more ungainly wings, and the flutter of an awkward bird over the weeds. If he has any use on earth it certainly is not to delight the sense of beauty, for he is about the homeliest combination of feathers and bones and feet and claws that ever was gotten together on this earth. He lives thousands of miles from our country. He lives in the unin-habitable swamps of South America. He is captured down there by the natives, and it appears that he is captured because there is one beautiful thing about him, and only one, and that , is this little feather that they call an egret that the women use to adorn their bonnets.

Instead of making these things dearer I am in favor of making them cheaper. I do not know what interest the United States of America has in protecting birds of that kind that are

States of America has in protecting birds of that kind that are born in swamps thousands of miles away, and that neither delight the sense of beauty nor serve any useful purpose.

Mr. McLEAN. I will say to the Senator that the egrets are gone. There are none to-day, except a few which exist in protected heronries. All the wild birds, so to speak, have been exterminated; so the Senator need not give himself any uneasiness over the egret question. If he will listen, I should like to read a discription of the manner in which these birds have been destroyed.

Mr. REED. But, Mr. President, if they are gone, if they are dead, if this chapter lies in the dead and buried past, why should we be legislating about it in the living present?

Mr. McLEAN. But we are not. Aigrets are not included in the proviso at all. I am simply calling the attention of the Senate to the way in which the bird trade tried to deceive the public at a time when they were destroying the egrets. I am showing the Senate how utterly unworthy of belief the plumage traders are by referring to their attempts to deceive the public in

Mr. REED. It is hardly worth while to take the time of the Senate to demonstrate that the man milliner has very little regard for truth and veracity. I think that might be conceded.

Mr. McLEAN. If the other Members of the Senate agree with the opinion expressed by the Senator from Missouri, I shall occupy but very little time on that question; but I desire to call the attention of the Senator from Missouri to the way in which these birds, which he considers to be of no value, have been exterminated, and that in the face of the fact that the trade has denied any connection whatever with the destruction of these egrets in our own country. It is the character of the plumage trade that the fate of the egret illustrates. No humane man can read it without a shudder.

I quote from the report of W. E. D. Scott, member of the American Ornithologists' Union, published in the Auk.

I quote from the report of W. E. D. Scott, member of the American Ornithologists' Union, published in the Auk.

May 4, 1887: Charlotte Harbor. Only a few years ago bird life so abundant that it would be difficult to exaggerate the numbers. Capt. Baker said that about 60 acres were so covered with white ibis that "it looked from a distance as if a big white sheet had been thrown over the mangroves." Salling to-day over 40 miles, I did not see a place that was occupied by even a few birds. Postmaster and others all agreed that for the past two years birds had been so persecuted to get their plumes for the northern market that they were practically exterminated. Birds were killed, plumes taken from the back, head, and breast, and carcasses thrown to buzzards (i. e., voilures).

May 8: Macleod Island, great breeding place of reddish egret. Found a huge pile of half-decayed birds lying on the ground, which had been killed a day or two. All of them had the plumes taken, with a patch of skin from the back, and some had the wings cut off. I counted over 200 birds so treated. Within the last few days it had been almost destroyed, hundreds of old birds having been killed and brutal exhibition than that which I witnessed here * * May 12: We found in camp Mr. Frank Johnson, who is a professional bird plumer. Snowy beron, American egret, and reddish egret brought the highest prices, but he killed almost anything that wore feathers. He said he wished there was some law to protect the birds, at least during the breeding lime, but added that, as everybody clse was pluming, he had made ap his mind that he might have his share. He was killing birds and making plumes now for Mr. J. H. Batty, of New York City, who employed many men along the entire Gulf coast from Cedar Keys to Key West particularly for herons, spoonhills, and formerly been the homes of the birds of this region. Now most of them were entirely deserted and the number still resorted to pearly becoming smaller. "It was easy to find thousands of birds five or six year

I now quote from Mr. Gilbert Pearson, member of the American Ornithologists' Union:

can Ornithologists' Union:

I visited a large colony of herons on Horse Hummock (central Florida) on April 27, 1888. Several hundred pairs were nesting there at the time.

* * Three years later I visited the heronry, but the scene had changed. Not a heron was visible. The call had come from northern cities for greater quantities of heron plumes for millinery. The plume hunter had discovered the colony, and a few shattered nesta were all that was left to tell of the once populous colony. The few surviving tenants, if there were any, had fied in terror to the recesses of wilder swamps. A few miles north of Waldo, in the flat, pine region, our party came one day upon a little swamp where we had been told herons bred in numbers. Upon approaching the place the screams of young birds reached our ears. The cause of this soon became apparent by the buzzing of green files and the heaps of dead herons festering in the sun, with the back of each bird raw and bleeding. * * * Young herons had been left by scores in the nests to perish from exposure and starvation.

Mr. H. K. Job, State ornithologist of Connecticut, has the following to say in reply to the claim of the plumage trade that the egrets are not injured in the collection of their plumage;

egrets are not injured in the collection of their plumage;

What a spectacle, the dark-green mangrove foliage dotted with lbises of dazzling whiteness, "pink curlews" (the local name for the roseate spoonbill), and blue-tinted herons. Wherever I may penetrate in future wanderings I can never hope to see anything to surpass or in some respects to equal that upon which I now gazed. Years ago such sights could be found all over Florida and other Southern States. This is the last pitiful remnant of hosts of innocent, exquisite creatures slaughtered for a brutal, senseless—yes, criminal—millinery folly. Such inaccessible tangles of southern Florida are the last piaces of refuge, the last ditch in the struggle for existence to which these splendid species have been driven. ("Wild Wings." by H. K. Joh, p. 54.)

I reveled in the sights and sounds of this wonderful place, which is probably the largest and perhaps the only large egret rookery in North

America. The only reason that it exists to-day is because it is guarded by armed wardens who will arrest or, if necessary, shoot any person found upon the property with a gan. * * * * * That the work of destruction is going on with rapidity one can not fail to realize who has been in Florida. Three years ago these beautiful and spectacular species were to be seen learly everywhere. In 1903 I had hard work to find a few scattered colonies in the remotest and wildest parts of the State. Mr. F. M. Chapman went there last season and found them all practically annihilated. The same is becoming true even in southern Brazil. ("Wild Wings," by H. K. Job, pp. 143-145.)

Mr. President L. em. in heavity.

Mr. SMITH of Arizona. Mr. President, I am in hearty sympathy with the purpose of the Senator, but it strikes me that it is not as much a question of imports here as it is the prevention of the slaughter of birds in our own States.

Mr. McLEAN. I am coming to that.

Mr. SMITH of Arizona. If the fact be that prohibiting the imports of these feathers is going to increase the slaughter at home under the lax regulations of our own State, I doubt whether the Senator will accomplish the purpose in which he

and I both have such intense sympathy.

I appreciate the awful crime of the slaughter of the birds of America. Can we not, under our interstate-commerce power or by some other device within Federal control, make up for what the State lacks in the performance of its duty in the protection of game or song birds and accomplish the result by that means rather than by a mere attempt to prevent the importation? In other words, I much prefer that they should be imported from other countries than killed at home. I am intensely in favor of the protection of bird life, and I shall be found always doing my best through all effective means to accomplish that most humane and beneficial end.

Mr. McLEAN. I shall undertake to show to the Senator before I finish, if he will do me the honor to listen, that the egret is a small item in the matter of bird protection. have been exterminated by the bird pirates and exist only in heronries which are guarded by wardens with rifles. My purpose in calling the attention of the Senate to the cruel and wanton destruction of the egret is to show how the trade has deceived the public in the past. Of course, what we are interested in, in the first place, is the saving of American birds, but if the Senator will bear in mind that during eight months of the year all our birds of bright plumage go to the islands of the sea, Central America, and South America, and there are the prey of the bird pirates and are killed there and exported to England, France, or Germany and there mounted and returned to this country, he will see possibly that some benefit may arise in preventing the importation of our own birds into this

country in that way.

Notwithstanding this overwhelming proof that the plumage birds were all killed in the nesting season and by and for the trade, and for the New York trade until very recently, we find this astonishing statement in the Feather Trade:

I can assure you most solemnly that the trade has no agents who are known or encouraged to poach upon preserves or reservations. That such poaching goes on is undoubted. Men who are working in the virgin lands where wild birds are plentiful will kill what they can, where they can, and when they can, and they will make the best use they can of the plumages, whether there is or is not a market. (Feathers and Facts, p. 63.)

Mr. President, the fate of the egret is the fate of all the birds of bright plumage, and all of them have been found to be of great economic value as destroyers of insect pests.

In the brief of the Trade submitted to the Finance Committee of the Senate we find the following statement:

We, the undersigned, importers and manufacturers of foreign bird plumage, excepting algrettes, respectfully object to the provision in Schedule N, 357, of the new tariff bill, H. B. 3321.

We deal exclusively in the plumage of birds of foreign nativity, totally dissimilar to any American birds, and, needless to argue, if the aforementioned provision is enacted this industry must come to an end.

The effrontery of this statement, to say nothing of its inaccuracy, will be best understood by calling the attention of the Senate to the facts collected by Mr. James Buckland and printed in his work, The Destruction of Plumage Birds, published in 1909. I use the word "facts" because Mr. Buckland bases his statements upon diplomatic and consular reports, which can not be controverted.

I quote as follows:

VENEZUELA. THE WHITE HERON.

The white heron.

Thirty years ago there were heronies in Fiorida which were estimated to contain, severally, about 3,000,000 white herons. At the same period prodigions multitudes of these birds roamed wildly over China. But even these wast bordes could not withstand slaughter during the breeding season, and now the white heron is practically exterminated in North America and in the Middle Kingdom.

From the many official returns in my possession showing the extent of the annual slaughter of this bird. I will extract two. They are taken from the Diplomatic and Consular Reports on the Trade and Commerce of Venezuela, and show the quantity of egret plumes exported from Cludad Bolivar during the years 1898 and 1908, respectively. I quote verbatim from the report for 1898: "The quantity of egret feathers

exported has this year reached the high total of 2,839 kilos. Considering that about 870 birds have to be killed to produce one kilo of the small feathers, or about 215 birds for one kilo of the larger, the destruction of these birds must be very great, and will no doubt affect the production before long." Commenting on these figures, her late Majesty's minister at Caracas said—I again quote from the report—"If, therefore, we take the average, the number of birds killed last year was 1.538.738, but if we take the highest number it was 2,469,930, and even the lowest accounts for the slaughter of 610,385."

Now, let us turn to the consular report for 1908—only five years ago. In this instance the quantity is given in ounces, and from these official figures we learn that the total export of egret plumes last year was 42,986 ounces. It is acknowledged by the trade that it takes, on an average, six birds to yield one ounce of these scapular plumes. If therefore we multiply this number of ounces by six, we will ascertain the number of white herons killed in Venezuela in 1908. The product is 257,916. That is to say, if we take the average mentioned by the Pritish minister in the 1898 report—which I think fair—the effect of 10 years' slaughter was to reduce the production—I use round numbers—from one million and a half to 250,000.

These particular figures can not be considered too gravely. They furnish complete evidence not only of the rapid diminution of the species in Venezuela but also complete evidence—unless effective protection comes in time to save the bird—that what has happened in North America and in China is going to happen in South America, and, for the matter of that, in every country in the universe in which the white heron is found.

The shallow lagoons which are occasionally met with in the great

THE JABIRU.

The shallow lagoons which are occasionally met with in the great savanna regions of the middle Orinoco district in Venezuela are favorite feeding grounds of the American Jabiru, the largest but one of all living storks. Slow and deliberate in its movements, and walking always with military precision, this glant bird is known locally as the "soldier stork." In the country districts of Venezuela one is likely to hear many stories of the part this bird with martial tread has filled in shaping the history of that country. One very good one is in connection with the Venezuelan war for independence, and relates how a body of Spanish soldiers mounted a rise in the savanna they were crossing to be suddenly confronted in the distance with a long line of soldiers in red jackets and white trousers marching toward them with all the precision of veterans. Without waiting for a closer acquaintance the Spaniards turned and fled. They had come upon a flock of jabiru. Some idea of the size and strength of this bird may be gathered from the fact that the nest, which is a great platform of sticks, built usually in a solitary tree in the midst of a great rolling savanna, contains pieces of wood 4 or 5 feet in length and as large around as a man's wrist. Such a grand bird was not made for vulgar descration, yet for the last 10 years there has been a growing demand for its wing and tail feathers. In the London plume sales alone there were catalogued last year 28,250 of these quills.

In the Consular Report for 1908 we find that, exclusive of the plumes of the white heron, there were exported from Ciudad Bolivar during that year 10,812 pounds weight of "other feathers and plumage." Five tons, nearly, of feathers shipped from one port in one year? I ask you to ponder on these figures and to reflect what this annual hecatomil of birds darkly yet plainly indicates.

The West Indies.

THE WEST INDIES.

The ancient Mexicans looked upon the humming birds as emblems of the soul, as the Greeks did upon the butterfly, and held that the spirits of their warriors who had died in defense of their religion were trans-formed into these most brilliant of living creatures in the mansion of

the sun.

It is a curious thought which is brought out by the fact that centuries later in the world's development the humming bird should be marked out for slaughter more than any other bird. Its destruction in the West Indies has been such that certain species with a restricted habitat are already exterminated, while others are at the point of extermination. In Trinidad, for example, the number of species has been reduced from 18 to 5.

The humming bird is protected by law and by sentiment throughout the Crown colonies of the West Indian division. Yet the mouth of the dealer is filled with laughter.

Mr. WILLIAMS. If the Senator will pardon me, I do not want to take up the time of the Senate, but I wish to say that when I was a boy there were humming birds all over my part of the country; there must have been 500 varieties of them; and they were of every colored wings that you could imagine, bronze, scarlet, green, blue, and everything else. I do not see a humming bird now twice in a season.

Mr. McLEAN. The reason why is because many of our humming birds go to Cuba for the winter and are there killed in great numbers. I read a report a few years ago stating that some 30,000 humming birds in one shipment were sent from Cuba to Europe to be mounted, and in one auction sale in London I think nearly 2,000 of these birds were sold for 2 cents apiece.

Will the Senator allow me to account to the Senator from Mississippi for the dearth of humming birds in his part of the country at this time and in confirmation of what the Senator from Connecticut has been saying? I have here a specimen of one of these American humming birds [exhibiting]. It was mailed to me by some one a number of days ago. It shows the skin of an American humming bird which was killed in Cuba and shipped to Europe and prepared and reshipped and sold in this country for the purpose of decorating hats. I think if the Senator from Mississippi will look at it he will recognize an old friend. The statement which accompanies this specimen is as follows:

This American humming bird was sold at the August auction of the London feather trade in 1912 for 2 cents along with 1,509 others like it at the same price. At the first three of the quarterly London sales of 1912 the following bird skins were sold: 129,168 egrets, 13,508 herons,

20,698 birds of paradise, 41,990 humming birds, 9.464 eagles, condors, etc., and 9,472 other birds, making a total of 223,490.

The Senator will notice in this exhibit which I make that the pennies which originally accompanied it are gone. I have trans-

ferred them to my pocket for safekeeping.

Mr. McLEAN. I will say to the Senator from Oregon that I am not at all sure his exhibit is an American humming bird. I had one sent to me, but I was so uncertain of it that I did not feel justified in calling the attention of the Senate to it, because it seemed to me that it might be a Brazilian bird.

Mr. WILLIAMS. It may be a Brazilian bird.
Mr. McLEAN. There are a great many varieties, I may say.
I saw recently a report of a cloak made of humming-bird skins in Paris and sold for \$10,000, if I remember correctly.

I have here reports with regard to the destruction of the American flamingo on the Bahama Islands, and I quote from the publication "The Destruction of Plumage Birds," by Mr. Buckland:

THE BAHAMA ISLANDS.

THE AMERICAN FLAMINGO.

THE BAHAMA ISLANDS.

THE AMERICAN FLAMINGO.

In December, 1904, Mr. Frank M. Chapman, curator of mammalogy and ornithology in the American Museum of Natural History, published an account of his discovery of a breeding ground of this singular bird in one of the outer Bahama Islands. Unwittingly he did more, as you shall see. I propose reading an extract from his fine piece of descriptive writing:

"Ten minutes wading through shallow water brought us so near the now greatly enlarged pink band that with a glass the birds could be seen unmistakably seated on their conical nests of sand, and with an utterly indescribable feeling of exultation we advanced rapidly to view at short range this wonder of wonders in bird life. At a distance of about 300 yards " " we first heard the honking note of alarm—a wave of deep sound. Soon the birds began to rise, standing on their nests " and waving their black and vermilion wings. As we came a little nearer, in stately fashion the birds began to move, uniformly, like a great body of troops, they stepped slowly fotward, black pluions waving and trumpets sounding, and then, when we were still 150 yards away, the leaders sprang into the air. File after file of the winged hosts followed. The very earth seemed to erupt birds, as flaming masses streamed heavenwards. " " They flew only a short distance to windward, then, swinging with set wings, sailed over us—a rushing, flery cloud."

One would have supposed that Mr. Chapman's stirring words would have appealed to the higher elements of our nature; yet no sooner had he disclosed the secret paths which led to this red city than the grasping hand of man clawed it in its clutch. At one time it seemed likely that the negroes who were employed in the slaughter would banish the wonder from the earth. As a set-off against the mischief he had innocently done, Mr. Chapman made heroic efforts to save for future generations what is assuredly the pinkest of all the pink pearls of the 3a-hamas. In the end—and to him the chief merit is due—the impen

THE UNITED STATES. THE ATLANTIC COAST.

No better instance of the destruction of species for the millipery market can be given than the massacre of the shore birds of the Atlantic coast of the United States. Twenty-five years ago these birds swarmed all down this coast in incredible numbers. To-day all that remains of that extraordinary abundance is a few scattered colonies, rigidly guarded by wardens. The part which we played in this appalling butchery may be measured from the fact that London was the largest buyer of the wings of the gulls and terns which were shot on these breeding grounds. For years the furious slaughter went on unchecked. At length the consequences became visible everywhere. The supply of wings, which at first had seemed inexhaustible, was rapidly approaching the vanishing point. Then, in response to an earnest appeal by bird lovers, the Government of the United States stirred itself to action, and on March 14, 1903, set aside Pelican Island, off the eastern coast of Florida, as a bird reservation, thereby forging the first link in that chain of insular bird sanctuaries which to-day stretches from Maine to Texas.

But to create national breeding grounds for the birds of the Atlantic

from Maine to Texas.

But to create national breeding grounds for the birds of the Atlantic littoral was one thing, to protect the birds quite another. The agents of the feather dealers were ever cruising in the offing, and no man knew the hour when they would swoop down and raid a sanctuary. So frequent were these depredations it became necessary to provide the wardens with powerful seagoing launches that they might pass swiftly and safely from island to island. This increased facility of surveiliance greatly interfered with the business of the raiders, who resented the check put upon their actions, and stories continually drifted across to the mainland and into the office of the Department of the Interior containing accounts of minor assaults and threatened assaults on wardens, but nothing of a very atrocious nature. Then the people of the United States were startled to hear that one of the chances a reservation warden assumed when he entered upon the duties of his office was the risk of being compelled to surrender his life to the depravity of his fellow men.

risk of being compelled to surrender his life to the depravity of his fellow men.

Oyster Key Reservation, a small island which lies off the coast of Florida, is fringed with mangrove, and in these bushes nested a few egrets which had escaped the general massacre—one of the very few small colonies in which lies the only hope that one day these birds may reestablish themselves in North America. This reservation was under the charge of Guy H. Bradley, a zealous guardian of the feathered wards of the Government.

On July 8, 1905, Bradley heard the discharge of guns on the reservation, and, rowing across, found two raiders shooting the egrets. Alarmed at his approach, the men rar to their boat, and rowed off to the schooner which had brought them to the island. Bradley reentered his skiff and followed. He was in the act of climbing the eschooner's side to arrest the offenders when one of them put his rifle to his shoulder and shot him dead.

By a grave miscarriage of justice the murderer was allowed to go free, the grand jury failing to indict him.

Three years passed, in which the resentment of the plume hunters was confined to its former limits of minor assaults and threatened assaults on wardens. Then, on September 15, 1908, L. P. Reeves, warden of the South Carolina reservations, was brutally murdered. He was shot from ambush, just after dark, as he was nearing his home. Two notorious raiders had been threatened by Reeves with arrest, and on the same day as the murder was committed these men had bought buckshot shells at St. George, 7 miles away. Reeves was shot with a full charge of buckshot, both wads and shot being found in the body. The governor offered a reward of \$500 for the capture of the murderers, but the men got away.

Two months later another human sacrifice was offered to woman's deity. On November 30, 1908, Columbus G. McLeed, warden of the bird reservation at the north end of Charlotte Harbor, Fla., was seen alive for the last time. In the patrol boat was discovered his hat with two long gashes in the crown, evidently cut with an ax. In the cuts were bits of hair and blood, and there was also a considerable quantity of blood in the boat. The body was never found, and it is supposed that it was thrown into the water by the murderer and carried out to sea by the tide, which runs very strong in that part of Charlotte Harbor.

From the day when man became man and walked erect he has slain lis fellow man for his gold. Now, the plumes of the egret are worth

From the day when man became man and walked erect he has slain his fellow man for his gold. Now, the plumes of the egret are worth £8 the ounce—double the value of gold.

THE PACIFIC COAST.

Little more than a decade of years ago there was no more populous waterfowl district in the world than through the lake region of southern Oregon. It was, in fact, the nursery of the immense flocks of migratory waterfowl of the Pacific coast. To-day these shallow bodies of water are almost depopulated. Prof. W. W. Cooke, of the Biological Survey, states in one of the annual reports of the Department of Agriculture, that hundreds of tons of ducks were killed each season merely for their green wing feathers and the bodies thrown away. White herons, swans, geese pelicans, ibises, and other species too numerous to mention here, were all slaughtered in a like way, and for a like paltry end.

mention here, were all slaughtered in a like way, and for a like paltry end.

But it is of the destruction of the grebes that I intend to speak particularly. The grebe colonies which were scattered round the lakes were probably the most extensive in the world. It was from here that the feather merchants for years obtained the bulk of the supply of those silvery breast feathers which women were wont, while the supply lasted, to attach to some portion or other of their attire. During the last six or seven years there were from 20 to 30 camps of professional killers and skinners stationed along the border of Klamath Lake, and the north end of Tule Lake, engaged solely in killing grebes. Wagons visited the camps regularly—about three times a week—to collect the skins. This continued until every grebe which had lived on the northern borders of Tule Lake had been wiped out of existence, and until the great breeding grounds on the southern end of Lower Klamath Lake had been reduced to a few small colonies.

When It had become evident that the feather dealers had no intention of staying their hands while a single grebe remained alive, the Oregon Audubon Society, in the spring of 1908, subscribed \$400 for two capable field naturalists to make a trip to the lake district, and to prepare a statement and an appeal to the General Government asking that some steps be taken to prevent the utter destruction of bird life in this area.

I have space to give one extract only from this report. It refers

that some steps be taken to prevent the utter destruction of bird life in this area.

I have space to give one extract only from this report. It refers to the grebes on Lower Klamath Lake. "* * * found but one nest, and saw only an occasional scared bird. Skinned bodies floating here and there told the story of disappearance."

Suffice it to say that when the report reached Washington, Mr. Roosevelt, with his usual admirable promptness and intelligent appreciation of the needs of bird protection, at once came to the rescue, and in August, 1908, set aside Lower Klamath Lake, Harney Lake, and Lake Malheur as bird reservations.

But the dealers, who had been working the field systematically, had not quite exhausted the supply of grebes on Lake Malheur, and they were not going to allow even Executive orders and proclamations to stand in the way of their doing so. Last season (1909) there were 6 indictments against dealers' agents filed in the district attorney's office at Burns for shooting grebes on Lake Malheur Reservation. These indictments cited the killing of 400 grebes by one hunter and 1,000 by a second hunter. While these indictments were being made a number of sacks belonging to a third hunter and containing the skins of 800 grebes were selzed at the express office at Burns. Unfortunately the poachers heard in advance that indictments were to be made and escaped to California.

I will conclude these few remarks on what was once one of the most extensive breeding grounds in the world with an extract from the monthly report ending May 31, 1909, of the State warden of Lake Malheur Reservation: "Very few grebes are nesting on the reserve this year—mute testimony of the inroads of previous market hunting. A few gulls and terns are nesting, but very few."

The Islands of the North Pacific.

THE ISLANDS OF THE NORTH PACIFIC.

The Islands of the North Pacific.

The extent to which the destruction of birds is carried in the North Pacific Ocean may be gauged by a few extracts from the report of William Alanson Bryan, United States special inspector of birds and animals. The report is dated October 31, 1904, and is addressed "To the Hon. Theedore Roosevelt, President of the United States." In this official communication Mr. Bryan states:

"During the past few years I have visited practically all of the low coral islands in the North Pacific, and have been appalled at the destruction of the birds on these islands by Japanese plume hunters, who made a business of visiting not only the bird islands of their own possessions but those of the United States as well, and killing birds by the hundreds of thousands. On Marcus Island a party had been at work for six years. In that short time they had wiped out of existence one of the largest albatross colonies in these waters. So complete was their work of destruction that during the year of my visit they had only secured 13 specimens of the albatross. While there I estimated that they had 40,000 tern skins ready for shipment, which was the second boatload to be shipped that year. * * Midway Island at the time of my visit was covered with great heaps of albatross carcasses which a crew of poachers had left to rot on the ground after the quill feathers had been pulled out of each bird."

The report then deals with the depredations on Lislansky Island, which is one of the outlying Hawaiian islets, and is a wonderful center of ocean bird life. For the purpose of brevity I will present this por-

tion of Mr. Bryan's report in my own words: In 1904 a Tokyo firm fitted out a schooner at Yokahama and dispatched her to this island, the object of the expedition being the collection of plumage for the millinery markets of Europe. The staff of killers, skinners, and taxidermists on board numbered 87. The schooner duly arrived at her destination, when the party landed and commenced at once to kill the birds. A few weeks later their presence on the Island was observed by the captain of a ship engaged in the guano trade, who reported the matter to the chief authorities at Honolulu. The U. S. S. Thetis, of the Revenue Service, was at once dispatched to stop these unlawful operations. She arrived at Lislansky Island to find that the raiders had already collected 335 cases of plumage, representing the skins and feathers of 300,000 birds.

After relating this incident, Mr. Bryan takes, in order, all the low islands of the chain and shows how each is similarly scourged.

The raids led to an interchange of views on the subject between Washington and Tokyo. It is only fair to Japan to say that she at once issued an order warning ship captains not to carry men who were engaged in this piracy. But the raids continued. Then, in reply to further protests from Washington, the Japanese minister for foreign affairs presented his compliments to his excellency the American minister, and, while assuring him of Japan's sympathy and cooperation in the matter of the bird laws of the United States, had the honor to inform him that the class of men engaged in plume collecting was composed largely of lawless marauders. The Japanese minister for foreign affairs knew what he was talking about. In 1908 the skins of about 50,000 terns from these islands came under the hammer in Mincing Lane. I have not yet completed the details of the London plume sales for this year, but I notice that terns from the North Pacific continue-to be a feature of the catalogues.

On December 17, 1904, the nomine of a syndicate of Europeans addressed a letter to

Mr. President, the truth of the matter is, the plumage hunters slaughtered the American egret until they were stopped by armed wardens, but not until they had committed all the crimes in the code from theft to murder.

It further appears that the plumage trade has done all that it could do to exterminate every other American bird of bright plumage from the humming bird to the albatross. It is no thanks to the feather trade, and very little thanks to the Federal Government, that there is a plumage bird now living in the United States.

The claim that the trade does not deal in American birds is true only so far as it may be unable to buy American birds. All of our birds—humming birds, orioles, scarlet tanagers, in-digo birds, plover—in fact, any bird of bright plumage, when it leaves the United States in the autumn spends seven or eight months far away from the protection of our State or Federal laws, the prey of the bird killers. In the London auction rooms we find the following birds in the market and sold by the thousands: Humming birds, 2 cents each; tanagers, 9 cents each; and orioles, any one of which is worth a hundred dollars to the American farmer, 6 cents each. Is it probable that a trade which in the past has never been caught telling the truth will to-day limit its shameful occupation to the purchase of European orioles and tanagers only? The fact of the matter is that this trade is world-wide. It buys every bird that is brought to it and which it can resell at a profit.

It has left behind it a trail of savage cruelty and civilized greed and cunning, and nothing whatever to commend it except the blood money it has collected from ignorant women. ignorant women, Mr. President, because no woman worthy of the name will encourage this trade once she understands her

responsibility for it.

It is said that protests against the House proviso have been received from Germany. Let me call the attention of the Senate to the fact that for many years Germany, by imperial act, has strictly prohibited the killing of the useful and beautiful birds within her own borders. Upon what ground and with what grace do the German merchants ask us to find a market for their contraband goods?

I want to call the attention of the Senate to the fact that the German Nation was the pioneer in the matter of effective bird protection. In 1868 the German farmers and foresters, after their twenty-sixth general assembly, appealed to the Austrian and Hungarian foreign minister, begging him to use his influence to persuade both Austria and Hungary to join them in their efforts to protect the birds valuable to agriculture and forestry.

The Germans from their earliest history have been alive to the value of birds, and in later years have been most persistent in their determination to protect their own birds. The Emperor

Frederick II was known as the "Crown Fowler"—1215—and wrote a book on birds which is said to have been remarkable in its day. In 1777 Lippe Detwold issued a decree protecting birds. In Sax-Coburg birds were protected by decree in 1809. In 1837 the Grand Duke of Hesse forbade the slaughter and sale of birds useful to agriculture, and provided for the protection of nests and broods.

It was upon the initiative of the German farmers and foresters that the first ornithological congresses were held, which finally resulted in united action on the part of the nations of

In 1908 11 European nations—Austria, Germany, Belgium, Spain, France, Greece, Monaco, Portugal, Sweden and Norway, Switzerland, and Luxemburg—ratified a joint treaty for the protection of birds.

As long as the German Government punishes with heavy penalties the killing of her own birds, I do not believe that the United States trespasses upon international comity or courtesy when she declines to buy contraband birds or their plumage.

It is said that this proviso will encourage the destruction of American birds; that the demands of the trade will be so strong when the importations are shut out that it will compel a raid upon American birds.

Mr. President, Dr. Field, the Massachusetts game commissioner, testified before the congressional committee that he had within a few years prosecuted over 75 milliners for selling the plumage of native birds in Massachusetts, and in every instance the defendant claimed that he could not tell the native from the foreign plumage when it was received from the dealers. It was found in the trial of these cases that all manner of beautiful American birds were killed and their plumage sent to Berlin or London or Paris, and there mounted and returned to this country as foreign plumage. How easy, under these circumstances, for the traders who appeared before the Finance Committee to swear that they never deal in American birds. And how clear it is that only by the strictest guard over our imports can we prevent the cunning dealers from stealing our birds and selling them back to us as foreign birds.

It is contended by the trade that the enactment of this law will throw those now engaged in it out of employment—the same claim that was made and abandoned in London because entirely without foundation.

The savages who do the killing will hardly excite our sympathy. As for the milliners, there is ample proof that the trade will be quickly diverted to artificial lines, which will multiply manyfold the labor now required to mount the natural plumes.

I have in my office a few samples of what is now being done in the line of artificial plumes made of the feathers of domestic fowls, also a few samples illustrating what can be done with the ostrich plumes, which I shall be glad to show to any Senator who feels interested.

It was declared by the trade when New York passed its law prohibiting the sale of imported plumage resembling that of native birds those 20,000 people would be thrown out of employment. The trade was forced to admit later on that nothing of the kind had happened.

Right here I want to call attention to an amendment which was offered as a compromise and which permits the importation of the plumage from game and noxious, or pestiferous birds. I will say with regard to this amendment that it opens the door so wide that the trade will go on precisely as before. The only way to protect our birds is to stop the sale of their plumage as such. As long as you permit the sale of plumage the birds will be killed for their feathers alone.

The plea that the feathers of game birds should be admitted is easily answered. Game birds are and will be imported with their feathers on, and this law will in no way affect the trade in game birds. Where the plumage of game birds is imported, it is taken in the nesting season and the bodies of the birds are

The tons of ptarmigan wings recently imported from Russia meant the slaughter of tens of thousands of game birds in the spring for their wings only.

It is very clear to those who meet this question fairly that the way to protect the birds is to stop the sale of their plumage. As long as birds' feathers are worth their weight in gold the birds who happen to produce them will be hunted to the utter most parts of the earth. Nearly all of the civilized nations prohibit the killing of plumage and insectivorous birds. But there is still a vast field unguarded, where the bird pirate can ply his trade, and will ply his trade as long as the highly civilized nations furnish a market for his victims. If the people of the civilized nations have at last been aroused to the great economic value of the birds of the world and the need of immediate and strict protection to prevent their extermination they must stop the trade in plumage, except such as can

be provided by the ostrich and domesticated birds, or their efforts to protect will be in vain.

Now, let us look at the precise situation in so far as it affects the United States to-day. Less than a year ago Congress by law prohibited the killing of the migratory song and insectivorous birds at any and all seasons of the year, and the plumage birds are included in this list. Under the spirit and letter of this law we are particeps criminis. We are receiving stolen goods if we permit the trade in contraband plumage to continue.

Again, and still more to the point, many of the States of the Union—New York, Massachusetts, Pennsylvania, Louisiana, Ohio, Colorado, Oregon, Washingon, South Dakota, Missouri, and Maryland—all prohibit the sale of the plumage of native birds, and in New York, New Jersey, and Pennsylvania the plumage of all birds resembling the native birds is outlawed and can not be sold. I assume that this situation will appeal strongly to the Senators who represent States where plumage is now contraband. What is there in this trade that should tempt any Senator to encourage and invite violations of the laws of his own State? It was found in Massachusetts that the trade at once took advartage of the opportunity to sell there great quantities of native plumage slightly manipulated to resemble the plumage of similar birds killed in foreign countries.

Again, Mr. President, this Senate passed a resolution at this very session inviting the President to negotiate conventions with foreign nations for the protection of birds. Not our birds; not game birds; not migratory birds; not song or insectivorous or plumage birds; but birds, the avi fauna of the world.

The adoption of that resolution by this Senate committed this Senate to secure, if possible, an intelligent world purpose and agreement to save the useful birds whenever and wherever they need saving. The President of the United States and the Secretary of State have both assured me that they will give their best endeavor to this request of the Senate, as they are both in hearty sympathy with its purpose.

The House of Representatives has come to the aid of the Senate by passing the wise and timely proviso which is now under discussion. I may be pardoned for insisting that the Senate can not now honorably or wisely decline to follow where it has already pointed the way by solemn resolution. How can we appeal to other nations to save our birds if we now right-about face and deliberately legalize the killing of their birds by protecting the market of the bird destroyers?

The trade now suggests that a commission be appointed to take this whole matter into consideration in order that some wise compromise and concert of action may be reached. years this shameful and cruel traffic has perpetuated itself by fraud and subterfuge and crime in the guise of compromise, always asking for more time, always keeping its neck out of the halter by playing the caprice and greed of one nation over and against the caprice and greed of other nations, always protesting its innocence and always found guilty when tried. I hope, sir, that its day in this court is over and that it will be told to divert its activities into respectable channels. It always asks for more time-it has already had too much time. One or two years more means destruction for the birds, and one or two more years of anxiety and suspense and expense for the friends of the birds. This fight has been a voluntary one, and it has been a long fight and most discouraging at times. Since I have been brought in contact with those who have conducted it I have been deeply impressed with their courage and unselfish devotion to their cause.

I can not close this feeble and incomplete appeal to the Senate in their behalf without expressing my belief that the people of this country are under great and lasting obligation to the naturalists who have at last succeeded in bringing public opinion to their support. The ornithologists are enthusiasts; they are as fearless and suspicious as crusaders. Their experience with lawmakers for 50 years has made them so. If the birds are saved, it will be due to the ornithologists and Audubon societies of this country who have pounded the indifferent legislator night and day until he has finally opened his eyes to a duty which has been fearfully neglected.

If any Senator will read the recent publications of Dr. Hornaday or Dr. Forbush, two of the great living authorities upon birds and their value to agriculture and the way these birds have been treated by the trade, he will get some idea of the service the bird lovers have rendered to society. I am informed that both of these men appeared before the Finance Committee or sent briefs to that committee for their consideration.

When the migratory-bird bill was under consideration last year Dr. Hornaday sent to each Senator a copy of his latest work, Our Vanishing Wild Life. If any Senator desires to know the truth, the whole truth, and nothing but the truth about this matter, I advise him to read this book.

Mr. SMITH of Georgia. Mr. President—
The VICE PRESIDENT. Does the Senator from Connecticut yield to the Senator from Georgia?

Mr. McLEAN, I do. Mr. SMITH of Georgia. I should like to ask the Senator from Connecticut if he has read an article sent out by this same gentleman in reference to the Finance Committee and the subcommittee of that committee? I want to say for myself that, if he is no more truthful in his other publications than he was in that, the article was so utterly false, I would not care to read anything he wrote.

Mr. McLEAN. I was not aware that the doctor had made false statements to the committee.

Mr. SMITH of Georgia. Not to the committee, but he issued a circular that was utterly false.

Mr. McLEAN. If so the doctor was misinformed. He is an enthusiast, as I have said.

Mr. SMITH of Georgia. I think that is true.
Mr. McLEAN. They are zealous men, these ornithologists; they have fought for the birds for many years; and they have had very little encouragement from lawmakers. Now they think they see victory for their cause, and they do not take this action kindly. The Senate of the United States, after having solemnly requested the President to negotiate conventions with other nations for the protection of useful birds, should be consistent and not right about face in the manner now threatened.

Mr. SMITH of Georgia. If the Senator will yield to me for just a moment with reference to this matter, I desire to state that that was no excuse for sending out such a publication. I only want to say with reference to it, if the Senator will yield to me for a moment, that I believe that the Senator is right, that the doctor is really such an enthusiast on this subject that his zeal led him to act without proper reflection. I really believe his purposes were good, although his statements about the subcommittee were so inexcusable that, if we were disposed to take offense, we certainly would have been justified in doing so.

Mr. McLEAN. I hope the Senator will be as considerate as possible, for I am quite sure that the doctor would not intentionally make a misstatement. He is intensely in earnest in this

matter and justly suspicious of the plumage trade.

Mr. Pearson, secretary of the National Association of Audubon Societies, appeared before the Committee on Finance. Others who are deeply interested in this subject are Mr. Henry ers who are deeply interested in this subject are Mr. Henry Oldys, the well-known ornithologist and lecturer; Mr. Joseph Grinnell, of the California Academy of Sciences; Mr. Casper Whitney, editor of the Outdoor World; Mr. Warren H. Miller, editor of Field and Stream; Mr. Walter Stone, president of the Pennsylvania Audubon Society; Mr. John H. Wallace, commissioner of game and fish of the State of Alabama and a loyal friend of the ornithologists; Mr. Ernest Napier, president of the New Jersey State Game Commission; Mr. W. P. Taylor, ornithologist of Berkeley, Cal.; May Riley Smith, chairman bird protection committee of the General Federation of Women's Clubs; Katherine H. Stuart chairman bird department Virginia Clubs; Katherine H. Stuart, chairman bird department Virginia Federation of Women's Clubs; Mr. Albert H. Pratt, president of the John Burroughs Nature Club; Mr. William F. Bade, president of the California Associated Societies for the Conservation of Wild Life,

Dmight continue this list indefinitely. There is hardly a town or village in the country that does not have its Audubon society preaching the gospel of bird conservation, all due to the untiring zeal of the ornithologists who, after years of conscientious and increasing appeal, have lifted the insectivorous birds to their true position in the economies of nature.

My interest in this matter arose from my observation of the rapid decrease in the game birds of this country, and it was in my study of the game birds and my desire to save them that I found the real source and strength of the bird-protection movement. The game clubs sound well, but they are organized to kill as well as protect. The Audubon societies are organized to save. The ornithologists have at last rallied the people of this country to their support, and my hope is that the Congress of the United States, having once taken up their cause, will continue steadfast. Let us stop the killing now, and if, as the trade claims, the birds will increase in such numbers as to be a burden we can, when that time comes, appoint a commission to look into the matter, and, if they are to be killed, let it be done by some other method than slow starvation in the nesting season.

When the migratory-bird bill was under consideration I called the attention of the Senate to the fact that all of the civilized nations are now alive to the great economic value of the insectivorous birds, and it is now well known that the birds which are

killed for their plumage are counted among those which are

valuable to agriculture.

I have also endeavored to impress upon the Senate the fact that for humanitarian reasons the cruel and inhuman methods of the bird destroyers should be stopped at once. I have not touched personally upon the ethics involved in this question, but it is now and always has been my belief that sentiment has done more for civilization than money, and when the money is tainted, as that in the plumage trade is tainted, with unspeakable cruelty if not crime, I am sure every Member of this great body will find excuses if not admiration and approval for the sentiment which cries out against this butchery and the fashion which sustains it. And, furthermore, these considerations are all outside the intense pleasure and profit many people find in the companionship and study of birds. Mr. President, I could vote to save the birds for their beauty alone. It may be a weakness, sir, but when the birds fail to come to my door in the spring you can have the door and the spring, too, for neither of them will interest me. It may be thought by some that the subject is a trivial one and that it ought not to be interjected into the United States Senate when so many matters of vital importance are pressing for consideration. My excuses for pleading the cause of the birds are two. First, I want their case tried and justice done to them for their own sake; second, I want the birds saved before we as a great people learn by experience that the birds are more vital to our comfort and happiness than we are to theirs.

I sincerely hope that my friends upon the other side of this Chamber will not insist upon making this a party question. They will find little support for the proposition that the salvation of the Democratic Party calls for the destruction of the

birds.

We have been called a commercial people by our neighbors across the water; we have been told a great many times that our high ideals are easily lowered in the presence of easy money or real estate. We are quite sure that our neighbors have been overjealous and overzealous in their criticisms of American culture and motive, but if now with our eyes open we deliver the useful and beautiful birds to the slaughter, we do it for the pieces of silver we are offered in exchange for their feathers.

I sincerely hope that this public and complete surrender to the commercial instinct will not be recorded in this bill, and if it is I shall be glad to see the Republican Party publicly recorded

against it.

Mr. O'GORMAN. May I ask the Senator from Connecticut a question?

Mr. McLEAN. Certainly. Mr. O'GORMAN. I do not want to anticipate his suggestion, but I desire to ask what amendment is the Senator inclined to offer to the bill as reported by the Senate committee?

Mr. McLEAN. I will say to the Senator from New York that my amendment simply provides for the restoration of the House

Mr. O'GORMAN. As to that I am in hearty accord with the Senator from Connecticut. I am in entire sympathy with the views to which he has given expression. I exceedingly regretted that the Finance Committee did not see the wisdom of adhering to the provision as proposed by the House, and I expect, when this provision comes up for discussion in the Senate, that there will be no substantial opposition to the provision being recommitted to the Finance Committee, with the hope that further reflection will induce that committee to adhere to the provisions found in the House bill.

Mr. McLEAN. I am very glad to hear that announcement from the Senator from New York.

I desire to print in the RECORD a letter written to the Washington Star, quoting Sir Harry H. Johnston, who has had many experiences in Africa. I read this letter, as it bears very strongly upon the proposition that this is an international question and that the heron is not as bad as he has been painted by the Senator from Missouri:

[From the Washington Star.]

HARMLESS WILD BIRDS OF GREAT USE TO MAN—ENGLISH WRITER ARGUES FOR PRESERVATION OF FORS TO TSETSE FLIES.

[Foreign correspondence of the Star.]

LONDON, May 19, 1913.

Sir Harry H. Johnston has written a letter to the Times on the preservation of rare, useful, beautiful, and harmless wild birds. He said it is the duty and almost the obligation of Governments to deal with this subject intelligently and with a definite purpose—

Mr. LANE. Mr. President—
The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from Oregon?
Mr. McLEAN. Certainly.

Mr. LANE. I merely desire to indorse the statement made by the Senator in relation to what has happened on the Pacific coast, and particularly in Oregon, as to our game birds, and what is happening to other birds which are being destroyed for their plumage, which is used for millinery purposes. Where formerly water fowl were to be seen in countless thousands they are now becoming scarce, and I have no doubt that if remedial measures are not adopted every bird will be destroyed.

In the old days we had the elk. We had them in large herds; but they were killed for the pitiful sum of \$1 apiece, which was

derived from the sale of their hides. It is wrong; we are making a mistake in this respect, I am quite sure, and we ought to

correct it before we go further.

I wish, Mr. President, to indorse the proposed amendment of the Senator from Connecticut and to say that my sympathy is with him in the effort which he is making for the protection of

Mr. McLEAN. I thank the Senator from Oregon. I was reading a letter from Africa to the Washington Star. There is a great continent, which we hope will be returned to civilization, a place where white men can live in comfort and prosperity.

Mr. President-

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from North Carolina?

Mr. McLEAN. Certainly.

Mr. SIMMONS. Mr. President, I do not know what the committee may do if this paragraph is recommitted to it. There have been some expressions of dissatisfaction with the action of the committee in striking out a part of the proviso in the House bill; and, in deference to that dissatisfaction, it was the purpose of the committee, when this paragraph was reached, to ask that it be sent back to the committee, in order that there might be further consideration and discussion; but what will be done about it of course I can not say, and I do not think any Senator can now say. That, however, was not the purpose for which I rose.

Mr. GALLINGER. Mr. President, before the Senator proceeds to another topic-

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from New Hampshire?

Mr. McLEAN. Certainly.

Mr. GALLINGER. Several items have already been sent back to the committee. I will ask the Senator from North Carolina if it is the purpose of the chairman to call the full committee together to consider those items? I think on an item like this the full committee certainly ought to be called together.

Mr. SIMMONS. I think the matters that have been or may be sent back to the committee will probably be dealt with as the

bill was originally dealt with.
Mr. REED. Mr. President, I desire to suggest to the Senator who has charge of this bill that they will be sent back to the caucus, for they have been reported after caucus action.

Mr. SIMMONS. Undoubtedly, after the committee has acted. following out the policy we have pursued with reference to the bill, the Democratic caucus would act upon the items. I do not think that anyone can speak now for either the committee or the caucus; but, as I said, that was not the purpose for which I rose.

Mr. McLEAN. I am very glad to hear the announcement of the Senator.

Mr. SIMMONS. It has been our purpose, in deference, as I said, to some little expressions of dissatisfaction, to pass this paragraph when it should be reached, and have it go back to the committee for further consideration.

Mr. McLEAN. I will express the hope that the committee and the caucus, upon reconsidering this matter, will vote to

restore the House provision.

Mr. SMITH of Georgia. I desire to ask that the paragraph relating to feathers may not be acted upon until it is regularly reached, because when it is regularly reached I wish to present some of the reasons which, I think, justified the Finance Committee in its action. In doing so I wish to say that I shall do so from the standpoint of one just as much interested as anyone else in birds and their protection, and with a record, perhaps, of almost as much accomplishment in that line so far as my own State is concerned, as anyone has accomplished in his

Mr. SIMMONS. Mr. President— Mr. McLEAN. If the Senator from North Carolina will Mr. McLEAN. allow me, I had about finished when I called the attention of the Senate to this communication.

Mr. SIMMONS. There are some questions that I wish to ask the Senator, but, of course, if the Senator prefers I will wait.

Mr. McLEAN. No; if they refer to this matter, I shall be very glad to yield.

Mr. SIMMONS. They do refer to this matter.

The Senator has discussed egrets. Of course the Senator knows that the importation of egrets is prohibited under the bill. Then, I understand the Senator's main purpose is to protect American migratory birds?

Mr. McLEAN. It is an important purpose, but my interest in this matter is largely brought about by the fact that the United States must take this step of protecting our own migratory birds as far as we can by preventing these importations, thus paving the way for consistent action in our endeavor to secure the cooperation of the nations of the world in ...n international agreement for the protection of all useful birds.

Mr. SIMMONS. I did not desire to enter into an discussion of the matter. I simply wished to get the Senator's point of view, and to ascertain whether the Senator wished us to undertake to protect all foreign birds without any reference to

whether or not they are American migratory birds.

Mr. McLEAN. Certainly, if they are useful birds. are useful wild birds or plumage birds, I certainly should insist that it is our duty, having taken this step, to set foreign nations an example which we hope they will follow, in London and in Berlin and in Paris.

Mr. SIMMONS. Has the Senator in mind any law passed by any foreign Government undertaking to protect the birds of other countries? I know the Senator has referred to some negotiations and conventions, but has any foreign Government ever passed a law along that line?

Mr. McLEAN. Australia prohibits the exportation of plumage; India does the same thing; and all the English colonies have memorialized the British Government to prohibit the intro-

duction into London of their plumage birds.

Mr. SIMMONS. But has any Government up to this time passed any law prohibiting the importation of the plumage of foreign birds?

Mr. McLEAN. I do not know that any nation has gone further than the English Government. A bill to that effect has passed the House of Lords-

Mr. SIMMONS. Would it be possible for the Senator-not to-day, but for the use of the committee later-to specify the American migratory birds that he thinks we ought to protect?

Mr. McLEAN. I think it would be very difficult, owing to

the experience which has been had in the States of the Union where the plumage is now contraband, as in Massachusetts. By slight manipulation of the native birds they have been made to resemble foreign birds, and have been sent back here and put into the trade; and when prosecutions have been brought the milliners have invariably set up the defense that they supposed they were buying foreign birds. The only way to protect a bird is to prevent its slaughter, and you can not do that unless you cut off the market for the plumage.

To return to Africa and Sir Harry Johnson's letter. Johnson goes on to state his experience in Africa, which I think is very interesting at this time, because it points to the real importance of this subject. As an international duty, I am proud of the fact that the United States, after years of neglect, has finally taken a position where she may be a leader in this great service to humanity as well as to the birds. Mr. Johnson continues:

Among the hundred and one reasons I have adduced for the protection of birds, especially in the Tropics, was the fact that many species in Africa fed on the tsetse flies. They are, in fact, in common with certain reptiles, the only effective enemies of the tsetse fly. I had noticed personally, from 1883 onward, a continually increasing destruction of certain birds in west and west-central Africa which feed on the tsetse fly among other items in their diet.

NOTED AS COINCIDENCE.

Coincidentally during this period there has seemed to be a decided increase of tsetse files in the coast regions of west Africa and in the Kongo Basin. At the same time trypanosomatous diseases, conveyed by this genus (glossina), have greatly extended their ravages. It is permissible to assume therefore, as several French writers on west Africa have assumed and as the late George Grenfell was beginning to assume in his diaries, that there is some connection between the destruction of white herons, rollers, bee eaters, shrikes, guinea fowl—the guinea fowl scratch up the larve of the tsetse and probably eat them in that stage—and other birds, and the apparent increase of the tsetse in uninhabited places and the consequent spread of sleeping sickness.

SACRIFICE IS HARMFUL.

I have personally noted the eating of tsetse files by almost all the

I have personally noted the eating of tsetse flies by almost all the species mentioned. I do not pretent that they do not devour all other flies that come in their way, but I do say that the destruction of the egrets and smaller herons, of rollers, bee eaters, etc., does remove one of the few means we have of checking the increase of the tsetse. Of course the tsetse question is only one among a hundred other reasons for putting a stop forever to the destruction of hirds merely or mainly for the ignoble purpose of using their plumage for the adornment of the human person. There are quite sufficient avenues along which the legitimate trade in feathers can be fed without or the verge of extinction.

Mr. WILLIAMS. Mr. President, I hope now we may go on with the reading of the bill.

I desire to say to the Senate that I hope as far as possible hereafter we will let the paragraphs and the discussion accord with one another. If a paragraph is away at the back of the bill, it seems to me it would be better to let it wait until we get to it, and meanwhile it may dispose of itself, as possibly may be the case with this particular paragraph.

Mr. REED. Mr. President, I have so much genuine regard for the Senator from Connecticut, who has just spoken, that I am almost forced to respect his opinions. But it seems to me we are following a curious line of reasoning upon this bill. It is rather strange that the business of the country should be halted at this time to give serious consideration to the prohibition of the importation of feathers because of an overstrained, not to say maudlin, sympathy for birds born and reared thou-

sands of miles from our coast.

The business of the United States awaits the passage of this tariff bill. All men, whether they be protectionists, free traders, or tariff reformers, understand that the sooner this great question is settled and the country knows exactly what the tariff rates are to be the sooner can business adjust itself to the new conditions and proceed to do business. There is not a wholesale merchant in the United States, not an importer of goods, not a manufacturer, not a producer of raw materials who does not find the market more or less interfered with because of the fact that this bill necessarily involves changes in commercial transactions. Until the bill is passed trade can not go on in its usual and vigorous course.

With that situation before us we stop to discuss the question of humming birds and herons. We pause here solemnly to dilate upon fanciful outrages alleged to be, or to have been at some time, perpetrated upon feathered tribes that are born and die in remote places of the earth far from the haunts of civilization and the eyes of men, and thousands of miles from our

shores.

Mr. President, one day I passed along the street of a city and witnessed a sight I shall never forget. Standing in the display window of a business building then occupied by some kind of a cheap show was a tiny girl, not more than 5 or 6 years of age—a beautiful child, with great, innocent eyes and delicate features just then distorted by mingled loathing and fear. Around this baby's neck were wrapped five or six venomous rattlesnakes in direct contact with her white, tender, velvety skin. The child was there to attract the attention of the passers-by to the show. I saw a policeman gaze at the fearful spectacle in stolid indifference, and then I saw him suddenly rush into the street and arrest a man for driving a horse that was drawing a load that appeared to be a trifle heavy. Nobody paid any attention to the child. No one lifted a hand to protect the baby from the infamous outrage perpetrated upon its innocence and its helplessness by the hearfless cupidity of some monster who held it in his power.

I have often thought of that scene and of how well it characterizes our course throughout this life. Indifference to human kind and tender solicitude for the brute creation is not new to our boasted civilization. Why, in ancient Egypt the crocodile was protected by the sacred and secular law. So highly was it regarded that in their ignorance and superstition mothers would ravish suckling babes from their breasts and feed them to the scaly monster. There were men then who could lift up their voices and speak for the denizens of the river in accents so tender as to not only evoke sympathy for the crocodile but also to convince the mother that it was a religious duty to sacrifice her offspring to satisfy its appetite for flesh. These same teachers entirely forgot the mother in her ignorance and

the child in its helplessness.

. In Turkey they have a system of protecting animals. Cats and dogs are sacred in Turkey. From the time they come into the world blind and filling the air with annoying mewings and whinings they are under the protection not only of the State but of the church. No man dare lift a foot to kick a mangy cur from his house over in Turkey. The dog and the cat are alike immune from harm. But over in Turkey they make slaves of their women. Over in Turkey they perpetrate inhuman outrages upon human beings. Over in Turkey they make charnel houses and slaughter pens in which the men and women God Almighty made are sent to ignominious and cruel death.

Sir, I have heard this "bird discussion" going on from time

Sir, I have heard this "bird discussion" going on from time to time in the Senate for the past six months, and have seen the business of the country halted. I have witnessed the immense interest that can be created over birds. I have more than once wondered why we do not stop sometimes to talk about the tens of thousands of people in this country who live along the edge of want; why we do not stop sometimes to devise legislation

that will protect the pauper child from the horrible conditions in which it is reared; why we do not take a little time away from the songster of the field to think of the songster of the cradle; why we do not pause to contemplate the starving mother who bends over her famishing babe; why we do not give some thought to the children now being reared in ignorance and misery to lives of vice and crime

misery to lives of vice and crime.

Mr. President, I think we would be performing a higher task for our country if we were considering laws for the protection of human beings than we are in discussing legislation for the protection of birds. But since that question is thrust in here, and we are called upon to discuss it, I desire to say, first, that there is a very practical side to this question. We can not tell just how much revenue is to be derived from the feathers of the particular birds referred to in the amendment now being debated, but there was last year derived from feathers, either dressed or undressed, \$1,820.000. It is proposed to abolish that tax, which is a tax upon luxury, and impose it upon industry. It is proposed to wipe out that tax, which is a tax upon luxury pure and simple, and to put it upon the necessities of life. It is proposed to take that tax from those who can afford to pay it and impose equivalent burdens, which, in large measure, must fall upon those who are already staggering beneath too great a load.

There is not a woman who wears an aigret upon her bonnet, there is not a woman who buys an imported feather, but is buying something she could do without. Imported feathers are not necessities, they are luxuries. The proposition is to transfer a tax of \$1,820,000 from luxuries and put it upon necessities.

When you come to that proposition, I have more sympathy with the human beings who must pay the \$1,820,000 upon their necessities than I have for the long-legged, ungainly, useless, and altogether homely bird from which aigrets are obtained.

Of course we can work up a lot of maudlin sympathy in talking about the wrongs and outrages of birds. We can picture the mother bird hovering over her nest, with her fledglings there looking up to her for food, we can depict the cruel monster who comes along and ravishes the bird of its life, and leaves the poor, innocent offspring to die, and we can get ourselves into a very frenzy of sympathy for the birds. But, Mr. President, that kind of sympathetic twaddle need not be limited to birds. not a single animal in all this world you can not create sympathy for by the same kind of argument. Witness the domestic The mother cow has been taught to look to her master for friendly protection. She comes confidently into the corral at night; she generously yields him her milk for the sustenance of himself and his family; she brings forth a little innocent calf, that plays and gambols and looks at him from the unsuspecting depths of mild eyes; that licks his hand and rubs its head against him; that follows him about in complete reliance and calf-like friendship. One day the monster man seizes the confiding, helpless creature, beats out its brains with a bludgeon, cuts its throat with a cruel knife, and with bloody hands tears the skin from the quivering flesh, cooks the meat, and with cannibal ferocity devours it and feeds it to his children.

Thus, we can easily work ourselves into a frenzy over the common barn-yard calf. Why, sir, I can make a speech upon the wrongs of a slaughtered calf that will appear a classic in comparison with the panegyric which has just been delivered upon the awkward, ungainly, long-legged swamp birds of South America from which we get aigrets.

Thus, we may rave over the calf and count his wrongs and fill our eyes with sympathetic drops, but just the same we continue to order our yeal chops and breakfast on calf's liver.

However, some one replies, the calf is used for food, and therefore its slaughter is justifiable. Mr. President, that may be all right for us, but how about the calf? When a calf is led out to slaughter the knowledge that it will soon fill a human stomach can not assuage its dying agonies. If that knowledge can rob death of its terrors, I might reply with equal force that the swamp herons' afflictions are doubtless solaced by the thought that it is only a miserable, homely creature, of no use on earth except for one feather, and that its departing agonies must be alleviated by the knowledge that that feather will soon go to glorify and adorn my lady's bonnet.

If it is wrong to kill animals for one purpose it is for another. If it is wicked to kill them to put them on our backs it is equally reprehensible to kill them to put them into our stomachs. But if they may justly be killed when they serve a useful purpose, if that is what God made them for when he created the earth and the fullness thereof, then the animal must

give way to the necessities and delights of man.

If you are not going to adopt that theory, Mr. President, we have no right to kill a single animal except in self-defense; neither have we the right to enslave an animal. If we have

the right to kill an animal for meat we have an equal right to kill a bird for its skin or its feathers. It is all a part of the same harsh philosophy of terrestrial life. Man stands at the apex of the pyramid and all beneath him must contribute to his welfare and comfort. It may be hard on the animal, but it is the economy of nature established by God Almighty.

Mr. President, let us see: Here is a thing of beauty. which is beautiful is of utility, for it contributes to the delights of living, to elegance, refinement, and the cultivation of the artistic nature of the race. I do not know that I can specially describe the beauty of an aigret or the beauty of any plume upon a woman's hat, but I do know that the women understand what pleases the eye, and that they have chosen these articles of adornment through all the ages, since and before civilization brought reformers and sentimentalists. I take it feathers contribute to the satisfaction of the ladies. It follows, of course, that they must add to the pleasure of the men. So here are these birds, from which the aigrets are procured, that are hatched and live and die in the almost inaccessible swamps of South America, and we are told that it is wicked to kill them for their feathers. But the same gentlemen declare it is all right to kill the wild duck for its meat. I say that sort of logic is mere rot. If it is right to kill the birds for one purpose it is for the other.

I come now to the question of protecting birds, because birds have a utility. I believe birds in our own country do have a real value. Their gay plumage and their sweet song contribute to the delights of the eye and to the pleasures of the ear, besides they serve another utilitarian end, namely, the destruction of insects. But when you say to the people of the United States, you can not buy the feathers of birds that were born in foreign lands, that were brought here from the heart of Africa or South America, or the remote islands of the sea, you thus say to the people of this country who are handling feathers, you must slaughter and kill the home birds. And they will slaughter and kill the home birds. Just as the tariff upon lumber tended to the destruction of the American forests and the preservation of the Canadian forests, so will this tend to the destruction of the American bird and the preservation of the foreign bird.

Why, sir, as you approach the Canadian line you find on this side of it a waste of land covered with stumpage and undergrowth and on the other side the towering pines lifting their magnificent heads in grandeur and sublimity toward the skies, as they did before the sound of the ax resounded through the primeval forest. But on this side of the line the monarchs of the woods are gone. Why? Because we taxed the lumber when it came in, and thus we put a premium on the Why? Because we taxed destruction of our own forests.

The amendment that is proposed to the bill ought to be entitled "An amendment to encourage the slaughter of American birds and to protect the birds of foreign countries." I am opposed to that kind of legislation. I insist that this revenue which now springs from ornaments, from luxuries that people can do without and that only those people pay who can afford to pay—that this revenue which comes chiefly from the pockets of the wealthy and is laid absolutely upon a luxury shall continue to be laid upon that luxury and not be taken from it and put upon the blankets of poor people-upon the woolen cloths and cotton fabrics that are worn by the man and the woman who toil from morning until night, who grind in the mills of labor and who walk in the paths of adversity.

I have nothing against the bird, but I have more interest in human beings

The PRESIDING OFFICER (Mr. Robinson in the chair).

The reading of the bill will proceed.

Mr. JONES Mr. President, I should like to return to paragraph 212 to offer an amendment. It will take probably just a few minutes to dispose of it.

Mr. WILLIAMS. I think that paragraph was passed upon, and it is out of order to go back to it now.

Mr. JONES. I understand that we can go back to any para-

Mr. WILLIAMS. Very well; but I hope Senators will keep trace of the bill and that when we get through with a paragraph we will be through with it hereafter. I shall not make any point against it.

Mr. WARREN. Was the paragraph passed over?

Mr. JONES. Not paragraph 212. Mr. WARREN. I think it was the general understanding, and it was consented to on the other side, that we could turn

back to any paragraph.

W. WILLIAMS. The understanding was that the amendments of the committee should be considered when we reached a paragraph, and then we would consider any other amend-

ment, and unless it was passed over by unanimous consent it could not be returned to as in Committee of the Whole.

Mr. WARREN. That was not the understanding

Mr. WILLIAMS. But I am not making the point. I merely hope that hereafter Senators will keep up with the paragraphs as we get to them, and then if a Senator wants to have a paragraph passed over we shall pursue the course we have been pursuing and have it passed over. Then all Senators will know that it will be returned to.

Mr. WARREN. I agree with the Senator that we should pursue that course as far as possible, but I remember the reply of the chairman of the committee, when I interrogated him, that these items could be turned back to at any time before finishing the bill. Such a course is necessary, and must

be followed as agreed upon.

Mr. WILLIAMS. I understood the chairman of the committee to agree with the Senator that any paragraph could be returned to later, but that that question was to be submitted to the Senate when we got to it, before we passed from the con-

sideration of the paragraph.

Mr. JONES. I have the understanding that the Senator from Wyoming has expressed. I did not desire to take up the time of the Senate yesterday in delaying the bill to ask that the paragraph be passed over.

The PRESIDING OFFICER. The Secretary will read the paragraph.

The Secretary read the paragraph, as follows:

212. Hops, 16 cents per pound; hop extract and lupulin, 50 per cent

The PRESIDING OFFICER. The amendment of the Senator from Washington will be stated.

The SECRETARY. At the end of the paragraph insert the following proviso:

Provided, That all hops when imported shall have the name of the packer or grower and, beneath the same, the name of the country and the particular hon district wherein the hops were grown and the year of production of the hops indelibly stamped or branded upon each container, and in a place that shall not be covered thereafter, except by outside containers marked the same as the inside container: Provided further, That all hop extract and lunulin when imported shall have the name of the packer or grower and, beneath the same, the name of the country and particular hop district wherein were grown the hops from which the hop extract or lupulin were extracted and the year of production of the hops indelibly stamped or branded upon each container, and in a place that shall not be covered thereafter, except by outside containers marked the same as the inside containers.

Mr. JONES. Mr. President, I desire to congratulate the committee upon retaining a sufficient amount of duty upon this one agricultural product and to call attention to the fact that the amendment which I have proposed does not propose an increase of the duty, but proposes marks and designations for the prevention of fraud.

The amendment I have proposed is very similar to other provisions in the bill of which the committee have approved. For instance, in paragraph 123, in reference to "table, butcher, carving, cooks', and so forth, knives," they have provided that these articles when imported shall have the name of the maker or purchaser, and beneath the same the name of the country of origin indelibly stamped or branded thereon. Then, in paragraph 163, there is a similar provision in reference to watches and watch movements. The similar provision is, I suppose, for the purpose of assuring the purchaser that he is getting what he desires and what he thinks he is getting. There is a great deal of complaint with reference to hops that are imported being mixed and being sold for what they are not.

I have a letter from the Agricultural Department in reference to the matter. I wrote to them and asked them for any information they could give me with regard to the necessity for an amendment of this character, because it had been called to my attention that hops were mixed and imported here as a certain kind of hops when they were not that sort of hops. are different kinds of hops and of different quality. Some are more desirable than others, and they command a higher price and are sought after by those who use them for certain pur-

The Agricultural Department writes me that-

The Agricultural Department writes me that—
The Bureau of Chemistry has conducted work to determine whether the food and drugs act might be invoked to prevent certain frauds in connection with imported hops, particularly from England and Germany, mixed with Bohemian, and sent to this county as Bohemian hops.
There seems to be no method at present that can be relied upon to distinguish one kind of hops from another. Some of the work done would probably enable the department to ultimately distinguish chemically between different varieties. Just as soon as this work has advanced to that stage the department can proceed against such hops under the food and drugs act.

So about the only recourse we have, and that may not, of course, accomplish all the purpose desired, is to require those importing hops to mark them so as to give us an opportunity,

if they are not what we are getting or what we desire, to see whether there has been actual fraud. That is the very purpose of this amendment. The department says:

It is the opinion of our experts that the passage of the proposed leg-lslation would only partially remedy the abuses, its chief value being that it would draw the attention of European governments to the frauds which they are perpetrating.

Mr. President, that is the sole purpose of this amendment. It is to protect those who need in their business imported hops from being defrauded as far as we can go. According to the department it is impossible for them to determine by chemical means or means at their command in every instance whether fraud has been practiced or not. So it is in the hope of protecting them somewhat that this amendment is offered. As I said, it is very much in line with other provisions of the bill, and I hope that the Senator in charge of the bill will not be disposed to object to this amendment, which is really to protect our own people from fraud, which it is admitted is perpetrated by those

sending hops into this country.

Mr. WILLIAMS. Mr. President, contrary to our general course in this bill this is a paragraph which we left undisturbed. The rate which is carried now is the rate which was carried under the Payne-Aldrich bill. We left it undisturbed because hops enter mainly into the manufacture of beer and malt liquors and things of that sort not necessary to life. We

thought it was a very good article to get revenue on.

Whatever may be the purpose in the mind of the Senator from Washington-and I know, of course, it is just what he states-the effect of the amendment proposed by him would be to hamper still further the importation of hops without adding a dollar of revenue for the Government and in proportion as we hamper by taxation regulations the importation it might possibly decrease the revenue.

I hope the amendment will not be adopted.

Mr. JONES. How could it hamper the importation of hops to require them simply to bring to our country and sell to our

people what our people are asking for?

Mr. WILLIAMS. There are some provisions of this sort applied to cutlery, to keep a man from selling cutlery of one make as the cutlery of another and deceiving the purchaser. Here is a hop and there is a hop, and the Agricultural Department says, by the Senator's own admission, that it can not tell them apart, they are so nearly the same. You want to brand them so that somebody will know them apart. The Bureau of Chemistry can not tell them apart, and the purchaser does not, by looking at and feeling them when buying, know them apart, if I understand the situation.

Mr. JONES. I desire to call the attention of the Senate to the fact that hops grown in a certain locality are known to be of a particular quality; that is, they have a peculiarity due to them. The purpose of the amendment is to have the hops grown in that locality so marked, just as cutlery that is made abroad and imported is marked as coming from a certain place.

That is the sole purpose.

Mr. WILLIAMS. That is to keep them from putting off inferior cutlery as the make of a house that makes better cutlery.

Mr. JONES.

Mr. JONES. So is this to prevent—
Mr. WILLIAMS. I know there is a fancy price for Bohemian hops, because Bohemia makes an excellent beer, and there is an idea that Bohemian hops will make it; but the Senator has just confessed that the Agricultural Department Itself says it can not chemically or otherwise tell the difference between Bohemian and other hops, and if it can not they must be wonderfully alike.

Mr. JONES. Their failure to do it is all the more reason

why we should make this safeguard.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Washington.

The amendment was rejected.

The Secretary read the next paragraph, as follows:

218. Straw, 50 cents per ton.

Mr. GRONNA. I wish to offer an amendment to paragraph 218

The PRESIDING OFFICER. The Secretary will read the

The Scenetary. On page 60, line 3, strike out the words "50 cents" and insert "\$1," so as to make the paragraph read:

218. Straw, \$1 per ton.

Mr. GRONNA. Mr. President, this is not a large industry in this country, but I believe that we ought to protect those who live along the border line whether it is to the north or to the south.

Mr. WILLIAMS. Speak for the North, not to the South, at any rate. If the Senator from North Dakota will pardon me a

moment, last night we read paragraph 217 and adopted the Senate committee amendment to it, and had an understanding that certain further amendments to that paragraph would be introduced by the Senator from Utah [Mr. Smoot] this morning. If we could dispose of his amendments first, then we would come to the succeeding paragraph. I think that would be a more orderly way of proceeding.

Mr. GRONNA. I shall take only a moment.
Mr. WILLIAMS. Very well.
Mr. GRONNA. I simply want to state that the Canadian rate per ton on straw is \$2 per ton. The present rate is \$1.50 per ton, the same as was the Dingley rate. The Wilson rate was 15 per cent ad valorem. There is some business transaction in straw. The imports for 1912 were 10,268 tons, valued at \$56,890, with a revenue of \$15,401.86. We exported 1,030 tons. with a value of \$11,559. There were sold by farmers in 1909 537,699 tons. The amount received was \$3,189,424.

I shall not ask for a roll call on my amendment, but simply

for a vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from North Dakota.

The amendment was rejected.

Mr. SMOOT. Mr. President, in paragraph 217, on page 59, line 19, I move to strike out the words "canary seed, one-half cent per pound."

These seed are on the free list in paragraph 668 under the present law. There were imported in the year 1912, 4,704,625 pounds. The value of it was a little over 2 cents per pound. That is the importation value. Even in the Wilson law canary seed was on the free list. It has always been on the free list, and I can not see why it should be taxed now one-half cent per pound.

Mr. SIMMONS. What are canary seed used for?

Mr. SMOOT. They are mostly used for seed for canary birds

and also for an extract.

I move to strike out those words, and if carried, I shall then move that canary seed be put on the free list in its proper

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Utah, which will be stated. The SECRETARY. In paragraph 217, page 69, line 19, strike out

the words:

Canary seed, one-half cent per pound.

The amendment was rejected.

Mr. SMOOT. On the same line of the same paragraph I move

to strike out "caraway seed, 1 cent per pound."

Caraway seed to-day is on the free list in paragraph 668 of the present law. There were imported in the year 1912, 3,616,481 pounds. The value of it is nearly 5 cents a pound. The imposition of 11 cents per pound is 20 per cent ad valorem on its present valuation. Caraway seed has always been on the free list, even under the Wilson law. It is used in cooking mostly and in the flavoring of food. It is used by the common people I can not see why this duty should be placed of the country. upon that seed.

Mr. WILLIAMS. Mr. President, there are several of these articles placed upon the dutiable list that hitherto have been on the free list. The Senator was wrong in saying that caraway seed had always been on the free list. It was taxed 30 per cent

ad valorem under the Dingley tariff.

Mr. SMOOT. That is only a certain class of caraway seed, and that went before the board of appraisers, and it was afterwards decided that it was wrong.

Mr. WILLIAMS. The Payne tariff law had a part of it at 30 per cent and a part free. The Dingley tariff law had 30

per cent.

I want to explain why we took this course as to these several articles, and then I shall ask for a vote. Both caraway seed and anise seed are taxed here and both have always been free. Both plainly enter into the class of luxuries. Neither one of them forms any part of a necessity of life. Anise seed and them forms any part of a necessity of life. Anise seed and caraway seed are put into little cakes and things of that sort. It is very nice and very sweet, but we did not see why the consumers of cakes with caraway and anise seed in them should not pay revenue to support the Government of the United States. We thought that men could dispense with even caraway-seed cake and anise-seed cake, if they wanted to do so, without any great detriment to their physical constitution.

The PRESIDING OFFICER. The question is on the amend-

ment of the Senator from Utah.

The amendment was rejected.

Mr. SMOOT. I desire to move an amendment in line 20, striking out the words "anise seed, 2 cents per pound."

Anise seed to-day is free under paragraph 668. Of course the statement made by the Senator from Mississippi covers anise

seed as well as caraway seed, with one exception. A great deal of anise seed is used for oil and goes into the commercial life of the country. It goes into the hospitals and into the medicine chests of the people of the country.

The PRESIDING OFFICER. The question is on agreeing

to the amendment proposed by the Senator from Utah, on page 59, line 20, to strike out the words "Anise seed, 2 cents per pound." [Putting the question.] The noes seem to have it.

Mr. BURTON. The bill imposes a duty of 37 per cent upon

an article which has heretofore been free. I ask for the yeas and nays upon the amendment.

The yeas and nays were ordered, and the Secretary proceeded

to call the roll.

Mr. LANE (when Mr. Chamberlain's name was called). wish to announce that the senior Senator from Oregon [Mr. CHAMBERLAIN] is unavoidably absent, and that he is paired with the Senator from Pennsylvania [Mr. OLIVER].

Mr. GRONNA (when Mr. McCumber's name was called). I wish to announce that my colleague [Mr. McCumrer] is necessarily absent on account of illness in his family. He is paired with the senior Senator from Nevada [Mr. NEWLANDS]. I wish this announcement to stand on all votes for the day.

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from New York [Mr. Root]. I transfer that pair to the Senator from Oklahoma [Mr. Gore] and vote. I vote "nay."

Mr. WILLIAMS (when his name was called). I am paired with the senior Senator from Pennsylvania [Mr. Penrose]. I transfer that pair to the senior Senator from Maryland [Mr. SMITH] and vote. I vote "nay."

The roll call was concluded.

Mr. CLARK of Wyoming. I have a general pair with the Senator from Missouri [Mr. STONE]. In the absence of that Senator, I withhold my vote.

Mr. BANKHEAD. I have a pair with the Senator from West Virginia [Mr. Goff], and therefore withhold my vote.

Mr. SAULSBURY. I transfer my pair with the junior Senator from Rhode Island [Mr. Colt] to the Senator from Nebraska [Mr. Hitchcock] and vote. I vote "nay."

Mr. CLARK of Wyoming. I transfer my pair with the Senator from Missouri [Mr. Stone] to the Senator from Maine

[Mr. Burleigh] and will vote. I vote "yea."

Mr. SHIELDS. I wish to announce the pair of the senior Senator from Tennessee [Mr. Lea] with the senior Senator from Rhode Island [Mr. Lippitt]. The senior Senator from Tennessee is necessarily absent from the Senate to-day.

Mr. GALLINGER. Mr. President, I have been requested to

announce that the Senator from Delaware [Mr. DU PONT] is paired with the Senator from Texas [Mr. Culberson]; the Senator from West Virginia [Mr. Goff] with the Senator from Alabama [Mr. Bankhead]; the Senator from Maryland [Mr. JACKSON] with the Senator from West Virginia [Mr. CHILTON]; and the Senator from Pennsylvania [Mr. OLIVER] with the Senator from Oregon [Mr. CHAMBERLAIN].

The result was announced—yeas 26, nays 37, as follows:

YEAS-26.

Brady Brandegee Bristow Burton Catron Clark, Wyo. Crawford	Cummins Dillingham Gallinger Gronna Jones Kenyon La Follette	Lodge McLean Norris Page Perkins Poindexter Sherman	Smoot Sutherland Townsend Warren Weeks
	NA NA	YS-37.

Burleigh	Goff	Nelson	Sterling
Chamberlain	Gore	Newlands	Stone
Chilton	Hitchcock	Oliver	Thornton
Clapp	Jackson	Penrose	Works

So Mr. Smoot's amendment was rejected.

The reading of the bill was resumed, and the Secretary read as follows:

220. Vegetables in their natural state, not specially provided for in this section, 15 per cent ad valorem.
221. Fish, except shellfish, by whatever name known, packed in oil or in oil and other substances, in bottles, jars, kegs, tin boxes, or cans,

20 per cent ad valorem; all other fish, except shellfish, in tin packages, not specially provided for in this section, 15 per cent ad valorem; caviar and other preserved roe of fish, 30 per cent ad valorem; fish, skinned or boned, 2 of 1 cent per pound.

Mr. SMOOT. I ask the Senator from Mississippi [Mr. WIL-LIAMS] to let paragraph 221 go over for a few moments only. The senior Senator from Massachusetts [Mr. Lodge] has been obliged to go to the State Department and will return in a short time.

Mr. WILLIAMS. Mr. President, I promised the Senator from Massachusetts, who had to go to the State Department, to let the paragraph go over, meanwhile giving him an opportunity to return to the Chamber

The VICE PRESIDENT. The paragraph will be passed over. The reading of the bill was resumed and continued to the end of paragraph 223, which is as follows:

223. Figs. 2 cents per pound; plums, prune, and prunelles, 1 cent per pound; raisins and other dried grapes. 2 cents per pound; dates, 1 cent per pound; currants, Zante or other, 2 cents per pound; olives, 15 cents per pound; per pound; per gallon.

Mr. WILLIAMS. Mr. President, the Senator from Washington [Mr. Jones] asked me to get consent to recur to paragraph 223 when he returned to the Chamber, as he desires to offer an amendment to it. I ask that the paragraph be now passed over for that purpose.

The VICE PRESIDENT. In the absence of objection, it will be so ordered.

The reading of the bill was resumed and continued to the end of paragraph 225, which is as follows:

225. Lemons, limes, oranges, grapefruit, shaddocks, and pomelos in packages of a capacity of 1½ cubic feet or less, 18 cents per package; in packages of capacity exceeding 1½ cubic feet and not exceeding 2½ cubic feet, 35 cents per package; in packages exceeding 2½ and not exceeding 5 cubic feet, 70 cents per package; in packages exceeding 5 cubic feet or in bulk, ½ of 1 cent per pound.

Mr. WILLIAMS. Mr. President, paragraph 225 is incorrectly printed. It ought to be printed:

Lemons, limes, oranges, grapefruit, shaddocks, and pomelos, & of 1 cent per pound.

Of course I am forced to offer an amendment to print it in that shape. I move, then, in behalf of the committee, that that paragraph be amended so as to read:

Lemons, limes, oranges, grapefruit, shaddocks, and pomelos, 3 of 1 cent per pound.

I move that substitute for the paragraph as it reads; in other words, the proposition is to strike out all the language about packages, capacity, and so forth.

Mr. SMOOT. I was going to call the Senator's attention to nat. As the caucus print did not have those words in it, I wondered why they were put into the bill as we have it before us.

Mr. SIMMONS. It is a mere mistake.
Mr. WILLIAMS. The committee had it one way at one time and another way at another time. That explains the fact that it was printed differently at different times.

Mr. WARREN. Does that change the rate at all? Mr. WILLIAMS. In my opinion, it slightly raises it, but the Senator from Florida and other Senators contend that it keeps it precisely as it was. I think the practical effect will be to raise is slightly at the end of the classifications, but very

Mr. WARREN. The intention, then, is not to change the rate, but to make it more intelligible or more easily applied?

Mr. WILLIAMS. It fixes the rate at one-half of 1 cent a pound. I have a letter here from Mr. Underwood, in which he savs:

My dear John-

It is addressed to me-

Your favor of the 25th instant in reference to paragraph 277-

Which it was then of the House bill-

reached me to-day. The Ways and Means Committee changed the rate of duty from so much a pound—

Which it was in the Payne-Aldrich bill-

to the cubic contents of the package for administrative reasons solely. We believed that the old method of levying this tax on the cubic contents of the package was more satisfactory than the pound rate. Our intention was to levy a tax of one-half a cent a pound on lemons and oranges, and from the information we have received on the subject I think that you will find that this is carried out substantially in our

Sincerely, yours, O. W. UNDERWOOD.

So that this is in essence a mere administrative change back to the pound method of levying the tax.

Mr. GALLINGER. Do I understand the Senator from Mississippi to say that it does not change the rate in the existing law?

Mr. WILLIAMS. Oh, yes; it does that. But it cuts the rate as in the House bill 50 per cent upon everything except lemons,

and 62% per cent on lemons below the rates of the Payne-Aldrich

Mr. GALLINGER. Then what the Senator said was that it did not change the rate of the House bill?

Mr. WILLIAMS. It does not essentially change the rate of

the House bill.

Mr. SMOOT. Mr. President, of course if those words were left in the paragraph it would decrease the rate of one-half of 1 cent a pound. A duty of 18 cents on 45 pounds of lemons would be equivalent to four-tenths of 1 cent per pound; a duty of 35 cents on 90 pounds of lemons, the amount in a 21 cubic foot box, would be equivalent to thirty-eight one-hundredths of a cent a pound; so that if this amendment is agreed to-

Mr. WILLIAMS. As it passed the House— Mr. SMOOT. If the Senate agrees to the amendment offered by the Senator from Mississippi, there will be an increase on lemons, limes, oranges, grapefruit, and so forth, over the rates as reported to the Senate.

Mr. WILLIAMS. On certain classifications of them.

Mr. SMOOT. Yes; that is what I say. I am calling attention to those classifications. There will be an increase if this amendment be adopted.

Mr. BURTON. Mr. President, what provision is made for the administrative features mentioned by the chairman of the Ways and Means Committee with regard to the weight of the container or package? Suppose the lemons weigh a hundred pounds and the package used weighs 20 pounds, how is the weight to be ascertained?

Mr. WILLIAMS. The weight has been ascertained hitherto by taking the lemons out and weighing them. I was much astonished to have some testimony before the subcommittee to that effect. It struck me as the most curious and absurd thing that I had ever heard of any intelligent administrators of any law doing.

It seems to me that they could have made a calculation of the weight of the boxes and deducted it without going through all that troublesome course. That, it seemed to our committee, subjected the Government now and then to a charge for fruit that was in the process of weighing, emptying, and so forth, destroyed or injured, and on which the Government could not collect the tax, which it would not be subjected to in the package. The intention of the House committee was to make a package rate which would amount to one-half of 1 cent per pound upon all these fruits, and Mr. UNDERWOOD, in his letter, says that he thinks if I would go through it all I would find that they substantially did that to reduce the rate to one-half of 1 cent per pound. Of course the Senator readily understands that all jumping duties vary. When you get to a certain class, as a matter of fact, one end of that class bears one rate and another end bears another rate; so that this when you reduce it to the pound rate, is a method of levying the tax at approximately the same pound rate per package rate. It does, as the Senator from Utah says it does, raise the duty somewhat upon the ends of the classification, but the administrative purpose which the House leader had in his mind was that it was much easier to count boxes than it was to

Mr. BURTON. But how can the weight of these packages be estimated unless you enforce a custom, which seems to have been somewhat in vogue, of taking the fruit out of the package and separating it entirely, thereby compelling a repacking?

Mr. WILLIAMS. I have been informed that if the lemons were all imported from the same country, the boxes would substantially weigh the same, but lemons imported from one country may come in boxes made out of thick, heavy wood, while those imported from another country may come in boxes as light as cottonwood, and very thin. There are different methods of packing in different countries. Messina lemons are packed in very rough boxes that weigh more than is necessary. So in administering the law the customs department were in the habit of weighing the lemons themselves independently of the containers.

Perhaps, after a long course of time, if they were to fix a tare, as they do on cotton, for example, when it is sent to Liverpool-an agreed tare to be deducted from every bale of cotton for bagging and ties-it would have the desired effectand I do not see why the administrators do not do it-of making everybody try to put his lemons in a box that would come as nearly to the agreed tare as possible or below it; but they have not hitherto adopted that means of administering the law. It seems to me that their method of doing it has been very awkward and expensive to the revenue.

Mr. SMOOT. I will say to the Senator that the reason that has not been done in the past, in my opinion, is that wherever a part of the fruit has rotted or became worthless an allow-

ance has been made, wherever a pound rate has been imposed, for the amount of fruit in that condition. That, of course, was held, as the Senator knows, in the case of Harris v. United

Mr. WILLIAMS. In connection with a case concerning grapes in packages it was decided by the courts that they had a right to do the same thing.

Mr. SMOOT. Absolutely; and of course it will hereafter apply to lemons, oranges, or any other kind of fruit.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

Mr. LODGE. Mr. President, I inquire if this paragraph has been completed?

Mr. WILLIAMS. I had an agreement with the Senator from Massachusetts to recur to the fish paragraph.

Mr. LODGE. I am much obliged to the Senator for passing it over. I am now ready to go on with that paragraph.

Mr. WILLIAMS. Very well.

The VICE PRESIDENT. The Secretary will read the paragraph with the committee amendment.

The Secretary. On page 60, paragraph 221, line 9, after the word "cans," it is proposed to strike out "20" and insert "25," so as to make the paragraph read:

221. Fish, except shellfish, by whatever name known, packed in oil or in oil and other substances, in bottles, jars, kegs, tin boxes, or cans, 25 per cent ad valorem; all other fish, except shellfish, in tin packages, not specially provided for in this section, 15 per cent ad valorem; caviar and other preserved roe of fish, 30 per cent ad valorem; fish, skinned or boned, 3 of 1 cent per pound.

Mr. LODGE. Mr. President, I wish to make a plea for a great industry which by the provisions of this bill is injured in all its parts, while that portion of the industry in which my State is particularly interested is menaced with total destruction.

It has always seemed strange to me that it should be the custom to place the fish paragraph in the middle of the agricultural schedule; but there is this to be said, Mr. President, that the fisherman and the farmer, although the crops which they gather are very different, have had much the same treatment at the hands of the Government. Neither the fisherman nor the farmer has ever received a high protection in any law that has been passed, although, as I shall presently show, the fisheries have been the care of the Government from the beginning.

In every attempt at reciprocity the fisherman and the farmer have been those who have been sacrificed. Sometimes it has been the fisherman alone; sometimes, as in the last attempt, the fisherman and the farmer together; so that they have received a similarity of treatment, they have been companions in misfortune, even if there is no likeness between their respective employments.

The fisheries of which I wish particularly to speak are those known as the northeastern fisheries, carried on upon the Great Banks and in the waters of New Foundland. The fisheries of the Great Banks are the oldest and the most historic industry connected with the American Continent. Fishermen from England and from France were on the banks fishing for nearly a century before a single white settlement had been established in the territory now known as the United States. Those fisheries were, of course, continued, and they became a principal source of wealth to the Colonies.

The salted fish gathered by the New England fishermen were shipped to the West Indies and to the southern colonies, where they were very largely used.

The fishing industry was the basis of our commerce in colonial days. How important it was and how much was thought of it at that time is shown by the fact John Adams considered it one of the greatest triumphs of his life that he had been able, in the treaty of Paris, to save the northeastern fisheries and secure for us the privileges on the New Foundland coast, which substantially we enjoy to-day. So great a pride did he feel in it that he had a seal ring engraved on which he put the Latin motto, "Piscemur venemur ut olim"—"We shall fish and hunt as of yore "—and his son, John Quincy Adams, I believe, used that same ring with the same motto when the treaty of Ghent was signed.

The fisheries were regarded by all Americans in those days as a matter of great importance. From the time of the famous report on fisheries, prepared by Mr. Jefferson when he was Secretary of State, onward especial care was given to the fisheries. Although the protection afforded them by the Government was of a moderate kind, it was the belief of all the public men of that day that the fisherles deserved the fostering care of the Government, wholly apart from the question of protection to an industry. Of course, at that time there was a consideration

weigh the fruit.

which to-day, with our enormous population, is no longer so serious, which was that the fisheries were the nursery of the seamen

who manned the ships of the American Navy.

In the tariff of 1789 salt fish were given a duty of 50 cents per quintal; mackerel, 75 cents per bushel. In 1816, which was a Democratic tariff, carried through under the leadership of Mr. Calhoun, the duty on salt fish was a dollar per quintal, or about 1 cent per pound; and on mackerel \$1.50 per bushel, or about three-fourths of a cent a pound. The average was about the same as the present rate, so far as the specific duty to-day is concerned, but as the price was lower in those days, the ad valorem rate was higher. In 1842 mackerel and herring each paid 1½ cents per pound, other fish in barrels 1 cent per pound, while all other fish paid 20 per cent ad valorem.

Those duties have remained, except during periods of reciprocity, substantially unchanged down to the present time. It is now proposed to put all fresh and all smoked and dried fish on the free list. This is not a reduction; it is the complete removal of the duties. I now ask the Senate to consider the conditions of the industry thus severely treated, for they are, I venture to say, different from those of any other industry in

the country.

It costs no more to bring a fare of fish from the Great Banks or from the treaty waters to Boston or to New York in a Cana-dian fishing smack than it does in one that sails from Gloucester or Provincetown. Therefore no freight protection is possible. I next ask you to consider the conditions under which they have to compete with the fishermen of Canada and Newfoundland.

The fishermen of the United States are required by law to build their vessels in the United States. It costs more to build a vessel here. Apart from the labor, lumber is much cheaper in Canada. A Gloucester fishing vessel costing \$15,500 was duplicated in every particular in Lunenberg for \$9,400. Our people are obliged to build their vessels here. More than that, they are compelled by law to buy their outfits here. They can not buy their nets, their cordage, their sails, their hooks anywhere but in this country. All the outfit of a fishing vessel, under the law, must be bought in the United States. On many of those

articles they necessarily pay a tariff duty.

With these burdens they start to confront their competitors. They are handleapped to this extent by the greater cost imposed upon them by law. I shall not go into the question of labor costs for the case is so strong that the comparison is needless. The President, in his message, said he wanted a fair field and open competition. We will assume, then, that the labor cost in the actual work of fishing is the same. The fishing fleet of Canada receive from their Government every year \$160,000 in bounties, paid to them in cash, the interest, or part of the interest, upon the Halifax award. In addition to that the Dominion Government pays one-third of the cost of the storehouses, the ice houses, or cold-storage buildings, where the fish is stored and preserved.

I quote from the Canadian Annual Review for 1911:

During 1910-11, \$332,300 was spent by the Dominion on fish-breeding establishments. And the usual \$160,000 of fishing bounty was paid in the Atlantic Provinces and Quebec—a total, since 1882, of \$4,580,204.

Mr. President, of course the money I spoke of as additional to bounty was not that spent in fish breeding; but the Canadian Government aids its fisheries by paying one-third of the cost of the construction of cold-storage plants, and makes rebates on the transportation of their products on all the failroads.

By this bill our fishermen will be forced to meet this bountyfed competition, while being compelled at the same time to use more expensive outfits and more expensive vessels, unaided and without any protection whatever. Under such conditions it is utterly impossible that our fishermen should continue to fish on the Great Banks or in the treaty waters.

If I may call your attention to the views taken of this matter on the other side of the line, the Halifax Chronicle, speaking

of this bill, says:

It will place the fishermen, particularly of the western shore of Nova Scotia, in practical control of the New England market for fresh fish * * * without any abandonment of national rights of any reciprocal concession of fishing privileges to Americans in Canadian waters.

Mr. WILLIAMS. Mr. President, if the Senator will pardon me, was that written at the time when the House bill was before the newspaper writer, or the Senate bill?

Mr. LODGE. It relates to the House bill.

Mr. WILLIAMS. The Senate bill raised this rate of duty 5 per cent from the House bill.

Mr. LODGE. I am not speaking of the fish that are left dutiable. I am speaking of the fish you put on the free list. The duty in paragraph 221, of which I am not speaking, covers the sardine industry of Maine, where the fish is packed in oil, and that is substantially all it does cover. It takes care

of the sardines which are packed in oil on the coast of Maine. They will not be injured. I am very glad that that portion of the fishing industry is to be preserved.

The Herald, of St. Johns, Newfoundland, a Province which was excluded from the benefits proposed by the Canadian reciprocity compact, could not refrain from saying as follows, although the provincial newspapers were urged to say nothing about it before this bill, so precious to them, became a law:

It would be difficult to imagine any change calculated to prove of greater value to this country than the grant of free entry of our fish into the United States. For years we have been seeking this, and vainly; we have been offering substantial concessions therefor in the past, and now it has come to us without our having to give any corresponding concession whatsoever.

The article goes on to say:

The advantage which will follow from this transformation of the industry will be enormous and will grow as the years advance, and opportunities for us in Newfoundland are such as never existed before.

That is what they expect from the removal of these duties. Why, Mr. President, for years Newfoundland and the maritime Provinces have been making every kind of offer, offering all sorts of concessions, in order to get an entry to our market and remove our duties. This bill will turn over the entire fishing industry of the Northeast-that is, the Great Banks and the treaty waters-to the Canadian and Newfoundland vessels. There is no escape from it. It will also turn over to them a large part of the packing industry that is not covered by paragraph 221—the smoked, dried, salted, pickled, or frozen fish, It will probably carry the packing industry with it in the end; but the fish that are now packed and preserved in the factories at Gloucester and elsewhere will be brought there henceforth in Canadian vessels.

Mr. President, I am unable to understand the theory upon which this industry is to be destroyed. We imported last year 5,000,000 pounds of fish from the Provinces. We produced 15,000,000 pounds ourselves. The duty is a large revenue raiser as it now stands. There has been no serious advance in the price of fish. The average profit on fish I will say here is less than the duty-less than three-fourths of a cent per pound. In seven years the price of fish has advanced only from 6 cents a pound to 6.2 cents a pound. It has advanced only two-tenths of a cent a pound in seven years, and that small advance is due undoubtedly to the increasing diminution of the catch.

This industry has another peculiar feature. The fishermen employed are paid directly from the catch. In the case of almost all the vessels that go out of Gloucester the fishermen on the vessel have one-half the profits and the captain and the owners have the other half. Therefore the pay of the men, like the profits of the captain and the owners, depends on the success of the voyage. Sometimes their profits are very large, if they have a good catch; sometimes the fares are very small. and the wages and profits go down. At its best it is not a very

profitable industry.

But the men who earn their living in the business are paid directly from the business. There is no such thing here as corporations or trusts or anything of that kind so far as the fishing is concerned. There are, of course, companies which pack and preserve the fish after it has been bought by them and delivered to them, and there are companies which have inthe men whose case I am trying to plead, depend for their livelihood on the result of their hands and their own catch. They are now to be displaced; their places will be taken by the Canadian and Newfoundland vessels. They will be forced to seek a living elsewhere.

We have pretty well rid ourselves of our merchant marine, and now we are preparing to take our flag from the seas where it still floats on the fishing vessels. Mr. President, I suppose it is thought that this is a small industry, perhaps; but even in the part of which I speak, which is only a fragment of it, there are 4,500 men who go out to the banks on the Gloucester fleet alone. That means a good many people dependent upon the earnings of those fishermen. There are 22,000 men engaged in the fisheries in New England. If we go farther afield, we find that Maryland has 18,000; Virginia, 20,000; New York, 18,000; California, Oregon, and Washington, 14,000; and the Lakes, 7,000. On the Lakes and in the Northwest, where the fisheries are just beginning to be developed, of course this matter of putting freeh fish smoked widdled. of putting fresh fish, smoked, pickled, and frozen fish on the free list is a heavy handicap to them, as it is to those on the east coast. The difference is that only the east-coast fishermen of Canada, so far as I know, receive the Government bounty, and I do not think it is distributed yet to the fishermen of the west coast.

In a case where we are getting revenue from an article, where there has been no advance in price, where everyone knows that the removal of the duty will not alter the cost of fish to the consumer at all, it seems to me utterly unfair, it seems to me cruel, to put this branch of the industry out of existence and to injure the industry as a whole everywhere.

Mr. LA FOLLETTE. Mr. President-

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Wisconsin?

Mr. LODGE. Certainly.

Mr. LA FOLLETTE. I have been following the Senator's interesting discussion of this paragraph, but I desire to inquire terms of the paragraph. just how and to what extent this bounty is distributed? I do

not think the Senator stated it.

Mr. LODGE. One hundred and sixty thousand dollars, the interest of the Halifax award, is distributed directly to the Canadian fishermen. It is given to the owners. I do not know whether they fish on shares, as we do, or not; but it is given in cash directly to the owners of the Canadian fishing vessels. I suppose it is pro rata, according to the tonnage of the vessels or the number of men on board. It is distributed in cash. The other help is indirect, in the form of rebates on the railroads, aid in the cold-storage warehouses, and so forth.

Here, then, we have a situation where it is utterly impossible for our men to compete. This bill simply gives the industry to the Canadian fishermen, wipes out the American fishermen of the banks and the treaty waters, and, so far as I can see, gets absolutely nothing in return. We do not get cheaper fish, get no benefit to the consumer. We throw away revenue.

extinguish a portion of a great industry.

Mr. DILLINGHAM. Mr. President, if the Senator will permit me, I think I can tell him where he can get the information asked for-from the Commercial Handbook of Canada. He can find there just what the bounty is and how it is paid.

Mr. LODGE. I am very much obliged to the Senator.

According to this volume the fishing bounty was first paid by the Dominion Government in 1882. As I read the totals, nearly \$5,000,000 have been paid out. The highest bounty paid per head—it is paid per head and to vessels—to vessel fishermen was \$21.75 in 1893; the lowest, 83 cents:

was \$21.70 in 1895; the lowest, 85 cents:

In 1908 vessels received \$1 per ton up to 80 tons; vessel fishermen, \$7.25 each; boats, \$1 each; boat fishermen, \$3.90 per man. The Canadian Government received, through the Imperial Government, \$4,490,882 as Canada's share in the fishery award made in 1877. Under the terms of the treaty of Washington, 1871, an amount equal to the interest of this sum was appropriated for bounty purposes to encourage deep-sea fishing on the Atlantic coast.

Mr. BRISTOW. Mr. President, I have been very much interested in the discussion, and I should like to inquire upon what theory the Canadian Government contributes such a liberal What are the purposes which they bounty to their fishermen.

seek to serve by so doing?

Mr. LODGE. They think it a very important industry to be maintained. They have always been buoyed up by the hope, which has been gratified at times by reciprocity arrangements, that they could get free entry into the American market. They believe, and I think they believe rightly, that if they pay bounties to their fishermen and encourage them in every possible way, and if we take off our duty and give nothing to our fishermen, they will get complete control of the American I think they are right as to that.

Mr. NELSON. Is it not a fact, too, that in respect to Newfoundland fishing is the only industry of any consequence, and unless it is fortified and maintained there hardly anybody will

be left on the island?

Mr. LODGE. What the Senator says is absolutely true. I

was about to make that statement.

Mr. NELSON. And it is such a distinct and important industry that I imagine that is one reason why Newfoundland did not enter the Dominion. Newfoundland is not a part of the Dominion Government to-day.

Mr. LODGE. No; it is not in the Dominion. Mr. NELSON. It is an independent Province, distinct from all the other Canadian Provinces; and I think the fishing industry is the main cause of that. It is the life of the country.

Mr. LODGE. It is; and the Senator, I think, is quite right in saying that they stayed out of the Dominion Government largely because they wished, if possible, to make separate arrangements with us, which they have been trying to do through reciprocity treaties. Now, we are going to give our market to them for nothing. Fishing is really the only industry of Newfoundland that is of the slightest consequence. It is the only industry, and in Newfoundland the vessels are all owned by what are known as the planters; that is, they are men of capital and corporations in St. Johns. They own the entire fishing fleet; and the inhabitants of the west coast, who do a great deal of the fishing there, are in a state of the greatest poverty.

In fact, it was made an issue in one of the recent elections in Newfoundland.

I do not know about the comparative labor cost. I made no attempt to show any difference in labor cost between the Canadian fishermen and the American fishermen; but there is no question that the Newfoundland boats, run as they are, and all in the hands of these rich owners in St. Johns, are run very much cheaper than ours, and I rather think somewhat cheaper than the Canadian boats; and, of course, they come in, They have besides the natural geographical advantage of neighborhood.

Mr. DILLINGHAM. I find also, while the Senator is speak-

ing on that subject, that-

Fish and other products of the fisheries of Newfoundland may be imported into Canada free of customs duty unless otherwise determined by the governor in council, by order published in the Canada Gazette; and fish caught by fishermen in Canadian fishing vessels and the product thereof carried from the fisheries in such vessels shall be admitted into Canada free of duty, under regulations of the minister of customs.

Mr. LODGE. Yes; they let in the Newfoundland fish free, while they have a duty on our fish. I have said nothing about

The bounty is enough.

Mr. NELSON. I also wish to call the Senator's attention to the fact that France has two islands for fishery purposes at or near the Newfoundland banks, which they retained under the treaty when they relinquished Quebec; and that is a great fishing ground for the Frenchmen.

Mr. LODGE. Yes; the French Government retained the islands of St. Pierre and Miquelon. The Breton fishermen come there, as they have come since the sixteenth century; but, of course, the product of the French fisheries is all taken to France.

Mr. President, these fishermen are a strong and hardy race. Their occupation is one involving a great deal of danger. Of late years the death list, I am happy to say, has been much reduced; but for a period of 25 years, up to a comparatively short time ago, the average loss of life every season in the Gloucester fisheries reached 100 and over. Mr. BRISTOW. Mr. President—

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Kansas?

Mr. LODGE. Certainly.

Mr. BRISTOW. I should like to inquire of the Senator if this policy of paying a bounty, in his judgment, has been in-augurated because this was regarded as a desirable occupation for British subjects in order to recruit sailors for their navy?

Does that enter at all into the question?

Mr. LODGE. The bounty is given by the Dominion Government. I do not know whether that consideration has entered into the matter at all or not as a source of supply for the British fleet, but I think it highly probable that it has. France the fishermen are encouraged. They receive bounties. They have special licenses which give them the sole right to fish. In return each one of the Breton fishermen has to serve three years in the navy; then he gets his license, and he gets certain

privileges, and every ship is given a bounty.

Mr. PERKINS. We have given bounties, too, at times.

Mr. LODGE. Yes; as the Senator from California suggests, there have been periods when we have given bounties. It has been the general policy of the world to encourage fisheries with

a view of making them a nursery of seamen.

With our great population, relatively few come from the fisheries, I suppose; but when the Spanish War occurred Gloucester sent a larger percentage of men into the Navy of the United States than any city or town in the country. While in seacoast cities like New York and Boston the average of men passed as physically fit for the Navy was only some 14 per cent, in Gloucester over 75 per cent passed. They sent nearly 500 men into the Navy. From a small town like Gloucester that was a pretty good contribution.

I asked an admiral of the Navy about those men. He said, "Why, they were the best men we could possibly get. We did not have to teach them anything. The moment they were on board the ship they knew the whole thing. You could put them into a boat and send them anywhere to do anything. They had to learn about big guns, and that was all." He told me that most of them rose to be boatswains and warrant officers at

They are a good population. They are a hardy, hard-working population. They carry on their industry at the risk of their lives in the gray and stormy seas of the North Atlantic. I think they are the kind of population it is well to encourage, just as it is well to encourage the men of the farm.

I am not saying what I do as to the danger to the north-eastern fisheries as a matter of alarm. There is not any ques-tion about it; it is utterly impossible for our people to carry

on the bank fisheries in competition with the bounty-fed fisheries of Canada and the poorly paid fisheries of Newfoundland. We can not do it. The bank fishermen of New England, of Massachusetts and Maine, where most of them are, will go out of existence.

I can see no reason whatever, on any principle of revenue or of protection or of free trade, for handing over our industries to our neighbors on the north who see fit to give a bounty to their fishermen. I can not see any reason for it, except, I suppose, that it is thought it would make an engaging cry upon the stump. That seems to be, as far as I can make out, the one coherent principle that runs through this bill. Will it make a pleasant cry when you get on the stump? "We have given you free fish; we have not cheapened it, but we have given you We have given you free sugar; we have not cheapened it, but you have free sugar. We have taken the duty off meat and off wheat, and so on." They will not lower the price by doing it. But it makes a pleasant cry upon the stump; and I can see no principle in such a plan as this, putting fish on the free list, except the principle of the stump speech, which is not an economic principle but a means of vote catching.

Mr. President, I offer the following amendment to go in as a

new paragraph before paragraph 221.

The SECRETARY. On page 60, after line 6, insert as a new

220%. Herrings, pickled or salted, smoked or kippered, % of 1 cent per pound; herrings, fresh, % of I cent per pound. Fish, fresh, smoked, dried, salted, pickled, frozen, packed in fee or otherwise prepared for preservation, not specially provided for in this section, % of I cent per pound; fish, skinned or boned, 1% cents per pound; mackerel, hallbut, or salmon, fresh, pickled, or salted, 1 cent per pound.

Mr. LODGE. On that I ask for the year and nays.

The yeas and nays were ordered.

Mr. WILLIAMS, I want to call the attention of the Senator from Massachusetts to section 5 of the bill. If the bounty system in Canada operates as a discrimination against us with regard to our fisheries, in section 5 the President—
Mr. LODGE. If the Senator will allow me, I examined that

with great care in the hope that there might be something there, but there is not. There is no discrimination against the United States in that bounty. It applies to all the world. Mr. WILLIAMS. It says here:

Which unduly or unfairly discriminates against the United States or the products thereof.

Mr. LODGE. It does not mention a bounty.

Mr. WILLIAMS. No; it does not mention eo nominee a bounty. It provides-

That whenever the President shall ascertain as a fact that any country, dependency, colony, province, or other political subdivision of government imposes any restrictions, either in the way of tariff rates or provisions, trade or other regulations, charges or exactions, or in any other manner, directly or indirectly, upon the importations into or sale in such foreign country of any agricultural, manufactured, or other product of the United States which—

"Which" refers back to all that-

which unduly or unfairly discriminates against the United States or the products thereof—

Then, the next clause is when found unduly discriminating upon the exportation of any article to the United States from that country, "or "-the next one is pretty broad-

does not accord to the products of the United States reciprocal and equivalent treatment, he-

That is, the President-

shall have the power, and it shall be his duty, to suspend by proclama-tion the operation of the provisions of this act.

And the first mentioned among the list of things upon which he may make this readjustment are "fish, fresh, smoked, and dried, pickled, or otherwise prepared."

Mr. LODGE. Mr. President, I examined that provision with the most anxious care, for I was in strong hopes that I could find something in it, something which would enable the President to impose the duties provided for in section 5 in the case of the payment of the Canadian bounty, but there is nothing in the wording of that section which gives him any power to do it. There is nothing discriminatory against the United States either in the duty that Canada imposes or the bounty she pays. To give the President power to act under section 5 there has to be a discrimination, and there is no discrimination here. It operates against us, and against us alone, it is very true, but it stands in the law as applying to all the world. There is no discrimination against our products, and the bounty is, of course, a domestic affair and does not come within that clause. I wish it did come within it, but there is no relief there.

Mr. BRISTOW. I understand the amendment offered by the

Senator from Massachusetts is the present law.

Mr. LODGE. Yes; it is the present law. It was not raised in 1909. It was not left entirely unchanged. It was reduced in some forms.

Mr. BRISTOW. I notice in the handbook that the ad valorem equivalent on the importations of 1910 for the first bracket was 6.72 per cent; on the second bracket, 12.86 per cent; on the third, 12.79 per cent; on the fourth, 13.32 per cent; and on the fifth, 16.20 per cent. That, I understand, is the ad valorem equivalent which these specific duties would impose. So the highest would be only a little over 16 per cent.

Mr. LODGE. The highest would be 16 per cent and the lowest 6 per cent. I am much obliged to the Senator from Kansas for calling attention to that, because it is a point which

I overlooked.

The existing duties are very low. The duties imposed are nothing but revenue duties, really, and why should that revenue be thrown away when you will not reduce the result of the reduction to the consumer? You throw away that revenue simply to give the whole business to the foreigner, to the Canadian, favored and supported by the bounty.

Mr. WILLIAMS. I find that the importations of fish of all sorts in the year 1910, the only year for which I have the full figures—I have them partly for the next year—amounted to \$3.931,863, in round numbers \$4,000,000, and the total consumption was twelve and one-half million dollars. It does not seem that we have suffered very much in the matter of "invasion"

or "inundation" of imports.

Mr. LODGE. I said when I began that 25 per cent of the fish consumed in the United States were imported, from which

we get revenue.

Mr. WILLIAMS. In other words, that equivalent ad valorem under the Payne tariff law was 29.9 per cent upon fish in oil or in oil and other substances.

Mr. LODGE. I have not been discussing any fish in oil. Those are taken care of. Those are the fisheries of the Maine

Mr. WILLIAMS. But the Senator need not get excited. I am discussing all of them.

Mr. LODGE. I am not getting excited. I was getting emphatic.

Mr. WILLIAMS. Well, emphatic, then. I am discussing the equivalent ad valorem. Taking the entire paragraph and the average ad valorem, we have only reduced it four and a fraction per cent, from 29.37 to 23.21, except when we come to caviar, which we have regarded as a luxury, and on which we have kept up the original figure. Fish, skinned or boned, we

have reduced 50 per cent.

Mr. LODGE. Mr. President—

Mr. WILLIAMS. I did not want to argue the case, but where less than one-third of the total consumption was imported—

Mr. LODGE. The figures the Senator from Mississippi has been reading—the paragraph he has been discussing—I have not alluded to at all. You have blotted out half the fish duty. Those are the ones I am speaking of.

Mr. WILLIAMS. You are talking of fresh fish?

Mr. LODGE. I am not speaking of the protection on the Maine sardine.

Mr. WILLIAMS. You are speaking about fresh fish.

Mr. LODGE. Fresh fish, salted fish, frozen fish, pickled fish. Mr. WILLIAMS. As to fresh fish, we have placed them upon the free list.

Mr. LODGE. You have also smoked, dried, frozen, and pickled, and all the salted fishes except sardines.

Mr. WILLIAMS. All right, Mr. President. The VICE PRESIDENT. The yeas and nays have been ordered on agreeing to the amendment proposed by the Senator from Massachusetts, and the Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. CLARK of Wyoming (when his name was called). I have a general pair with the senior Senator from Missouri [Mr. Stone], who is absent from the Chamber. I will transfer the pair to the junior Senator from Maine [Mr. Burleigh]. I vote "yea."

Mr. SHEPPARD (when Mr. Culberson's name was called). My colleague [Mr. Culberson] is unavoidably absent. He is paired with the Senator from Delaware [Mr. DU PONT].

Mr. KERN (when his name was called). I transfer my pair with the Senator from Kentucky [Mr. Bradley] to the Senator from Maine [Mr. Johnson] and vote "nay."

Mr. SAULSBURY (when his name was called). my pair with the junior Senator from Rhode Island [Mr. Colt] to the Senator from Nebraska [Mr. HITCHCOCK] and vote, I vote "nay."

Mr. THOMAS (when his name was called). I again transfer my general pair with the senior Senator from New York [Mr. Roof] to the Senator from Oklahoma [Mr. Gore]. I vote "nay."

Mr. WILLIAMS (when his name was called). same announcement I made on the last roll call, I vote "nay."

The roll call was concluded.

Mr. MARTIN of Virginia. I wish to announce the pair of the senior Senator from West Virginia [Mr. Chilton] with the junior Senator from Maryland [Mr. Jackson].

Mr. BRYAN. I transfer my pair with the Senator from Michi-

gan [Mr. Townsend] to the Senator from Mississippi [Mr. Vardaman] and vote "nay."

Mr. BANKHEAD. I transfer my pair with the junior Senator from West Virginia [Mr. Goff] to the junior Senator from Tennessee [Mr. Shields] and vote "nay."

Mr. LODGE (after having voted in the affirmative). if the junior Senator from Georgia [Mr. SMITH] has voted? The VICE PRESIDENT. He has not.

Mr. LODGE. I have a general pair with that Senator. I transfer it to the Senator from California [Mr. Works], and

let my vote stand.

Mr. LANE. I desire to state that the senior Senator from Oregon [Mr. CHAMBERLAIN] is unavoidably absent. He is paired with the Senator from Pennsylvania [Mr. OLIVER].

The result was announced—yeas 27, nays 36, as follows:

YEAS-27.

So Mr. Lodge's amendment was rejected.

Mr. SMOOT. Mr. President, I wish to call the attention of the Senator having the bill in charge to the last two lines of paragraph 222. The present law in relation to pineapples preserved in their own juice reads:

Pineapples preserved in their own juice, not having sugar, spirits, or molasses added thereto.

I remember very well why those words were included in the law of 1909. In the law of 1897 they were not included, and the words of the law of 1897 are the words used in the pending The question arose in a good many cases as to what it actually meant, and there were a number of decisions and endless litigation on it, it being held that pineapples containing up to 33 per cent sugar were not dutiable as fruits preserved in sugar, but pineapples preserved in their own juice.

It is possible that this provision would be interpreted as indicating an intention on the part of the Congress to single out pineapples from the general provision of fruit containing sugar. Therefore I offer an amendment. After the word "juice," in line 6, page 61, I move to insert the words:

Not having sugar, spirits, or molasses added thereto.

I will assure the Senator from Mississippi if those words are not included in this law the same litigation will be passed through again that was passed through under the law of 1897. I ask for a vote upon the amendment, unless the Senator will

The VICE PRESIDENT. That is paragraph 222. Para-

graph 221 has not yet been passed upon.

Mr. WILLIAMS. The litigation to which the Senator from Utah refers seems to have been a litigation which was carried to a conclusion. The principle involved seems to have been adjudicated, for I find that it was held in a number of decisions that pineapples containing up to 33 per cent of sugar were not dutiable as fruits preserved in sugar but as fruits preserved in their own juice. I suppose the idea in the mind of

the decision under the previous law, where the language of the bill as passed by the House was decided to be a line of demarcation between pineapples preserved in their own juice and arti-

ficially treated with sugar.

Mr. SMOOT. The result will be that if we strike out these words now, after the litigation which has been passed through, the importers will take it that we have singled out pineapples only, whereas this applies to all kinds of fruits; and with those words in there would be no question about it.

I think I have done my duty in offering this amendment, and if the Senator does not want to accept it, of course, well

and good.

Mr. WILLIAMS. I believe I should like to have that sugges-

tion go back to the committee.

Mr. SMOOT. That will be perfectly satisfactory, Mr. Presi-I offered it with no intention of finding fault whatever. dent. Mr. WILLIAMS. I believe I would rather look into it a little further. My own opinion is that the intention of the House was to allow 33 per cent sugar content to be regarded as pineapples preserved in their own juice. But I would rather look into it a little further.

The VICE PRESIDENT. Without objection, the paragraph

goes back to the committee.

Mr. JONES. Mr. President—
The VICE PRESIDENT. Paragraph 221 has not yet been passed on by the Senate. The committee amendment has not

been acted upon.

Mr. JONES. If paragraph 221 has not been passed upon I want to ask the Senator in charge of this part of the bill a question. Under the first part of paragraph 221 the average rate at the present time is twenty-nine and a fraction per cent. The House reduced it to 20 per cent. The committee has raised it to 25 per cent. In the other bracket the present rate is 30 per cent for fish not specially provided for in tin packages, and so forth. The committee has reduced that 50 per cent. Upon what theory did the committee make so much greater reduction on that bracket than on the first?

I will state, Mr. President, that when we Mr. WILLIAMS. came to the first part of the paragraph there was a good deal of complaint here. On the coast of Maine they capture a little herring and can it and call it a sardine. I reckon it is just about as good as the sardine, except that it is not. The Maine fishing laws are so much more stringent than the laws just across in Nova Scotia regarding fishing in season and all that, that those people convinced the subcommittee, of which I was a member, that with the duty as fixed by the House they would have to move their plants over to Nova Scotia. Not being desirous of uselessly injuring anybody in connection with an article which was not an absolute necessity, and believing we would get as good a revenue for a reason which I will explain in a moment, we raised that duty.

Mr. JONES. I am not complaining about that raise.

Mr. WILLIAMS. I understand the Senator. I am stating the distinction which we made. Then we concluded that the sardine that is really imported is the genuine Mediterranean sardine, which is a luxury. The so-called sardines up there in Maine are canned and sold for 6 cents or 5 cents a box. These others, Mediterranean, sell, as we know, up to 20 and 30 cents. We concluded that they would all come in anyhow, and if we raised the duty 5 per cent above the House rate we would not import any less sardines and we would get a better revenue.

When we came to the second part of the paragraph we found that nobody took the trouble to make any complaint. We found by experience that when those who have a special interest in this kind of business need protection there is complaint. The rate was certainly high enough. The only question was whether it was not too high.

Mr. JONES. I wish to ask whether canned salmon come under the second bracket? I think they do.

Mr. WILLIAMS. Are they put up in oil?

Mr. JONES. I do not think so.

Mr. WILLIAMS. If they are they come under the first bracket; if not, they come under the second.

Mr. JONES. I think they come under the second. I am not sure but that I have some letters in reference to that proposition, and I should like the matter to go over until I can examine it and see whether or not I have some suggestions with refer-

Mr. WILLIAMS. I am perfectly willing to do'that.

We passed over while the Senator was out paragraph 222. As the Senator has come back, is he ready to take that up now?

Mr. JONES. I am ready. Mr. SMOOT. In connection with paragraph 221, before we the House was to permit this leeway of 33 per cent, which is pass upon the increased rate, I simply want to say that on fish where the specific rate is 11 cents, the equivalent ad valorem is 20.21 per cent. I take for granted that the Senator, from his statement, stated the fact-

Mr. WILLIAMS. I stated the facts as they were represented

to me; I do not know.

Mr. JONES. I will say I have no objection to a vote on the committee amendment. Then I should like to have the paragraph go over.

The VICE PRESIDENT. The question is on agreeing to the

amendment, which will be stated.

The Secretary. On page 60, line 9, paragraph 221, after the word "cans," strike out "20" and insert "25," so as to make the paragraph read:

221. Fish, except shellfish, by whatever name known, packed in oil in oil and other substances, in bottles, jars, kegs, tin boxes, or cans, per cent ad valorem; all other fish, except shellfish, in tin packages, t specially provided for in this section, 15 per cent ad valorem; caviar dother preserved roe of fish, 30 per cent ad valorem; fish, skinned boned, three-fourths of 1 cent per pound.

The amendment was agreed to.

Mr. JONES. In paragraph 222, line 15, page 60, I move to strike out "10" and insert "13" before "cents."

The VICE PRESIDENT. That paragraph has been by unani-

mous consent recommitted to the committee.

Mr. WILLIAMS. I beg the President's pardon if he so understood me. I asked that the last clause of the paragraph, "pineapples preserved in their own juice, 20 per cent ad valorem," be recommitted to the committee. The balance of the paragraph I did not ask to have recommitted. The amendment

is in order now.

Mr. JONES. I thought we could dispose of my amendment. The VICE PRESIDENT. The order will be set aside, then, referring it to the committee. The amendment of the Senator

from Washington will be stated.

The Secretary. On page 60, line 15, paragraph 222, before the word "cents," strike out "10" and in lieu insert "13," so as to read:

Apples, peaches, quinces, cherries, plums, and pears, green or ripe, 13 cents per bushel of 50 pounds.

Mr. JONES. Mr. President, just a word. The tariff on apples, peaches, and so forth, going into Canada is 13 cents for 50 pounds. The only complaint I have from our growers with reference to this provision in the bill is that we are placing the tariff lower than the adjoining country. The tariff now is 25 cents on 50 pounds. The House has cut that to 10 cents. Our people ask that we put them, as far as the tariff is concerned, upon an equality with our Canadian friends across the line. They can not understand why we should voluntarily place our tariff below that of the adjoining country. They are not objecting to a reduction of the tariff, and they are not objecting to a large reduction, but they can not understand why, when we are making a reduction of duties on imports into this country, we should put the tariff 3 cents below what they put upon our fruit going into that country. That is the principal reason why I offer this amendment.

I suppose that labor conditions in connection with the growing of fruit are very much the same in Canada as labor conditions in this country, except that I am satisfied that as to a great many sections the land values are much higher in this country than they are in Canada. I know that to the north of my State in the central part, there are several hundred thousand, if not two or three million, acres of land that are being irrigated and have been planted largely with fruit trees which are coming into bearing and which will form a very formidable and very active competition in our own markets with our own fruit.

It does seem to me that it is nothing but fair and right that we should place upon fruit coming from another country the same rate at least that they impose against fruit from our country. Of course, I recognize that this rate applies to all countries, but I think the main competition comes from our northern neighbor. So I hope the committee will not oppose fixing this duty at the low rate of 13 cents, instead of 10 cents a bushel.

Mr. WILLIAMS. There could not be any more unsound rule of taxation adopted in the world than to fix your rate because some other nation had fixed the same or a higher rate against you. If they had fixed the same rate against you for protective purposes, it was because they thought you could undersell them. That would tend to show that for protective purposes you did not need any rate at all. If they fixed it for revenue purposes, then when you came to fix your rate for revenue purposes, you ought to fix it by the rate that you thought would give you the most revenue with the least burden. We thought 10 cents would give enough. Apples do not need any protection that I

know of from Canada, nor, by the way, do Canadian apples need any from us. To say that because Canada wants to punish her people who want to buy American apples from Washington and Oregon by making them pay 13 cents a bushel more, even if true, is no reason why we should make our people pay 3 cents a bushel more for Canadian apples if they want them, if

we think 10 cents is a sufficient revenue to raise upon apples.

Mr. JONES. Of course, I understand that this bill is framed with no purpose whatever of protecting our people from anybody else; that it is framed entirely for revenue purposes; and yet I have noticed very frequently that in explanations made with reference to why a duty is placed at this or why it is placed at that rate, other conditions have been taken into account in a great many instances.

Mr. WILLIAMS. Undoubtedly; but the other conditions do

not exist in this case.

Mr. JONES. Oh, yes; of course it is not identical with some conditions that exist in another case; and yet this simply illustrates how easy it is to justify a rate under a bill framed for purposes of revenue. Of course if any objection is made to a rate, you can say "we simply put it on at that rate for revenue purposes," and that is all there is to it. Well, there is no answer, of course, to that proposition. Then in another case, if you want to justify it on another ground, you are at perfect liberty to do it. It shows the elasticity of framing a tariff bill for revenue only."

It does seem to me, however, where there is a country that is likely to be a competitor in an article in which our people are very much interested, that it is justifiable for us in framing our tariff to take into account their tariff on the same proposition.

Mr. President, I ask for the yeas and nays on the amendment. Mr. WILLIAMS. The higher the protection, then, that Canadians thought they needed against you, the higher would be the protection that you think you need against them. That is the logic of the argument. I leave it to fall by its own weight.

The year and nays were ordered, and the Secretary proceeded

to call the roll.

Mr. KERN (when his name was called). I transfer my pair with the Senator from Kentucky [Mr. BRADLEY] to the Senator from Nebraska [Mr. HITCHCOCK] and vote. I vote

Mr. LODGE (when his name was called). I have a general pair with the junior Senator from Georgia [Mr. SMITH]. In his absence I transfer that pair to the Senator from California [Mr. Works] and vote. I vote "yea."

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. Colt] to the Senator from Maine [Mr. Johnson] and vote. I vote

Mr. THOMAS (when his name was called). I again transfer my general pair with the Senator from New York [Mr. Root] to the Senator from Oklahoma [Mr. Gore] and vote. I vote "nay."

Mr. WILLIAMS (when his name was called). Making the same announcement in regard to my pair and its transfer which I made upon the last roll call, I will vote. I vote "nay."

The roll call was concluded.

Mr. LANE. I wish to again announce that the senior Senator from Oregon [Mr. Chamberlain] is unavoidably absent, and that he is paired with the Senator from Pennsylvania [Mr. OLIVER 1

Mr. BANKHEAD. I make the same announcement I made on the previous roll call as to my pair and its transfer, and I will vote. I vote "nay." I desire this announcement to stand for the remainder of the day.

Mr. BRYAN. I transfer my pair with the Senator from Michigan [Mr. Townsend] to the Senator from Illinois [Mr. Lewis] and vote. I vote "nay."

The result was announced—yeas 25, nays 36, as follows:

No. of Contract of	11110 20.		
Brady Brandegee Bristow Burton Catron Gallinger Gronna	Jones Kenyon La Follette Lodge McLean Nelson Norris	Page Perkins Poindexter Sherman Smith, Mich. Smoot Sterling Y8—36.	Sutherland Thornton Warren Weeks

Myers O'Gorman Overman Owen Pittman	Pomerene Ransdell Reed Robinson Saulsbury Shafroth Sheppard Shively Simmons	Smith, Ariz Smith, S. C. Swanson Thomas Thompson Tillman Vardaman Walsh Williams

NOT VOTING-34.

Culberson Cummins Dillingham Johnson Lea Shields Smith, Ga. Smith, Md. Boran Bradley Burleigh Chamberlain Chilton Clapp Clark, Wyo. Lewis du Pont Fall Goff Gore Hitchcock Lippitt McCumber Newlands Oliver Stephenson Stone Townsend Works Penrose Crawford Root

So the amendment of Mr. Jones was rejected.

Mr. WEEKS. Mr. President, is the paragraph still open to amendment?

The VICE PRESIDENT. It is still open to amendment.

Mr. WEEKS. On page 60, line 17, I move to amend by striking out the figures "10" and insert the figures "25," so as to

Cranberries, 25 per cent ad valorem.

The VICE PRESIDENT. The question is on the amendment

offered by the Senator from Massachusetts.

Mr. WEEKS. Mr. President, the reason I move this amendment is that the only supply of cranberries we obtain in this country, except what are produced here, comes from Canada, and the Canadian preferential rate of duty is 171 per cent; the intermediate rate is 221 per cent; and the regular rate, which applies against this country, is 25 per cent. I see no reason for making our rate on cranberries lower than the rate which Canada imposes on our cranberries, especially when the cranberries produced in the United States come from States comparatively near the Canadian line.

Mr. THORNTON. Did I understand the Senator from Massachusetts to say that the Canadian rate was 25 per cent? Mr. WEEKS. Yes; the rate is 25 per cent against us.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Massachusetts.

The amendment was rejected.

VICE PRESIDENT. In order to keep the record straight, the Chair will state that the paragraph is recommitted to the Committee on Finance.

The reading of the bill was resumed, and the Secretary read

The VICE PRESIDENT. The Chair inquires of the Senator from Mississippi whether paragraph 223 went over? It was so announced awhile since.

Mr. WILLIAMS. No; I did not so understand. I heard no request to that effect.

The VICE PRESIDENT. The Chair so understood.

Mr. WILLIAMS. That paragraph did not go over, so far as I know

The VICE PRESIDENT. The committee amendment to para-

graph 223 will now be stated.

The Secretary. The Committee on Finance reported an amendment to paragraph 223, on page 61, line 10, before the words "per pound," by striking out "2 cents" and inserting 1 cent," so as to make the paragraph read:

223. Figs, 2 cents per pound; plums, prunes, and prunelles, 1 cent per pound; raisins and other dried grapes, 2 cents per pound; dates, 1 cent per pound; currants, Zante or other, 1 cent per pound; olives, 15 cents per gallon.

The amendment was agreed to.

The next amendment of the Committee on Finance was, in paragraph 227, page 62, line 3, after the word "thousand," to insert "bananas, one-tenth of 1 cent per pound," so as to make the paragraph read:

227. Pineappies, in barrels or other packages, 6 cents per cubic foot of the capacity of the barrels or packages; in bulk, \$5 per thousand; bananas, one-tenth of 1 cent per pound.

Mr. BURTON. Mr. President, I trust this amendment recommended by the Finance Committee will not be adopted. banana is one of a multitude of items upon which this bill proposes to levy a duty where no duty existed before, and I think it one of the most objectionable products which could have been selected for that purpose. If the committee intends to adopt the principle of levying duties upon noncompeting products, there is an immense field from which they could have drawn. It would include coffee, it would include tea, and, passing to the category of materials for manufacture, it would have included crude rubber. Bananas are certainly the most objectionable of them all, because they are a food of the poor, a food which is increasing enormously in use in our own country.

I have before me an article in the latest issue of the North American Review, by Chester Lloyd Jones, professor in the University of Wisconsin, in which he gives some valuable figures in regard to the increase in the consumption of this article. It appears that in the year 1912 continental United States alone consumed 44,520,539 bunches of bananas, or over 60 bananas

for each man, woman, and child in the Union. That means

between 25 and 30 pounds per inhabitant.

The consumers of this article include a large number of our foreign population—Italians, perhaps, more than any others. have a communication from the east side of the city of New York in which it is stated that it is becoming a leading article of food there. Some years ago it may have been regarded as a quast luxury, but it is not now, by any means, and it is especially the food of those who desire to economize by avoiding the purchase of the more expensive articles of diet.

Another set of figures which show how the consumption has In 1900 increased is derived from the value of the imports. the value of the imports of bananas into the United States was \$5,877,835. By 1910 the value had reached \$11,642,000; and in 1912 the value of the imports was \$14,368,000, nearly three

times as great a value as in the year 1900.

Up to date much the larger share of the consumption of bananas has been in the United States—probably more than four-fifths of the whole. Bananas, however, are now becoming a prominent article of food in other countries. At Manchester in the year 1909 there was a warehouse which had been constructed for the express purpose of storing bananas, and ships were provided for the purpose of bringing them from the West Indies. Calculations evidently were made in reliance upon a great increase in the trade.

In France, in the year 1908, the imports were 5,697.6 tons; in 1911, 17,813 tons-three times as much. Germany took only 320 metric tons in 1899, but in 1911 the amount had increased to 30,438 tons. A similar increase is shown in Holland where, in the year 1907, 100 tons were brought in, while in 1910, 3,000 tons were imported.

This increase in the consumption in other countries assumes especial importance, because, at least according to the theory upon which this bill seems to have been framed, countries which buy articles like bananas give their own products in exchange, and the great increase of banana imports in these other countries means an increase of their exports to the Caribbean countries where heretofore we have had the preponderance of trade.

In England there is no duty on bananas; in Germany there is none; in Holland there is no duty; in France there is a

small duty, along with that on other kinds of fruit.

I wish to call attention in the next place, Mr. President, the fact that bananas are purchased from countries with which we have the most friendly relations, and where year by year we are gaining the greater share of their trade.

Another point to be made in this connectionvery important point-is that up to date nearly all of their exports to the United States are admitted free of duty. banana is produced for the most part around the Caribbean Sea. Jamaica is the leading place of production. Next to Jamaica comes Honduras, next Costa Rica, then Panama, then Cuba and Nicaragua, Guatemala, and Colombia. Practically each of these countries supply the United States with more than a million bunches of bananas; indeed, bananas are the leading export in many of these countries.

The total value of the exports from Jamaica in the year 1912 was £2,948,000. Of these exports bananas made up £1,456,000,

or very nearly half of the whole.

I call attention to the statistics in regard to cultivation: In the island of Jamaica of acres planted in sugar cane there were 34,766; planted in coffee, 24,433; in tobacco, 904; in bananas, 82,435, or considerably more than all the combined

acreage of sugar cane, coffee, and tobacco.

The total value of the exports from Honduras in 1912 was £630,146. I give the figures in pounds because they are derived from the Statesman's Yearbook. Of this value bananas made up £267,535. From Costa Rica the total exports were valued at £1,883,546, of which bananas made up £890,870.

On the other hand, we have about two-thirds of the export trade of Jamaica. That island is coming to be like Canada, a country which, notwithstanding its political affiliations with England, nevertheless obtains the greatest share of its imported commodities from the United States.

Of the imports into Honduras in 1912, 71 per cent came from the United States; and of the imports into Costa Rica, 46.29

per cent.

Now, let us notice for a moment the treatment that we give to these countries as regards imports from them. In the year 1912, of the imports into the United States from Jamaica 96.46 per cent were free of duty. If this duty on bananas should be imposed, the percentage would be diminished from 96.46, I think, to a figure below 50.

Of the imports into the United States from Honduras in the same year, 99.78 per cent-very nearly all-came in free of

A very radical change would be made in this regard, diminishing the percentage of nondutiable imports from nearly 100 to about one-half, and perhaps to a lower figure than that. I have not made the exact computation.

Of the imports into the United States from Costa Rica, 99.88 per cent were free of duty; of the imports from Nicaragua, 99.88 per cent-the same percentage-were free of duty.

It thus appears that we have given the most liberal treatment to the products of those countries. Several of them, especially those in Central America and Jamaica, depend in a very great degree for their prosperity on the sale of this article, and here it is proposed to change radically our relations with each of those countries by imposing, against their protest, a material duty on an essential article of food.

Mr. President, it was claimed by every Democratic speaker from the stump last autumn that one of the missions of the Democratic Party, one of the reasons why it should be intrusted with power was to diminish the price of food; and yet, with a multitude of other sources of revenue, one of the first things they do is to impose this duty, which, as it is computed, amounts to about 15.61 per cent, upon an article which I think I may say more than any other is the food of people of limited means in the United States. It seems to me it is an absolute betrayal of platform promises; it is imposing a tax upon the people who are subjected to the greatest hardship of any of our population in obtaining sufficient food for their sustenance. It sounds very small—one-tenth of 1 per cent—but everybody knows that with an imposition of the duty not only the amount of that duty is added, but there is the vexation and expenses of the customhouse and the change in the course of trade which is created by taking an article from the free list and putting it upon the dutiable list.

There is one other appeal which I desire to make in this connection, Mr. President-

Mr. THOMAS. Mr. President—
The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Colorado?

Mr. BURTON. Certainly.

Mr. THOMAS. If I remember correctly, when the Senator spoke upon the general subject of this bill about two weeks ago he stated that some proposed reductions or additions to the free list would not affect to the consumer the price of the article. should like to ask him if he thinks this small duty would add to the price of the article to the consumer?

Mr. BURTON. If I did make any such reference—and I fancy I did—it was not to this class of articles at all.

Mr. THOMAS. I think it was sugar.
Mr. BURTON. Well, when we come to sugar I will discuss that and endeavor to show the exceptional conditions prevail-ing in that case. Sugar is an entirely different food from bananas

Mr. THOMAS. It is a necessary of life, as I understand the Senator.

Mr. BURTON. Oh, yes. Another point everyone realizes is that sugar, having been produced as well as consumed here for many years, is an article of more general consumption than bananas, and that a very large share of those who buy it have ampler means and can more readily pay any tax.

Mr. THOMAS. I understood the Senator to say that bananas were becoming a general universal article of food-a necessity of life.

Mr. BURTON. Oh, I do not think I said that. I would say that they are becoming more and more the food of persons of more limited means. I mentioned some of those who purchased them.

Mr. President, if there is any one thing in our diplomatic political policy which we should observe now, it is friendly relations with the countries to the south of us. They have been misunderstood by the whole world. Their rich resources have been exploited by aliens from every land. The general opinion has come to be accepted that they are constantly engaged in revolutions and that they have the limitations that belong to a tropical climate and arise from the mingling of different races under the same political jurisdiction. But those who would be their most unfriendly critics must admit that they have made wonderful progress in the last few decades. That progress may not have been equal in all of them, but it has been most apparent in every one. Their future is bright. Our political, social, and economical relations with them must be closer every year.

We owe to them a peculiar responsibility. Just as the New World is geographically distinct from the Old World, so also it has its political affiliations and ties. If we should not succeed in establishing that comity and friendly relation with some of

for the States of Central and South America which the stronger should always give to the weaker, and to create those enduring relations of friendship which should exist between all the This will benefit us no less than them. Americas.

Mr. LANE. Mr. President, if the Senator will yield to me, I should like to say just a word in relation to this matter, in all

Out on the Pacific coast, and throughout the entire Northwest, the people have planted thousands and thousands of acres of their lands in orchards. I guess I am strictly within the bounds of fact when I say it has been done by the square mile. They will soon be in bearing, bearing apples and other fruits which are very much more nutritious and palatable than the banana shipped from the far southern countries. Those people are very anxious when the Panama Canal is opened, as it will be in a very short time, to come into the market on the Atlantic coast, where the people are so much in need of fruit. They wish to introduce their products there, and thereby to give mutual benefit to all parties concerned. I hope the Senator will take that matter into consideration. The Senator from Washington [Mr. Jones] will confirm what I have said. There are a great many of these people on the Pacific coast.

Mr. JONES. Mr. President, I can confirm that, but I wish to ask the Senator whether or not this is intended as a pro-

tective duty?

Mr. LANE. No; I think not. I think it just accidentally

happens that way. [Laughter.]
Mr. BURTON. Mr. President, I can not imagine any reason for mentioning this fact that in the Senator's State the production of apples is increasing, except that he looks askance upon the coming of the banana; that there is a pet product in his State to which he wishes to give preference and a peculiar advantage. He may call it protection, he may call it local interest or whatever it may be, but if his argument has any force it is that we should protect him against the growing importation of the banana. Yet, I do not expect that at any time in the discussion of this bill the Senator from Oregon will stray into the protective camp. He may come as far as the border of Oregon, but he will never come so far as to accept the general principle. It will not affect his action here in Washington.

Mr. LANE. Mr. President, will the Senator permit me a

moment further?

Mr. BURTON. Certainly. Mr. LANE. The fact is, Senators, that the people in that part of the country have overplanted with orchards. There is no doubt that they have. It is a matter of necessity with them. You may lay aside any idea of protection or revenue or matters of that sort. Their very existence, almost, is dependent upon it. Anyhow, the facts exist, and I want to call your attention to it, and I hope you will be merciful to those people.

Mr. BURTON. Mr. President, I think we are merciful to them when we pay 5 or 10 cents apiece for one of their apples. According to the principle I have heard advocated so much on the other side, practically there is no such thing as an oversupply of commodities. Like Adam and Eve when they were banished from the Garden of Eden, the world is all before them where to go. If there is a big supply in this country, they can ship to some other. I really think the Senator from Oregon will find that no matter how many acres his constituents plant in apples, there will be an ample market for them. We should like some of them here on the Atlantic coast. We are ready to consume them, and while we have not, perhaps, been very loudly complaining about the price, we would welcome a somewhat cheaper rate upon them than we have been enjoying in the past. I think probably if the price were lower we would consume more of them.

Mr. President, I regard this amendment here as altogether out of line with a rational protective policy. I regard it as imposing a burden upon a very large class of our people, including many of those who have come from abroad and with whom it is a favorite food, and again I say it is unjust to these countries around the Caribbean, after we have for years been practically admitting all their products free, to levy this duty and thus impose a serious handicap upon them.

Mr. WILLIAMS. Mr. President, it is a fact well known to those who know him and love him that when he does try to look serious nobody in the world can look more serious than my genial friend the Senator from Ohio. The country may believe to-morrow, when it reads what he has said, that he was dis-tressed to death. Those of us who know him know that he was

acting distress.

There is one consolation about this tax upon bananas, at any rate, and that is that every dollar of it will go into the Treasury the countries of the eastern continent which we desire, there is at least the opportunity for us to manifest that consideration of dollars extra for their bananas, if the ultimate consumers shall pay it, they will have the satisfaction of knowing that they still have the money; that while each individual buying bananas paid out his share of it, the people in the aggregate have it all, yet it can be devoted to the purposes of the Government

When we taxed oranges and lemons and pineapples and limes and all these things, no voice of complaint was heard from the Senator from Ohio or from anybody else over there. Why? Because a part of those taxes went into the pockets of certain interested parties who had influence at the polls, who wanted a tax levied on the people in order that it might pro-tect or, rather, profit them. Therefore there was a special interest underlying it. There is no special interest underlying a tax on bananas. Every dollar of the tax levied on the people,

so far as bananas are concerned, will go to the Government.

Mr. BURTON. Mr. President, will the Senator from Missis-

sippi yield to me for a moment? Mr. WILLIAMS. Yes; I yield.

Mr. BURTON. Does not the Senator from Mississippi know that with the imposition of duties on raisins, prunes, oranges, and lemons, under the policy of the bill of 1890, the supply of those articles has so increased that not only is the larger share of the demand satisfied at home, but the prices now are cheaper

than they were then?

Mr. WILLIAMS. If the Senator means to say that the imposition of a tax upon the various articles which he has mentioned caused them to go down in price, or if he means to say, still more extremely, that his purpose and the purpose of others in fixing the tax upon these articles was that they might be reduced in price, then he has said something that is precisely contrary to all that he and his party have professed, because they have professed that the purpose of levying the duty was to raise the price in order that the man who sold the product might make a better profit and pay his laborers higher wages. You may rest assured that wherever the levying of a protective tariff of any description has been followed by lower prices than existed before, it has not been because of the levying of the tax, but has been because of something else.

You may rest assured of the fact that wherever a protective tax has been followed by the result of reducing the price the tax has failed in the purpose for which it was levied. But if the new position all at once taken by the Senator from Ohio were correct, then I might arrive at the conclusion that perhaps Hawaii and Porto Rico, and perhaps the Philippinesas long as the blessed archipelago is under our flag; God grant that it may not be for too long-might succeed in producing enough bananas to cheapen the cost to the American consumer. But wherever his party has levied a duty, the purpose of the duty has failed if there has been a cheapening of

the article.

I am not going to play with this proposition. Somebody is going to pay two and a quarter millions more for bananas. Of course they will have to do it. The tariff is a tax, and a tax is a burden, and somebody has to bear the burden. You can no more make people rich by burdening them than you can pull yourself over a fence by your boot straps; and when we levy this tax upon bananas somebody will have to pay it. The consumer.

Who is the consumer? The general body of the American people. What is the burden? What is it on? If you ask me whether a tax is good or bad, I want to know first the rate of the tax, and I want to know next the article upon which it is levied, so that I may determine how burdensome it is to the general run of mankind.

I want to know how necessary it is in their lines.

Why, my friends, when people read the newspapers and the RECORD to-morrow, they will think that the Senator from Ohio almost cried when he talked about putting a duty of one-tenth of 1 cent per pound upon a "basic food product of the people" in the shape of bananas. Yet, if I am not mistaken, he was one of the gentlemen who wanted to keep a duty upon bread, and upon meat, and upon potatoes, and upon apples, and upon everything else under the sun.

I started to say something about "vota Italiano" at election time. Maybe that has something to do with it. duty of one-tenth of 1 cent per pound on bananas. takes from four to five bananas to make a pound, depending upon the size of the banana. It would take five or six of these little Jamaican bananas to make a pound, I suppose-certainly five. One-fourth of one-tenth is one-fortieth of a cent on a banana. I have not the slightest doubt that this duty is going to impoverish the downtrodden workingman of this country to the tune of one-fortieth of 1 cent for a banana; or, if it is one of the little Jamaican bananas, one-fiftieth of a cent for a banana.

This is one of the things where perhaps the burden will not fall on the man who eats the fruit. It must fall on somebody. I read the article to which the Senator refers. It was sent to every Senator here. It was very well written and very nice. I expect it was sent by the United Fruit Co. as a present to each Senator, in order that he might understand what the United

Fruit Co. meant or wanted.

Bananas are sold in the grocery stores, and they are sold from the little carts on the street corners for the nickel. If every cent of this tax is reflected upon the man who buys a nickel's worth of bananas it will be one-fourteenth of 1 cent for each nickel's worth. Now, bananas are not a necessary article of food, of course. Every one must know that. Bananas are in the United States a luxury. Every one of us knows that. They are a luxury which many poor people love and many poor people eat. In proportion as that is true they ought not to be made more costly to the people. Nevertheless, when you begin to talk about foodstuffs no American considers the banana a regular article of diet of the American people.

We have not yet even learned to cook bananas green, as they do down in South and Central America, where they do more nearly take the place of a regular food. We eat them simply as a fruit. They are no more a part of our food in this country than oranges, not so much as apples are, and yet these same gentlemen who quarrel about a duty of one-tenth of a cent per pound on bananas were trying half an hour ago to put

a duty of 25 cents a bushel on apples!

I am afraid they think there is politics in this banana duty, and perhaps there may be; and perhaps for a little while somebody will carry it out to the consumer and lay the tax upon him. But very soon afterwards the man who does that will have to compete with the other little fellows that are peddling bananas, and with the other little grocers that are selling bananas; and I am almost tempted to say that this is one tax that will not be reflected in the final price to the men who eat the bananas. The United Fruit Co. will have to pay it. The jobbers will have to pay the United Fruit Co. The grocery men will have to pay them. But the amount of profit upon bananas now, between the time they are imported into New York and the time they go down the throats of the men who buy and eat them, is about 100 per cent. The present price is made up in the meantime in the processes between the United Fruit Co. and the purchaser from the fruit stand. Carry one-tenth of 1 cent per pound down through all these processes and see what will become of it.

If this duty adds anything to the price to the consumer it will add one-tenth of 1 cent per pound. If it is lost in the shuffle, as I verily believe it will be, somebody will have to make

99.9 per cent profit instead of 100 per cent profit.

Competition with abundant margin for competition may take care of that.

If not, nobody will be bankrupted and the suffering poor will not suffer more than one-fortieth of 1 cent than they suffer now.

I read the article that has been referred to and so abundantly quoted by the Senator from Ohio; and, as I have said, it is delightfully well written. It is remarkable that it should have come out just at this time, too, and that it should have been worded or headed or entitled the way it was. You would have thought the man who wrote it had no reference to anything in the world but the beautiful international relations between us and Jamaica and Central and South America. Beautiful coincidence!

The United Fruit Co. imports nearly all the bananas that are imported into the United States. I have forgotten the proportion; I had it in the subcommittee, but I have forgotten it now. My recollection is that it is about two-thirds, but I am not sure of that.

Mr. SIMMONS. Practically all except those that come from Jamaica.

Mr. WILLIAMS. Practically all except about one-third of those that come from Jamaica. It not only does that, but it owns the ships in which they are brought; and that is not all. It has gone down there and has begun to buy up the lands, and it uses its ships to oppress the other people who raise bananas. It brings bananas from its plantations in Central America and the West Indies into this country in good condition when they are ripe, or when they are at the stage where they will become ripe by the time they reach this country; and they tell the other fellow whose fruit is spoiling on the tree that they "have not room for his fruit this trip." In my private opinion, the United Fruit Co. will pay most of this tax in the long run.

But suppose every man that buys a banana, every child that buys one, and everybody that goes to a circus and gets one at the circus, pays this duty at the rate of one-fiftieth of a cent per banana or one-fortieth of a cent per banana more than he would have paid otherwise. You still have the consolation of knowing

that every dollar, every dime, every nickel, every cent of the two and a quarter million dollars is in your Treasury and still be-longs to you, and that it was a real governmental tax levied and received by the Government, and that it did not leak on the way

into the pocket of some private special purpose.

Mr. President, the Government has a right to tax me. I have said several times that it has a right to take 10 per cent or 50 per cent or 100 per cent of all I have, if necessary, in order to answer governmental purposes. It has a right to tax me on tobacco or on bananas or on land or in any other way it chooses that is necessary. But from my standpoint it has not any right to take one nickel out of my pocket in order to put it into the pocket of the Senator from Utah or the Senator from Wisconsin.

True, the people pay this tax, but the people get the money. These other taxes—protective taxes—which never distressed any of the gentlemen, who have suddenly discovered what a basic food product bananas are, leak on the way in greater or less proportions, and instead of landing in the people's Treasury

they land in somebody's private treasury.

This is absolutely a revenue duty, with not even incidental protection to any soul in the world. Senators on the other side have been twitting us about not having enough duties of that

This is one that is all right, at any rate.

Mr. WEEKS. Mr. President, I present a protest to the President and Congress, signed by a large number of citizens, many of whom live in the north end of Boston, a section of the city that is occupied very largely by those of foreign birth or parent-age. I should like to have the protest read and printed as a part of my remarks, without taking the time to read the names, which, however, I wish printed.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

To Hon. President Wilson and the Members of the Senate and House of Representatives, Washington, D. C .:

The Secretary read as follows:

To Hon, President Wilson and the Members of the Senate and House of Representatives, Washington, D. C.:

We, the undertsigned, respectfully and earnestly petition you not to Impose the proposed tax on bananas. The banana, as we all know, is scarcely less nutritious than milk, and long ago ceased to be a luxury. To-day the banana is universally regarded as one of the necessities of the price of bananas, instead of going up as held for the first of the footstuffs, has gone dows, all tax would mean to increase the present burden of the high cost of living.

[Note.—Original signatures of names below have been sent to Hon, Woodrow Wilson, President of the United States.]

Arancle Bros. Co., Boston, Mass.; Joseph A. De Pesa, 302 Main Street, Medford, Mass.; Howard Halpin, 21 Prescott Street, Everett, Mass.; C. Di Fatta, 15 Claybourne Street, Docthester; Achille Forte, 322 Hanover Street, Docthester; Achille Forte, 322 Hanover Street, Docthester; Achille Forte, 322 Hanover Street, Boston; Alfonso Gaet, 708 Broadway, Revere; E. C. Burbank, 39 True Street, Revere; J. D. Zolla, 43 Tremont Street, Boston; A. Repetio, Jure, 18 Handle, 19 H

Roston; S. Shelbourne, 6 Roilins Place, Boston; F. Manfold, 357 Main Street, Charlestown; J. Hammond, 37 Green Stree B. Broth, 25 May 19 Land 19 Land

Mr. WEEKS. Mr. President, I am opposed to the principle involved in imposing this tax. Removing the duty from food products produced in this country and making up the loss in revenue by imposing a duty on a similar food product which is not produced in this country is directly contrary to such political principles as I have bearing on the tariff; and it is on that subject that I want briefly to address the Senate.

This is not a protective duty in any sense, as has been stated by the Senator from Mississippi [Mr. WILLIAMS], because bananas can not be produced in the United States.

Mr. THOMAS. Mr. President—

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Colorado?

Mr. WEEKS. Yes. Mr. THOMAS. 1 wish to remind the Senator from Massachusetts that in portions of the territory belonging to the United States bananas are produced. They are grown in Porto Rico and in Hawaii, and form a part of the imports of both those countries to the continent.

Mr. WEEKS. I was referring, of course, to continental United States. While there are some bananas produced in Porto Rico, they are limited in number. There are compara-

tively few produced in Hawaii.

The islands of the Caribbean are not alike in their capacity to produce bananas. Those which are brought into this country are the large bunches, containing from seven to nine hands, or perhaps 100 bananas to a bunch. It has been determined by experiments made that certain sections of some of the islands of the Caribbean do not produce bananas of that kind. The United Fruit Co., to which the Senator from Mississippi has referred, devoted between one and two millions of dollars to trying to produce bananas in Cuba. There are some bananas produced there; but this company finally gave up the attempt, believing that bananas could not be produced there successfully, and not desiring to attempt to import bunches of bananas containing less than seven hands, because it was believed then and is now that they could not be imported successfully in competition with larger bunches.

As I have said, there is no protection involved in this duty, so far as continental United States is concerned. The banana plant, or tree, is a very tender plant, and all attempts made to produce them in Florida have failed, the tree being killed or

damaged by the slightest frost.

Neither is the banana a luxury, as has been suggested by the Senator from Mississippi. It is an important food product in general use, and is especially popular among people of very mod-

erate means in large cities.

It may be of interest to note what has been the result of the development of the banana business in the United States. It is only about 40 years since the captain of a trading schooner brought a few bunches of bananas from Jamaica to Boston as an experiment. Last year there were brought into this country more than 44,000,000 bunches of bananas, equal to about 60 bananas for every man, woman, and child in the United States.

If anyone will take the trouble to go into the sections of the city-where those having the smallest resources live, especially in sections occupied by those of foreign birth, he will see all classes and all ages of those people eating bananas, and to a large extent it is the basic food on which they depend. It is so immeasurably cheaper than any other food of similar character that they can afford to buy the banana when they could

not afford other fruits.

The Senator from Oregon [Mr. LANE] a few moments ago made some remarks about apples and the relative value of apples and bananas. Why, a pound of bananas has substantially the same fuel value per pound (calories) that a pound of apples has; and yet you can go anywhere on the street and buy 3 pounds of bananas for what you must pay for a pound of apples, raised in any part of the United States. As an economical food product they are not in the same class. The banana is so much cheaper.

Mr. LANE. Mr. President, may I be allowed to interrupt the

Senator?

Mr. WEEKS. Yes. Mr. LANE. If the fruit section of the Pacific coast is allowed free access to the Atlantic coast, with cheap transportation, it can flood the Atlantic coast with all the fruit the people will I wish to assure the Senator that good apples are consume. fully as healthful as bananas. There is a question raised by many physicians as to the desirability of bananas as a food for children. If the banana is eaten in its native country, ripened by natural processes, I think it is a good food for children, for the reason that the starch has undergone a change toward the formation of sugar in a normal manner. But many bananas, as they are handled in this country, where the ripening is forced by artificial means, are not good for children; and it is a question whether in many cases they do not do a great deal of harm. I think if the Senator will leave out that part of his argument he will be on safer ground, for it is just possible that a good many children have been killed by eating very bad and poor bananas, while if they had eaten the good old Oregon and Washington apples they would not have suffered that fate.

Mr. SMOOT. They could not afford them.
Mr. WEEKS. Mr. President, I think as many children have been given the stomach ache by eating green apples as by eating bananas. In any case, the Senator from Oregon does not want to get the idea that all the apples grown in the United States are raised in Oregon. The Senator from Arkansas would tell us that the best apples in the United States are raised in Arkansas; or the Senator from Virginia would tell us that the best apples in the United States are raised just across the line, in Virginia.

Mr. GALLINGER. And I would tell the Senator that the best apple is raised in New England.

Mr. WEEKS. Of course. [Laughter.]

Mr. OVERMAN. I believe North Carolina got the prize. [Laughter.]

Mr. MARTINE of New Jersey. In order that there may not be anything selfish about this production I wish to say that New Jersey is quite prominent. [Laughter.]
Mr. WEEKS. Mr. President, I am willing to admit that New

Jersey excels in applejack, if not in apples.

Mr. MARTINE of New Jersey. We have the apples to make the best applejack.

Mr. WEEKS. The Senator from Mississippi has said some-

thing about the price to the consumer. It is the first time I

have ever heard a Democrat in a position of responsibility make the statement that a tariff tax was not paid by the consumer. I do not know exactly who will pay this tax. I do not think anybody knows exactly who will pay it, but somebody is going to pay about two and one-quarter million dollars, and I sus-

pect it will be the consumer in this case.

The majority of the Senate committee at first proposed to impose a duty of 5 cents a bunch. Then, finding there was a great variation in the size of bunches, they changed it to one-tenth of I cent a pound, a bad step, in my opinion, because it imposes a weighing of the bunches, causing an additional handling of the fruit, from which more or less damage will be done, especially to the best fruit. But the amount of revenue raised will be substantially the same in either case, for a bunch of bananas of 9 hands weighs between 50 and 75 pounds, and a bunch of 7 to 8 hands weighs between 25 and 50 pounds. If the average weight is 50 pounds, the duty will be exactly the same as that originally contemplated.

Bananas are brought from the place where grown and are sold by the transportation company to jobbers. If a tax of 5 cents a bunch is imposed, it follows that the company transporting the bananas is going to charge the jobber 5 cents a bunch more than it would if it did not have to pay the duty.

The jobber sells the bananas to the retailer, and it is more than likely that the duty which the jobber has paid will be passed along when this transfer is made. The retailer sells the bananas by the dozen, or sometimes, of course, by the piece, but in any case the retailer will have to distribute that duty, and those who use the bananas will pay the two and one-quarter million dollars which this duty will produce; quite likely they will pay more than that, for it will not be easy to charge exactly enough additional to make the difference, and the tendency will be to increase the retail price so that there may be no possibility of loss to the retailer, thereby increasing his profits.

But it is not for the purpose of protection, and it is not for the purpose of reducing the cost of living, and it is not for the reason that bananas are not a food product, and it is not for the purpose of raising revenue that this duty is being imposed; the duty is really being imposed because Senators on the other side think they have discovered a trust in the shape of the United Fruit Co., to which the Senator from Mississippi has referred.

Some days ago the Senator from Kansas [Mr. Bristow], in referring to the duty on bananas, brought forth from the Senator from Mississippi [Mr. WILLIAMS] the statement that he was not responsible for this duty; that the Senator from Oklahoma [Mr. Gore] was responsible for it. That suggestion led me to investigate, and I found some remarks on this subject made by the Senator from Oklahoma four years ago, when the Payne-Aldrich bill was under discussion. At that time Senator Gore announced that he had discovered a trust, and to punish it he proposed a duty of 6 cents a bunch on bananas. He used this language:

Mr. President, I think I have treed a trust.

Then he goes on to make statements about the United Fruit Co. There was, of course, a modicum of fact in what he said, but much of his statement indicated that some one had imposed on his credulity, for the facts did not then and do not now accord with his statement.

It is of importance to determine whether a monopoly is controlling this industry, even though it is not operating in the United States, and whether it is extorting unreasonable prices from those who use the fruit, and in order to arrive at a correct conclusion it is necessary to refer in some detail to the operations of the United Fruit Co. and point out its relations to this trade. In doing this I think it will be demonstrated that there is the most active competition in the banana industry; that the consumer gets the fruit at a reasonable price; that the profits are not large, but both price and profit are dependent upon the crop and other conditions which apply to every similar industry; that the operation of the United Fruit Co. is relatively gaining so that there is not only now but is likely to be in the future sufficient competition, and that in any case it is not the kind of trust the Senator from Oklahoma evidently had in his mind, and I think there may be seen some things in connection with the operations of the United Fruit Co., which will appeal even to a Democratic Senator.

This company was organized in 1900 by combining a dozen companies, among them the Boston Fruit Co., with an authorized capital of \$20,000,000, and capital issued for the purposes of the combination of \$11,230,000. Since that time in extending the business of the company and entirely for assets as the result of the expenditures, the capital has been increased to \$36,594,300. Indeed, the assets have increased more rapidly than the capital, so that dividends are not being paid on water but on actual capital paid in.

The object in establishing this company was to raise fruit and sugar and to transport them to a market, and in carrying

out these purposes the company has been successful; it has been and is now paying good dividends on its stock-I think 8 per cent at this time-and it has developed one of the largest farming industries in the world. But this development has not been at the expense of others, as has been intimated by the Senator from Mississippi, but has been done along natural and proper lines, benefiting a large number of people connected with the industry in many different ways and indirectly great numbers of people in other ways, including those who consume the fruit.

As an evidence of the development of the industry since 1900 it is only necessary to state that at that time there were brought into this country 16,000,000 bunches of bananas, and in the 13 years this quantity has increased to 44,000,000 bunches, and to show in making this increase that the United Fruit Co. has not developed a monopoly it is needless to make any other statement than that of the 16,000,000 bunches brought into the United States in 1900, the United Fruit Co. transported 11,000,000 and other companies 5,000,000. Last year the United Fruit Co. brought in 25,000,000 bunches, while other companies brought in 17,000,000; in other words, the fruit transported by the United Fruit Co. had increased in the 13 years 125 per cent, while that transported by the 20 other companies in operation, had increased 240 per cent. This increase has been brought about without increasing the price of bananas to the retailer or to the consumer

I submit herewith a statement of the average annual prices obtained for bananas during the operations of the United Fruit Co., which shows that the highest wholesale price per stem durthis period has been \$1.048; the lowest price, \$0.815; the average price, \$0.931, and, curiously enough, that is exactly the price obtained last year:

ne-hand bunch, jobbers' price:	
1900	\$0.866
1901	. 815
1902	. 94
1903	. 916
1904	. 931
1905	. 828
1906	. 97
1907	1. 039
1908	. 958
1909	. 908
1910	1. 048
1911	. 931
1912	. 307

Therefore, while the cost of foods in the United States during this period has increased 24 per cent, the cost of bananas to the consumer has not increased a cent, and, as I have just stated, the United Fruit Co.'s part in the production and the transportation of bananas has not increased one-half as rapidly as the increase of the 20 other companies which are in competition

Incidentally, it may be mentioned that the United Fruit Co. is a home corporation; I believe its stock is entirely owned by citizens of the United States, while the opposition companies are very largely controlled by foreigners, and I am told that the strongest opposition is entirely within foreign control. As an evidence of the widespread financial interest in this company and as an indication of the fact that it is not owned or controlled by a few men. I submit a statement showing the holders of the stock in the United Fruit Co. at the time of the consolidation and each year since; also the number of trustees who are holders of stock and the shares held by them; the number of women who are owners of stock and the number of shares held by them: Number of stockholders in the United Fruit Co. and the increase from year to year since its organization.

September, 1899	1	
September 1800 September, 1901 September, 1902 September, 1903 September, 1904 September, 1905 September, 1906 September, 1907 September, 1907 September, 1908 September, 1909 September, 1909 September, 1909 September, 1910 September, 1910 September, 1911 September, 1912 June, 1913	9/1 1,608 1,643 1,865 2,314 3,232 3,778 5,122 5,908 6,160 6,181 6,658	361 610 637 33 222 444 911 546 1,34 786 252 27 477 446 451

It will be noticed that there has been a very wide distribution of the capital since the organization of the company, and that in number more than one-half of the stockholders are women, and that trustees have a considerable holding, which shows the estimation in which the management and operation of the company are held by those who are familiar with it.

It has been charged that there is an extremely large profit made in the producing and bringing bananas to the United States. All the testimony that has been submitted indicates that this surmise is not true, and as evidence in favor of this contention I submit a circular issued by the Atlantic Fruit Co., of 11 Broadway, New York City, under date of June 23, 1913, in which they contend that profits are extremely small, and that while the Atlantic Fruit Co. is an important element in this trade it can not compete with the United Fruit Co. if the duty in question is imposed. I quote a paragraph giving their statement as to profits obtained in this trade during recent years:

ment as to profits obtained in this trade during recent years:

It may be argued against our contention that the United Fruit Co. is abundantly able to stand the tax and will have to do so, and that other companies should be in the same position, but against this our figures will show that on the importations of this company from October, 1905, to September 30, 1910, profits shown were only 2.7 cents per bunch; and from September 30, 1910, to December 31, 1912, a loss of 2 cents per bunch; and from January 1, 1913, to May 31, 1913, a loss of 6.3 cents per bunch; although as to the latter item, which includes the winter months, when all companies must face a certain loss, the remainder of the fiscal year may bring the year's showing to approximately 2.5 cents profit per bunch.

If this statement is correct, of course it necessarily means that either the smaller companies will go out of business or the price of bananas to the consumer will be increased.

The operations of the United Fruit Co. are not confined to the raising and transporting of bananas, but are extended to the transporting of other fruits and to the production of sugar, of which 144,000,000 pounds were produced last year. This has not been done by absorbing or purchasing other companies, but by a husiness built up by the United Fruit Co. itself.

not been done by absorbing or purchasing other companies, but by a business built up by the United Fruit Co. itself.

The operations of this company, of course conducted presumably for its benefit, have inured indirectly to the advantage of the whole Caribbean district in many ways. It has constructed hospitals in various countries at a cost of over \$300.000, in the maintenance of which it spent last year \$240,000. During the life of the company there have been treated in these hospitals 63,000 patients, more than 25 per cent of whom were not employees of the company. During the past year, as a result of the health service installed by this company, not a single case of any disease subject to quarantine appeared in any port in which the company is engaged in business, as a result of its operations, nor on any of its ships in the service. It has established an extensive wireless-telegraph system covering the Caribbean Sea region, and has constructed lighthouses at many points, which are not only of benefit to itself but to commerce Incidentally, it has largely affected our commerce in the field in which it operates. During the first year of the company's business it exported to foreign countries, for use in connection with its own affairs, \$754,506 worth of merchandise purchased in the United States, while last year, for the same purpose, it exported \$4,020,660 worth. But this is only a small item compared with the business which has been very largely developed through the means of transportation and as the result of the operations of the United Fruit Co. For instance, the exports to the West Indies and Central America from the port of New Orleans during this period show an enormous increase, much of which is due to the direct line of steamers operated by this company. The following is a statement of these exports:

Exports to the West Indies and Central America from New Orleans.

Country.	1900	1911
British Honduras Guatemala Spanish Honduras Nicaragua Costa Rica Panama Maxico Cuba	\$244, 247 58, 343 403, 828 936, 825 354, 269 595, 044 1, 817, 583	\$1,266,320 862,746 1,205,668 904,837 993,190 3,616,668 3,836,534 5,223,695
Total	4,410,139	17,909,658

In other words, from New Orleans alone, in 11 years, these exports have increased 300 per cent, and if such results are obtained from other ports touched by the United Fruit Co. it seems that an enormous volume of manufactures and agricultural products in the United States have found a new market in the Caribbean district, and this traffic does not inure alone to the benefit of the transportation line itself, but indirectly affects local traffic in the United States. As an example of this, there

were transported by rail to inland points in the United States freight, which originated within the operations of the United Fruit Co., aggregating 583,500 tons, a necessarily valuable business to the railroads and probably reducing the rates charged on goods brought from inland to the seaboard, because a lower rate can be made in cases where cars go loaded both ways than in cases where the cars must be returned empty to their starting point.

The development of the company has meant the building of many steamers and an increase of its transportation facilities commensurate with the increased resources of the company and the business which it carries on. During the first year of the company's business the largest ship employed in connection with its business had a capacity of about 2,000 tons, and most of the vessels employed in the service at that time were foreign steamers chartered by the company. Since then the company has built 20 steamships, having a total tonnage of 117,252 tons, the largest having a capacity of 8,000 tons. This is of great importance to our people, because it means employment for those engaged in shipbuilding and ship repairing, and it would give us the possibility of obtaining valuable auxiliaries in case of In 1898 the country was greatly disturbed in obtaining sufficient steamers for the comparatively small transportation service required at that time. Since then the United Fruit Co. has built and put in operation more steamers than all other similar transportation companies put together, and if we are going to take steps to rehabilitate our merchant marine, which I believe will be done in the near future, it is a pretty poor way to commence it by crippling the one company which has been adding to our transportation facilities, even under the present conditions. If we put a duty of 5 cents a bunch on bananasthere being no duty in most European countries-it will, in my judgment, change the trend of banana shipments away from the United States to those countries. It is true that the countries of Europe have not increased their use of bananas in the same proportion that the increase has been developed in the United States, but it is evident that the trade in Europe will in the near future make the same or similar advances that have been made in the United States, and if we impose this duty it will accelerate this increase at our expense. With this increased demand in Europe the steamers carrying the bananas, in order to make their calling more profitable, will offer unusual facilities for the transportation of goods in return, so that the sales of European goods will be increased as transportation lines are established and as a result of the development of the banana traffic. The net result of this would be that we in this country not only will lose the bananas, which will necessarily affect food prices in other cases, but we will also lose the sale of goods which will be imported from Europe to take the place of those which otherwise would come from this country.

It seems to me that all of this shows that the operations of the United Fruit Co. have been beneficial not only to the 7,500 stockholders and the 40,000 employees of the company, but to all of the people in the United States, and that an attempt to cripple this company by the imposition of this duty is not only an un-reasonable proceeding in itself, but that it will fail of its purpose, for the United Fruit Co., being a producer as well as a transporter and having large interests in the localities where the best bananas are produced, can operate on terms which mean annihilation to the competition of smaller companies. So we have the spectacle of the Democratic majority in the Senate being willing to put a duty on a food product, used very largely by people of extremely moderate means, for the purpose of punishing a corporation which any unprejudiced individual must admit has been beneficial to American interests. But even this attempt, in my judgment, will fail in its purpose, for there is every reason to believe that the smaller companies will feel the result of the duty much more keenly than the larger company, so that competition instead of being increased will be destroyed and the larger company will be able, if it desires to do so, to increase the cost of bananas to the American consumer to its own benefit.

I can not believe that the large number of those who protest against this duty and others who are advised of the contemplated action will submit without still further protest to this ill-advised attempt to restrict American enterprise, which must result, if it succeeds, in increasing the cost of an important food.

Mr. SHERMAN. Mr. President, one of the statements made in the report of the majority of the Committee on Finance of the Senate says:

A small revenue tax on this article was deemed justifiable-

Referring to bananas-

in view of the fact that the importation of bananas to this country is a practical menopoly of the United Fruit Co. On account of the perishable nature of bananas and the smallness of the tax, it is not believed it can be readily shifted to the ultimate consumer.

In order to test the application of the statement made in the committee report, I found it advisable to investigate the time that a bunch of bananas requires to come from Costa Rica into the grocery shop in Washington or Chicago. It takes two weeks from the time it is cut from the banana tree, put on the local railroad back in the plantation in Costa Rica, and the hoisting machinery puts its down in the United Fruit Co.'s steamer until it is hanging up in the grocery in Chicago or in the States of the Middle West.

The modern plan of transportation of this perishable product has entirely changed the method of transacting the business. There is a refrigeration in the steamer bringing that product to our shores that is practically perfect. It is equal to that of any refrigerator car that travels on the continental lines of

Therefore there is no protection, as a perishable commodity, against shifting this 10 cents a hundred pounds to the consumer of the article. There is no competition by the protection of a like product in this country. Porto Rico'does not, commercially speaking, put anything on the market that affects the supply; neither does Hawaii. There is not anything which comes to the Pacific coast that materially affects the market of this product unless from Central America or the Caribbean Sea country. There is nothing raised inside the limits of continental United States. There is but little in Mexico. You do not strike the banana belt until you get way into south Mexico. You have to take a steamer at Vera Cruz, if you are on land, and go around to get into the banana country.

Practically, therefore, what is claimed by those who believe

in the doctrine of encouraging and developing something we can produce here does not and could not apply to bananas. There are not enough bananas raised in the United States or in the country that is subject to its jurisdiction practically to feed the animals in the zoological gardens that are maintained in this country. In other words, the market is not appreciably affected by the home production. It is supplied by the plantations in south Mexico, in Costa Rica, in Honduras, in Colombia, in the northern part of South America, and a few other

countries near there.

Jamaica is a British colony. Our relations are not only friendly with the home Government of Jamaica and the local business interests that is handling the banana product in Jamaica, but it is friendly with all the Caribbean Sea country. Of course, that is not important. What our relations may be with the Central or West Indian countries is not of much consequence. We are not out of the Government receivership in San Domingo yet. It is not of much consequence. It may be dismissed, notwithstanding the fact that we have either to vitalize the Monroe doctrine in the Western Hemisphere or we have to ignobly and meanly abandon it. It is of no importance what our relations are with the Central or South American Republics. It is of no consequence what are our relations with Mexico until some Senator on this side of the Chamber introduces a resolution, and then there is a most astounding and consuming interest manifested, and we restrain ourselves; and I

But when it is said here that our commercial relations with Central America are of no consequence it is well to remember that under the Monroe doctrine we must exercise some sort of supervisory power over many of those countries or abandon it. Now I think is a good time to begin to cultivate amicable relations with the principal product many of them send to a friendly port. I do not want to discuss that branch of it at this time;

it may become proper some other time.

There is one matter that I think is material here. A great many of the tropical countries exporting to us their products

have seen fit to impose an export duty.

In every instance the South American Governments will learn this in time. If you talk with them when traveling in those countries, you will find that they are gradually beginning to discover how to extract revenue from other countries from their products we use but can not produce. They know that everybody who drinks a cup of coffee made from Brazilian coffee is paying tribute to that country. Costa Rica on the 1st day of July, 1910, put an export duty on bananas. There is an export duty of 1 cent gold on every bunch of bananas that goes out of that country. That export duty lasts until July, 1930. You can figure upon twelve and fourteen million bunches that come from Costa Rica alone just about how much revenue they will make, which either the United Fruit Co. will pay or the purchasers of bananas will pay; somebody must pay it. Costa Rica gets the revenue, and the United Fruit Co. and the independent companies, if you call it a trust, are engaged in the pleasing occupation of contributing to the public revenues of the Government of Costa Rica.

If you go to South America, what do you find? You skirt around the coast and you get to Colombia. You will find our heavy machinery there; you will find our flour and our salted meats there; you will find there the cheeses that are made here that are imperishable and gain strength every day in the Tropics; but little outside of that, hardly. You find our trade in other lines diminishing, if we ever had it, and you find the German and the Englishman selling in that market.

If you investigate a little further you will find that in this year, 1913, Germans have gone into Colombia and bought up large bodies of the available banana lands, and this year, 1913, is their first crop. They have organized a line of steamships, and in this year, 1913, that line of steamships is carrying out of that country that first crop of bananas grown from the trees that were planted long enough ago to produce it.

this year's crop is the first they have sent to the European That is a German company.

You will find, if you go a little further, that about 1900-I am quoting from memory—Englishmen organized a line of freight boats to Jamaica. If you look back of that organization, you will find that, like most of the English steamship lines, it is a subsidized line, and under the guise of carrying the Royal mails, it is a subsidized freight boat that goes to Jamaica and takes the bananas back to the home country.

If we investigate the exports from Jamaica into the English market we find that Great Britain is the second of the countries in the world in the consumption of bananas, the United

States being first.

A little after this freight-boat line was established, a second one was established, and is now plying its craft between the West India ports and the home country.

About two or three weeks ago dispatches came here from that country to the effect that England is preparing to fortify one of her West India islands, putting there many thousands of pounds sterling in the improvement of her harbors, in strengthening her coast defenses, and in establishing an ade-quate coaling station for her navy in that part of the world. So far as the public peace is concerned it is a friendly undertaking on her part; no hostility toward this country is manifested in that development, but she is simply preparing for the coming change.

When the Isthmian Canal is opened the great trade routes of the world will be changed, the line of travel by shipping will be deflected from present courses, and Great Britain, with her foresight, with her subsidies to her boats that travel world-wide. is preparing herself for the change that will come in the transportation of persons and property through the Isthmian Canal. When that time comes, with an import duty on 45,000,000 bunches of bananas entering our market they can send their products in Costa Rica and in northern South America and the rest of the Caribbean country to some other places, because the

market is increasing daily.

I do not regard a banana as a luxury; but I regard an Oregon apple as a luxury. In some parts of our Mississippi Valley country we have had to draw our supply from the Pacific coast—those of us who are inclined to be of fruit-eating habits. I am not much of a meat eater, but am a good deal of a vegetarian, and I take great pleasure in paying from 5 cents apiece to six for a quarter for apples that come from the Pacific coast. I have no objection to that, for they are fine apples, and they are worth the money.

Mr. LANE. Mr. President—
The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from Oregon?

Mr. SHERMAN. Yes, sir.

Mr. LANE. Mr. President, I should like to explain to the Senator from Illinois that the reason for his paying so high a price for apples is due to the cost of transportation from the Pacific coast. What I say applies pretty generally to the State of Washington, to northern California, to Arizona, and to New Mexico. The high price of apples in Illinois and on the Atlantic coast is on account of the transportation charges to those sections. In our region thousands of bushels of good apples are allowed to lie upon the ground and are not picked for the reason that it does not pay to ship them. You can buy them in that country at any price you desire, but if we had the means of transportation cheaply to this coast, as we shall have when the Panama Canal is opened, we could furnish you apples at a rate which would compete with bananas. Here is one article which ought to please you immensely, for the reason that it brings in a revenue to the Government and incidentally gives

you an opportunity to protect the American farmer.

Mr. SHERMAN. Mr. President, the explanation is entirely reasonable and it is entirely satisfactory; but we raise bananas in no place in continental United States, while we raise apples

in nearly every State here. The apple is peculiarly an American fruit. If it is not raised where it used to be—in the New England States—as much as it was formerly, it is because we have neglected the care of the orchard. That is also true with other places. There is hardly a locality in the United States that will not raise apples if the orchard is cared for. Consequently

what applies to apples does not apply to bananas.

It has been stated here, and it is true, that the banana is not a home production—that the principle of protection could never

apply to it.

I, too, Mr. President, have a number of communications from gentlemen in various parts of the United States. I will say for the information as well as for the peace of mind of those concerned that I have had no communication of any kind from the United Fruit Co.—not even a circular letter. The communications I have received are from some of my constituents, among whom there are many sons of Italy and many who come from Greece, famed in the classics. They have with one accord unanimously sent me many petitions not to interfere with their usual occupation in furnishing the population with bananas. They know what is the matter; they are in the retail fruit busi-They are not in it to make fortunes; they are in it to make But they know just as well as anybody knows that if \$2,250,000 of duties are collected at the ports of New Orleans, Mobile, Baltimore, Boston, and New York-and when I name those ports I name pretty nearly all the ports to which bananas are shipped in this country-they know that when that amount is collected the charge will be passed along on the bunch until finally the man with the pushcart pays the bill.

Mr. SMOOT. Mr. President-

The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from Utah? Mr. SHERMAN. Yes, sir.

Mr. SMOOT. I do not remember whether the Senator has mentioned the fact that not only will the amount of this duty be passed on to the ultimate consumer, but the expense of weighing the bananas and the loss that will come by bruising, due to extra handling and in many other ways, will be added and will ultimately fall upon the consumer.

Mr. SHERMAN. Yes, sir; it will be just the same as in

every other case.

Mr. SIMMONS. Mr. President, the Senator from Utah has suggested that this duty will be passed on to the consumer.
suppose that is true of all duties, is it not?
Mr. SMOOT. On articles not produced in this country.

Mr. SHERMAN. That depends. Name the article and then I will answer your question.

Mr. SIMMONS. It is true of many articles upon which the Republican Party has levied duties, is it not?

Mr. SHERMAN. The Senator should state a specific article. That is not a question that can be answered except in relation

to some specific article in a paragraph or schedule.

Mr. SIMMONS. I find that when Senators on the other side are opposed to a duty and want an article put on the free list they say the duty will be passed on to the consumer, but when they are in favor of a duty they say the duty will not be paid

Mr. SHERMAN. That depends entirely on whether we can produce enough of the article here in this country to supply the domestic consumption. If the Senator will offer the evidence that we can supply our domestic consumption of bananas by

some form of culture, it would be a different matter.

Mr. SIMMONS. The Senator has been arguing for some time as if the duty were placed upon bananas for the purpose of protection; and, with that in view, he has been trying to show that we do not produce any of this article in continental America, although it may be produced in several of our de-pendencies. I want to say to the Senator that we do not im-pose this duty with any idea whatsoever of protection. Our sole purpose in proposing the levying of this duty was revenue.

Mr. SHERMAN. Mr. President, I never had the remotest suspicion that anything like that lurked in the minds of the authors of this bill when they wrote it. The first time I read it I had some suspicion of my own that it was drawn for other purposes. I would not consume time by saying to the Senator from North Carolina that I thought he had any idea of protection in levying this duty on sonfe other articles which we either

have considered or will consider.

I only wish to say that if the United Fruit Co. will pay out of its treasury this two million and a quarter dollars and the consumer of the banana will not pay it, although we do not produce any bananas in this country, it is pertinent here to ascertain why the manufacturer of cast-iron pipe can not have applied to him the same kind of a rule. Why should not it apply also to the agricultural-implement manufacturers at Moline and else-

where, together with the branches of the International Harvester Co.'s world-wide business? Why not tax their product? Agricultural implements are one of the shining lights in the writing of this bill, because the farmer gets them free listed, and he is supposed to be correspondingly benefited, as well as the municipalities needing gas and water are correspondingly supposed to be benefited by the free listing of cast-iron pipe; but when it comes to bananas, of which we do not produce any appreciable quantity in this country, there is a different rule followed. If it works in one case, it seems to me that it ought to work in another case.

Mr. SIMMONS. Does the Senator really think that a duty of one-tenth of a cent a pound on bananas will be passed on to the consumer-and by the "consumer," I mean the person who eats

them-does the Senator think that?

Mr. SHERMAN. Yes; the consumer will pay the tax in this

Mr. SIMMONS. This is a duty of one-tenth of a cent a pound. My understanding is that it takes about five bananas to weigh a pound, and that bananas are sold in bunches of about five for 5 cents. A bunch of five bananas would pay, therefore, one-tenth of a cent a pound. How would they pass that onetenth of a cent a pound on to the man who buys five bananas?

Mr. SHERMAN. By raising the price about a nickel. Mr. SIMMONS. Does the Senator think they would add a

cent to each banana?

Mr. SHERMAN. That is the usual course, as we know from experience. I can answer that. We endeavored to cheapen

shoes in 1909 by free-listing hides-Mr. SIMMONS. The Senator thinks that when the seller here has to pay a tax of one-tenth of a cent and comes to pass

that on to the consumer, he multiplies it by 10 and makes it

Mr. SHERMAN: Not necessarily; but he multiplies it enough

to get even change.

Mr. SIMMONS. I merely wanted to know how much they pass on to the consumer. I wanted to know whether they really pass on the tax that is paid. The Senator says that if the dealer pays one-tenth of a cent on a bunch of five bananas, worth 5 cents, he will charge the consumer a cent, because he has had to pay one-tenth of a cent; and I want to know if that is the way protection works in the United States.

Mr. SHERMAN. I will explain to the Senator how it works. Ordinarily we buy bananas by the dozen; at least, most folks do. We do not buy them one at a time. We buy them for so much a dozen, and ordinarily when there is a change of this kind the dealers pass along enough of the added charge to make

even change

even change.

Mr. SIMMONS. But the Senator has just said that they would pass along ten times the tax in this particular case.

Mr. SHERMAN. Well, I do not care how much you figure it out, whether it is five times or ten times. Let me ask the Senator a question. I would not like to have the Senator go. I will be lonesome if the Senator leaves the Chamber.

Mr. SIMMONS. I am very sorry for the Senator, because if that be true, I will say to the Senator that the Senator is present.

seldom lonesome in these days when the Senator is present.

Mr SHERMAN. I am glad to know that I relieve the ennul of the occasion. How much does the Senator think the free listing of wheat and flour will diminish the price of a loaf of bread?

Mr. SIMMONS. I have not calculated. Mr. SHERMAN. Well, I have.

SIMMONS. Then, the Senator can answer his own question.

Mr. SHERMAN. Yes; I can answer the question. It will diminish it three sixty-fourths of a cent in Chicago and ten sixty-fourths of a cent in New York.

Mr. SIMMONS. It will, then, diminish it? Mr. SHERMAN. That is figured out by millers and bakers in whom I have some confidence. I never knew them to mis-lead me in regard to anything. I should like to know whether the free listing of flour will result in any corresponding cheapening of the loaf of bread.

I said something about shoes a while ago. When hides were free listed and the duty on shoes was reduced, as I remember— I am quoting from memory-60 per cent, or from 25 per cent down to 10 per cent, the only result of that reduction was that the jobber—not necessarily the manufacturer, but the jobber and the retailer—absorbed the diminished cost themselves. We did not get any benefit of it. That is the way free listing works. Adding a tax to bananas works just the opposite way, because

the other fellow is paying it. The tax is paid by the fruit company in the first instance, the shipper, the importer to this country, if we put it that way. Instead of paying it out of their corporate treasury, the easiest thing in the world is for them to pass it along. They do not absorb it as they do where an article now taxed is free listed. Shoes that formerly cost \$6 cost \$6.50 now. If you are wearing that kind of a shoe, you got nothing out of that. Bananas, when the duty of more than \$2,000,000 is paid, will have that much of an additional burden put on them, and the men that buy them for their families are the ones that will pay it. That is the usual result all the way

The VICE PRESIDENT. The question is on the amendment proposed by the committee.

Mr. BURTON. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. Townsend]. I transfer that pair to the junior Senator from Illinois [Mr. Lewis] and will vote. I vote "yea."

Mr. LANE (when Mr. Chamberlain's name was called). I wish to announce that the senior Senator from Oregon [Mr. CHAMBERIAIN] is unavoidably absent, and that he is paired with the junior Senator from Pennsylvania [Mr. Olaver].

Mr. CLARK of Wyoming (when his name was called). Announcing my pair with the senior Senator from Missouri [Mr. STONE] I transfer that pair to the junior Senator from Maine [Mr. Burleigh] and will vote. I vote "nay."

Mr. KERN (when his name was called). I transfer my pair with the senior Senator from Kentucky [Mr. Bradley] to the senior Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "vea."

Mr. GRONNA (when Mr. Poindexter's name was called). I am requested to announce that the junior Senator from Washington [Mr. POINDEXTER] is necessarily absent from the Chamber. He is paired with the senior Senator from Oklahoma [Mr.

Mr. REED (when Mr. Stone's name was called). announce the necessary absence from the Chamber this afternoon of the senior Senator from Missouri [Mr. Stone]. I will let this announcement stand for all roll calls of the afternoon.

Mr. THOMAS (when his name was called). I again announce the transfer of my pair with the senior Senator from New York [Mr. Root] to the junior Senator from Oklahoma [Mr. Gore] and will vote. I vote "yea."

Mr. SMITH of Michigan (when Mr. Townsend's name was called). My colleague [Mr. Townsend] is temporarily absent from the Chamber. I understand he is paired with the junior Senator from Florida [Mr. BRYAN]. If he were present, he would vote "nay."

Mr. WILLIAMS (when his name was called). I am paired with the senior Senator from Pennsylvania [Mr. Penrose]. I transfer that pair to the senior Senator from Maryland [Mr. SMITH] and will vote. I vote "yea."

Mr. BRYAN. I wish to announce that the senior Senator from Oklahoma [Mr. Owen] is paired with the junior Senator from Washington [Mr. POINDEXTER].

The roll call was concluded.

Mr. LODGE (after having voted in the negative). I desire to make the same announcement that I made before. I have a general pair with the junior Senator from Georgia [Mr. SMITH]. I transfer that pair to the junior Senator from California [Mr. Wobks], and will allow my vote to stand. I ask that this announcement may stand for the day.

Mr. GALLINGER (after having voted in the negative). Mr. President, I inquire if the junior Senator from New York [Mr.

O'GORMAN] has voted? The VICE PRESIDENT. He has not.

Ashurst

Bacon Bankhead

Mr. GALLINGER. I am paired with that Senator. I transfer that pair to the junior Senator from Wisconsin [Mr. Ste-PHENSON | and will allow my vote to stand as originally recorded. The result was announced-yeas 31, nays 28, as follows:

1.15	A5-01.	
Kern	Reed	Swanson
Lane	Robinson	Thomas

So the amendment of the committee was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Finance was, in paragraph 233, page 62, line 18, after the word "section," to strike out "15" and insert "10," so as to read:

233. Extract of meat, not specially provided for in this section, 10 cents per pound.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.
Mr. SMOOT. Mr. President, have we passed paragraph 232?

The VICE PRESIDENT. We have. It has been passed.

Mr. SMOOT. I was engaged in talking with the Senator from Mississippi [Mr. WILLIAMS], and it was passed before my attention was called to it.

I desire to call the attention of the Senator from Mississippi to paragraph 232, which provides for venison and other game a duty of 11 cents per pound, and for game birds, dressed, a duty of 30 per cent ad valorem. This paragraph levies a duty on venison and game birds, while paragraph 234 levies a duty on dead poultry. Nevertheless, these articles if prepared or pre-served would be apparently free of duty under paragraph 548 of the free list, which covers "meats of all kinds, prepared or preserved.

Mr. THOMAS. "Not specially provided for in this section."
Mr. SMOOT. I am perfectly aware that it says "not specially provided for," and they are not specially provided for in this paragraph. In other words, game birds, dressed, and dead poultry are dutiable under this bill; but if the same articles are prepared or preserved in any manner, they come in free of duty. That is to say, the meat of ducks, whether salted, dried, or packed in tins, comes in free of duty. Was that the intention of the committee?

Mr. WILLIAMS. What?

Mr. SMOOT. To impose a duty on wild ducks and dead poultry, and at the same time to allow them to come in here free if prepared or preserved in any manner? I call the Senator's attention to paragraph 548 of the free list.

Mr. WILLIAMS. Paragraphs 232, 234, and 548?

Mr. SMOOT. Yes.

Mr. WILLIAMS. At first blush I see no clash between them. The first one refers to venison and other game, or, as far as this particular discussion is concerned, it refers to game birds, dressed, and imposes a duty of 30 per cent. Paragraph 234 refers to poultry.
Mr. SMOOT.

refers to poultry.

Mr. SMOOT. Yes.
Mr. WILLIAMS. There is certainly no trouble in discovering the difference between poultry, domestic fowl, and game birds, Mr. SMOOT. None at all. That is not the conflict.

Mr. WILLIAMS. That is dutiable at 2 cents a pound. Parameter of the conflict of the conflict

graph 548 refers to "Meats: Fresh beef, veal, mutton, lamb, and pork; bacon and hams; meats of all kinds, prepared or preserved, not specially provided for in this section." That is true, Mr. President.

Mr. WILLIAMS. Poultry is specially provided for in paragraph 234.

Mr. SMOOT. Yes: dead poultry is.

Mr. WILLIAMS. Game birds are specially provided for in paragraph 232.

Mr. SMOOT. The Senator does not yet seem to catch the I asked the Senator if it was the intention of the committee to impose a duty upon dead poultry, and impose a duty upon game birds dressed, and allow those same items—that is, poultry and game birds—to come in here free if they are preserved or prepared in any way? In other words, suppose the

meat of ducks was salted, dried, or canned?

Mr. WILLIAMS. Oh, I see the Senator's point! Paragraph 234 refers to live poultry.

Mr. SMOOT. Why, certainly. Mr. WILLIAMS. And the point the Senator is making is that

paragraph 548 would let in this poultry free.

Mr. SMOOT. If it was canned or if it was preserved; cer-

tainly. That is the point.

Mr. WILLIAMS. No; I do not think that was our intention.

Mr. SMOOT. Then I ask that this paragraph may be passed. over for further consideration by the committee. I did not think that was the intention.

Mr. WILLIAMS. Wait one second. Paragraph 232 does not need to go back to the committee. Paragraph 234 is the paragraph that needs to go back.

Mr. SMOOT. No; I am not objecting to 234.
Mr. WILLIAMS. Mr. President, I move, after the word "live," in paragraph 234, to insert the words "or dressed."

Mr. SMOOT. That would not cure it. Mr. WILLIAMS. No; I beg pardon. Wait a minute. That will not cover it at all.

Mr. SMOOT. No; that will not cure it.
Mr. WILLIAMS. "Poultry, live, 1 cent per pound; dead, 2 cents per pound." That includes all poultry, of course.
Mr. SMOOT. The Senator agrees with me in that. I am not

asking now for the amendment which the Senator has just offered. I am calling the Senator's attention to the fact that paragraph 548 provides for "meats of all kinds, prepared or preserved." Dead and live poultry is assessed, and so game birds if they are dressed are assessed; but you can take game birds and preserve them; you can take dead poultry and preserve it, and then they would fall under paragraph 547 and come in free. There will be a conflict there. The Senator will no doubt remember the case of the Chinese company of New York against the United States where this question was decided. the bill is written the same question will arise again. The way

Mr. WILLIAMS. I see the point now. The point the Senator is making is that dead poultry, in paragraph 234, would refer only to poultry, dead and in its natural state, and that dead poultry, prepared or preserved, would be upon the free list.

Mr. SMOOT. It would be upon the free list.
Mr. WILLIAMS. Of course, that was not the intention of the committee. The Senator is right about it, and I ask that the latter part of paragraph 234, after the semicolon, be sent back to the committee for further consideration. I would offer the amendment now, but I am a little afraid I might not get the

wording exactly right.

The VICE PRESIDENT. If there be no objection, the whole paragraph will go back. The question is on the amendment of the committee, in paragraph 233, page 62, line 18, to strike out "7" and insert "5" before "cents," so as to read, "fluid extract of meat, 5 cents per pound."

The amendment was agreed to.

The VICE PRESIDENT. Paragraph 234 is recommitted.

Mr. WILLIAMS. The same thing has occurred twice. I dislike to take up the time of the Senate about it, but paragraph 234 was not recommitted. The latter part of paragraph 234, following the semicolon, was recommitted.

Mr. GRONNA. Do I understand that paragraph 234 was recommitted?

The VICE PRESIDENT. The Chair desires to state for the benefit of the Senator from Mississippi that unless there is some good reason why the whole paragraph should not go back the Secretary has informed the Chair that it aids the clerks very materially in keeping the record to have it all go back.

Mr. WILLIAMS. It may aid the Secretary very materially in keeping the record, but it may cause very considerable trouble later on. To-day, on an earlier paragraph, we sent one subject matter with about a dozen items in the paragraph back to the committee, and the Chair later announced that we had sent the paragraph back. As far as I can lay the work behind me I want to lay it behind me. Therefore, when we send a part of a paragraph back it will not take much more pen and ink or pencil for the Secretary to note the fact that that part of the paragraph following the semicolon was sent back to the committee.

Mr. GRONNA. If the paragraph has not been recommitted,

wish to offer an amendment to it.

The VICE PRESIDENT. The Senator from Mississippi says he wants only the last half of the paragraph to go back. Is the Senator's amendment to the first part of the paragraph?

Mr. GRONNA. I have an amendment to the entire paragraph, to change the rate from 1 cent a pound to 2 cents a pound and from 2 cents a pound to 3 cents a pound.

The VICE PRESIDENT. The Chair will have to let the

Senate rule on that question.

Mr. SMOOT. Does the Senator from North Dakota simply want to offer an amendment to poultry live or to both items?

Mr. CLARK of Wyoming. Both. Mr. BRISTOW. I do not think the Senator from Mississippi understood him. The Senator from North Dakota wants to offer an amendment to the entire paragraph, and under the present status the Senator from Mississippi has referred half of it back and half of it is here. The Senator from North Dakota can not offer his amendment because the amendment applies to both parts of the paragraph.

Mr. WILLIAMS. Undoubtedly it is in order because you

must perfect the paragraph before you recommit.

The VICE PRESIDENT. The Senator from Mississippi had the last half of the paragraph referred back to the committee.
Mr. WILLIAMS. I understand that. The amendment ought

to have been offered earlier of course, before we took that action. I assume that the paragraph must be perfected before it can be sent back to the committee, either in whole or in part.

Mr. GRONNA. I call attention to the fact that paragraph 234 had not been read before I offered my amendment.

Mr. WILLIAMS. I beg the Senator's pardon; it was, and the next paragraph was read. I ask that the action of the Senate recommitting a part of the paragraph be reconsidered for the present.

The VICE PRESIDENT. Is there objection? The Chair hears none. The paragraph is now before the Senate, and it will

The Secretary read as follows:

234. Poultry, live, 1 cent per pound; dead, 2 cents per pound.

Mr. GRONNA. I move to amend the paragraph, so that it will read:

Poultry, live, 2 cents per pound; dead, 3 cents per pound.

Mr. President, this is a paragraph on which a great deal might be said. I know that the Senator in charge of this schedule is very anxious to proceed with the bill, and I shall not take up the time of the Senate to discuss it, but I wish to ask to have printed in the RECORD in connection with it a table.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The table referred to is as follows:

Canadian rate: 20 per cent ad valorem.
Payne rate: live poultry, 3 cents per pound; dead poultry, 5 cents per pound.
Dingley rates: Same as Payne rates.
Wilson rates: Live poultry, 2 cents per pound; dead poultry, 3 cents per pound;

cents per pound. Imports 1912.

Pounds. Value. Revenue. \$12, 534. 70 20, 809. 77

Exports 1912: Poultry and game, value, \$697,955. Number of poultry in 1910.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from North Dakota.

The amendment was rejected.

Mr. WILLIAMS. I now ask that the part of the paragraph after the semicolon be recommitted.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The reading of the bill was resumed.

The next amendment of the committee was, in paragraph 236, page 63, line 8, before the word "cents," to strike out "15" and insert "20," so as to read:

Sweetened chocolate and cocoa, prepared or manufactured, not specially provided for in this section, valued at 20 cents per pound or less, 2 cents per pound.

The amendment was agreed to.

The next amendment was, in paragraph 236, page 63, line 9, before the word "cents," to strike out "15" and insert "20," so as to read:

Valued at more than 20 cents per pound, 25 per cent ad valorem.

The amendment was agreed to.

Mr. SMOOT. Mr. President, in previous tariff acts and also in the present law powdered cocoa has always been provided for by itself. The present law provides for powdered cocoa, un-sweetened, 5 cents a pound. After the words "ad valorem," in line 10, on page 63, I move to insert the words:

Powdered cocoa, sweetened, 3 cents per pound.

That is a reduction from 5 cents a pound in the present law to 3 cents a pound. It is a reduction of 40 per cent over the present law. I am informed by the cocoa manufacturers of the country who make this article that with a reduction less than that it is impossible for their business to live.

The VICE PRESIDENT. The question is on the amendment

proposed by the Senator from Utah.

The amendment was rejected.

The Secretary continued the reading of the bill to the end of paragraph 238, the last paragraph read being as follows:

238. Dandelion root, and acorns prepared, and articles used as coffee, r as substitutes for coffee not specially provided for in this section, cents per pound.

Mr. NORRIS. Mr. President, paragraph 238 puts a tariff of 2 cents per pound upon substitutes for coffee. I am thoroughly convinced if the Senators on the other side who have been voting steadily and constantly and nearly unanimously against any change in the bill would give due and fair consideration to the amendment I shall offer they would be unanimously in favor of it. I am going to move to strike out the paragraph with notice that if it prevails when we get to the free list I will move to add it there.

The substitutes for coffee ought to be on the free list. Regardless of any man's theory of the tariff, I believe if you will give due consideration to the question no one can have any other

I am not going into the coffee situation now, because I admit that this amendment would not fully meet what ought to be met regarding the great International Coffee Trust, known as the Brazilian valorization scheme. But the articles in this particular paragraph come in direct contact and competition with coffee, which is itself the subject, in my judgment, of the greatest trust on earth.

It is true, I think, that even if you adopted my amendment it would not be, as I have said, a complete solution of it, but it would be a partial solution. This particular paragraph is a direct protection to the International Coffee Trust. It can not Everything that will come in competition he anything else. with coffee as long as coffee is on the free list ought to be put on the free list, because the only beneficiary of anything of that kind will be the International Coffee Trust. I am satisfied if every Member would vote as he feels when he has considered this question there would not be a single vote in the Senate against the amendment I propose.

We have imported of these substitutes for coffee at different times comparatively large quantities, although as compared with the amount of coffee we consume it is not very large. In 1910 we imported something over 452,000 pounds of these substitutes for coffee. The tariff was 2½ cents a pound under the law as it existed then and as it exists now. This bill reduces the duty just one-half cent per pound. Last year there was not so great an importation. It is estimated in the handbook here that under this rate per pound the equivalent ad valorem duty would

be 16.67 per cent.

I am not offering this amendment, I should like to say to Democrats on the other side, on any theory of protection; I am not offering it on any theory of free trade; I am simply offering it to partially bring into competition, if we can, and this will

bring some competition, the great International Trust, organized in a foreign country, and that has during the last four or five years taken from the common people of the United States at least \$75,000,000 in the increased price of coffee.

If there is any reason for this tariff, if there is any reason why this amendment should not be adopted and that which comes in competition with the product of that great trust, would be very glad to have some one suggest it. I would be glad to yield for any question connected with the subject.

I do not believe it is necessary now for me to go over the question of the International Coffee Trust and the Brazilian valorization scheme. I think in a general way that is well understood by all the Members of the Senate, and it will be the only beneficiary of this particular legislation.

Mr. WILLIAMS. Mr. President-

Mr. NORRIS. I yield to the Senator. Mr. WILLIAMS. If the Senator from Nebraska will pardon me, while I myself am rather inclined that he is wrong, I am rather inclined to think that, while this duty can not be defended upon revenue principles or upon protective principles, either, it could be defended upon ethical principles, to prevent frauds and substitutes of one thing for another and the sale of it as another.

Still, upon consultation, I will ask that the matter be recommitted, if that will be satisfactory to the Senator, and the com-

mittee will consider it.

Mr. GRONNA. I will ask the Senator from Mississippi if that paragraph is recommitted, whether paragraph 235 should not also be considered by the committee? Chicory is used as a

substitute for coffee. Chicory is the poor man's coffee.

Mr. WILLIAMS. I think chicory is a positive fraud; and, if sold for coffee, it is a positive deception. It is an undeniable fraud and there is nothing good about it. As to this other matter, I want to look into the character of it. I understand there is nothing in the dandelion root that is injurious to the human system at all, although there is an amount of tannic acid which, when consumed in too large quantities, might be injurious. I want to tax chicory so that it shall not be sold to me and my children as coffee.

Mr. GRONNA. I remember the attack made on this particular article by Judge Sabath, of Chicago, a few years ago. shall not take up the time of the Senate to discuss it, but it can be found in the Congressional Record. It was shown by Mr. Sabath that large quantities of this article are being used as coffee. But I know it is being used by the poor people of the

city and most of it is used by the farmer.

Mr. WILLIAMS. I know that a very great fraud is being perpetrated upon the consumer and that chicory is not a good thing for anybody to put in his stomach. I have no objection to substituting one more than another if equally harmless; but I do not think that, as a general principle, applies to chicory. would rather send it back to the committee.

Mr. GRONNA. I objected to a duty of 2 cents a pound on

That was my objection to it.

Mr. NORRIS. In connection with that matter I should like to say that, so far as my knowledge goes, this article

Mr. WILLIAMS. I have agreed to allow it to go to the I think the Senator might help me sometimes.

Mr. NORRIS. But I want to make a suggestion to the Senator for his consideration when he takes it up in committee. may be mistaken about what I am saying now, but my information is that these substitutes for coffee are not imported under the name of coffee. There is not any fraud practiced against the Government. They are not sold as real coffee. So the question the Senator raised is not involved.

Mr. WILLIAMS. But I want to examine it. I have an impression now that they are mixed with coffee and ground with

coffee and sold as pure coffee.

Mr. NORRIS. I think that could not be done under our purefood law

Mr. WILLIAMS. If that is a mistake, I will try to find out

Mr. GRONNA. I want to say to the Senator from Missis-sippi that he will find that chicory is ground up and mixed with coffee and sold as coffee. There is no substitute for unground coffee.

Mr. WILLIAMS. I thought not, and therefore I thought it was a fraud on the consumer.

The VICE PRESIDENT. Paragraph 238 is recommitted to the committee.

Mr. BURTON. I ask that paragraph 240 may go over until, say, Monday afternoon or Tuesday. It is the paragraph in regard to spices. In the meantime I should like to ask a question of the Senator from Mississippi.

Mr. WILLIAMS. Suppose we consider the paragraph and adopt the Senate committee amendments, and then let it go

Mr. BURTON. The amendments are just what I should like to have considered further.

Mr. WILLIAMS. Very well.

Mr. BURTON. I want to ask the question, What does this provision mean on page 64, beginning with the words "ground There is an amendment of the Senate committee which I think helps the situation very much, but I should like to know how it is interpreted and what is intended by it. It

Ground spices, 20 per cent ad valorem in addition to any duty on the spices in an unground state.

Does that mean that you impose on the ground spices, in addition to the ad valorem rate, the rate per pound imposed on the unground spices, or that you take the value of the unground spices and impose a duty upon them?

Mr. WILLIAMS. It says "20 per cent ad valorem in addi-

tion to any duty.'

Mr. BURTON. How do you compute that duty?

Mr. WILLIAMS. If the duty levied is an ad valorem duty, it will be 20 per cent of the ad valorem duty added, and when the duty is a specific duty, it will be one-fifth of the specific duty added. There is no trouble about it, because it is all specific. The rate is 1 cent per pound on some, 2 cents per pound, three-fourths of 1 cent, and one-half of 1 cent; mace, 8 cents; Bombay or wild mace, 18 cents. Then, when they are ground it is just one-fifth added to each-20 per cent. That is what is intended.

Mr. BURTON. But I do not believe the Senator from Mississippi quite understands me. Take a concrete case. Suppose cinnamon is ground into spices. You would then impose 20 per cent ad valorem in addition to any duty on the cinnamon in an unground state?

Mr. WILLIAMS. Oh, that is all right; I see now what the

Senator means.

Would you impose a duty of 1 cent a pound on the weight of the ground spice, or how would you do it?

I think perhaps it would be best to pass the matter over, and then the Senator from Mississippi will consider it. I think the language as it now stands is open to ambiguity.

Mr. WILLIAMS. I do not see any ambiguity in it. Ground

spices

SIMMONS. As that paragraph has been passed over until Monday, what is the necessity of discussing it now? We can discuss it when we reach it on Monday.

Mr. WILLIAMS. I did not agree to pass it over. Mr. SIMMONS. I thought the Senator had.

Mr. WILLIAMS. I agreed to pass it over after the adoption of the committee amendments. The paragraph reads:

Ground spices, 20 per cent ad valorem.

Of course, "ad valorem" means upon the value of the ground spices, and that that is to be an addition to any duty which is a specific duty on the unground spices.

Mr. BURTON. How will you figure the amount on the unground spices? Suppose it requires a pound and a quarter in its unground condition to produce a pound that is ground?

Mr. WILLIAMS. You have the tariff upon the ground spices when it comes in.

Mr. BURTON. How can you compute it?

Mr. WILLIAMS. This will operate like every other thing at the customhouse.

I think an appraiser would have a good deal of difficulty about it.

Mr. WILLIAMS. The point is, whether you are going to take the weight of the ground or the unground spices?

Mr. BURTON. As to how you will fix the duty? It would hardly be possible to ascertain the quantity of unground spices.

Mr. WILLIAMS. Mr. President, I think, after all that has been said, that the language is ambiguous. The customhouse people will have some trouble in getting the duty upon the unground spices by weight when they come to fix the duty on the ground spices ad valorem, and then to make the addition. We will carry that back into the committee and cure the difficulty.

Mr. BURTON. Very well. Mr. WILLIAMS. Mr. President, I do not know whether or not I formally asked that paragraph 240 be passed over. Did I do so?

Mr. SIMMONS. Let it be passed over until Monday. The VICE PRESIDENT. The paragraph will be passed over. The reading of the bill was resumed, and the Secretary read paragraph 241, as follows:

241. Vinegar, 4 cents per proof gallon. The standard proof for vinegar shall be taken to be that strength which requires 35 grains of bicarbonate of potash to neutralize 1 ounce troy of vinegar.

Mr. GRONNA. Mr. President, this is the concluding paragraph of the schedule. I shall detain the Senate on it but a

I want to call the attention of the Senate to the fact that, taking 35 articles in this schedule, 15 of them have been placed on the free list. Those 15 articles are the ones which are of the greatest importance to the farmer. More than \$25,000,000 in revenue will be lost to the Treasury of the United States by this proposed change. My figures are taken from the tariff handbook. Under the present law the revenue collected for 1912 on these articles was \$32,026,260.

Mr. GALLINGER. Will the Senator from North Dakota per-

mit me to interrupt him?

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from New Hampshire?

Mr. GRONNA, I do.

Mr. GALLINGER. The Senator from North Dakota calls attention to the fact that there will be a loss of \$25,000,000 to the Treasury of the United States. Has the Senator made any estimate as to how much the Canadian people will gain?

Mr. GRONNA. Well, Mr. President, I have not made an estimate as to what they will gain, but I can assure the Senator from New Hampshire that the Canadian people will gain a great many times the amount the Treasury of the United States

will lose.

The estimated revenue to be collected under this bill, according to the Democratic tariff handbook, is \$6,739,570. You admit, according to your own figures, that there will be a loss to the Treasury of the United States of \$25,286,696. The very people to whom you denied protection upon the basic necessities you are taxing on spices. It may be that we could get along without using spices, but it is a well-known fact that they are being used by everybody. What is the difference, so far as the cost of living is concerned, whether you levy a duty upon food products or levy it upon such articles as spices? The American people pay it. There is, however, a great difference to those who are engaged in the industries and are producing these basic necessities. You permit the foreign producer to come to this country and give him the same opportunities to market his products as is given to the American farmer.

Last year there was paid out for extra labor on the farm, not mentioning the labor of the farmer himself or that of his family, over \$1,000,000,000; and yet we hear much about raw material. Last year it cost 40 cents a bushel to produce barley; 35 cents of this was labor cost, and yet you call it raw material The glass of beer, the product of the brewer, which is most all profit, does not have in it 5 per cent of labor cost, and yet beer is protected by a heavy duty.

Mr. WILLIAMS. Does the Senator think that American beer is very heavily protected? Is not most of the taxation a counter-

vailing duty against the internal-revenue tax?

Mr. GRONNA. Well, Mr. President, it is protected in this

bill by a duty of 100 per cent or more.

It seems to me that it is unfair to the American farmer to deny to him any protection whatever on these articles; it seems to me it is unfair to the American people to take from the Treasury of the United States more than \$25,000,000 in revenue now derived from these 35 articles. I can well understand how a free trader can justify his position in placing these articles on the free list, but I can not understand how anyone who claims to be for a tariff for revenue can justify his position, because the rates on agricultural products, according to your own figures, involve a loss of nearly \$26,000,000.

Mr. WILLIAMS. The Senator does not want the impression to go to the country that agricultural products are all on the

free list, does he?

Mr. GRONNA. No; I am referring to 35 articles. Mr. SHEPPARD. Mr. President—

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Texas?

Mr. GRONNA. I yield to the Senator from Texas.

Mr. SHEPPARD. How does the Senator arrive at the figures—\$26,000,000—which he says will be lost by virtue of the reduction in the tariff on agricultural products?

Mr. GRONNA. I had not intended to take up so much time of the Senate, but since the Senator has asked me the question how I arrive at these figures I shall be glad to give them to him.

According to the handbook, the imports of horses for 1912 were \$335,684, which brought in a revenue of \$68,323. proposed rate is 10 per cent, under which the estimated imports are \$475,000 and the estimated revenue \$47,500. I do not think I would be justified in taking the time of the Senate to read all of the figures which I have here.

Mr. SHEPPARD. I will ask the Senator to give the total

for the whole 35 products.

The total amount of revenue collected on Mr. GRONNA. these articles in 1912 was \$32,026,266, and the estimated revenue

Mr. SHEPPARD. Does the Senator mean the revenue estimated to be obtained from this schedule of the pending bill?

Mr. GRONNA. The revenue on the same number of articles I have indicated.

Mr. SHEPPARD. The Senator, then, is not speaking of all the articles in the agricultural schedule?

Mr. GRONNA. I am speaking of 35 articles or products of

the farm.

Mr. BURTON. Mr. President, I will ask the Senator from North Dakota, if he conveniently can, to select three or four of the leading articles where the loss is greatest.

Mr. GRONNA. Before I do that I want to give the Senate the exact figures of the amount of revenue that will be lost. The loss to the Government will be \$25,286,696. The articles to which I refer are horses, mules, cattle, swine, sheep, other animals, barley, oats, rice, corn, wheat, rye, broom corn, buckwheat, butter and substitutes, cheese and substitutes, beans, beets, hay, honey, hops, onions, garlic, peas, flaxseed, straw, regetables, poultry, eggs, flax straw, fresh milk, cream, potatoes, wool, and hair of the Angora goat.

Mr. WILLIAMS. Now, I want to ask the Senator a question. Mr. SIMMONS. Wool is not covered by the agricultural schedule, nor is the hair of the Angora goat. If the Senator will pardon me, he is laboring under some curious misapprehension. The total duty collected under this whole schedule on everything in the schedule was \$34,000,000; and it is estimated that under the Senate bill the total duties collectible will be \$21,863,000; so that, taking the whole schedule, there is a difference between the present duties and the estimated duties of less than \$13,000,000.

Mr. SHEPPARD. Less than \$10,000,000. Mr. SIMMONS. No; less than \$13,000,000.

Mr. WARREN. The Senator must be mistaken in that. Mr. SIMMONS. I am speaking of the whole schedule.

Mr. WARREN. There is more difference than that in the one matter of wool.

Mr. SIMMONS. Well, wool is not in the agricultural schedule. Mr. WARREN. I know it is not, but the Senator from North Dakota has enumerated it as an agricultural product.

I understood the Senator to be talking Mr. SIMMONS. about Schedule G.

He has enlarged it somewhat to include Mr. WARREN. other agricultural products.

Mr. SIMMONS. I understood the Senator to be speaking

about Schedule G, the agricultural schedule.

Mr. GRONNA. I want to say to the Senator from North Carolina that my figures are correct, and I shall ask to have them printed in the RECORD so as to give the Senator time to investigate them; and if the Senator finds that I am mistaken, I hope he will correct me.

Mr. SIMMONS. Of course the Senator is correct when he states that there is a large loss of revenue as the result of putting raw wool on the free list; nobody denies that; just as there is a large loss of revenue from putting sugar on the free

Mr. GRONNA. Mr. President, I shall ask to have printed in the RECORD this full statement.

The VICE PRESIDENT. In the absence of objection, per-

mission is granted.

I want to ask the Senator if in his state-Mr. WILLIAMS. ment he considers sugar to be an agricultural product or a manufactured product? It is really a very highly finished manufactured product.

Mr. GRONNA. I will say to the Senator that I do not hap-

pen to have sugar on my list, and I have not referred to sugar.

Mr. WILLIAMS. I want to ask the Senator the further question, before he puts the paper in the RECORD, is it his contention that the farmers have lost the amount of money he has named by the removal of the duty?

Mr. GRONNA. Mr. President, my contention is—I hope I am mistaken, but my contention is—that they will lose a great deal more by losing the American market, which rightfully belongs to them.

Mr. WILLIAMS. Very well. Then the contention of the Senator from North Dakota is that the farmers of this country have lost in the prices they were enabled by the tariff to levy upon the American people even more than the amount of money he is stating as having been put on the free list. Admitting for the sake of argument that that contention is just; if so, then the American people have escaped that much taxation levied upon them for the benefit of special farming interests. There is no escape from it.

It is true either that the farmers have not lost the amount of taxes that we have reduced, or they have. If they have lost them, they have lost them because they have lost the power to levy, in the shape of the added price, that much tax upon the American people. If they have lost that power, the American people have profited that much—the poor and the rich, the low and the high.

I am not a political farmer. Every dollar I have in the world is invested in agriculture, directly or indirectly. Every dollar I have anywhere is either in tools, or in implements, or in cattle, or in horses, or in sheep, or in crops, or in land, or in mortgages on agricultural lands. I say I do not know of anything more iniquitous than to espouse the idea that my class has a right to levy a contribution of millions of dollars upon the necessities of the American people every year of our lives, every generation of our time, in order that we may reap greater profits. For the most part it goes to the landlord and not to the farm laborer. I belong to the landlord class, and I know it; and so does every landlord in this country.

Mr. GRONNA. I desire to ask the Senator from Mississippl a question. I have for a long time known the belief or the contention of the Senator from Mississippi with regard to this particular industry.

Mr. WILLIAMS. It was your contention,

Mr. GRONNA. I wish to ask the Senator from Mississippi a question. How much revenue do you propose to collect under this tariff?

Mr. WILLIAMS. Does the Senator mean the total amount of revenue?

Mr. GRONNA. The total amount.
Mr. WILLIAMS. I have forgotten the figures. They are in • the hands of the committee.

Mr. GRONNA. We have generally collected about \$300,000,000 annually, have we not?

Mr. WILLIAMS. Yes.

Mr. GRONNA. And about the same amount, or a little more, by an internal-revenue tax. I ask the Senator from Mississippi what difference it makes whether we levy it on food products or whether we levy it on something else that the American people use?

Mr. WILLIAMS. Ah, I can very easily tell the Senator. When you levy a tax upon food products you levy a tax upon something which every human being—man, woman, or child—absolutely must have. It is like levying a tax upon water; it is like levying a tax upon air; it is like levying a tax upon anything without which humanity can not exist.

When you come to levying a tax upon other things, it depends upon what those other things are. If you levy a tax upon a man's necessities, you have levied a tax upon the man, his physical fabric, all there is to him. When you have levied a tax upon his comforts, you have inconvenienced him. When you have levied a tax upon his luxuries, you have "unluxuriated" him to a slight extent.

Why, it is as old Solon of Athens said, a thousand years before Christ, about a graduated income tax. He said: "If you levy a tax of 10 per cent upon a man"—he used the Greek coinage, but I shall use the American coinage-" who has \$100 a year, and take from him \$10, you deprive him of something he needs. When you take \$100, the same percentage, from him who has a thousand dollars a year, you deprive him of something that will improve him, but without which he can exist. \$10,000 from a man with \$100,000 a year, still the same percentage, you deprive him of some luxuries, without which he can well live and develop."

So you never can make uniform percentage taxation, either upon incomes or upon necessaries, an equal tax. You always tax the poor more than you tax the rich, not because you want to do it, but because you can not avoid it. It is absolutely unavoidable.

My principle always has been this: If I could have my way, would divide all of the imports into the United States into three classes-necessaries of life and necessaries of industry at one extreme; luxuries away out at the other extreme; between the two, the things that are comforts. I would tax them at different rates, because in taxing them at different rates I tax humanity more approximately at the same rate. Do you not understand? Or, to express it better, I tax humanity in all of its classes more nearly in proportion to humanity's ability to pay. That is the reason.

You never can begin the reform of any great tax system unless you start at the bottom—at the necessaries of life and industry. Another great reason for it is that when you take the tax off the necessaries of life or off a necessary of industry. especially the latter, you then have the opportunity to take off all the "compensatory" taxes that were levied on account of

it, and you have the opportunity to take off all the intermediate profits in the shape of compound interest, that accompanied it from the day it came from the mill to the time the man put it on his back, or put it in his stomach. So that every time you take off "X" from the raw product, you can take off "XY," whatever that may amount to-algebraic progression-from the finished product, and not merely "X" itself.

Mr. GRONNA. I will ask the Senator from Mississippi

whether it is not true that he expects, under this bill, to collect somewhere near \$300,000,000 in customs taxes?

Mr. WILLIAMS. I have forgotten the amount. Mr. GRONNA. Is it not true that the people need clothing and wearing apparel as well as food?

Mr. WILLIAMS. Yes; but they can exist without much of

the latter if the police will let them alone.

Mr. GRONNA. I ask the Senator, then, what difference does it make whether you levy a portion of that amount on the food products and a portion of it on the wearing apparel or leave it all on the wearing apparel?

Mr. WILLIAMS. Mr. President, we have not levied it all upon the wearing apparel. We have not taken all the tax off the agricultural products. The assumption that we have left the farmer taxed upon the manufactured products, while we have taken off the tax upon his products, is not borne out by

the bill. Take the flax schedule-

Mr. GRONNA. Mr. President— Mr. WILLIAMS. Wait a minute. Let us undeceive the people in connection with this.

Mr. GRONNA. I hope the Senator will not make the state-

ment that I am trying to deceive anybody. Mr. WILLIAMS. Oh, no; I said I wanted to undeceive them. My friend would not deceive anybody. He is as honest as the day is long. He is as clean as a hound's tooth.

day is long. He is as clean as a nound's tools.

Mr. GRONNA. I thank the Senator for that.

Mr. WILLIAMS. But what I say is that I want the people to be undeceived about it. Take the flax schedule alone. What did we do first? We put flax upon the free list. We put hemp to the wool schedule, and we put wool upon the free list. What does that enable us to do? Why, it enables us to reduce the duties upon the finished products of flax 50 per cent and the duties upon the finished products of wool 35 per cent. So we have given to the farmer the opportunity to buy 50 per cent cheaper linen and 35 per cent cheaper wool, in so far as the duty raised the price; and he already had free raw material on the cotton schedule, so we were not able to reduce that quite so much.

Mr. GRONNA. I wish to read to the Senator from Missis-sippi some of the articles in this schedule that have been

placed on the free list. I want to name them.

Cattle are on the free list; swine are on the free list; sheep are on the free list; corn is on the free list; wheat is on the free list; rye is on the free list; broom corn is on the free list; buckwheat is on the free list; eggs are on the free list; flax straw is on the free list; milk and cream are on the free list; potatoes are on the free list; wool is on the free list.

I had hoped I might have the attention of the Senator from

Mr. WILLIAMS. I beg the Senator's pardon.

Mr. GRONNA. I have just read to the Senate some of the articles which this bill proposes to place on the free list.

Mr. WILLIAMS. I knew what they were before the Senator

read them.

Mr. GRONNA. I am sure of that. I simply read them for the RECORD, of course. But the articles placed on the free list are those of the greatest importance to the agriculturist. I can not understand where you benefit the consumer by giving him free wheat. The people of the country do not consume whole wheat. I can not see where you are going to benefit the consumer by giving him free wheat and placing a duty upon wearing apparel or on spices.

Mr. WILLIAMS. We did not place the duty there. We re-

Mr. GRONNA. You are placing a duty on it, and you are simply going on the theory that by increasing importations you will produce a sufficient amount of revenue to defray the expenses of the Government.

Mr. WILLIAMS. Oh, no. Upon the contrary, we went to an income tax in order to get the necessary revenue, taxing the wealth rather than the bellies and the backs of the people.

Mr. GRONNA. I will say to the Senator from Mississippi that if the income-tax provision of this bill stood by itself I should be glad to vote for it. I believe in an income tax. For 20 years or more I have advocated it.

Mr. WILLIAMS. We are advocating it now just to this extent: We are substituting it for a lot of consumption taxes; and just to the extent that we are doing it we are removing the burdens of taxation from the bellies and the backs of the people to their pocketbooks and their bank accounts.

Mr. GALLINGER. Mr. President-

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from New Hampshire?

Mr. GRONNA. I yield. Mr. GALLINGER. The Senator from Mississippi argues that the \$25,000,000, to which the Senator from North Dakota has called attention, will go to the consumers of the country.

Mr. WILLIAMS. I beg the Senator's pardon, but I did not. The Senator from North Dakota said the farmers would lose that much. I did not say it, and I do not believe it.

Mr. GRONNA. I said they would lose many times more than

Mr. WILLIAMS. Then I said if that were true they would lose the power to tax the people that much; but I said upon the floor of the Senate the other day that in spite of the reduction of taxes meat and bread will both go up, and cattle and wheat will both go up, because of other conditions existing in this country and in the world at this time. These are conditions overmastering the natural tendency of tax reductions to reduce prices of the things taxed.

Mr. GALLINGER. Then I misunderstood the Senator, Mr. WILLIAMS. Yes.

Mr. GALLINGER. The Senator's suggestion now is that, notwithstanding the farmer has been deprived of the protection he formerly had, under the operation of this bill the consumer will have to pay more than he does now.

Mr. WILLIAMS. No. Mr. GALLINGER. That is not a very alluring picture.

Mr. WILLIAMS. Oh, no. What I say is this: The Senator from North Dakota said the other thing, and I merely took his ground for the sake of argument and reply of any possible ground of the opposition. I say that owing to other conditions that have nothing to do with the tariff the price of the staple articles of agriculture will for quite a time continue to go up, with now and then a sag downward, but that the tendency of prices will be upward. The farmer will get just as much for his wheat and just as much for his cattle and the consumer will pay as much. The only difference is that the rise in the price of the farmer's cattle and wheat will not be what it would have been if we had not made the reduction. The reduction will counteract overmastering conditions to some extent. But as compared with present prices the prices are going up. is my prediction. That is my belief.

Mr. GALLINGER. On every stump in my section of the country our good Democratic friends in the last campaign thrilled their audiences with the suggestion and the promise of cheaper

Mr. WILLIAMS. Yes; and we are going to have it. We are going to have it in the shape of cheaper iron, and cheaper woolen clothing, and cheaper cotton clothing, and cheaper linen clothing, and, generally speaking, cheaper manufactured products; but we are not going to have it in the shape of cheaper basic necessities of food products from the farm, because the great influx of people to the cities and the increased demand for food and the decreased supply, owing to the fact that labor is going from the farm to the factory all over the world, will prevent what would be the natural tendency of this act. But we are going to give the people cheaper clothing; we are going to give them cheaper plows, and agricultural implements, and bagging and ties, and wool sacks and grain bags; we are going to give them cheaper barbed-wire fences; we are going to give them all these goods cheaper, and the Senator will live to see it.

Mr. GALLINGER. The argument of the Senator from Mississippi reminds me of what occurred in my own State a few years ago. A Democratic orator grew eloquent, and, pointing to a boy on the front seat, he said, "Why, the jacket you have on is taxed 40 cents." The boy said, "That is a lie, because mother bought it for 35 cents." [Laughter.] It does not follow, because these articles are put on the free list that the consumer is going to get them for very much less, particularly if we deliver over our business into the hands of foreigners.

Mr. SIMMONS. Does that apply to agricultural products as

well as to manufactured products?

Mr. GALLINGER. We will not discuss agricultural products, because the Senator from Mississippi admits that they are going to cost more, notwithstanding our people have all been promised that they were going to have cheaper living; and when that was promised, it was not cast-iron pipe. It was a cheaper breakfast table. That rang all through the country from every

stump; and the people did not think you were going to give them cast-iron pipe or barbed wire on their breakfast tables.

Mr. SHEPPARD. Mr. President—
Mr. SIMMONS. Mr. President—
The VICE PRESIDENT. Let us have some order. Does the Senator from North Dakota yield to the Senator from Texas?

Mr. GRONNA. Not just now; I will in a moment. In answer to the Senator from New Hampshire, I will say In answer to the Senator from New Hampshire, I will say that the Treasury of the United States will lose more than \$25,000,000 of revenue upon the articles I have enumerated. There is no question in my mind but that the farmer of the country will lose many times as much.

Mr. GALLINGER. Undoubtedly.

Mr. GRONNA. Because the Canadian farmer and the farmer

from other foreign countries will have access to the American market, which belongs to the American farmer. I thought the Senator from Mississippi and I could agree on at least one thing, and that is that the Treasury of the United States will lose more than \$25,000,000 through the changes that have been made, or that are proposed in the present bill to be made, from the present law on those items.

Mr. President, I do not care to occupy the floor any longer. I have said all I am going to say. I asked a few minutes ago to have a table printed in the RECORD.

The VICE PRESIDENT. Permission was granted to the

Estimated revenue and estimated imports taken from tariff hand-book prepared by Finance Committee. Fruits not included in above statement. Where the article is placed on the free list the handbook contains no estimate as to probable imports.

Mr. WILLIAMS. Mr. President, that finishes this schedule, I think, except for some paragraphs that have been passed over. I ask that the bill may be temporarily laid aside.

Mr. BACON. If the bill is laid aside and there is no other matter of a pressing nature-

Mr. WILLIAMS. I thought probably the Senator from Georgia would make a motion to go into executive session.

Mr. BACON. No. Mr. WILLIAMS. Then we may as well adjourn.

Mr. KERN. I move that the Senate adjourn.

The motion was agreed to; and (at 6 o'clock p. m.) the Senate adjourned until Monday, August 18, 1913, at 11 o'clock a. m.

SENATE.

Monday, August 18, 1913.

The Senate met at 11 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. The Journal of the proceedings of Saturday last was read and approved.

CALLING OF THE ROLL,

Mr. SMOOT. Mr. President, I suggest the absence of a

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Dillingham	McLean	Simmons
Bacon	Fall	Martin, Va.	Smith, Ga.
Bankhead	Fletcher	Martine, N. J.	Smoot
Borah	Gallinger	Norris	Sterling
Brady	Gronna	O'Gorman	Sutherland
Brandegee	Hollis	Page	Swanson
Bristow	Hughes	Perkins	Thomas
Bryan	James	Pittman	Thompson
Burton	Johnson	Pomerene	Thornton
Catron	Jones	Robinson	Tillman
Chamberlain	Kenyon	Saulsbury	Townsend
Chilton	Kern	Shafroth	Weeks
Clapp	La Follette	Sheppard	Williams
Clark, Wyo.	Lane	Shields	
Crawford	Lodge	Shively	

Mr. JAMES. My colleague [Mr. Bradley] is detained from presence here by reason of illness. He has a general pair with the Senator from Indiana [Mr. Kern]. I will allow this announcement to stand for the day.

Mr. SHEPPARD. The senior Senator from Texas [Mr. Cul-BERSON] is unavoidably absent. He is paired with the Senator

from Delaware [Mr. Du Pont].

Mr. GRONNA. I wish to announce that my colleague [Mr. McCumber] is necessarily absent on account of sickness in his family. He is paired with the senior Senator from Nevada [Mr. NEWLANDS].

Mr. SMOOT. I desire to announce that the junior Senator from Wisconsin [Mr. Stephenson] and the senior Senator from Delaware [Mr. Du Pont] are detained from the Senate by reason of illness. This notice will stand for the day.

Mr. SHIELDS. I wish to announce the necessary absence of the senior Senator from Tennessee [Mr. LEA]. He is paired

with the Senator from Rhode Island [Mr. LIPPITT].

The VICE PRESIDENT. Fifty-eight Senators have answered to their names. A quorum of the Senate is present.

TARIFF DUTY ON SPICES.

Mr. WILLIAMS. Mr. President, the RECORD does not show that paragraph 240 was recommitted to the committee. It simply states that the paragraph was passed over. It was the intention to have it recommitted. I desire to have that change

The VICE PRESIDENT. The paragraph will be recommitted to the committee.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented a memorial of the Widen-Lord Tanning Co., of Danversport, Mass., remonstrating against the adoption of paragraph No. 503, relating to grease, fats, vegetable tallow, etc., in the pending tariff bill, as proposed to be amended by the Senate Finance Committee, which was referred to the Committee on Finance.

Mr. TOWNSEND. I present sundry memorials signed by a large number of teachers and students at the summer session of the University of Michigan, Ann Arbor, Mich., remonstrating against the proposed tax of 15 per cent ad valorem on books of all kinds imported into the United States. I move that the memorials lie on the table.

The motion was agreed to.

Mr. WARREN presented a resolution adopted by the local branch of the Socialist Party of America, of Hanna, Wyo., favoring an investigation into the imprisonment and treatment of certain labor representatives, which was referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Wyoming, Iowa, Nebraska, Colorado, and Illinois, praying that an appropriation be made for the construction of good roads and a central transcontinental highway, which was referred to the Committee on Agriculture and Forestry.

THE TARIFF-BOOKS AND PLUMAGE.

Mr. GRONNA. I have a letter from a constituent of mine with reference to the tariff bill. It has reference to Schedule M, relating to the proposed tariff on books printed in foreign lan-It is signed by the president of a society, the C. M. B. A., and is a brief letter. I also have a letter from W. Leon Dawson, of Santa Barbara, Cal., in reference to the tariff on plumage. I ask that the letters be printed in the RECORD.

There being no objection, the letters were ordered to lie on

the table and to be printed in the RECORD, as follows:

RICHARDTON, N. DAK., August 11, 1913. To the Hon. A. J. GRONNA, Member United States Senate.

Member United States Senate.

Dear Sir: As president of the C. M. B. A., numbering societies with 80 members, I beg to urge you to use your influence to defeat the proposed 15 per cent tariff on books printed in other languages than the English. This measure has been rightly characterized as a "fax on knowledge," and we consider it unduly detrimental to the entire field of science and education, as well as unfavorable to those religious denominations or congregations, Catholic, Protestant, and Hebrew, whose services are conducted in whole or in part in German, French, Italian, Polish, or any other language than the English. Moreover, the source of revenue would be out of proportion to the additional burden laid on a portion—and that only a portion—of the American people.

Respectfully,

President of the C. M. B. A.

THE BIRDS OF CALIFORNIA PUBLISHING Co., Santa Barbara, August 5, 1913.

Hon. Asle J. Gronna, Washington, D. C.

Washington, D. C.

My Dear Senator: To the intense disappointment of the bird lovers of America the Democratic Senators in caucus have ratified amendments which would rob the provisions of Schedule N (sec. 357) of all power to protect the world from the operations of the nefarious "Feather Trust." The most casual eye may see how easily the glitter of gold in a Jew's purse has blinded some of our Democratic friends to all humanitarian considerations as well as to the claims of agriculture, which so fully recognizes its dependence upon the birds.

We who love the birds, therefore, look to you to point out the inconsistency and the prospective damage threatened by this change in Democratic front, as well as to seek to win to the side of righteousness such as are not too far gone in this inspired folly. The cause of bird protection is really of the most profound significance, and the situation is crucial.

We count upon your vote. of course; may we not also count upon your voice manfully uplifted?

Sincerely and respectfully,

W. Leon Dawson.

POLITICAL ACTIVITIES BY MEMBERS OF CONGRESS.

Mr. CLAPP, from the Committee on Privileges and Elections, to which was referred the bill (S. 2242) making it unlawful for any Member of Congress to serve on or solicit funds for any political committee, club, or organization, reported it with amendments and submitted a report (No. 103) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. NORRIS:

A bill (S. 3001) to change the homestead and preemption laws in certain cases; to the Committee on Public Lands.

By Mr. BACON:

A bill (S. 3002) making appropriation for expenses incurred under the treaty of Washington; to the Committee on Foreign Relations.

By Mr. OVERMAN:

A bill (S. 3003) for the prevention of fraud, and for other purposes; to the Committee on the Judiciary.

By Mr. OWEN:

A bill (S. 3004) to carry into effect findings of the Court of Claims in the cases of Charles A. Davidson and Charles M. Campbell; to the Committee on Claims.

A bill (S. 3005) granting a pension to Eva E. White (with accompanying papers); to the Committee on Pensions.

AMENDMENT TO THE TARIFF BILL.

Mr. DILLINGHAM submitted an amendment intended to be proposed by him to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes, which was ordered to lie on the table and be printed.

CONDITIONS IN MEXICO.

The VICE PRESIDENT. The Chair lays before the Senate the following resolution, coming over from a preceding day.

Mr. LODGE. In the absence of the Senator from Pennsylvania [Mr. Penrose], I ask that those resolutions relating to Mexico may go over without prejudice.

The VICE PRESIDENT. The resolutions will go over, then—all three. The morning business is closed.

THE TARIFF.

Mr. SIMMONS. I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

Mr. TILLMAN. I gave notice some days ago that I would address the Senate this morning.

Mr. SIMMONS. But let the bill be taken up first.
Mr. TILLMAN. I am willing that it shall be taken up first. The VICE PRESIDENT. The Senator from North Carolina asks unanimous consent for the present consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes. hears no objection, and the bill is before the Senate.

DR. BLEDSOE AND WOMAN SUFFRAGE.

Mr. TILLMAN. Mr. President, those Senators who served with me here before I was taken ill know that I never read speeches in the Senate, and I regret very much that my physical weakness compels me to do so now.

A few days ago I asked permission of the Senate to insert in the RECORD and to have printed as a public document an article entitled "The Mission of Woman," by Dr. Alfred Taylor Bled-When the Record appeared the next morning it was found that the article in question contained what many Senators thought was an unkind and unjust reference to northern women. I had not read the entire article before submitting it to the Senate. I had read only the first part, and was struck by the force of the historical references quoted in it as to the cause of the decay and fall of Rome. I felt that the article was very opportune just at this time, and that was why I wanted it given circulation in the RECORD and printed as a public document. On discovering the attitude of my brother Senators toward it, which I can readily see was natural, if not justifiable, I promptly joined them in requesting that it be stricken from the RECORD. I wished to avoid even the appearance of harboring mean thoughts or uncharitable sentiments toward the women of the North. Some of the very finest women I have ever known were northern women; and good women, thank God, are not confined to any section of our great country. They are to be found everywhere in the United States, and they will be the greatest factors in saving our civilization and institutions from degeneracy and destruction.

The expunging of the article from the Record did not prevent

its reaching every part of the United States, for the copies containing it had been mailed before the action of the Senate ordering it to be expunged and countermanding the order for it

to be printed as a public document had been taken

Comments more or less vitriolic, and some of them unjust and wholly unfair, have come to me through the mail. I have been astounded to see how much ignorance has been shown. Some of the most scholarly northern magazines and periodicals, like the Independent, whose editors ought to be ashamed of their ignorance, discuss "The Mission of Woman" as though it had just appeared, instead of having been published forty-odd years ago. I have received a number of requests for copies of "The Mission of Woman," and I am sorry that the Senate refused to have it printed as a public document, because the action of the Senate expunging it from the permanent Record only attracted attention to it the more and caused people to be curious to see what had stirred up all the row in Washington.

I have investigated the matter fully, and feel that in justice both to Dr. Bledsoe and to myself I ought to make a further statement. He was a profound scholar, a courteous gentleman, and a godly man; and I feel that it is due his memory to explain fully how the article came to be written and under what circumstances it was given publicity. Dr. Bledsoe died in 1877, so nothing that has been or will be said about "The Mission of Woman" here or elsewhere will affect him in the slightest. He has gone "somewhere past the sunset and the night," to a land where worldly praises can not please nor worldly censures wound or crush. But I want to clear his memory and his name from any suspicion of sectional narrowness of any kind, and above all of narrowness and bigotry toward the women of any part of our common country. A chief tenet of the school in which he was reared was chivalrous respect and reverence for women; and to him a good woman, wherever and under whatever circumstances she might live, was a superior being, a sort of divinity whose high and holy purpose on earth was to bear, to rear, and to mold man into the image of his Maker. In sadness, not in anger, he saw, or thought he saw, northern women surrendering their divinity and high privileges for mere human rights, and as an honest man, true to the training he had received from his own mother and to the ideals which that training had engendered, he kindly but firmly spoke his sentiments.

The article first appeared in print in 1871, in the October number of The Southern Review, one of the broadest and most scholarly periodicals of its day. It was the lineal descendant of the once famous DeBow's Review. From 1846 until the close of the Civil War, this latter magazine was a leading exponent of the hopes and aspirations of the South; and when it, mortally wounded, as it were, by the collapse and fall of the Southern Confederacy, suspended publication shortly after the end of the war, The Southern Review was founded to take its place. Dr. Bledsoe was chosen editor of the new periodical, and it was his review of the then newly published "History of Morals," by Lecky, which led him to write "The Mission of Woman." The last chapter of Lecky's history is a very brilliant and profound exposition of the condition, social rights, and political privileges of women in all ages. The criticism, as it appeared in The Southern Review, had been reprinted in pamphlet form under the title "The Mission of Woman" by some admirer of Dr. Bledsoe; and Senator Johnston of Alabama-now, alas! gone from us to his long resting place—had come into possession of a copy. He showed it to me and asked me to have it printed as a public document. I glanced through it hurriedly and was so forcibly impressed by the author's apt application of Lecky's facts to the question of woman suffrage, divorce, and materialism, now so apparent everywhere, that I asked to have it printed in the RECORD as well as a public document. I thought it could not be given too wide publicity, because the country needs educating along these lines more than any other just at this time.

But Lecky's history was only the occasion of "The Mission of Woman." The real reason for its being written was undoubtedly the deplorable condition of southern politics at that time. As Senators will remember, the reconstruction of the South was completed in 1868. Universal suffrage had been decreed by Congress, and men with Federal uniforms on their backs and rifles in their hands marshaled the newly freed negroes to the polls and directed how they should cast their ballots. Thus, under the leadership of Thad. Stevens and others, the northern fanatics sowed the seed, and by 1871 the harvest of evils and crimes began to ripen. The South, prostrate and bleeding at every pore, her past a hopeless memory of better times, her present a slough of despond, and her future a hideous nightmare—the South, I say, was literally wallowing in violence, corruption, dishonesty, and political debauchery. It was pitiful. The great South—

"Than which no fairer land hath fired a poet's lay"—
was become a loathsome region, full of hideous sights and sounds and things unholy. Negroes, very few of whom could defiled," that I shudder to think of the consequences to the

read or write, and some of them not three generations removed from the jungles of Africa, controlled our legislatures, while white scoundrels and thieves from the North ruled the negroes and robbed our people through them. Many of the magistrates and judges were negroes. The State colleges and universities of the South, maintained by taxation, were controlled by trustees elected by the negro legislatures. Carpet-baggers, scalawags, and negroes were among these trustees, and Dr. Bledsoe and other southerners like him were ready to cry out:

Ichabod! thy glory has departed.

At the thought of women anywhere, especially of the South, entering this monstrous and filthy arena, Dr. Bledsoe's chivalrous, sensitive spirit recoiled with horror. He pointed to the women of the North, not for what they were but for what they might become and would become if they persisted in their determination to abandon the sphere in which God had placed them. He lifted the kindly finger of warning; he drew the knightly sword of protection; he did not level the brutal pike of censure and condemnation. His scholarly mind appreciated the cause of the decay and rottenness of imperial Rome, and believing that history repeats itself he trembled for his country. I know from experience how hard it is for old men to adopt new notions or to accept new ideals. Visions are for young men; old men can only "dream dreams" and cling to their traditions. They dislike to be rudely awakened and are ever holding back against innovations and changes. The world moves forward, ever forward, because the young men will seek to progress. It is the ideal civilization or condition in society when the two forces are equalized, and the young and progressive visionaries are counseled and directed and held back by the wisdom of their seniors. Old men see the world rushing along pell-mell, helter-skelter, "going to the devil," so to speak, and we mourn in spirit.

"The old order changeth, yielding place to the new," and the transitions are so rapid and startling that they hurt us

I am led to make a few remarks on woman suffrage, although it is a dangerous topic to handle just at this time. myself, however, that my well-known reverence for good women will shield me from being misunderstood. The idea is fast be-coming a practical issue, and Senators will realize the importance of our obtaining as much accurate information in regard to it as the nature of the subject will permit. Much valuable data could be obtained in States where the experiment is now being tried. Vital statistics should by all means be gathered in those States where woman suffrage already obtains. We ought to have records made of the birth rate, death rate, divorces, and other things affecting the everyday social life of the people, which would in a hundred years, say, show us whether female suffrage has affected these things injuriously or not. Such a radical change as would be produced in the manners and customs of the people by woman suffrage would put in motion influences that would be bound to revolutionize society. It might be, and the woman suffragists claim it will be, beueficial in every way. But it is the duty of statesmen to see that no rash experiments are made; and we ought to watch care fully and study all the facts obtainable in order to reach just conclusions. We can only be enlightened in such matters by the study of history. It would take three or four generations of men and women under woman suffrage before any just conclusions could be reached as to what direction we were going, and then only guesses could be made as to ultimate results.

In Rome when the manners and customs with regard to women began to change, and they were given more privileges than they had ever enjoyed before, divorces were so largely increased that free love became the rule. The birth rate correspondingly decreased, as Lecky's history shows. Now it is a beautiful dream that female suffrage will purify politics, because our ideals of women are so high, and we regard them so absolutely as the sources of goodness and purity, that we can not conceive of their not elevating and helping anything they touch. But the really vital and important thing for us to consider is the effect on the women themselves. We had better endure the evils of corruption in politics and debauchery in our Government, rather than bring about a condition which will mar the beauty and dim the luster of the glorious womanhood with which we have been familiar, and to which we have been accustomed all of our lives. We can better afford to have degraded and corrupt politics than degraded and bad women. To have both in ever-increasing degree, as was the case in Rome, would make the world so unspeakably horrible, as well as so corrupt, that good men and women both would disappear from the face of the earth, and civilization be blotted out like it was in the Dark Ages after the fall of Rome. Indeed, I am so thoroughly a conwomanhood of America should suffrage become universal, taking in both sexes and all races. Yet the experiment is going to be

I know the demand for suffrage on the part of women is growing too fast for old fogies like me to stop it, except possibly in the South and New England, where conservatism is more strongly intrenched than anywhere else in this country. I believe religiously that whatever the women ask for the men will give them, even though it be to their ultimate injury; and the country will have to test and be tested along these lines in spite of all the theories and ideals which have governed us heretofore. Fortunately, the United States Supreme Court has declared that casting the ballot is a privilege—not a national right—and that the States alone can confer this right on their citizens.

Neither the suffragettes, nor the suffragettors—as Representative Heflin calls their masculine sympathizers—ever consider or seem to pay any regard to the effect of politics on women; but I sincerely believe that the usefulness and goodness of woman vary inversely as the extent of her participation in politics. I believe she will improve politics, but ultimately politics will destroy her as we know her and love her; and when good women are no longer to be found, and we have lost the breed, the doom of the Republic is near.

It may be contended that information such as I have described would be partial and fragmentary, and that any conclusions based on it would therefore contain a large factor of uncertainty. That may or may not be true. But there is at least one subject about which mathematically exact knowledge can be obtained. The number of divorces granted in a State with woman suffrage and the birth rate may be compared with the number in the same State before equal suffrage was adopted, and the relation between the two phenomena inferred.

I thank God that my lot was cast in a State where there is no such thing as divorce. To get married in South Carolina is the easiest thing imaginable. To get "unmarried" is impossible. "Once married, always married," is the rule. Literally and exactly we believe that "for better or for worse, in poverty and in wealth, in sickness and in health, till death do them

part," the twain are one.

It is true that, if life together becomes unbearable, a man and wife may separate and live apart, but even then the bonds that bind them are only stretched, not legally broken. In South Carolina we tie a matrimonial knot that baffles alike the skill of legal logic, the dexterity of sophistry, the nimble fingers of a false expediency, and the brute strength of a statute. The knot we tie holds faster than the fabled "Gordian knot" of antiquity. Ingenuity can not unfasten nor force destroy it. The skeleton fingers of death alone can loose it.

We in South Carolina do not believe in the modern idea so prevalent in this day and time of permitting a man to marry a woman in her youth and beauty and then, when her neck begins to grow skinny and shrunken, her face sallow and splotched, and her eyes dim, to search out among his women acquaintances some young and buxom girl who suits his lustful eyes better and straightway set to work, systematically, to treat his old wife so that she in self-defense and to maintain her selfrespect seeks a divorce to get rid of him. There have been glaring cases of this kind of world-wide notoriety wherever the divorce evil flourishes,

When we contrast this type of man and woman with the glorious picture drawn by Burns, those men who have souls are bound to recoil from the one type and bow down and worship the other. Lest you have forgotten the verses, I will recite them for you:

John Anderson my jo, John.
When we were first acquent,
Your locks were like the raven,
Your bonie brow was brent;
But now your brow is beld, John,
Your locks are like the snaw,
But blessings on your frosty pow,
John Anderson my jo! John Anderson my jo:
John Anderson my jo. John,
We clamb the hill thegither,
And monie a cantie day, John,
We've had wi' ane anither;
Now we maun totter down, John,
And hand in hand we'll go,
And sleep thegither at the foot,
John Anderson my jo!

This song, one of Robert Burns's best, is the very apotheosis of married life among the virtuous and good people of the

In thinking about the widespread, progressive character of the divorce evil, like all thoughtful men, I have been led to consider the cause of it and the great demoralization which has followed it. The law of sexuality is the most powerful law in

nature, and it is the wise provision of the good God who created us with it to compel reproduction, the perpetuation of the race. Wherever the marriage bond is regarded as a sacred one women are virtuous, and virtuous women nearly always make virtuous men, just as good mothers are more apt to raise up brave and noble sons than bad ones. As long as Rome had women of the type of Virginia and Lucretia the Romans conquered all their neighbors and all other nations in Europe. When the women grew to be loose in their virtue, and lost it altogether in many cases, and the women came to be of the type of Nero's mother, who committed incest with her own son, as the historians tell us, Rome rapidly decayed and ceased to be mistress of the world. Therefore, it can be safely claimed that civilization itself is dependent on good women, and by good women I do not mean only amiable women, I mean virtuous women. The divorce evil does not directly affect South Carolina, but

our State is the only one that does not permit divorce in some form. North Carolina and Georgia, States on our borders, both grant them, and on increasingly trivial grounds, if report be true.

Mr. BACON. I hope the Senator will permit me, in order

that what I say may go out in connection with his speech, as he specially mentions my State, to say two things. In the first place, divorce is not respectable in Georgia

Mr. TILLMAN. The Senator means divorced people are not

respectable.

Mr. BACON. I mean the institution of divorce.

Mr. TILLMAN. How is it that anything the Legislature of Georgia has enacted into law is not respectable?

Mr. BACON. Will the Senator permit me to make a remark? I do not want to enter into a colloquy with him.

Mr. TILLMAN. I will sit down while the Senator proceeds,

Mr. BACON. If it excites the Senator at all, I will not interrupt him.

Mr. TILLMAN. The Senator knows my weakened condition, and I have been hurrying to get through. The Senator can make his explanation after I have finished.

Mr. BACON.

Mr. BACON. I beg the Senator's pardon. Mr. TILLMAN. My State is a lonely isle, surrounded on all sides by a turbid flood of raging, maddened waters; and lest we, too, be submerged, I would see the waters subside and the dry land appear, and under the blessed rays of God's moral sunshine would behold once again over our whole country the fruits and flowers of domestic peace, love, and affection, confi-

dence, joy, and contentment.

I beg the pardon of Senators for having digressed. But as I was going on to say, statistics on the number of divorces granted in States where women have the vote would be very valuable. It would enable us to see the connection between woman suffrage and family life. It appears to me that the relation between "votes for women" and divorce, if not one of cause and effect, is at least one of mutual acceleration. I am no pessimist, but I am enough of a scientist to accept the truth wherever I find it, be it pleasant or unpleasant, and I have read history to no purpose if it has not taught me that the purity and stability of the family has in all ages been the surest bulwark of the State. It has ever been that when the marriage relation became in-secure and women quitted their own sphere to enter that of man, the decay and fall of States followed. So often has this happened that I must believe that the one set of events is the result of the other. I have, therefore, sounded this feeble note of warning. As Hannibal gazed mournfully on the bloody head of his dead brother, Hasdrubal, which the Romans threw over the wall into his camp, and prophetically exclaimed, "Carthage, the wall into his camp, and propheteany exclaimed, Cartinge, I see thy fate," so I, looking at the growing craze of woman suffrage and the rapid increase in the number of divorces granted in this country, sadly think, if I do not say, "America, thy race is almost run unless something is done to check thy headlong speed.

The demoralization and consequent degradation which have been produced by the divorce evil are illustrated by the notorious Diggs-Caminetti affair in California. The ease with which divorces are obtained in Reno led to that place being selected as the one to carry the two once respectable girls from Sacramento, and the promise to marry these women after divorces were obtained no doubt had much to do with overcoming their scruples. Such a tragedy in domestic life could not happen at all in South Carolina. It could not happen anywhere in the South, even in those States where divorces are obtained, and I

say it in no boasting spirit.

We have bad women in South Carolina and throughout the South. But the habits of our people and their customs, inherited from our forefathers, all make it dangerous to "monkey with men's womankind." Some northern people call us barbarians because we shoot the seducer and lynch the rapist. If the California men had our customs Diggs and Caminetti would

not be alive now, because they would have been shot like dogs, and the fathers of the girls they have ruined would be acquitted almost without the jury leaving the box. The "unwritten law," as it has been called, is the best law to protect woman's virtue that I have ever heard of, though there have been abuses of it and men at times have gone scot free who ought to have been punished. The more I think about the Diggs-Caminetti case, the more outraged I grow at the state of morals and society which not only permits such crimes but encourages them. I am too much of a savage myself to think upon such things with calmness and equanimity. However, this case is now being tried, and perhaps I ought not to comment on it. But I am speaking as I do, not for the purpose of influencing the jury or public opinion for or against the men who are indicted. I am only using the case to illustrate the argument I am making on the demoralizing effects of woman suffrage and easy divorces.

Among our very rich people in America degeneration and bestiality have gone so far that swapping wives is a common Family life is no longer what it ought to be and once was, and the watering places by the seaside and hotel resorts in the mountains afford opportunities for getting acquainted with other men's wives and other women's husbands. Lust takes the place of love, with the result that divorces are soon arranged and the swap is perfected under the forms of law.

The women are just as bad as the men and divorce their husbands on any slight pretext if they come across a man they

like better who makes love to them.

A most disgraceful and mortifying fact which every American must blush for is to see how the American millionaires are buying their daughters titled husbands. Some count, baron, or lord, no matter how much of a debauchee and scoundrel he may be, but always with an empty purse, is looked up by the rich father and purchased in the open market just as he would purchase a bull or a stallion. The woman submits to legal prostitution for a time. Then the titled debauchee whose relatives have sneered at the plebeian wife all along are relieved of her presence. She finds a title a poor substitute for manhood and love and tires of her bargain. A divorce follows, and the unnatural alliance between money and scoundrelism is ended. O, the shame of it! but that is the way modern society is "progressing." God save the mark!

To me such people seem to be going straight to hell, and I am no stickler for religion either. I only abhor from the bottom of my soul the degradation and rottenness now becoming

too common in society.

The danger, if danger there be, in giving woman the ballot at all is increased by the cowardice of public men everywhere. Politicians the world over have always had a keen eye to see which way they think the people are going; and it seems to me that the men politicians are trying to make peace with the women politicians and get on their good side now while it is fair weather. I noticed in Saturday's paper that the headlines threatened dire consequences hereafter to any public man who dared oppose the demand for woman suffrage now. I am afraid some of the weak-kneed men will be influenced in their attitude on this momentous subject by this fear. No man who is a man worth standing in shoe leather will be influenced by any such motive, and only cowards will yield their convictions and vote to give the women the ballot unless they believe honestly that it is for the best interests of the women and of the country. The history of the world is full of "crazes," or what they now call obsessions. The crusades are an illustration of what I mean.

Peter the Hermit, a fanatical monk, who was very eloquent, aroused the religious fervor of the Christians in western Europe to such a pitch that hundreds of thousands enlisted for the holy war against the infidels. No doubt this fervor was necessary to prevent the crescent from supplanting the cross. It was like two storms coming from opposite directions and meeting. The Saracens overran Egypt and northern Africa and crossed the Strait of Gibraltar into Spain. They crossed Spain and invaded France, and were only beaten back by Charles Martel, who defeated them at the Battle of Tours. It was six centuries before the Moors were expelled from the Spanish

Peninsula and compelled to return to Africa.

Later when the Turks had conquered Constantinople the followers of the crescent overran southeastern Europe up to the walls of Vienna, where the rising tide of Mohammedanism was checked and beaten back by John Sobieski, the hero King of Poland. After centuries of enslavement to the followers of the crescent, Christianity triumphed and the so-called Christian peoples of the Balkan Peninsula with the aid of Russia regained their independence. The liberty of Greece and the restoration of its kingdom came about in 1820 largely through the help of England.

The recent war in the Balkans has wrested almost all of that peninsula from the Turks, but there was so little Christianity, patriotism, and sense among the allied nationalities that racial and religious prejudices and hatreds brought on a fratricidal strife among themselves to the disgust and horror of all Christendom. Patriotism and love of liberty drove them to combine against the Turk, and their preparedness and valor surprised the world. After winning great victories, each of the four small nations covering itself with glory, peace was forced upon Turkey, with the loss of all but a small slice of her territory in Europe. Then the pitiable spectacle was presented of their fighting each other like cats and dogs over the carcass they had brought down together. This last war cost more blood and treasure, perhaps, than the first one, but there was no glory in it for anybody. It is probable that another will soon break out, for those peoples seem hardly half civilized.

In one of the crusades the children were crazed by the priests and tens of thousands of them gathered and began to march toward the East. What they could do after they got there never seemed to enter their minds at all. They were simply lunatics frenzied with the religious idea, and thus made

into fanatics.

First and last, historians tell us that upward of 1,100,000 people perished. The pitiful story is told that five shiploads of these children who started for Palestine were sold into slavery to the infidels by their so-called Christian leaders. The greater part of the rest of the children died from exposure and starva-

It may not be worth while to recall these things, and I only mention them for the purpose of directing attention to the dangerous forces which are being set in motion by those who

are preaching and agitating for female suffrage.

Priests and princes for their own selfish purposes appealed to the religious instinct of the people and produced a thousand years of war, bloodshed, and horror; selfish and sordid politicians of to-day, by appealing and yielding to the beautiful but fatuous idea of "woman's rights," may usher in another thousand years of moral blight and sexual depravity and degrada-

I am aware that in reciting all these horrid and cruel things I am chargeable with making a jeremiad or lament for the decay of our civilization. To others there may be no appearance of decay at all. I may be blinded or giving way to vain imaginings, but it seems to me very real, and I speak my thoughts frankly and bluntly as I have always done, for I was taught by my mother long ago to always tell the truth and to shun anything like hypocrisy, falsehood, or double-

"Of man's whole terrestrial possessions and attainments, unspeakably the noblest are his symbols," says Thomas Carlyle, and his highest earthly symbol is woman. She is his goddess of innocence and purity, and if ever she steps down, or man removes her from her high place at our altars, then God have mercy upon us, for the golden bowl of purity will be broken; the silver chord of chastity will be loosed; the sound of mourning will be heard in the streets; and the "reign of Chaos and old Night" will have come.

I pray God my foreboding of evil and prophecies of disaster may never come true. I would depart when my time shall come with much more confidence in the future of my country if I could believe that the women of our great land would always remain as pure and as high as most of them now are.

Mr. OVERMAN. Mr. President, I wish to say right here that the Senator from South Carolina has been misinformed in regard to North Carolina. I doubt if there is a State in the Union, except South Carolina, that has so few legal causes for divorce as North Carolina. I wish to say to the Senator, also, that several years ago, I regret to say, we did have many causes for divorce. Some, in the language of the Senator, were trivial. They have all been repealed except two Mr. TILLMAN. Thank God!

Mr. OVERMAN. And now there are but two legal causes for divorce in my State-impotence and adultery.

Mr. TILLMAN. Mr. President, I ask unanimous consent that the original article of Dr. Bledsoe, edited by TILLMAN, be again inserted in the RECORD and published as a document.

Mr. CHAMBERLAIN. Mr. President, I object.

Mr. GALLINGER. I must object, Mr. President.
Mr. TILLMAN. I will assure the Senators that I will leave
in it nothing that is objectionable to anyone.
The VICE PRESIDENT. Is there objection?

Mr. CHAMBERLAIN. I object.

Mr. GALLINGER. If it is to be considered at all, it ought to be referred to the Committee on Printing.

Mr. TILLMAN. I am willing it shall be referred to the Committee on Printing, if the Senator wishes that done.

Mr. GALLINGER. I shall not object to that.
The VICE PRESIDENT. The matter will be referred with the request of the Senator from South Carolina to the Committee on Printing.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes. The VICE PRESIDENT. The Secretary will resume the

reading of the bill. The reading of the bill was resumed, at page 64, line 15, and the Secretary proceeded to read the first paragraph of Schedule

-spirits, wines, and other beverages.

Mr. President, I was requested by my col-Mr. GRONNA. league [Mr. McCumber] to offer a substitute for Schedule G, the agricultural schedule. I have just been informed that he has arrived in the city and will be here this afternoon, perhaps in a very few minutes. I will ask the Senator from North Carolina if he will kindly agree to let the schedule be pending, so that my colleague, when he returns, may offer his amendment to the schedule?

Mr. SIMMONS. Mr. President, my understanding has been that we are now reading the bill principally for the committee amendments, and that any Senator could offer hereafter any amendment that he might desire. I should think that would

meet the situation.

Mr. GRONNA. Will it be in order, then, to return to Schedule G and offer a substitute at any time before we have finished the bill?

Mr. SIMMONS. It probably would be in order; but I would prefer, and I think the committee would prefer, after we leave a schedule not to return to it until we have finished the other schedules imposing duties, and the free list. Then we can return to any schedule to which any Senator may desire to offer an amendment.

Mr. GRONNA. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. GRONNA. If the amendment proposed by my colleague should be offered now would it be pending and could it be taken up and voted upon at any time before we conclude the reading of the bill?

Mr. LODGE. The Senator can offer it at any time, Mr.

President.

The VICE PRESIDENT. The Chair will state to the Senator from North Dakota that the committee amendments in Schedule G have not yet all been passed upon. There are one or two paragraphs which have been referred back to the com-In the usual and ordinary course of parliamentary procedure, as the Chair understands, the committee amendments have precedence. The Senator can offer the amendment now, as far as that is concerned, or later, after the committee amendments have been disposed of.

Mr. LODGE. If I may make a parliamentary inquiry, the Chair has just stated that certain clauses and paragraphs have been referred back to the committee. Of course, until those are disposed of the schedule as a whole is not closed.

The VICE PRESIDENT. Certainly not. That is what the Chair was trying to explain to the Senator from North Dakota. The Senator will lose nothing by waiting until his colleague comes into the Senate Chamber.

Mr. SIMMONS. The Senator's colleague will not lose the

opportunity to offer his amendment.

Mr. GRONNA. Very well.

Mr. SIMMONS. I ask that Schedule E, relating to sugar,

molasses, and manufactures thereof, be taken up.

Mr. SMOOT. Mr. President, will the Senator consent to going on with Schedule H at the present time? The senior Senator from Michigan [Mr. SMITH] is absent from the Chamber, and I know the last time he spoke to me about the matter he stated that he was preparing to speak upon Schedule E. I really do not know whether or not he is prepared to go on now. will make no difference to the Senator from North Carolina, we can take up Schedule H at this time.

Mr. SIMMONS. I should prefer not to take up that schedule at present, because I do not believe there is much in the schedule that will be the subject of controversy except the last paragraph; and the committee has been considering that paragraph, and has been having some hearings upon it. have finished the hearings, and have reached a decision, I should rather not take up the schedule. I will say to the Senator, further, that there are some other matters in connection with the schedule that I wish to look into.

I do not think there will be any trouble about the Senator from Michigan having abundant time, as there are other Senators ready to go on with the sugar schedule. The Senator from Michigan is in the city, and I think he will get here in time to speak upon the sugar schedule. At any rate, it was put over-week before last with the understanding that it was to be taken up last week; and last week, as we were not quite ready, we went on with the agricultural schedule.

Mr. SMOOT. I did not so understand. I thought it went over just the same as any other paragraphs that have been

passed over.

Mr. SIMMONS. No; it went over by a sort of agreement. Several Senators asked that it go over for their convenience. One of the Senators from Nebraska, I think, suggested that he had to be away for a day or two, and would like to have it go over; and other Senators made the same suggestion, so that it went over by consent until the agricultural schedule was finished

Mr. BRISTOW. Mr. President, do I understand that Schedule E is now before the Senate?

Mr. SIMMONS. I had requested that the Senate proceed to the consideration of Schedule E; yes.

Mr. BRISTOW. I desire to offer an amendment to the first

paragraph of Schedule E. I send it to the desk and ask that it may be read.

The VICE PRESIDENT. The amendment will be read.

The Secretary. It is proposed to strike out all of paragraph 179, with the committee amendment, and paragraph 180, in the following words:

following words:

179. Sugars, tank bottoms, sirups of cane juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75°, seventy-one one-hundredths of 1 cent per pound, and for every additional degree shown by the polariscopic test, twenty-six one-thousandths of 1 cent per pound additional, and fractions of a degree in proportion; molasses testing not above 40°, 15 per cent advalorem; testing above 40° and not above 56°, 2½ cents per gallon; testing above 56°, 4½ cents per gallon; sugar drainings and sugar sweepings shall be subject to duty as molasses or sugar, as the case may be, according to polariscopic test: Provided, That the duties imposed in this paragraph shall be effective on and after the 1st day of March, 1914: Provided further, That on and after the 1st day of May, 1916, the articles hereinbefore enumerated in this paragraph shall be admitted free of duty.

free of duty.

180. Maple sugar and maple sirup, 3 cents per pound; glucose or grape sugar, 1½ cents per pound; sugar cane in its natural state, or unmanufactured, 15 per cent ad valorem: Provided, That on and after the 1st day of May, 1916, the articles hereinbefore enumerated in this paragraph shall be admitted free of duty.

And in lieu thereof to insert:

179. Sugars, tank bottoms, sirups of cane juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75°, nine-tenths of 1 cent per pound, and for every additional degree shown by the polariscopic test, twenty-five one-thousandths of 1 cent per pound additional and fractions of a degree in proportion; from and after June 30, 1916, testing by the polariscope not above 75°, nine-tenths of 1 cent per pound, and for every additional degree shown by the polariscopic test, two one-hundredths of 1 cent per pound additional and fractions of a degree in proportion; from and after June 30, 1919, testing by the polariscope not above 75°, nine-tenths of 1 cent per pound, and for every additional degree shown by the polariscopic test fifteen one-thousandths of 1 cent per pound additional and fractions of a degree in proportion; molasses testing not above 40°, 20 per cent ad valorem; testing above 40° and not above 56°, 3 cents per gallon; testing above 56°, 6 cents per gallon; testing ab And in lieu thereof to insert:

Mr. BRISTOW. Mr. President, I have prepared a summary of what I desire to say on this amendment in manuscript form. I would prefer to read it and not to be interrupted until I have concluded the manuscript. After I have finished the manuscript, I shall be glad to answer any questions that I can, and then I expect to present some tables which I intend to ask to have printed. So, if Senators will kindly wait until I am through with the manuscript, which I think it will take probably about 40 minutes to read, I will appreciate it.

Napoleon Bonaparte may properly be called the father of the beet-sugar industry. Its success really dates from his famous decree of 1811, when he ordered approximately 79,000 acres of land planted to sugar beets and sent out a corps of instructors to teach the farmers how to grow them. He established six schools for instruction in the processes of the production of beets and the manufacture of sugar. In fact, a century ago he established agricultural schools and experiment stations for sugar-beet culture similar in many respects to the efforts we are now making along general agricultural lines. It is true that German scientists more than half a century before had discovered the process of extracting sugar from beets, and an occasional feeble effort had been made in Germany and France to establish factories for that purpose. But they all failed.

When Napoleon read the report of Chaptal, who had been designated by the French Institute to inquire into the process

of extracting sugar from beets, his active mind grasped the possibilities of such production. He became intensely interested and visited a factory where the experiment was being made. With his usual promptness, he determined to develop the production of beet sugar in France and thereby make his empire as far as possible independent in the production of this great commodity of universal consumption. His detailed attention to the establishment of this industry in France in the years 1811-1813, when he was struggling with such tremendous military and political problems, is another striking illustration of the marvelous versatility of that wonderful man. After half a century of failure in Germany and many futile efforts in France he commanded its production, and within two years France was furnishing her people more than 2,000 tons per annum of refined sugar from her beet-sugar factories.

The impetus which Napoleon gave the industry made France for 50 years, despite the industrial disturbances that followed the vicissitudes of her turbulent history, the leading country in the development of beet-sugar production. About 1835 Germany began to realize the great advantage to any country in producing its own sugar, and she adopted in various forms the Napoleonic method of developing the industry. Since that time every important European nation, with the exception of Great Britain, has adopted a policy for promoting domestic sugar production. Practically all of them for years imposed heavy impost duties on imported sugar, to stimulate the home industry, and they also provided a bounty on sugar that was exported.

While Germany moved slowly in the early stages of the development of this resource, during more recent years she has made great progress. She not only levied high-tariff duties on made great progress. She not only levied high-tarin duties on imported sugar, but also paid bounties upon that exported by her factories. These bounties were first provided in a very ingenious way. In 1869 it was estimated that in round numbers it required 12 tons of beets to make 1 ton of sugar. Nearly all European nations levy an excise tax on sugar production and consumption. Germany's method of levying this tax was to impose it upon the number of tons of beets that were sliced by the factories. Then she provided that for every hundred pounds of beet sugar exported the Government would give a drawback; but the drawback was on the weight of the sugar, not on the weight of the beets. The excise tax was first fixed at approximately 17 cents per hundred pounds of beets sliced. mated that 1,200 pounds of beets would produce 100 pounds of This tax therefore produced a revenue of approximately \$2 per hundred pounds of sugar.

The result was that when the German factory sliced 1,200 pounds of beets it paid an excise tax of \$2 to the Government, and when it exported 100 pounds of beet sugar it received from the Government a drawback of \$2. The excise tax being levied upon the number of tons of beets sliced upon the ratio of 12 tons of beets to 1 ton of sugar, and the drawback being on the pounds of sugar exported, it offered a great inducement to the German factory to increase the saccharine strength of the beet and also to improve the method of extracting the sugar from the beet so as to have the smallest waste and secure the largest number of pounds of sugar that it was possible to get from the beets sliced. If the German factory could increase the productiveness of the beets so as to get a hundred pounds of sugar out of 1,000 pounds of beets instead of 1,200 pounds, it would pay an excise tax of 17 cents per hundred, or \$1.70 on the 1,000 pounds sliced from which it would secure 100 pounds of sugar; and when it exported that 100 pounds of sugar it would receive a drawback of \$2, or 30 cents more than the excise duty paid, which was equivalent to a net bounty of 30 cents per 100 pounds. This great inducement for increasing the saccharine strength of the beet and improving the methods of extraction of the sugar from the beet resulted in a rapid development along both lines, so that for several years Germany led the world in the saccharine richness of her While the German Government was offering this skillful and enticing inducement to the beet growers to increase the fertility of their product she was protecting them from competition in the home market by an excessive customs duty of \$2.59 per 100 pounds of raw sugar and \$3.24 per 100 pounds on

This system of export bounty was adopted in modified form by Austria, Russia, and other great sugar-producing countries. At the same time they protected their domestic market from foreign competition by high import duties. Austria's tariff was \$2.76 per 100 pounds on raw and \$3.68 on refined," while Russia at times imposed a duty as high as \$4.28 per 100 pounds on raw and \$5.71 on refined. It was by such radical policies

 1 U. S. Dept. of Agriculture, Bureau of Statistics, p. 27. 2 Ibid., pp. 40, 41. 2 Ibid., p. 114.

that these countries became great sugar-producing nations. The ingenuity and the industry of the German people have been manifested by the wonderful development of their sugar production. for while France had pointed to her the way and for years led in the amount produced, Germany in time outstripped her rival. France has finally attained the dreams of Napoleon and is now producing her entire sugar consumption, but Germany not only produces the entire amount of her consumption but is exporting about 1,000,000 tons per annum. There is no doubt but that the European nations imposed excessive burdens on their people in the development of the sugar industry. That fact, however, emphasizes the importance they have attributed to the policy of domestic sugar production. After their supply was sufficient for their home demands there began among them intense competition for foreign markets.

The fierce rivalry that developed between these nations during the last decade of the nineteenth century in their struggle for a market for their surplus led in 1902 to a commercial treaty, known as the Brussels convention, whereby it was agreed that bounties for exports should be abandoned and that none of the countries that were parties to the convention should charge more than 52 cents per 100 pounds import duty. Russia did not become a party to this convention at that time, but later joined with the other European countries under a specific clause that she might continue her bounty system and be permitted to export within five years a million tons. This convention was recently renewed, and the amount Russia was permitted to ex-

port was increased to 950,000 tons in the years 1911, 1912, and 1913, and 200,000 tons a year thereafter.

Great Britain did not join the Brussels convention originally because her people were the beneficiaries of the struggle on the Continent for supremacy in sugar production, but later she did become a member of the convention under certain conditions, being induced to do so because of her vast colonial cane-sugar interests. She is not a party, however, to the last agreement. I should add that the export limitation imposed on Russia by

the Brussels convention only applied to the countries that were parties to the agreement. She is at liberty to export all that she can to countries that are not parties to the convention.

I refer to these historical facts to show that the statesmen of the greatest nations of the civilized world, since the process of extracting sugar from beets has been known, have thought it wise to encourage the development of sugar production by various systems of taxation. Great Britain has not sought to develop sugar production at home. Her climate and soil are not adapted to beet culture, but her colonial possessions produce vast quantities of cane sugar, and her leading statesmen have believed that the Empire's interests are better served in the encouragement of commerce with her colonies by purchasing from them her sugar supply and in turn providing them with manufactured commodities from her mills and factories. the exception of Great Britain, every great civilized country has encouraged the development of beet-sugar production as a domestic industry wherever it was practicable, and in most of them their factories are now able to supply the sugar necessities of their own people.

Since the establishment of our Government, with the exception of one brief period, from 1891 to 1894, sugar has been a source of taxation for revenue, and a part of the time heavy protective duties have been imposed for the purpose of develop-

ing the industry in our own country.

For almost a hundred years we feebly followed the plan of European nations with indifferent success, but in 1897 began our effective development of the production of beet sugar. In the Dingley bill a duty of 95 cents per 100 pounds was imposed on sugar testing 75 degrees pure, and 3½ cents more was added for each additional degree of purity, making pure sugar carry a duty of \$1.821, and on sugar that had gone through the process of refining there was added 121 cents as a refiner's differential, making the full duty on refined sugar such as is produced in beet-sugar factories \$1.95 per hundred. These duties, as compared to those imposed by European countries, were very low, yet our experience has shown that they were sufficient. the passage of the Dingley bill beet-sugar production in the United States has developed faster than it ever developed in any country in the history of the industry. It took France almost 75 years to bring her sugar production up to an amount sufficient to supply her demands, approximately 1,000,000 tons per annum.

Germany started later but made more rapid progress; yet it required about 60 years for her to develop the industry so as to supply her domestic consumption. During the 16 years that have passed since the Dingley bill was enacted the production of beet sugar in the United States has increased from approximately 40,000 tons in 1897 to 698.952 tons in 1913, and the estimated crop for this year is 715,000 tons. If this ruinous legislation which is now proposed could be defeated, in my humble judgment, within less than 20 years from this hour we would be producing within our own borders every pound of sugar which the American people consumed. Since the enactment of the Dingley bill a reciprocity treaty has been entered into with Cuba which gives her a discount of 20 per cent from our tariff duties; 300,000 tons have been admitted free from the Philippines, and Porto Rico has been annexed to the United States, so that there is practically no longer any sugar imported upon which the full duty is paid.

The great increase in our own production, plus that from Porto Rico, the Philippines, and Cuba, supplies our demands. The duty of \$1.90 is in fact a fiction, there being no importations of consequence at that rate, the real protection to our domestic sugar being the Cuban rate. The standard grade of imported Cuban sugar is 96 per cent pure, the duty on which is \$1.348 per hundred pounds. In commenting on this fact Willett & Gray's Sugar Trade Journal, on May 1 of this year, said:

Gray's Sugar Trade Journal, on May 1 of this year, said:

Accepting as fact that Cuba centrifugals can not be produced below 2 cents cost and freight without loss, it is evident that the production of sugar in our domestic and insular possessions has already increased to an extent to bring about competition between these several crops without any influence felt from the 18,000,000 tons total crops of the world, 14,000,000 tons of which are outside our own privileged crops, which are now estimated to reach about 4,000,000 tons to meet our year's consumption of about 3,600,000 tons. Under these conditions the United States is entirely independent of European values and 0.73 cent per pound beneath the parity of the world's price as fixed at Hamburg.

The Cuban reciprosite

The Cuban reciprocity agreement in 1904 and the free sugar from Porto Rico and the Philippine discount were equivalent ultimately to a reduction in the duty of 20 per cent from the rates fixed in the Dingley bill.

As a result of that agreement there has been developed a sugar production in Cuba, Porto Rico, Hawaii, and the Philippines which, added to that produced in continental United States, supplies our demand independent of the world's production, as stated in the quotation that I read.

The immediate effect of this treaty was to somewhat retard the development of our beet-sugar industry, yet by 1906 it recovered and has since made marvelous growth. I submit herewith a table showing the sugar production in the United States for each year, both beet and cane, since 1897, and the estimated production for this year. I will not read the table, but ask that it be printed.

Mr. LODGE. What is the total?

Mr. BRISTOW. The total for this year in the United States of the estimated crop is 715,000 tons of beet sugar. There is no estimate on the cane sugar, or I have not been able to get an estimate on the amount of the cane sugar. On account of the floods in Louisiana the cane production has been comparatively small for last year and this year. Last year it amounted to only 188,000 tons.

Mr. SMOOT. That is, in the United States proper?

Mr. BRISTOW. In the United States proper.
Mr. LA FOLLETTE. What was the tonnage of the beetsugar production last year?

Mr. BRISTOW. It was 698,952 tons.

Mr. LA FOLLETTE. For 1912?

Mr. BRISTOW. For the sugar year of 1912-13.

Mr. LA FOLLETTE. Part of that is estimated, is it not?

Mr. BRISTOW. No; the figures for 1912-13 are complete, because the sugar year of 1912 extends into 1913 before all the product is ground and marketed. The yield, as I have said, was 698,952 tons.

Mr. PERKINS. Does the table to which the Senator from Kansas refers show the production of the different States?

Mr. BRISTOW. No; it merely shows the total in the United

The VICE PRESIDENT. The table referred to by the Senator from Kansas will be printed in the RECORD in the absence of objection. The Chair hears none.

The table referred to is as follows:

Cane and beet sugar produced in the United States 1897 to 1914.1

Cane sugar.	Beet sugar.
Short tons. 322, 088 354, 126 284, 394 161, 275 311, 887 364, 325 372, 903	Short tons. 42,040 45,241 36,36; 81,722 86,08; 184,600 218,400
	322,088 354,126 284,394 161,275 311,887 364,325

1897 to 1912 from Statistical Abstract of the United States, 1910, p. 218; and 1912,

pp. 254 and 772.

The periods relate to sugar-production years.

Cane and beet sugar produced in the United States, etc .- Continued.

Year.	Cane sugar.	Beet Sugar.	
1905	Short tons. 392,000 383,040 272,160 394,240 414,490 375,200 355,040 361,920 188,200	Short tons. 242, 113 312, 921 483, 612 463, 628 425, 884 512, 469 510, 172 599, 500 698, 952 716, 800	

From Willett & Gray's Sugar Trade Journal, July 24, 1913.
 Estimate from Willett & Gray's Sugar Trade Journal, June 26, 1913.

Mr. BRISTOW. It costs more to produce beet sugar in the United States than it does in Europe. The increased cost in this country consists principally in the higher price that is paid to the farmers for the beets. The average price of beets in Germany per short ton for the years 1907 to 1911 was \$4.49²; in France, 1907-1910, \$4.06²; in Russia, 1911-12, \$3.90³; and in the United States, 1907-1911, \$5.11⁴. The statistics cited show that for the years referred to the farmers in this country received 62 cents per ton more than they did in Germany; \$1.05 more than in France; and \$1.22 more than in Russia. Mr. Roy I. Blakey, in his admirable work on the United States beet-sugar industry, published by the Columbia University, written in 1911, said:

Although on the average the German grower gets 50 cents to 75 cents per ton less for his beets than the American grower, he gets from \$7 to \$8 more per acre on account of the greater yield, and the sugar in the beet costs the German factory about 50 cents to 80 cents less per hundred pounds of granulated sugar, owing to lower prices per ton and higher sugar content of the beets.

The prices paid for beets in our country for 1912 and 1913, since this book of Mr. Blakey's was written, are above the average for the years submitted, being about \$5.90 per ton. Some of the factories in California are paying \$7 and over. In Colorado the price is from \$5 to \$6; in Nebraska, from \$5 to \$5.85; in Kansas, from \$5 to \$5.50; in Wisconsin, from \$5.50 to \$6.50; and in other States similar advances have been made. From the most accurate information I have been able to procure it appears that for the last two years the American farmer has been receiving about \$1 per ton more for his beets than has the German farmer. The beet is the largest element of cost in beet-sugar production. There is not so wide a difference in the cost of extraction between American and European factories as there is in the cost of beets, showing that a large percentage of the additional cost for the production of beet sugar goes direct to the grower of the beet. That can not be successfully contradicted and will not be by anyone who is informed.

Russia I regard as a more dangerous competitor for our sugar factories than Germany because of the cheapness of her labor and her almost unlimited beet-producing area. I believe, however, that \$1 a hundred pounds would be abundant protection for the American producer as against European competition.

The real menace, however, of free sugar to the sugar producers of our country is not the beet-sugar production of Europe, but the came-sugar production of the Tropics. In the cane-sugar-producing countries there is an entirely different civilization from ours. The wages paid labor in those countries are very small. The necessaries of life are few and the character of the civilization is low. To force the American sugar producer to compete on equal terms with the cane producer of the Tropics is to force him out of business. This I believe is largely conceded by the advocates of free sugar. Cane sugar can be produced in Cuba, San Domingo, Java, and other tropical islands for amounts ranging from \$1.25 to \$2.10 per 100 pounds, depending upon the conditions surrounding the immediate factory. Add to that the cost of refining and transporta-tion, and we have an actual cost of refined sugar at New York at from \$2.10 to \$2.80 per 100 pounds, while the cost of producing beet sugar in our country ranges from \$2.70 to \$5.14, showing the difference in the cost of production to range from 60 cents to \$2.34 per 100 pounds. So it readily appears that free sugar

² From bulletins of statistics of minister of finance.

³ From figures of minister of finance.

⁴ From Hardwick committee hearings. These figures are averages as compiled from the reports of 33 factories.

⁶ Willett & Gray, in 1910, give cost price of Cuban sugar at average f. o. b. Cuba \$1.85 per 100 pounds, and at average c. i. f. New York \$1.95 per 100 pounds.

⁶ H. C. Prinsen Geerligs, in The World's Cane-Sugar Industry, p. 194, gives cost prices of sugar prepared in the more modernized factories at \$1.25 per 100 pounds, and in the old-fashioned factories at \$1.80 per 100 pounds. 100 pounds.

TH. C. Prinsen Geerligs, ibid., p. 139, gives cost price of sugar Nos.

11-13 D. C. at \$1.63 per 100 pounds.

8 Hardwick hearings, p. 2379.

from the Tropics will practically destroy our domestic sugar industry. A few factories might survive, such as the Spreckels factory at Spreckels, Cal., and possibly some of those in Colorado and Utah, but the great majority of them will be closed.

I believe that the duty of \$1.95 per 100 pounds, when it was imposed in 1897, was justified. Since that time we have developed the saccharine strength of our beets and improved the methods of extraction so that now the cost of producing 100 pounds of beet sugar in the United States has been reduced, and as large a duty as was necessary in 1897 is not now needed. I submit herewith a table showing the increase in the saccharine strength of our beets and the improvement in the methods of extraction.

Beet sugar produced in the United States 1901 to 1911,1

¹ Source, Statistical Abstract of United States, 1912, p. 254. ² These averages are not based on data for all the factories, as some of them failed to report results of tests, but it is believed that they fairly represent the character of the total best cross.

Believing that the present duties should be lowered, I have submitted an amendment which reduces the general duty on the refined sugar from \$1.90 per hundred, as now provided for in the law, to \$1.521. It then provides for additional reductions in periods of three and six years until the duty is finally reduced to \$1.27\frac{1}{2}. It leaves the Cuban 20 per cent preferential stand as it is now, because I do not think it wise at this time to disturb the reciprocal relations we have with Cuba; and under this amendment the duty on Cuban 96, which is the real protective duty the American producer receives, will be reduced immediately to \$1.14 and ultimately to 97.2 cents. In my opinion our relations with Cuba and the reciprocity agreement which we entered into should not at this time under any circumstances be disturbed. It would possibly bring about additional inter-national complications that would be exceedingly embarrassing. I believe these reductions can be made with absolute safety to our sugar industry and that it would continue to grow and prosper. If this should prove to be true, then we will have developed a domestic sugar supply at a less cost than has any other country in the world's history. I invite the attention of anyone who is interested in the subject to investigate this matter. It will be found that the statements which I make will prove to be not only true but highly interesting. As I said, we shall have developed the production of sugar in our own country sufficiently to satisfy our ultimate and complete demands with the least possible burden that has ever been imposed upon any people in the history of civilization.

Since I have been in the Senate I have contended for a reasonable reduction in the existing sugar duties; a reduction that could be made without materially impeding the development of the industry, and that would not permit the local producers to charge the American people excessive prices. But I have never favored free trade. I can not understand how anyone can believe that it is for the best interests of our country to destroy our home production of sugar. First, it will lessen the amount of the sugar supply of the world and result in an increased price everywhere. This is clearly demonstrated by the great advance in the price of sugar in 1911. The world produces about 18,000,000 tons of sugar per year; we consume approximately one-fifth of the entire world's production. In the sugar year 1911–12 there was a shortage in the world's production of about a million tons, and the price of sugar in the United States went up as high as \$7.50 per 100 pounds, an advance of about \$3 per hundred.

The enactment of free-sugar legislation would reduce our production at least a half million tons. A shortage of a half million tons in our own production would inevitably have a corre-

sponding influence upon the world's price and the benefit expected by the advocates of this bill in sweeping reduction in prices would not be realized. The greatest objection to the destruction of the American industry, however, is that it would give the cane-sugar refiners a monopoly of our sugar market. Tropical sugar is produced in a raw state, shipped to the United States, and there refined, and then put upon the market last refined or granulated sugar. The refining business is controlled by three concerns, with headquarters in New York. They co-operate in fixing prices. Their only competitor in our market is the American beet-sugar producer. When the refiners con-trol the market they fix the price as high as the market will stand, regardless of the cost of production to them. Their resources are so tremendous and their financial strength so great that no cane-sugar producer in any country would have the hardihood to fight them in a commercial warfare for the control of the American market. So with the beet-sugar producer eliminated they would be supreme in the sugar markets of this country. A few years ago, when they learned of the possibility of beet-sugar production in our country under the protective duties that existed, they started this campaign for free sugar. Their purpose is to destroy the beet-sugar industry. It is their only competitor in this market. The legislation proposed in this bill will destroy that industry in the United States, and the refiners are for it. And it should not be forgotten that it was the cane refiners that robbed the United States Treasury a few years ago of millions by a system of false weights. They will profit more by this legislation than all others, for it will put out of the way their only competitor in our market, and then they will raise the price as high as they can. In fact, up to this time the greatest advantage which the beet-sugar producers have been to the people is in beating down the excessive prices which the refiners charge when they control the market. This is illustrated by the rise in the price of refined cane sugar when the beet product is exhausted and the decline in the price whenever the beet sugar is being put upon the market in large quantities

To illustrate, in March of this year heavy quantities of beet sugar were being sold, and the refiners' margin between the raw sugar duty paid in New York and the wholesale price of refined sugar in New York ranged from 581 to 681 cents per 100 pounds. That represented the difference between what they paid for the raw and what they received for the refined. It was the amount of toll which the refiner took for refining and marketing sugar. During the months of April, May, and June, as the pressure of beet sugar on the market grew less, the price of refined was advanced by the refiners until their margin of profit in July reached 96.8 cents per 100 pounds, an increase of about 40 cents per hundred. There was absolutely no justification for the increase, because the refiners paid no more for their raw sugar in July than they did in March. They increased the price to the American people 40 cents a hundred pounds simply because our domestic beet-sugar supply had been exhausted, and it was within their power to do it. Let me repeat, they sold the refined sugar for 40 cents a hundred more profit, because there was no beet sugar in the market, although they were paying exactly the same for the raw sugar from which this refined was made. This has been their invariable practice. In June of last year they ran the price up until the margin reached as high as \$1.176; that is, they took from the American people about 60 cents per 100 pounds more than they could when our markets were supplied with the beet-sugar product. I submit herewith a table showing for the last five months the weekly New York prices on raw and refined cane sugar and the refiners' margin:

1 Willett & Gray say "American beet-sugar factories have finished their cam-

paigns."
² Lowest margin for year.

When you place sugar on the free list you place in the hands of these sugar refiners the weapon with which to destroy their competitor; and, having destroyed their competitor, they will exploit this market to their heart's content. However worthy may be the motives of those who vote for free sugar, they are, in fact, voting directly in the interests of the Sugar Refining Trust and handing over to it, for exploitation and pillage, the greatest market for refined sugar on the earth.

A further illustration of the power of the sugar refiners over the American market, if the beet-sugar industry is destroyed, is the difference in the price of American sugar as compared with foreign sugar at the time that our beet-sugar production is being marketed. In March and April this year the refiners sold their refined sugar at from 47.6 cents to 62.3 cents per 100 pounds less than the Hamburg price plus the duty and freight. That is, they were selling at about 60 cents a hundred pounds under the world's parity. During that period it can not be said that the American consumer was paying all the duty, for he was not. In July this year, when the supply of beet sugar had been marketed, the refiners raised their price until they came to within 8 cents of the Hamburg price plus duty and freight, demonstrating beyond question that our beet-sugar supply forces down the price, and that during such periods the consumer does not pay the full duty, as is so confidently alleged by those who have not taken the time to study the subject. Indeed, at one time last year, before the beet-sugar crop came upon the market, the refiners put the price of granulated sugar in the United States up as high as 31 cents per 100 pounds above the Hamburg price plus freight and duty. That was in October last year, and when the beet-sugar supply came upon the market the price went down from 31.1 cents above the world's parity to a point 62.3 below it, a reduction of almost \$1 per 100 pounds, which was the direct result of the pressure on the market of the domestic production. Yet, in the face of this showing, men will stand here upon the floor of the United States Senate and advocate a policy that will place the American sugar market absolutely in the control of these refiners, and unwit-tingly become the agents of this giant combination in its efforts to monopolize our sugar supply.

Willett & Gray's Sugar Journal of April 17, 1913, in commenting on this subject, said:

The consumer gets cheaper sugar under the protection of duty to the home industry than he will without such protection against the European speculative sugar exchanges. To-day sugar is 74 cents per hundred pounds below world's prices. This is equivalent to a duty of 61 cents per hundred pounds on Cuba raws, instead of \$1.348, because our free and privileged supplies of sugar have so increased under protection that we are independent of European prices and now under the influence of competition among the sugar producers at home.

The sugar refiners being aware of the fact set forth in the quotation from Willett & Gray, knowing that duty-paid Cuban 96 sugar was selling only sixty-some cents above the world's price, have nevertheless distributed broadcast throughout the country millions of circulars stating that with free sugar the American consumer would be able to buy his supply about 2 cents a pound less than he is now paying. This statement was circulated persistently by men who knew it to be false, by the men who put the price of sugar up as high as the market will stand as soon as the domestic supply is exhausted. In this campaign for free sugar the refiners are just as dishonest in their methods as they were when they robbed the Government Treasury by their system of false weights.

I herewith submit table showing the weekly New York prices of granulated sugar, the prices of sugar from Hamburg laid

down in New York, and the differences, for the past five months, demonstrating the accuracy of my statements:

Weekly prices, granulated sugar, New York and Hamburg.

¹ Weekly quotations are taken from Willett & Gray's Sugar Trade Journal.
² Willett & Gray say: "Domestic beet granulated of the old crop is practically alt contracted for, as is also the early production of the new crop, which has begun in California."

As I have said, in 1897 we produced about 40,000 tons of beet sugar. Since then there has been a rapid increase in the amount of beet-sugar production. It has grown step by step until now we are producing approximately 700,000 tons per year, an increase in 16 years of 1,650 per cent.

This is an unprecedented increase. You may search the history of the sugar industry in every nation on the earth and you will not find anywhere else such a rapid development of sugar production as there has been in our country within the last 16 years.

This large production of beet sugar has stimulated many other lines of business. It has made a market for millions of dollars worth of machinery, which has been manufactured in American factories and made by American workmen, who in turn have been fed by the American farmer and gardener. It has produced a market for millions of dollars worth of lime, an important ingredient in the clarification of the beet juice, and a hundred other items, such as tools for the farmers who grow the beets, machinery for the construction of irrigation ditches, fuel for the factories, bags for the sugar, and labor of many kinds and varieties. It touches our whole industrial life and stimulates practically every line of American business.

Villages have grown up in the sugar-beet producing regions; farms have been developed for that specific purpose, and men have engaged in various occupations that are necessary for the comfort and happiness of the people who compose the communities that are engaged in the production of this great commodity. These communities were founded and millions of dollars invested in beet-sugar production upon the invitation of the United States Government when it paid bounties to encourage the production of domestic sugar or imposed heavy import duties for the same purpose.

The sugar industry is not a local enterprise; it is nation wide in its influence, and its destruction will be a national calemity.

I believe that a reduction of approximately 20 per cent of the present duty can be made immediately, and additional reductions made later without materially impeding the progress of our sugar development. But instead of making such reductions, which would be just to the sugar producer and fair to the consuming public, it is proposed to abolish the duty, which will not only stop the development of the industry, but close a majority of the factories that are now in operation. Such a blind and seuseless policy has never been followed by any nation in the history of civilized government without disaster. And the astounding thing is that there can be found in the American Congress patriotic men so blind to the interests of their country as to advocate such a policy.

We consume about 3,600,000 tons of sugar per annum. We reduced last year about \$50,000,000 worth of sugar. This produced last year about \$50,000,000 worth of sugar. This value is based upon the price of raw. If we had not produced the \$50,000,000 worth at home, we would have been compelled to send out \$50,000,000 more of our resources into foreign lands to purchase the sugar which our people consumed. We would therefore have been \$50,000,000 poorer than we are to-day. Our resources would have been impoverished to that amount. It will be said by some that our farmers should have grown corn, wheat, and other crops. But I answer that we now have a full supply or surplus of the cereals. To abandon beet culture and produce more corn, wheat, and potatoes is to further glut our markets with these staple articles. One of the greatest needs of our agricultural life to-day is diversified crops, and for that reason we should encourage the production of beets. We imported something over \$115,000,000 worth of sugar last year; that is, we sent out of the country more than \$115,000,000 for If next year we could ourselves produce the \$115,000,000 worth that we imported last year, if we could take out of our own soil and gather from our own atmosphere that amount of additional wealth by the employment of our own labor and the utilization of our rains and sunlight, we would as a people be approximately \$115,000,000 richer than we would otherwise be. Is not it desirable for a nation to develop its own resources, to bring into activity its dormant wealth, to produce the things from its own soil which its people need, and thereby husband its financial and industrial strength? If such a policy is desirable, then the policy proposed in this bill is deplorable. But the statesmen who by accident have been put in temporary control of the affairs of this country, in the face of the facts heretofore presented, propose by this bill to destroy our sugar industry. Such a policy in France, Austria, or Germany would be regarded as industrial treason, and this is the first time that it has been seriously proposed in our history. But a school of false political economists, unfortunately, are in command here, and from the debates that we have listened to in this Chamber during the last two months we must infer that they have a malignant hatred toward certain American industries and American producers. They seem to regard the beetsugar producer and the sheep grower as public enemies. say that the woolman has been coddled for a century and that he is a failure and deserves no further consideration. malign him because he has not grown sufficiently while he has been the recipient of public favor; then they turn and denounce the beet-sugar man because he has grown and established a virile and thriving industry. They propose to cripple the woolman because he has not prospered and to kill the beet-sugar man because he has. But the amazing thing to me is that men who know that this bill is wrong are not only willing to acquiesce in its passage, but are actually supporting it. If every Senator in this body should vote his honest judgment on this schedule, it would be defeated. There are many Senators here who believe that free sugar is wrong and not for the best interests of their country, yet they will vote for it. They say that they do this for the sake of party harmony and regularity. obeying the decree of a party caucus against their consciences, the interests of their constituents, and the welfare of their country.

This leads me to suggest that while I believe the bill itself to be imperfect and unjust I regard the manner of its preparation as infamous. Four years ago, with all the vehemence of which I was capable, I denounced the stiff-necked and arbitrary methods of the Republican leaders then in control of the National Legislature, and I hold the same views now. Mr. Aldrich, at the very apex of his political power, when he dominated the proceedings of this Chamber as few men have in the history of this country, never had the hardihood to propose such outrageous and unwarranted methods in the making of his tariff bill as have been followed by the majority in control of this Congress. Bold as Mr. Aldrich was in the execution of his desires, he never undertook to perfect legislation in the secret sessions of a partisan caucus, where debate was muffled and wily statesmen with impunity could conceal their attitude on vital questions from their constituents. The public knows nothing of the positions taken by its representatives in the star-chamber proceedings of a secret caucus except as information leaks out through the keyholes.

The political caucus has been one of the most corrupting influences in American politics. It is the agency through which ward heelers have risen to power, and through them sinister influences have controlled the legislation of the country. It has been most potent in the slums of our cities, but its baneful influence has extended to the village and the township.

The political system which rested upon the caucus has become so hateful to the American people that they have outlawed it in a majority of the States of the Union. But while an in-

dignant public was abolishing by the enactment of direct primary laws the caucus in the States the friends of this foul system have found a place of refuge for it here in Washington at the National Capitol.

By the caucus process less than 20 per cent of the Members of this body can control its action, and I have been informed that in the making of this bill that has actually occurred. full-grown, self-respecting men will not only tolerate such a

system, but actually defend it.

To frame a great bill like this, affecting thousands of industries and the welfare of millions, in a secret party caucus, where the people of the country are not permitted to know the position taken on such measure in detail by the men sent here to represent them, is a menace to free government, and the party or the administration that is responsible for the establishment of such a system of legislation merits the unmeasured condemnation of the American people.

Personally, in considering the schedules of this tariff bill, I am standing to-day where I have stood during the last four years. I believe that we should have protective duties that will measure the difference in the cost of production at home and abroad; duties that will preserve legitimate American industry and maintain the standard of American wages and at the same time protect the American people from exorbitant The amendment which I offer to this paragraph, I prices.

believe, meets that requirement.

Mr. LODGE Mr. President—
The PRESIDING OFFICER (Mr. ASHURST in the chair). Does the Senator from Kansas yield to the Senator from Massahusetts

Mr. BRISTOW. Certainly.
Mr. LODGE. Would the Senator mind my asking him a question before he takes his seat?

Mr. BRISTOW. I shall be very glad to have the Senator

Mr. LODGE. I have listened with great interest to the very concise and admirable statement of this case made by the Senator from Kansas. I noticed that he said that the reduction of the world's supply of sugar as a probable result of the passage of this bill, assuming that it results in the destruction of a large part of the American production, will be about 500,000

Mr. BRISTOW. That is the lowest estimate I would make.

I think it will be more than that.

Mr. LODGE. In that connection is it not true that in order to make an estimate we should have to take the normal crop of Louisiana? Of course last year, as the Senator pointed out, it was not a normal crop. That is in the neighborhood of it was not a normal crop. 300,000 tons.

Mr. BRISTOW. Between 300,000 and 400,000 tons.
Mr. LODGE. In Porto Rico, which had a production of 60,000 tons at the time we took over the island, the production has risen to 367,000 tons. A decline in that production has begun already, owing to the fear that has been created by the pendency of this bill, and the smaller producers there are going out of the business. Many of the smaller plantations are in the hands of receivers already. So there will be a reduction in the Porto Rican production also, and I suppose some, perhaps, in Hawaii. It seemed to me the Senator was putting it very low when he said there would be a reduction of 500,000

Mr. BRISTOW. I think I am. Mr. LODGE. I think it will be nearly a million tons.

Mr. BRISTOW. That is probably true. I think it will be at least 500,000 tons within the continental United States. course, there will necessarily be a reduction in Porto Rico, because since Porto Rico became a part of the United States, and has had the advantage of the American protective laws, the production has advanced from about 60,000 tons to 367,000 tons, and in Hawaii the production has more than doubled.

Mr. LODGE. Yes; and, of course, we should lose the whole

of the Louisiana production.

Mr. BRISTOW. Yes. I think there will be a greater reduction than that in our domestic production, considering the outlying territory which is under our jurisdiction.

Mr. LODGE. Which, of course, would have an immediate

effect on the price of sugar.

Mr. BRISTOW. An immediate effect; yes. I think that is true.

Mr. LODGE. There are two other points to which I should like to refer, if the Senator will allow me.

The Senator spoke of the \$115,000,000 sent out of the country for the purchase of foreign sugar during the past year, and what he said is quite true. It would be, in my judgment, a great benefit if we kept that sum at home for our own sugar, as I think we should do in a comparatively short time if the beet-sugar industry were given assurance as to its future. But the Senator omitted, I think, the point that on that \$115,000,000 we now get a certain compensation, because a large portion of the sum goes in articles of American production to Cuba, where they have a special market under a preferential rate. Of course the moment we have free sugar the Cuban treaty falls and we cease to have that preference.

Mr. BRISTOW. Yes. Mr. LODGE. We do get now a certain recompense for that

Mr. BRISTOW. I think that is true. I have not undertaken to estimate the value of the Cuban trade, but there is no doubt that we will lose a lot of it and that every business man, every factory, every farmer, every producer of any article that is sent to Cuba will have his business that much curtailed.

Mr. LODGE. Precisely.

The other point is this: I know the Senator could not cover everything; but there is one point that he did not touch upon, or at least I did not hear him, which is, I think, an important element. I refer to the improvement which has been effected by beet culture in the productiveness of land. The Senator may have referred to that subject when I was out of the Chamber.

Mr. BRISTOW. I did not deal with it in the manuscript, but I have here an article directly on that line that I think I shall read into the Record. It is a little illustration which shows that beet culture is of great use to the land. I probably should have dealt with that matter in the part of my address where I was discussing the value of diversified crops, because there is nothing that American agriculture needs more than diversified crops. That is known to every man who has given any study to our agricultural industries. The farmers appreciate that the beet agricultural industries. production as a change of crops is of the greatest value.

Mr. LODGE. It has had the effect in Germany certainly of

increasing the productivity of land in other crops.

Mr. BRISTOW. I think that has been one of the features of agriculture that has induced European nations to strive so persistently to develop the sugar production within their own

Mr. SMITH of Michigan. Mr. President— The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Michigan?

Mr. BRISTOW. I do.
Mr. SMITH of Michigan. Mr. President, of course, every Senator on this side of the Chamber understands that we have been treated to a most excellent discussion of the great ques-tion that is now before the Senate. In detail, in fairness, in candor, and in unanswerable logic it is difficult to conceive a better presentation than has been made by the Senator from Yet I desire to call his attention and the attention of Senators to the fact that during that discussion of an important question, vital to the American people, the other side of this Chamber has been practically without representation.

During all the time of this discussion there were but three or four Senators on the other side of the Chamber. The Senator from Louisiana [Mr. THORNTON] sits here before me and his colleague [Mr. RANSDELL] sits upon my left. The Senator from [Mr. THOMAS] has honored the speaker with his presence; the Senator from Mississippi [Mr. WILLIAMS], the Senator from Kansas [Mr. Thompson], the Senator from Texas [Mr. Sheppard], and the Senator from New Jersey [Mr. MARTINE], with the Senator from Arizona [Mr. ASHURST] in the chair. Beyond that there has not been the slightest attention or consideration given to the unanswerable argument of the Senator from Kansas.

I think it is a very sad commentary upon the deliberation of our membership and the importance of the work that is going on here that Senators upon the other side will content themselves with a caucus declaration and then absent themselves from the Chamber during an argument which many on this side of the Chamber believe to be unanswerable and vital to the interests of the American people.

Mr. President, I desire to express my mortification and shame that they should have thus abandoned their seats during this able address. I am afraid that our efforts to save this industry are hopeless, no matter how strong the argument of Senators who favor the American sugar industry.

Mr. NORRIS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Nebraska?

Mr. BRISTOW. I do. Mr. NORRIS. I should like to have the Senator explain the effect of his amendment and the effect of the bill as it is now before the Senate shorn of all technicalities. Will be just give all the obligations of our reciprocity treaty with Cuba, in so far

the amendment and the provision of the bill itself in plain terms so that an ordinary person may understand what the bill means as it is now before the Senate and what the Senator's amendment means?

Mr. BRISTOW. My amendment would reduce the duty on refined sugar from \$1.90 to \$1.521 per hundred pounds. As explained in the address which I delivered, that duty is merely a fiction, and the protection of Cuban sugar in this market is its real purpose

Mr. NORRIS. The real effect would be to still lower the duty, taking into consideration the 20 per cent preferential to

Cuba.

Mr. BRISTOW. Taking into consideration the 20 per cent preferential to Cuba, it reduces the duty on 96 centrifugal, which is the Cuban sugar we import, from \$1.348 immediately to \$1.14, and then again another reduction is made after three years to \$1.07, and in three years more to 97½ cents. So it reduces the duty on sugar to something less than \$1 per hundred pounds in stages.

Mr. NORRIS. What is the real duty provided for in the bill now before the Senate. How much does it reduce the present

Mr. BRISTOW. It reduces it approximately to \$1, and then,

after three years it places sugar on the free list.

Mr. NORRIS. I understand the bill reduces it to \$1, taking into consideration the 20 per cent reduction that we have in reference to Cuban reciprocity?

Mr. BRISTOW. Yes. Mr. NORRIS. Now, I should like to ask the Senator what, in his judgment, would be the effect after three years, when sugar goes on the free list, upon our treaty with Cuba?

Mr. BRISTOW. That is a pretty big question. The lawyers and the diplomats of the Senate will have to figure it out. I think it nullifies the treaty, but others may see that different.

Mr. LODGE. Mr. President-

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Massachusetts?

Mr. BRISTOW. I am very glad to yield.

Mr. LODGE. If the Senator will allow me, the reciprocity treaty with Cuba provides that if either party to the treaty comes to the conclusion that the arrangement is not advantageous owing to tariff changes-I am stating it in general language—they are at liberty to terminate the treaty with a notice of six months. Of course, the only advantage to Cuba in the treaty is the sugar preferential. She gives us entry into her markets for a great many articles which are specified. Now, if sugar goes on the free list, of course a preferential becomes impossible and Cuba ceases to have any advantage whatever from the treaty. Therefore she would, I assume, give notice from the treaty. Therefore she would, I assume, give notice that the treaty having ceased to become advantageous to her she terminates it.

Mr. NORRIS. That is the point I thought ought to be brought out in connection with the admirable address of the Senator from Kansas. Whatever benefits we get we would lose if we put sugar on the free list.

Mr. BRISTOW. I think that is a very important subject for consideration.

Mr. CUMMINS. Mr. President-

I will yield to the Senator from Iowa. Mr. BRISTOW.

Mr. CUMMINS. That is a very interesting question as well as an important one. There is a curious conflict, as it seems to me, presented in the bill before us. I have little doubt that the bill itself abrogates the treaty with Cuba, because it is in conflict with it. But there is a paragraph the effect of which may very well be considered. It is in the administrative part of the proposed law, which provides

Mr. LODGE. Before the Senator takes that up-I know he has examined the treaty with care-would he mind my asking him if he does not agree with my statement as to the practical

effect of free sugar?

Mr. CUMMINS. Oh, undoubtedly, Mr. President. But I am inclined to go a little further. I am inclined to the opinion that in the absence of the paragraph I am about to read the law which we are now about to enact would be an abrogation of the treaty instantly. However, I want to call the attention of the diplomats and the lawyers upon the other side of the Chamber to this provision in the proposed law. It will be found on page 250. It is paragraph B. I quote:

That nothing in this act contained shall be so construed as to abrogate or in any manner impair or affect the provisions of the treaty of commercial reciprocity concluded between the United States and the Republic of Cuba on the 11th day of December, 1902, or the provisions of the act of Congress heretofore passed for the execution of the same.

I take it, therefore, inasmuch as the act specifically reaffirms

as the terms of that treaty are in conflict with the specific provisions of this law the treaty will prevail and the provisions

of the law will be nugatory and of no effect.

If that be true, I should like to know from some of the students of the subject whether the supposed advantages of the reduction in the duties upon sugar will be realized, because it is specifically declared that no part of this bill when it becomes a law shall be construed to impair or affect any of the provisions of the Cuban treaty. I am at a loss to understand how the proposed duties on sugar and finally free sugar can be reconciled with the Cuban treaty, and if they can not be reconciled, whether the treaty is to prevail or the law is to prevail. Undoubtedly the law would prevail if the paragraph I have just read had not been put into the law, because we can abrogate a treaty by legislation as effectually as we can in any other manner; but I do not know just what our friends upon the other side hold with respect to this point, whether they concede that the sugar schedule does violate the Cuban treaty. Before any of them will answer that question, I beg to call their attention to the treaty itself. The second article of the treaty provides-I quote-that-

During the term of this convention all articles of merchandise not included in the foregoing Article I and being the product of the soil or industry of the Republic of Cuba imported into the United States shall be admitted at a reduction of 20 per cent of the rates of duty thereon as provided by the tariff act of the United States approved July 24, 1897, or as may be provided by any tariff law of the United States subsequently enacted.

Again, I read from Article VIII:

The rates of duty herein granted by the United States to the Republic of Cuba are and shall continue during the term of this convention preferential in respect to all like imports from other countries, and, in return for said preferential rates of duty granted to the Republic of Cuba by the United States, it is agreed that the concession herein granted on the part of the said Republic of Cuba to the products of the United States shall likewise be, and shall continue, during the term of this convention, preferential in respect to all like imports from other countries.

The bill before us declares that the obligation which I have just read shall not be impaired by anything in the bill, but shall continue in full force and effect. However, I have not read the entire provisions of Article VIII.

Provided-

This follows what I have just before read-

Provided, That while this convention is in force, no sugar imported from the Republic of Cuba, and being the product of the soil or industry of the Republic of Cuba, shall be admitted into the United States at a reduction of duty greater than 20 per cent of the rates of duty thereon as provided by the tariff act of the United States approved July 24, 1897, and no sugar, the product of any other foreign country, shall be admitted by treaty or convention into the United States, while this convention is in force, at a lower rate of duty than that provided by the tariff act of the United States approved July 24, 1897.

Again I remind my friends upon the other side that the bill about to be passed declares that that provision shall remain in full force and effect, not in the least impaired or affected by

any of the specific items or paragraphs of the bill.

I will not pursue the matter further at this time. time I may feel warranted in expressing my views at greater length, but I think that when we are dealing with a subject like this, which affects our relations with Cuba, which may determine whether they be friendly or unfriendly, which may determine whether Cuba will admit to her markets our products under a preferential ranging from 25 to 60 per cent, as I remember it, we might very well have the opinions of the distinguished lawyers upon the other side. I confess there is great difficulty in my mind in reaching any conclusion as to just what shall be our

relation to Cuba after we pass this bill.

Mr. NELSON. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from Kansas

yield to the Senator from Minnesota?

Mr. BRISTOW. I do. Mr. NELSON. This Cuban reciprocity was an agreement between two countries, was it not?

Mr. CUMMINS. It was.

Mr. NELSON. Can the mere fact that we declare on our side that that treaty remains in full force while we change the fundamental element of it bind the other side of that treaty? Can we modify it and change the conditions and still maintain the treaty in force without the consent of the other side?

Mr. CUMMINS. Unquestionably not: but I went further and pointed out that in the very act it does modify the treaty and does give to Cuba the right to abrogate it; we expressly say that no part of the treaty shall be changed; that whatever obligation, in other words, we have undertaken toward Cuba shall continue and be in full force and effect. I shall wait with a great deal of interest and curiosity an elucidation of that interestical situations. that international situation.

Mr. LODGE. Mr. President-

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Massachusetts?

Mr. BRISTOW. I do. Mr. LODGE. Mr. President, it so happened that I drafted the proviso which has just been read in the Cuban reciprocity treaty. The treaty was on the eve of failure on account of the opposition coming from the sugar interests of the United States, and a compromise was made by the insertion of that proviso, which, as I said, I drafted.

In this bill, on page 250, as the Senator from Iowa has

pointed out, it is stated-

That nothing in this act contained shall be so construed as to abrogate or in any manner impair or affect the provisions of the treaty.

Of course abrogation must be distinguished from the right reserved in a treaty to terminate the treaty, which is a wholly different thing. It is, that nothing in this act contained shall of itself and of its own force and effect abrogate the treaty and make it cease the moment it becomes a law.

Mr. BRISTOW. Mr. President-

Mr. LODGE. Just a word more and I will yield to the Senator. He has been very kind. It will be observed that the proviso of which I speak says:

That while this convention is in force no sugar imported from the Republic of Cuba, and being the product of the soil or industry of the Republic of Cuba, shall be admitted into the United States at a reduction of duty greater than 20 per cent of the rates of duty thereon as provided by the tariff act of the United States approved July 24, 1897.

Now, the reduction on the tariff rates of the act of 1897 amounted to a reduction of 3.8 cents in round numbers. This bill makes a reduction, we will say, in round numbers, assuming the rate fixed for the next three years is one and the same, from \$1 to 80 cents a hundred pounds. That is not a greater reduction than was made by the reduction on the Dingley rate; it is a less reduction. The proviso was directed only against a greater reduction; that is, it was a provision that if we raised the duty to 3 cents the Cuban should still receive a reduction of only 3.8 cents, but if in our bill here, or at any other time, we reduce the amount-and it was slightly reduced in the Payne-Aldrich bill-if we reduce the amount so that it is not greater than the reduction effected by the 20 per cent off the Dingley rate, which is merely the standard by which it is to be measured, we have not abrogated the treaty.

That is a totally different question, of course, from the question whether by our change of tariff we have created a situation which the other party to the treaty thinks is disadvan-

tageous. Article X provides:

It is hereby understood and agreed that in case of changes in the tariff of either country which deprive the other of the advantage which is represented by the percentages herein agreed upon, on the actual rates of the tariffs now in force, the country so deprived of this protection reserves the right to terminate its obligations under this convention after six months' notice to the other of its intention to arrest the operations thereof.

That is a special privilege for termination. Of course the general privilege of termination involves a year's notice, but

each side is given a special privilege of termination.

Now, if Cuba is dissatisfied with getting her sugar in at 80 cents instead of a dollar, as compared with the present preferential where she gets it at \$1.348 a hundred pounds instead of \$1.90, she has nothing to do but give us a notice under the treaty. I differ from my friend from Iowa, with whom I have had some talk upon this subject, as to the construction of the proviso. I think only one construction is possible. It certainly was drawn with that intention. I can testify to that.

Mr. CUMMINS. I gave no interpretation to the proviso. I

read the proviso.

Mr. LODGE. I did not mean to misrepresent the Senator, of course.

Mr. CUMMINS. I did not attempt to interpret it. The earlier part of Article VIII, however, contains an obligation on the part of the United States that we will maintain a preferential rate of duty in favor of Cuba. I have no doubt about the power of Congress to abrogate the trenty by the passage of a law, but in the very measure which we have before us, which does destroy the preferential rate of duty, we reenact the treaty and declare that Cuba still shall have a preferential rate of duty. To me there is an irreconcilable conflict between those provisions.

Mr. LODGE. Mr. President, we do not destroy the preferential for three years to come. Then we do destroy the preferential

beyond a doubt.

Mr. CUMMINS. Yes; but we are destroying the preferential to take effect three years hence.

Mr. WILLIAMS. It will be destroyed as to one article when sugar goes on the free list. That would not destroy the treaty. Mr. LODGE. Of course, the Senator knows that is all that

Cuba gets.

Mr. WILLIAMS. Cuba has a right to give notice. She has that right anyhow.

Mr. LODGE. She has a right at any time, if she thinks it is not to her advantage. Of course, practically the only thing of value in the treaty to Cuba is the preferential on sugar, and that will perish when sugar is made free, of course. But for the next three years I am not able to see that we abrogate the treaty at all, because that proviso limits our powers only in the direction of making the reduction greater; that is, it was a protection to us; it was not a guaranty of anything to Cuba.

Mr. WILLIAMS. I understand that that provision was put in

at the request of our own sugar producers.

Mr. LODGE. Certainly. It was put in on account of the opposition of the beet-sugar interests to the treaty.

Mr. WILLIAMS. Of course, in order to get it through in this

country, not in order to get it through in Cuba.

I want to say that there is a point about the treaty, if the Senator will pardon me, that has challenged our attention and which we are considering. There is nothing in this that violates the treaty, but there is the point that when sugar goes upon the free list perhaps Cuba might come to the conclusion that although the differential on only one article had been destroyed that was an article of such great importance with her as compared with all these other articles that she had practically ceased to get any benefit from the treaty and might take advantage, therefore, of her right to give notice to abrogate it.

Mr. LODGE. We do not import anything else substantially

from Cuba.

Mr. WILLIAMS. I say it is a matter of such great importance in comparison with the balance of what she sells us she might say substantially you have put aside all the advantage we have. I wish to say to the Senator that that matter will be under consideration by the committee, and it will be submitted-and I do not want to throw a red flag in the face of the Senator from Kansas, either, when I say it—to the wisdom of a Democratic caucus, where it will be freely discussed and debated and fairly decided upon. I hope that will not hurt the Senator's feelings.

Mr. SMOOT. Mr. President-

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Utah?

Mr. BRISTOW. Will the Senator let me finish and then take the matter up, unless it is something he wants to put into the RECORD at this point?

Mr. SMOOT. I want to state the reductions proposed in the amendment offered from the present law.

Mr. BRISTOW. All right.

Mr. SMOOT. The Senator from Nebraska [Mr. Norris] asked what the reductions were in the Senator's amendment. figured them out hurriedly, and this is what they are:

Ninety-six per cent sugar, as that is the Cuban sugar imported, has a rate of duty under the present law of \$1.348. Under the amendment of the Senator from Kansas the rate on 96 per cent sugar until June 30, 1916, will be \$1.14, or a reduction of 20.8 cents per hundred. After June 30, 1916, the Cuban rate on 96 per cent sugar will be \$1.056, or a reduction from the present rate of 29.2 cents per hundred. After that time the Cuban rate on 96 per cent sugar will be 92 cents, or a reduction from the present rate of 37.8 cents per hundred pounds.

Mr. BRISTOW. Mr. President, there has been a great deal of discussion in regard to the wages paid in the different sugar-producing countries. I do not think that the scale of wages can be used as an accurate argument in regard to the cost of sugar production, because the producing power of one man varies greatly as compared with that of another. In my address this afternoon I set forth in a brief form the facts gathered from the most reliable statistics that are to be had. I now desire to read from some tables that I have here statements of fact as to the wages that are paid, so that the information may go into the RECORD for what it is worth.

In Santo Domingo the wages in American money-that is, gold-vary from 50 cents to 75 cents per day of 12 hours. In Cuba the wages are from \$1 to \$1.50 a day.

I desire to say that the best wages paid in any tropical country in the world, so far as I have been able to ascertain, are paid in Cuba, and wages have gone up materially in Cuba since Cuba has had the advantage of the American market for her sugar. The 20 per cent preferential that was given to Cuba has

had a wonderfully stimulating effect upon the production of sugar in Cuba, and also a corresponding effect upon the wages paid in the cane fields, so that while we have been giving Cuba only 20 per cent protection, that 20 per cent protection has been of inestimable value to her wage earners.

In the British West Indies wages are from 261 cents per day for men to 16 cents per day for women; in the Fiji Islands, from \$6 per month for men to \$4.80 per month for women; piecework, 24 cents per day for men to 18 cents for women. In British India wages are about 4 cents a day; in the Straits Settlements they are from 8.4 to 11.2 cents.

As I have said, these wretched wages that are paid are, of course, paid to people who can not produce anything like that which can be produced by our wage earners, who receive in our sugar-beet fields from \$1.75 to \$2.50 a day.

Mr. SMITH of Michigan. Mr. President— The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Michigan?

Mr. BRISTOW. Yes. Mr. SMITH of Michigan. Has the Senator from Kansas finished?

Mr. BRISTOW. I have finished my statement in regard to

this phase of the matter.

Mr. SMITH of Michigan. On that point I wish to say that, under date of August 12, Vice and Deputy Consul General De Witt C. Poole, jr., of Berlin, sends a report, which is published in the Daily Consular and Trade Reports. Has the Senctor that report before him?

Mr. BRISTOW. No; I have not that. Mr. SMITH of Michigan. Then, if the Senator will permit me, I should like to make an observation right here.

Mr. BRISTOW. I shall be very glad to have the Senator

Mr. SMITH of Michigan. The daily wages in the sugar-beet fields of Germany are reported by our consul to be, in Saxony, for a man, 59 cents per day; for a woman, 39 cents a day; and for a child, 19 cents a day. In Silesia, for a man, 51 cents a day; for a woman, 34 cents a day; and for a child, 18 cents a day. In Mecklenburg, for a man, 78 cents; for a woman, 46 cents; and he was unable to get the wages of children. This is the latest report, under date of August 12, and gives the exact wage conditions in the Province of Saxony, Prussia, and in Mecklenburg.

Mr. BRISTOW. I have here a statement of the wages paid in French factories to factory help for the years 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, and 1910 in tabular form. The table shows that the wages of men in those factories—this is factory help, and not the beet-field employees-run from 76 cents per day to 83 cents per day for men; for women, from 42 cents per day to 46 cents per day; and for children, from 33 cents to 35 cents per day.

I also have a table showing in detail the wages in a number of German factories, the wages for each particular occupation, and a comparison. I will read some of them merely for the infor-

mation of the Senate, because it is quite interesting.

In Hungary the wages run for unloading beets from 24 cents to 50 cents per day; in Austria they average 48 cents, and in Belgium 48 cents. In Germany they are paid by the ton. corresponding wages in the United States average \$2.18. wages of beet feeders in Hungary run from 50 to 60 cents; in Germany from 48 to 52 cents; and in the United States the wage is from \$2.10 to \$2.40. Beet cutters in Belgium, from 50 to 60 cents; Germany, from 43 to 84 cents; and in the United States from \$2.10 to \$2.88, and the table goes on giving the compensation in each occupation.

Take machinists. Machinists in Hungary are paid from 40 to 50 cents; in Austria 50 cents; in Belgium 60 cents; in Germany \$1.02; and in the United States from \$4.20 to \$4.80, showing a great difference in the wages paid to labor in this country and in our competing countries. I believe it is a fact that American labor is far more efficient than is the labor that is worked such long hours and paid such low prices in these competing countries, and this great disparity of wages does not mean such a wide difference in the cost of producing the sugar. I have given that, I think, with as absolute accuracy as it can be ascertained in the address which I have delivered.

There is a great difference in the cost of producing sugar, and I have selected here statements from a wide range of authority as to the cost of producing sugar in Cuba, which is really the competitor of the American sugar producer.

Col. Tasker H. Bliss, of the United States Army, who was collector of the Port of Habana in 1902, gave the cost delivered at Habana at the seaboard at \$2.25 per 100 pounds.

Mr. Lacosta, the Cuban secretary of agriculture, the same year gave it at \$2.20; Mr. Edward P. Atkins, interested in Cuban plantations and also connected, I think, with the Sugar Refining Trust, gave it at \$2.25 per hundred; the United States Department of Labor in 1905 gave it at 2 cents f. o. b. Habana; Truman G. Palmer, representing the Association of American Beet Sugar Manufacturers, gave it at \$1.50; Horace Havemeyer, interested in Cuban sugar plantations and in American beetsugar plantations, gave the cost at \$2, including freight to New York; Henry T. Oxnard, of the American Beet Sugar Co., gave it at from a cent and a half to 2 cents per pound; Edw. F. Dyer, builder of beet-sugar factories, gave it at from 11 cents per pound up, without giving the maximum. He gave that as the minimum. Joseph H. Post, president of the National Sugar Refining Co. of New Jersey, gave it at 2 cents per pound f. o. b. at Habana; Moriz Weinrich—his occupation I have not here gives it at 1½ cents per pound, under the most favorable conditions. I think that is the lowest estimate that has ever been made so far as I have observed for Cuban sugar.

Mr. D. P. Machado, sugar planter at La Grande, Cuba, gives it at the Cuban port at \$2.06 per hundred.

George R. Fowler, sugar planter at Santa Clara, Cuba, places it at \$2.13.

J. W. De Castro at \$1.31. That was in 1900, while Mr. Fowler's estimate was given in 1905 and in 1906. De gave it at \$1.35 in 1900 and Mr. Fowler gave it at \$1.31. De Castro

George Bronson Rea, a resident of Cuba for 13 years, places it at \$2.25. That is the highest point at which it has been placed by any experienced man that I have noticed.

Edward Atkins, owner of the Soledad Central near Cienfuegos,

nt 2% cents.

Hugo Kelly, of the Central Teresa Co., Manzanillo, at \$2.16 per hundred pounds.

Miguel Mandoza, of the Central Santa Gertrudis, Banaguises, at 0.021.

Mr. Armstrong, in the Cuban reciprocity hearings, at 0.02.

R. B. Hawley, who is an ex-Member of the House of Representatives, from Galveston, Tex., at 0.02.

C. F. Saylor, special agent, United States Department of Agriculture, who wrote annual reports on "The Progress of the United States Beet Sugar Industry," placed the Cuban production cost at 1½ cents a pound.

Dr. H. Paasche, a German scientist, placed it at 1.94. Dr. Julius Wolf, another German statistician, placed it at 1.94. The German consul general in Santiago placed it at 1.784. Sereno E. Payne, of the Ways and Means Committee, placed it

at 2 cents.

Hon. George B. McClellan, a former member of the Ways and Means Committee, placed it at 2 cents f. o. b. Habana. H. C. Prinsen Geerligs placed it at \$2.03 per hundred pounds.

Willett & Gray placed it at \$1.85 per hundred pounds.

Roy G. Blakey, professor of political science in Cornell Uni-

versity, placed it at 2 cents a pound.

I put these statements in the Record because it seems to me that they cover every phase of the sugar discussion. They are the opinions of men looking at it from every phase of sugar production-those who are interested in the trust, those who are interested in beet-sugar factories, those who were producing in Cuba, and the statisticians of the British and German Governments, who were investigating Cuban production with a view of ascertaining the effect that it might have upon sugar industries in their own countries and in the countries that are under their jurisdiction.

Mr. CHILTON. Mr. President-

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from West Virginia?

Mr. BRISTOW. I do.

Mr. CHILTON. I have listened with a great deal of interest to the very entertaining discussion of the Senator from Kansas. I was in the Chamber a little while ago when the senior Senator from Michigan [Mr. SMITH] was calling the roll of the Democratic Senators who were present. I dislike to see this very interesting part of the discussion go on in the absence of the senior Senator from Michigan. Possibly the Senator from Kansas has not noticed his absence and would want him present while the discussion is going on. I have been here practically all of the time, and was just going to call attention

Mr. WILLIAMS. Why not ask a page to go for the Senator? Mr. CHILTON. That is a very appropriate suggestion.

Mr. CHILTON. That is a very appropriate suggestion.
Mr. TOWNSEND. Mr. President, the senior Senator from
Michigan is taking lunch at this moment. He has been here all morning.

WILLIAMS. No one ought to sacrifice a speech for

Mr. BRISTOW. Mr. President, I have some other data here which are of interest to me, and I think will be of interest to the discussion, being the latest that I have been able to collect in regard to the prices paid for beets in the United States now and last year. The figures are not given in any of the statistical books I have examined; but I have searched all of the data that is available, and examined various journals, and I find the following as to the prices paid for beets in our country, which I think is of interest: The price in Arizona in 1912 was \$5 a ton; in Ventura County, Cal., the average was \$6.95 a ton—some of the California general factories paid as high as \$7.25 a ton, and very few less than \$6 a ton-Nebraska, Scottsbluff Sugar Co., \$5, with 50 cents per ton additional for siloing, if a hundred thousand tons are delivered 25 cents per ton additional, and if 135,000 tons are delivered 50 cents additional to each farmer; Michigan, Menominee River Sugar Co., \$6 a ton, flat rate; Nevada, Fallen factory, \$5 per ton-that was in 1912; this year they have increased it to \$6 a ton-California, Spreckels, \$5 per ton for 11 to 14 per cent beets, with an increase of 25 cents for each additional per cent over 14; Colorado, National Sugar Manufacturing Co., \$6 a ton-from \$5 to \$5.50 was paid last year, \$6 being paid this year—some Colorado factories pay \$5 per ton and a half interest in the profits over 10 per cent; Kansas, Garden City, \$5.50 per ton; Montana, Billings, \$5 for beets containing over 12 per cent and under 15 per cent, \$5.50 for 15 and 16 per cent beets, and 25 per cent advance for each per cent over 17; Wisconsin, 1913, \$5.50 per ton for beets delivered before December 1, \$6 for those delivered in December, and an additional 50 cents per ton if Congress does not pass adverse sugar legislation this year; in Montana the average price this year is \$6; in 1912 Montana had a graduated scale and it averaged about \$5.50, this year the price is up a little; in California the Visalia factory, \$5 per ton for 15 per cent beets and 30 per cent advance for each 1 per cent of sugar. I thought those figures would be of some interest.

I have here the average cost of 31 German factories, as given

in the official monthly of the industry for 1907, page 45, from the hearings of the Senate Committee on Finance, and also statistics of 8 German factories for 1909 and 1910, which I ask

to incorporate in the RECORD.

The PRESIDING OFFICER. In the absence of objection it will be so ordered.

The matter referred to is as follows: .

Average cost of 31 German factories as given in the official monthly of the industry, 1907, page 45.

Year.	Price per ton of beets.			Total expenses, including de- preciation.

Mr. BRISTOW. I have here very interesting information as to the sugar produced per acre in the United States and a number of European countries, and the tons of beets produced per acre. It covers a period of three years, and, of course, is the average. In the United States we have produced on an average of 2,790 pounds of sugar per acre, with an average production of 10.19 tons of beets; Germany produces an average of 3,803 pounds of sugar per acre, being about 900 pounds per acre of sugar more than we get, and 11.74 tons of beets per acre; Russia, 2,346 pounds of sugar per acre, and 7.35 tons of beets per acre; Austria-Hungary, 3,235 pounds of sugar per acre, and 10.82 tons of beets per acre. So it goes on. Denmark produced a larger amount of sugar per acre than any other sugar-producing country, and she also produced the largest number of tons of beets per acre, Denmark's production being 3,943 pounds of sugar per acre, or 13.96 tons of beets—approximately 14 tons per

The great advantage which the European countries have over us is due to the long period during which they have been developing the fertility of their sugar beets. They have employed very ingenious devices, such as I indicated in my address this For instance, they would put an excise tax on the number of Beets sliced and then give a drawback on the amount of sugar exported. Austria not only did that, but she had a similar device for encouraging the improvement of machinery for extracting the sugar from the beet. The countries that resorted to these legislative inducements secured the desired result; that is, a very high production of sugar per ton and of beets per Of course the smaller European countries have a system

of intensive cultivation which would be very material aid.
Mr. THOMAS and Mr. RANSDELL addressed the Chair. The PRESIDING OFFICER. Does the Senator from Kansas

yield; and if so, to whom?

Mr. BRISTOW. I yield to the Senator from Colorado, and then I will yield to the Senator from Louisiana.

Mr. THOMAS. I understood the Senator awhile ago, in given ing the price paid for beets, to mention, among other places, the price paid at Durango, Colo.

Mr. BRISTOW. Yes. Mr. THOMAS. I think there is no sugar factory there, and

I suggest that perhaps the Senator meant some other place.
Mr. BRISTOW. Probably the wrong town was mentioned in transcribing the notes. I read from the notes. I will look it up and correct it.

Mr. RANSDELL. Mr. President— The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Louisiana?

Mr. BRISTOW. I do, very gladly.
Mr. RANSDELL. The Senator made a very interesting statement during his address about the effect of the cultivation of beets upon the production of other crops, and he promised to give us more extended information on that subject. In connection with what he has just said about the yield of beets in Germany and in other countries I wish to ask him if it is not a fact that in Germany and the countries of Europe generally they get a yield of practically twice as much wheat, barley, and rye per acre as we get in this country, and if it is not thought to be due more to the cultivation of beets than to any other one cause? I should also like to have the Senator state in that connection what, in his judgment, would be the effect upon the gen-

eral production of wheat and other cereals in this country if we

were to encourage and fully develop the beet industry?

Mr. BRISTOW. I believe that feature of the development of our sugar industry should be given more consideration than has been given it in the past. There is at Garden City, Kans., in my own State, a small sugar factory which during recent years has enlarged its capacity; has extended the area for beet production, and has been testing the different parts of the State as to qualities of soil, and so forth. It induced a number of farmers of Lyon County, Kans., some few years ago to experiment in beet production; and I have clipped from a copy of the Emporia Gazette a write-up of the experience of those farmers and some interviews with them, which I will read:

Mr. Fowler, whose farm is 4 miles southeast of Emporia, had three plats of land, all the same soil and adjoining, in wheat, sugar beets, and corn in 1912. This year he had all of this land in wheat and had changed his beet field to one of larger acreage. The 13 acres of land that was in corn last year and in wheat this year did not grow a good crop. In fact, he plowed up 3 acres and had but 10 acres to harvest—

That is 10 acres of wheat on his former corn land-

That is 10 acres of wheat on his former corn land—
The 20 acres he had in wheat in 1912 and again this year, at harvest time presented the average looking field of grain, and on this field Mr. Fowler used 2 pounds of binding twine to the acre.

When Mr. Fowler's binder went into the 7 acres of wheat growing on land that raised a sugar-beet crop in 1912, he found that the binder used 5 pounds of binding twine to the acre. This caused Mr. Fowler to think a bit. He decided that he would thrash the crop from the three fields separately, and find out just what was the difference in the yields.

So the crop from the different fields went through the separator at

yields.

So the crop from the different fields went through the separator at different runs and a careful account was kept of the yield. It was found that the 10 acres of wheat on land that was in corn last year produced 5 bushels of wheat to the acre. The 20 acres that was in wheat in 1912 and in the same crop again this year yielded 16 bushels of wheat per acre. The 7 acres of wheat grown on land that was in sugar beets in 1912 thrashed out 40 bushels of wheat per acre.

Mr. Fowler, after this demonstration, thoroughly believes the statements of the sugar-beet experts that the root crop is most valuable in preparing land for other crops, and that the deep rooting of the beets acrates the soil and deposits valuable humus and that the intense tillage of the fields greatly improves the soil. Mr. Fowler has demonstrated the value of sugar beets in crop rotation.

Mr. REED. Mr. President

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Missouri?

Mr. BRISTOW. Certainly.
Mr. REED. I did not quite hear all that the Senator read, but did I understand him to say that the ground that had been in corn produced only 5 bushels of wheat the next

Mr. BRISTOW. Yes; 5 bushels.

Mr. REED. And the ground that had been in wheat produced 16 bushels.

Yes. Mr. BRISTOW.

Mr. REED. And the ground that had been in beets produced 40 bushels?

Mr. BRISTOW. Yes; that is the statement made here

Mr. REED. Does not the Senator, as a farmer, think it rather remarkable that ground that had been in corn the year before produced only one-quarter as much wheat as ground that had been in wheat the year before?

Mr. BRISTOW. Yes.

Mr. REED. There is something the matter with that experiment.

Mr. BRISTOW. Of course, I do not know a thing about it, except what I am reading from this statement. My judgment would be that the corn land was either plowed with the stalks not having been raked and burned, and a dry spring, with the stalks turned under, caused the wheat to dry out, or the wheat was drilled in the rows and a good stand not secured. That would be my judgment in regard to the matter. I do not know. I am simply guessing at it from my limited experience in farm-

ing in the prairie country.

Mr. REED. I did not rise to interrupt the Senator, but does the Senator know whether these interviews or statements were just given to the paper by farmers who happened to be inter-

ested, or whether they were inspired in some way?

Mr. BRISTOW. I do not know. This is an article that is taken from the Emporia Gazette, which comes to my office, and this was clipped out. I know that at Emporia they have been trying to get the farmers to grow sugar beets, although they get only \$5 per ton, it being necessary to transport the beets quite a long distance to the factory. I think this is a friendly write-up on the part of this paper, which believes it to be for the best interests of the county to develop this diversified crop there instead of growing wheat and corn continually. That is my judgment about it.

Mr. REED. My reason for asking the question is that from some testimony that was produced before the Hardwick com-

mittee and some which was produced before the lobby committee, I have been led to believe that the sugar-beet factory owners are engaged in a systematic effort to fill the newspapers with just such matter as the Senator is reading. I thought possibly there were some earmarks by which the Senator could judge as to that.

Mr. BRISTOW. I do not know a thing about this, and I will say that I have not personally interviewed these gentlemen. am simply reading from this newspaper article. Whether these are interviews that have been sought or are wholly voluntary I do not know. I am giving the names and addresses of the men, and if anyone cares to write to them I shall be very glad to have him do so.

I do not know whether these experiments can be verified or whether they will be denied. I do not vouch for this at all. I have not made a personal inquiry into the matter. But I know the paper-it is a most reliable journal-I know the community, and I know there has been a great deal of interest in that community in recent years in the development of beet-sugar produc-The most energetic and progressive citizens of the county believed that if they could develop this agricultural industry there in connection with what they had it would add to the wealth and the prosperity of the community.

I believe, of course, that these are genuine and honest expressions of sentiment. I believe it from what I know of the community and of the paper. But of course I do not vouch for it as a matter which I have personally investigated by having conferred with these men themselves.

Mr. TOWNSEND. Mr. President—
The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Michigan?

Mr. BRISTOW. I yield.

Mr. TOWNSEND. I had not supposed anyone would seriously dispute the proposition that the growth of beets upon land prepares the land and makes it better for other crops. I know it is a notorious fact in Michigan, and I suppose it applies everywhere else in the same way. As to the proportion of benefit I am not prepared to state, but I know it to be a fact that crops rotating after beets are much more productive, the yield is much greater than where beets have not been grown. As I said, I have never known that that was disputed.

Mr. REED. Mr. President, may I ask a question of the Sen-

ator from Michigan?

The PRESIDING OFFICER. Does the Senator from Kansas further yield to the Senator from Missouri? Mr. BRISTOW. Certainly.

Mr. REED. I will ask the Senator from Michigan whether it is not true that crops rotated with alfalfa, crops rotated with cowpeas, and crops rotated with crimson clover, also produce these remarkable results?

Mr. TOWNSEND. There is not any question but that where alfalfa can be grown or where cowpeas can be grown, as the Senator suggests, and are plowed under to fertilize the soil, they are great fertilizers. But there are places in Michigan, as I suppose there are in other States, where neither alfalfa nor red clover will grow, but where beets will grow as well as in certain other sections which seem to be naturally fitted for that particular product. Clover, of course, and all crops of that kind that grow largely with roots, if plowed under, will produce a fertilizer that is of great value.

Mr. WILLIAMS. Mr. President-

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Mississippi?

Mr. BRISTOW. I do.
Mr. WILLIAMS. I do not intend to go into the question of alfalfa, red clover, crimson clover, cowpeas, and all that. By the way, however, cowpeas do not need to be plowed under. They furnish a very rich fertilizer without that, and can be cut for hay and still improve the land.

I want to say in this connection, leaving all that aside, that it is true of sugar beets that they do put the land in a condition which brings a larger production of wheat or some other crop. It is also true of turnips; it is true of cabbage; it is true of kale; it is true of truck farming of any description. I want to add to that the fact that England, which produces no sugar beets at all, makes a larger yield of wheat per acre than Germany, in the sugar-beet country, one being about 32 bushels per acre and the other something less than 30. So that what the Senators are attributing to sugar beets, as if sugar beets in them-selves added something of fertility to the soil, is not true. The cultivation of sugar beets does it, because the land has to be so carefully cultivated to put it in condition for the sugar-In England, where they raise no beets at all but beet crop.

for the feeding of cattle, sheep, and so forth, the same result

Mr. BRISTOW. I will read an interview with just one more person. There are a number here. I will read this at the suggestion of the Senator from Louisiana.

A Mr. Wingert, whose farm is about 5 miles from Emporia.

Beets make the best crop we have. They are no harder to care for than corn, except the thinning. I don't know what I could put land into that would make as much profit as beets. I had two thin cows last year and fed them for 40 days on the beet tops and sold the cows for \$137. I am convinced that the beet tops make the best of feed. The work done on the land in cultivating the beets is worth \$2 per acre per year in putting the land into a higher state of cultivation.

I read those because of the suggestion of the Senator from Louisiana [Mr. RANSDELL]

Mr. MARTINE of New Jersey. Mr. President, will the Sena-

tor permit me to say one word? Mr. BRISTOW. Certainly.

Mr. MARTINE of New Jersey. I can speak from experience in this matter. That is true of all the root crops. A crop of potatoes demands high cultivation and a rich, loose subsoil. It is true with the sugar beets as with the mangelwurzel beets. The sugar beet and the mangelwurzel beet are both of similar character, except that one is of a yellow character and the other is of a red character. The mangelwurzel beet is used for cattle food and makes the same general demand upon the soil, and the process of subsoiling is that from which it derives its fertility. It loosens up the soil, aerates it, and readily permits the permeation of the air and the moisture.

The same result that is accomplished with the sugar beet would be accomplished with any other beet. I think, however, that the instance given by the Senator from Kansas, where only 5 bushels were raised on the soil following a crop of corn, and then a crop of 40 bushels on the immediately adjoining plat that raised beets, if the soil was absolutely alike and the seeding was done at the same time, is a little

extravagant.

Mr. BRISTOW. I think that would be very unusual. It would be due, in my judgment, to some such circumstance, as I

suggested to the Senator from Missouri.

The Senator also spoke of alfalfa. In certain sections of the prairie country an alfalfa field plowed under may not produce well the next year at all. I have known of a practical failure on an alfalfa field plowed under, because the roots seemed to make the ground too loose, and it would have to be cultivated a year or two before it got at its best. But, of course, in countries where there is an abundance of rainfall that would not be the case; it would have just the opposite effect.

I have here a statement of the cost of manufacture of beet sugar as reported by the factories. It is a statement compiled from the Hardwick committee hearings, and given from 33 factories. I ask leave to insert it in the Record. I think it will be of interest.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

Cost of manufacturing beet sugar as reported by the factories. [Hardwick committee hearings. These figures are averages compiled from the reports of 33 factories.]

	1906-7	1907-8	1908-9	1909-10	1910-11
Tons of beets sliced	81,371	71,845	65, 647	73,012	70,043
Sugar extracted per ton of beets	235.2	269.9	248.5	252.7	262, 2
Average price paid per ton of beets	\$4.95	\$5.01	\$5.08	\$5.12	\$5,41
factory per ton of beets	\$5.71	\$5.73	\$5,86	\$6,00	\$6, 49
Cost of manufacture per 100 pounds of granulated sugar: (a) Raw material (mostly beets) (b) Factory cost (c) Overhead and administration charges (d) Taxes and in- surance.	\$2, 439 \$1, 153 \$0, 156 \$0, 075	\$2, 268 \$1, 217 \$0, 208 \$0, 093	\$2,339 \$1,215 \$0,267 \$0,104	\$2.431 \$1.243 \$0.253 \$0.098	\$2, 621 \$1, 120 \$0, 242 \$0, 117
Total	\$3.823	\$3.786	\$3,925	\$4.065	\$4,100
Total, including 10 other fac- tories	\$3.94	\$3.56	\$3.87	\$3.73	\$3,89

Mr. BRISTOW. I also have here another statement of a parresort to the same sort of cultivation in order to raise turnips tial list of beet-sugar factories and their location, the cost per pound of producing sugar in each, and the selling price per pound. This was taken from the reports of the beet factories, an interest in which was formerly owned by the Havemeyer Sugar Co. Since it is the report of the managers to the stockholders as to the cost of production, I give it a great deal of weight, because I do not think the factories would undertake to deceive their stockholders as to excessive costs. I should think these would be probably the minimum costs. I ask to have this matter inserted in the Record.

The PRESIDING OFFICER. In the absence of objection, it will be so ordered.

The matter referred to is as follows:

Partial list of beet-sugar factories in the United States, their location, cost per pound of producing sugar at each factory, and selling price per pound.

Name.	State.	Cost.1	Selling price.2
Michigan Sugar Co. Great Western Sugar Co. Billings Sugar Co. Sectsbluff Sugar Co. Amalgamated. Lewiston. Utah-Idaho Alameda. Spreckels. Menominee. Continental Iowa. Carver County	Michigan. Colorado. Montana Nebraska Utah and Oregon Utah Utah and Idaho California do Michigan Michigan Michigan and Ohio Iowa Minnesota	3. 49 3. 85 3. 05 3. 03	5. 327

¹ As shown by reports of these companies to the American Sugar Refining Co., p. 2379 of the hearings before the special committee on the investigation of the American Sugar Refining Co. and others, campaign of 1910-11.

² As shown on p. 3149 of the same hearings, the above prices being the average net wholesale price in each case for the season of 1911, up to Nov. 1, 1911.

Note.—When the production of each of these factories is considered, the average cost is 3.54 cents per pound. Average of cost by factories—production not considered—3.71 cents per pound. As above, Mr. Truman G. Palmer says cost of production of beet sugar per pound in this country in 1909 was 3.67 cents per pound. (H. Rept. 331, 62d Cong., 2d sess., p. 23.)

Mr. BRISTOW. I have here a large amount of data that I shall not ask to have inserted now, but as the discussion runs on, if I find it necessary to answer any further inquiries I shall be glad to use the matter. I shall not burden the RECORD with it now.

Mr. WILLIAMS. Mr. President, I desire to answer what the Senator from Iowa [Mr. Cummins] had to say about this bill violating in some manner the treaty with Cuba.

Mr. BRISTOW. If the Senator will pardon me, I have not had my lunch yet; so the Senator will excuse me if I do not

remain during the entire time of his discussion.

Mr. WILLIAMS. Why, Mr. President, I thank God for the fact that there is nothing either in the law or in the Constitution of the United States compelling us to listen to one another. It would be the most miserable life in the world if we had to stay here all the time and hear one another. I am speaking, as all of us do, chiefly for the RECORD and the country. I know the Senator would not intentionally commit any sort of impoliteness

of any description to anybody.

The Senator from Iowa has sought to find in this bill something which brought about a necessary conflict between it and the reciprocity treaty with Cuba. He sought to find that especially because this bill, in a part of it, provides that nothing in the bill shall abrogate or violate anything contained in the reciprocity treaty with Cuba. Then he sought to find certain provisions which prevented us from changing our laws.

I am anxious to get this matter in the RECORD, so that Senators may be saved the trouble of making the investigation themselves to a large extent and chiefly for use upon this side of the Chamber.

Article I of the Cuban reciprocity treaty has nothing to do with the question.

Article II has nothing to do with it. After providing that articles of merchandise imported from Cuba into the United States shall bear a preferential of 20 per cent of the rates provided by the tariff act of the United States of July 24, 1897, this article goes on very significantly and adds these

Or as may be provided by any tariff law of the United States subsequently enacted.

Article III, which provides for a preferential of 20 per cent upon all articles coming into Cuba from the United States, after providing for the preferential adds this significant lan-

At a reduction of 20 per cent of the rates of duty thereon as now provided or as may hereafter be provided in the customs tariff of said Republic of Cuba.

There is nothing else, then, that has a bearing upon the question until you come to Article VIII. The other articles following Article III are the schedules in the main part. Article provides that regulations to prevent fraud, and so forth, if they have the effect of decreasing or increasing, shall not violate the treaty.

Article VI deals with tobacco, and says that that shall not be one of the articles covered by the treaty, but shall be ex-empt. Importations of tobacco into Cuba do not enjoy the

differential.

Article VII is a provision that each country shall receive equal treatment in regard to its importations into the respective ports of the other country.

Article VIII has a slight bearing upon this matter. I will read it:

The rates of duty herein granted by the United States to the Republic of Cuba are and shall continue during the term of this convention—

Mark the significant language, now-

preferential in respect to all like imports from other countries, and in return for said preferential rates of duty granted to the Republic of Cuba by the United States it is agreed that the concession herein granted on the part of the said Republic of Cuba to the products of the United States shall likewise be, and shall continue during the term of this convention, preferential in respect to all like imports from other

Then follows the proviso that has a somewhat direct bearing in the minds of some people, which seems to have had it in the minds of the Cuban legation, because the Cuban legation has made representations to the State Department, and the State Department has communicated those representations to the chairman of the Finance Committee,

This proviso at the end of Article VIII, following the part I

have just read, says:

Provided, That while this convention is in force no sugar imported from the Republic of Cuba and being the product of the soil or industry of the Republic of Cuba shall be admitted to the United States at a reduction of duty greater than 20 per cent or the rates of duty thereon as provided by the tariff act of the United States approved July 24, 1897.

I will stop reading for a moment to make a comment. This is another illustration of the manner in which special interests influence not only our laws, but our treaties with foreign powers. The Senator from Massachusetts [Mr. Lodge] this morning confessed that this language was put in the treaty at the demand or at the request of the sugar interests of this country. It was put in not to advantage Cuba, but to advantage them, so that we should not make another and a later reciprocity treaty with Cuba making a differential even greater than 20 per cent. So that in order to get votes enough for the treaty it was put in—votes enough in this country, not in Cuba. In other words, this special interest had to be begged and bought to give consent to the Cuban reciprocity treaty.

Now, I shall continue to read from where I left off. repeat part of my reading, so that I may get the connection:

Shall be admitted into the United States at a reduction of duty greater than 20 per cent of the rates of duty thereon as provided by the tariff act of the United States approved July 24, 1897.

As the Senator from Massachusetts well said, this does not fall within that description. But here follows this language, which seems to have deceived the Cuban Legation, and seems to be what they are relying upon:

And no sugar the product of any other fereign country shall be admitted—

They seem to have read itshall be admitted into the United States.

But it reads:

And no sugar the product of any other foreign country shall be admitted by treaty or convention into the United States while this convention is in force at a lower rate of duty than that provided by the tariff act of the United States approved July 24, 1897.

It does not say that no sugar shall be introduced into the United States while this convention is in force at a lower rate of duty, but that it shall not be introduced by convention or treaty at a lower rate of duty. The evident intention was to prevent Cuba, which had gone into a reciprocity treaty with us, being forced to surrender all of her advantages under that reciprocity treaty by some reciprocity treaty we might make with some other sugar-producing country. The insertion of the lan-guage "by treaty or convention" is very significant, because it leaves the balance of the language of the treaty undisturbed, and leaves us, of course, free to permit imports of sugar into the country by law and by a change of our customs duty at a less rate than under the law of 1897.

Article IX has no bearing upon this subject.

Article X has no hearing upon the subject. Article XI has no bearing upon the subject.

I have quoted this from Senate Document No. 357, treaties, conventions, and so forth, 1776 to 1909, volume 1, being a document of the Sixty-first Congress, second session, 1909 to 1910. The treaty from which I have quoted begins on page 353 and goes down to the middle of page 357.

Mr. CUMMINS. Mr. President, I think the Senator from

Mississippi did not clearly understand the point I made. me say, in the beginning, that I have no well-settled conviction with regard to the interpretation that should be given to the treaty in connection with the law that is about to be passed.

I give only my first impression.

I agree with the Senator from Mississippi with respect to the meaning and application of the last clause of the proviso. I am not prepared at this moment to dispute the construction given to the first clause of the proviso by the Senator from Massachusetts, and now reasserted by the Senator from Mississippi, although it is very difficult for me to reach that conclu-It is very hard for me to understand how a government would deliberately agree, or attempt to agree, to foreclose itself from the exercise of a power which would continue and which could be exercised at any moment. We will all agree that after the treaty was entered into it was within the authority of the Congress of the United States to admit Cuban sugar at a rate of duty the equivalent of more than the reduction provided in the Cuban treaty

Mr. WILLIAMS. The Senator means a preferential rate.

Mr. CUMMINS. We could do that at any time; and, as it seems to me, it was a useless and futile thing for us to agree that we would not do so. I thought when first reading it that there must be some other obligation in the first clause of the proviso than simply an obligation by which we undertook to bind our own action with regard to our own affairs. If that was the purpose, I can hardly understand its mission, or how it could be applied, at any time or under any circumstances.

Those things, however, were not the things in my mind when I rose to ask the Senator from Kansas a question.

Disregarding entirely now the proviso in Article VIII, let us

see how we stand toward Cuba.

We have agreed in the treaty that the rate of duty on Cuban sugar into the United States should be a preferential rate. have agreed that it should be not more than 80 per cent of the full rate. If the treaty means anything at all, it means that we have undertaken to allow Cuba to come into our markets so that she would have an advantage over the other countries of the world

I agree with the Senator from Mississippi that we have not stipulated that the rate upon sugar should be a specific rate. We have not stipulated that it should be the rate announced in the law of 1897; but we have agreed with Cuba that she should have a preference of 20 per cent in our market. Any duty that we attach to sugar which will not permit Cuba to avail herself of this preference is a violation of the treaty. There can be no doubt about that. We have reserved to ourselves the right to change the duty from time to time. No one disputes that. But we have not reserved to ourselves the right to deny Cuba the preference we granted to her unless we do it through the abrogation of the treaty, against the terms of the treaty. That is perfectly evident.

Mr. WILLIAMS. Mr. President-

Mr. CUMMINS. If the Senator from Mississippi will allow me to read one sentence which he himself has read, I will then yield to him. It is the beginning of Article VIII:

The rates of duty herein granted by the United States to the Republic of Cuba are and shall continue during the term of this convention preferential in respect to all like imports from other countries.

It goes without saying that if we admit sugar without duty Cuba has not a preferential rate, and therefore I can reach no other conclusion than that when we deny to Cuba the preference we gave her above all other nations with regard to sugar we have violated our stipulation or agreement with her upon this subject. We have a perfect right to violate it. I do not mean that we have an ethical or moral right to violate it, but it is within our power to violate it. If Congress should pass a law admitting sugar free, in my opinion, hastily formed, it is a violation of this treaty, but the act of Congress is valid. It is the treaty which falls, not the act of Congress. Therefore we would have free sugar.

Now, all that is upon the assumption that this bill contains nothing more than a declaration for free sugar; that is, a bill for the admission of sugar without duty. If it had ended there, I would have no doubt about the validity of the law. I would have no doubt that sugar would come in from all the world free at the end of three years. But the part of the proposed law which I am unable to reconcile with the conclusions I have just

stated is found in the administrative provisions of the bill, page 250. Therefore I have said that if the act proposed to be passed contained nothing else than the legislation regarding sugar, its validity would be undoubted, its effect would be unquestioned. But in the same law, in connection with the same legislation, we

That nothing in this act contained shall be so construed as to abrogate or in any manner impair or affect the provisions of the treaty of commercial reciprocity concluded, etc.

When you put the paragraph I have just read with the paragraphs relating to sugar it is my opinion, open, of course, to re-consideration, because I have not reflected upon it as carefully as I shall do in the future, that it will be the treaty that will stand and the statute will fall.

The only question I have is whether the entire sugar schedule, in so far as it disturbs Cuba, will become invalid or whether only that provision of the sugar schedule which provides for free trade in sugar. But if it is true that by reaffirming the treaty and reasserting that it shall stand in every part and that all its obligations shall still remain we lift the treaty above the law, then the law which is in conflict with it must necessarily fail, and the courts will declare either the entire sugar schedule void because it conflicts with the treaty thus reasserted and reestablished or they will declare that part of the law which provides for free sugar after three years void and of no effect.

Mr. THOMAS. Mr. President-

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Colorado?

Mr. CUMMINS. I do.
Mr. THOMAS. I merely wish to say that on that last conclusion the Senator would be correct, because the last paragraph of the last section of the act expressly provides that-

If any clause, sentence, paragraph, or part of this act shall for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of said act, but shall be confined in its operation to the clause, sentence, paragraph, or part thereof directly involved in the controversy in which such judgment shall have been rendered.

Mr. CUMMINS. I am very much obliged to the Senator from Colorado for calling that to my attention. I had it in mind. I am not clear, however, whether even under that provision the sentence which establishes free trade will be eliminated or whether it will be the entire sugar paragraphs or schedule. But it is impossible for me to avoid in my reasoning one or the other of those conclusions.

Now, it can very well be retorted on me that I ought not to be very much concerned, inasmuch as I am opposed to free sugar. But I am looking more to the effect it will have upon our relations with Cuba. I think before we pass a law of this sort we ought to have an understanding with Cuba, or we ought to proceed in the way in which the treaty points out to de-nounce and to abrogate the agreement. Common courtesy and good faith between nations would seem to me to require a course of that kind.

Mr. WILLIAMS. Mr. President, the Senator from Iowa has merely repeated the argument which he made this morning, and to which I undertook to reply. His argument proceeds altogether upon the assumption that there is a conflict between the treaty and the act. That is just what I undertook to prove does not exist. What the Senator seems to leave out of sight is that there is an immense difference between the violation of a treaty by an act of the United States and the doing of something by the United States which under the terms of the treaty may give to the other power a right to abrogate or to give notice of abrogation. He makes the entire argument as if this treaty were made about sugar. The treaty was made about all the imports into the United States from Cuba, including tobacco and a great many other things as well as sugar, and the guaranty is that the rates shall remain preferential.

The other provisions which I read to the Senate a moment ago fix limitations and conditions as to sugar itself. limitations fixed upon sugar itself are simply two: First, that it shall not be admitted at a reduction of duty greater than 20 per cent of the rates of duty imposed under the act of July 24, 1897; and, secondly, that no sugar the product of any other foreign country shall be admitted by another reciprocity treaty while this provision is in force at a rate of duty lower than that provided by that act, thereby inferentially there, and I presume elsewhere, providing that this does not effect a reduction by a law.

Now, Mr. President, there is another clause of the treaty with regard to the right of abrogation. That treaty says:

It is hereby understood and agreed that in case of changes in the tariff of either country which deprive the other of the advantage which

is represented by the percentages herein agreed upon, on the actual rates of the tariffs now in force, the country so deprived of this protection reserves the right to terminate its obligations under this convention after six months' notice to the other of its intention to arrest the operations thereof.

That is what the Senator is getting mixed up with the viola-on of the treaty. That this undoubtedly will give to Cuba, if tion of the treaty. she wanted to take that view of it, the right to give the notice to us that she desires to have the treaty terminated is, of course, true. But I rose to defend ourselves from the charge of bad faith and violation of a treaty obligation, which is a totally different thing from the cause and reason to abrogate it.

Now, as Cuba gets her tobacco in at a differential of 20 per

cent and some other things at a differential of 20 per cent-I started to say iron ore, but we have put iron ore on the free list; if this free sugar is a violation of the treaty, so is free iron ore-she may conclude, as she gets a great many other things at a differential of 20 per cent, and especially tobacco, which is a very valuable export, it is to her interest to maintain this treaty anyhow. She may conclude that as some seventy-odd per cent, I believe, of her exports to the United States consist of sugar, and that is such a great part of the advantage she reaps from the bargain, she would prefer to enter into renewed negotiations for a new treaty, and give notice of the abrogation of the old one.

But I rose to defend this bill and to defend the House from the charge of bad faith involved in the idea that the bill is a violation of a treaty, which is a totally different thing, as every student of international law knows, from making changes of legislation which may give to the other side a right to ask an abrogation and a refashioning of an existing convention.

Mr. CUMMINS. Mr. President, I understood that difference, and had it in my mind. If there was nothing else in this bill except the adjustment of tariff duties there would be much in

the argument of the Senator from Mississippi.

Mr. WILLIAMS. The Senator sees the point is that the courts will take no notice of it, because it is a violation of the treaty.

Mr. CUMMINS. I do not think it can be so looked upon, inasmuch as the bill itself confirms the treaty, perpetuates the treaty, and, as far as an act of legislation can, it declares that nothing in it shall be held to be an impairment of any privilege granted by the treaty. The present bill provides:

That nothing in this act contained shall be so construed as to abrogate or in any manner impair or affect the provisions of the treaty.

It can not be said that if we eliminate from the act every thing that either abrogates the treaty or impairs or affects any of its provisions there will be anything left in the bill that will give good cause to Cuba to recede or withdraw from the treaty. But let me ask the Senator from Mississippi-

Mr. WILLIAMS. Of course I admit that under this clause about the abrogation clause of this treaty or any change of tariff duties in Cuba or any change here expressly under the abrogation clause, the matter is relegated to the respective parties to say whether or not they shall abide by or abrogate the treaty. That is a totally different question from a violation of the treaty

Mr. CUMMINS. The Senator from Mississippi did not mention, nor did I, the original Article I. A question with regard to that article may shed some light upon this matter. It provides that-

During the term of this convention all articles of merchandise being the product of the soil or industry of the United States which are now imported into the Republic of Cuba free of duty, and all articles of merchandise being the product of the soil or industry of the Republic of Cuba which are now imported into the United States free of duty shall continue to be so admitted by the respective countries free of duty.

At that time bananas were on the free list. This bill puts a duty upon bananas. I am not arguing about bananas, I do not care very much whether there is a duty on bananas or whether they are free, but we agreed with Cuba that we would

Mr. WILLIAMS. The Senator was arguing the question as to whether reducing the duty or putting sugar on the free list impairs the treaty, and now the Senator's argument is whether taking the duty off bananas abrogates the treaty. I think there is more soundness in the last argument than in the first,

Mr. CUMMINS. I am applying bananas to the agreement with Cuba. We agreed with her that bananas should come in free, and there were no conditions upon that agreement save a final condition that the treaty might be abrogated. We put bananas on the dutiable list and at the same time we assert in the most solemn manner that we do not intend in this enactment to impair or affect in any manner our agreement with Cuba made in 1902. I should like to know whether the Sena-

tor from Mississippi believes that that is a mere violation of the treaty.

Mr. WILLIAMS. Article II and Article III say what I shall read. I will not read both, for they are the same language. But the language is significant. I understand this language was drawn by the Senator from Massachusetts [Mr. Lodge]. It is pretty carefully worded, whoever drew it:

During the term of this convention all articles of merchandise not included in the foregoing Article I—

That is, not included in the free list-

and being the product of the soil or industry of the Republic of Cuba imported into the United States, shall be admitted at a reduction of 20 per cent of the rates of duty thereof as provided by the tariff act of the United States, approved July 24, 1897, or as may be provided by any tariff law of the United States subsequently enacted.

The VICE PRESIDENT. The question the Chair thinks is first to be taken on the committee amendment to perfect the paragraph before the amendment of the Senator from Kansas [Mr. Bristow] is in order.

Mr. SMOOT. Mr. President, I had no idea that Schedule E was to be taken up this morning or I would have been prepared to go on this afternoon and discuss the pending paragraph. I will, however, be ready to go on to-morrow morning. I know there are a number of other Senators who desire to speak upon this paragraph, I believe, on both sides of the Chamber.

Mr. STERLING. Mr. President, I confess I was in some doubt whether to say anything upon this question or not, but my interest in the principle involved, as well as my interest in an industry which I think would be a great benefit to my State if established there, impels me, almost against my will, to say a few words.

In my mind, no subject under discussion in the consideration of this tariff bill so well illustrates the beneficent and wholesome results of the protective principle as the question of the sugar industry, and especially the beet-sugar industry.

Referring for a moment to the principle underlying all this discussion and the discussion of nearly every feature of this bill. I think we can for a moment consider the ideas and beliefs of some of the fathers of the Republic. The men of 1787, as we know, gave us that great instrument under which we have maintained all these years our political independence. Alexander Hamilton was one of these. But in his great report on manufactures he gave us another constitution. Upon the observance of the principles laid down in that constitution has rested in great degree our economic independence-our independence of foreign nations in regard to the things that we con-

Briefly I wish to recur to a few statements by two of the founders of our Government. Alexander Hamilton in this report on manufactures, when discussing the question of protecting manufactures and as to whether such protection should be by means of duties imposed on imported goods or whether the protection should be by means of a bounty, said:

But it is to the interest of the society in each case (whether of duty or bounty) to submit to a temporary expense, which is more than compensated by an increase of industry and wealth, by an augmentation of resources and independence, and by the circumstance of eventual cheapness, which has been noticed in another place.

I quote from page 230 of the work entitled "Official Reports on Public Credit," and in which is found his report on manufactures, made by him as Secretary of the Treasury to Congress

in 1790.

The "other place" in this report to which he refers is at page 212, where he discusses at length the benefits that will come to the people under a protective system, although possibly involving a present sacrifice, by reason of the ultimate cheapening of the product.

I recall the idea expressed by the Senator from Ohio [Mr. Burton] in his address delivered early in this discussion to the effect, or in substance, that while we were in a sense old and while in the older parts of the country we might have some industries of long standing which were well developed and were equipped with all the modern facilities, yet in this great country of ours we are ever new, in the fact that we are continually opening up new portions of this great domain of ours to new industries. In the development of these new resources we are a little like or, by analogy, like what was said by the old philosopher when they were trying to find out something about the origin of being, of the world, of the cosmos, and who held it not either "being" or "not being," but the coexistence of both, or, in other words, a "becoming," as it were, and so in our development, taking the industries that we have and considering the possibilities of the future as relates

to this development of ours, we are always becoming.

Is Alexander Hamilton in the statement of his to which I have referred corroborated in any degree? I want to call attention to expressions by that father of modern Democracy, that great patriot and statesman whose memory I love and revere because he could rise above some of the technicalities of the time and some of the ideas in regard to the strict construction of the Constitution which otherwise hedged him in, to do what he did for the welfare and for the glory of this country in the Louisiana purchase.

I say that the principles advanced by Hamilton and afterwards supported by Jefferson are as applicable to-day, in a degree, as they were away back at the beginning of our Government. Mr. Jefferson, discussing this question and what we should do with reference to the protection of our manufacturers, in a letter to a friend, Benjamin Austin, Esq., the letter being written at Monticello, January 9, 1816, said:

We must now place the manufacturer by the side of the agriculturist. The former question is suppressed, or rather assumes a new form. Shall we make our own comforts, or go without them, at the will of a foreign nation?

We may ask ourselves the question, as we go along here, as to the applicability of this statement to the subject under immediate discussion, the protection of our sugar industry—a home industry—it having been demonstrated, I think, beyond doubt, that within the short period of 10 years, by proper protection and encouragement, we shall have arrived at that stage in our development which Hamilton and Jefferson said we should ever have in view, namely, the production of those things upon which we must depend as necessaries of life independently of the other nations of the world.

He, therefore, who is now against domestic manufacture must be for reducing us either to dependence on that foreign nation or to be clothed in skins and to live like wild beasts in dens and caverns. I am not one of these. Experience has taught me that manufactures are now as necessary to our independence as to our comfort, and if those who quote me as of a different opinion will keep pace with me—

Note this, involving as it does, the very idea expressed by Hamilton, one which I think we can all afford, in the development of the industries of this great Nation, to have in mind; and it is but the part of patriotism and the part of having a proper sense of the welfare and growth of this Nation that we do have it in mind, namely, the ability and the willingness to make a little temporary sacrifice in order that we may profit in the end and produce in greater quantity and at a cheaper price to the ultimate consumer in whose welfare we are concerned.

If those-

Says Jefferson-

who quete me as of a different opinion will keep pace with me in purchasing nothing foreign where an equivalent of domestic fabric can be obtained, without regard to difference of price, it will not be our fault if we do not soon have a supply at home equal to our demand and wrest that weapon of distress from the hand which has wielded it.

Further on he shows how he would fit protection to new conditions, as, Mr. President, we want to fit protection to new conditions in this country, and if by reason of the cost of labor in this country, if by reason of added and increased facilities of production there is no difference between the cost of production here and abroad, we may then as a general proposition, and not till then, afford to do without protection to that industry.

Here, however, is the principle which I think well worthy of consideration. Suppose in all these questions of per cents, in all this close figuring now as to whether or not protection is needed for a particular industry, that industry being one which supplies a great demand on the part of our people, there remains a doubt, how should we as patriots and public-spirited citizens—I will put it on that high ground—resolve that doubt? I for one would resolve the doubt in favor of protecting and developing that industry which will mean so much to the country. This is how Jefferson himself viewed it:

If it shall be proposed to go beyond our own supply, the question of '85 will then recur, will our surplus labor be then most beneficially employed in the culture of the earth, or in the fabrications of art?

This splendid development of ours could never have been had we pursued the policy hoped for by England and other nations of the world, for they would have kept us a nation of farmers. While we know what the 35,000,000 now engaged in farming mean in the stability and in the progress of our country, our greatness lies partly in the fact that we are not a nation of farmers, in other words, that agriculture is not our only great industry.

But a few words more from Thomas Jefferson:

We have time yet for consideration, before that question will press upon us; and the maxim to be applied will depend on the circumstances which shall then exist; for in so complicated a science as political economy, no one axiom can be laid down as wise and expedient for all times and circumstances, and for their contraries. Inattention to this is what has called for this explanation, which reflection would have rendered unnecessary with the candid, while nothing will do it with those who use the former opinion only as a stalking horse—

He evidently refers to the opinion some had had of him, that he stood for free trade instead of for protecting our infant industries. He proceeds:

to cover their disloyal propensities to keep us in eternal vassalage to a foreign and unfriendly people.

So much, Mr. President, for the foundation principle and for those who stood for it. As I have said, in the course of our development with these successive industries of a new kind coming into being there is still the need and the demand for the application of that principle.

Mr. President, I have said that my interest in this industry, which will be so important to my own State, is one, if not the main, consideration that led me to say a word or two here. I desire now to briefly call attention to a statement made in my remarks which were delivered in the Senate on the 29th of July last. I at that time submitted a letter with some tables received from the head of the chemistry department of our agricultural college.

Talk about the production of beets and the per cent of saccharine matter in them. We have heard much about it this morning. There is no State in this Union, according to the report of this chemist, who has devoted almost a lifetime to the service of the State, which excels the State of South Dakota in the qualities of soil and climate adapted to the raising of sugar beets.

I will merely read the result of a series of about 16 tests made to ascertain the per cent of sugar contained in beets in that State in 1911. They run all the way from 16.2 per cent, as the lowest, up to 22 per cent, as the highest. In all those 16 tests as to the pounds of sugar beets produced to the acre the quantity runs all the way from 26,515 pounds per acre up to 48,510 pounds, all except the first one I have named being considerably over 30,000 pounds per acre.

Another word—and I here quote from the letters to which I referred, written me by Prof. Shepard, which are so applicable to this discussion. He says:

Again, sugar beets will add immensely to the yield of our regular grain crops, owing to their beneficial effect on the soil itself. They are subsoilers and open up the soil for the penetration of water. They are a cultivated crop and so will clean the ground from weeds. If the tops and pulp are returned to the soil, little exhaustion takes place, since sugar comes wholly from the afr.

In corroboration of what has already been said on the floor of the Senate this morning, reference has been made to the other kinds of root crops which we may produce instead of beets. Reference has been made to turnips and to potatoes, both valuable as improving and conserving the soil, so that better crops of wheat and barley and rye and oats may thereafter be raised. I have seen, after a well-cultivated crop of potatoes in South Dakota, the three successive crops of wheat raised on that well-cultivated potato ground; and because they were better you could readily distinguish those crops of wheat for the three years from the wheat raised alongside on the same kind of land and otherwise as well farmed. To a greater degree will sugar-beet culture improve and conserve the soil than will the potato crop.

Do we want, as suggested by the Senator from Mississippi, to compare the raising of turnips, as in England, for example, with sugar beets in this country as it relates to the preparation of the soil for other crops? Granting that the turnips are to be fed to cattle, you have in the tops and in the pulp of the sugar beet as good, if not a better, food for the stock than you have in the turnip, a more nutritious food, with, of course, the added consideration that while you are raising the sugar beet you are also favoring this great industry, which will mean in the comparatively short time I have mentioned the production of all the sugar which this country consumes. But we will not have it, we can not have it, with sugar to go on the free list within three years from this time. Prof. Shepard says in regard to that:

I am anxiously watching the sugar-tariff proceedings. We were scheduled to have two or more factories in our State next year. I honestly believe that no State can raise better sugar beets, and I know that the advent of sugar-beet culture means the greatest prosperity to our State.

Prosperity, Mr. President, in the mere development of that industry itself, in the diversity in industry which the beet-sugar factories will make in our State. In what other respect will there be benefit? There will be benefit in the additional amount of stock we shall produce in South Dakota.

The claim is made that this bill and our labors here are for the purpose of reducing the high cost of living. How shall we bring down the price of cattle? By encouraging an industry which in turn will encourage every farmer in the raising of more cattle and give a new impetus to mixed farming and stock raising.

The cattle from the ranges are fast going. A letter from a friend the other day indicated that out in the great plains country in South Dakota west of the Missouri River, where formerly hundreds of thousands of cattle could have fed and did feed, he thought there were not to exceed 25,000 head now. That is on account of the opening up of all that country to homestead settlement within the last 8 or 10 years.

How may we best supply the deficiency except by giving such protection directly, in the first place, by a moderate tariff on cattle, and, indirectly, in the second place, by so treating the beet-sugar industry as to encourage every farmer in South Dakota to maintain on his farm of 160 acres all the stock which he can raise and feed? With such a policy we would soon hear less of the dearth of cattle or the high price of cattle; farmers would be induced to raise more of them, and with the greater cheapness and facility with which cattle would be grown there would be a corresponding increase in quantity. The greater number which he thus will be led to produce will keep the farmer as well off, or better off, than he will be with the present higher prices. And as with cattle so with other farm stock. It all means the bringing of the farm up to its highest efficiency.

I will not stop to read further from this letter of Prof. Shepard; but the justice of the claims of the beet-sugar industry seems to me so evident that I am almost inclined to plead with the Members of the Senate on the other side on behalf of South Dakota, believing as I do in the possibilities of

this one industry for our State.

I think the Senator from Montana [Mr. WALSH] said in the Senate the other day that free sugar would mean the prevention of the establishment of another beet-sugar factory in Montana. It certainly will mean the prevention of the establishment of any beet-sugar industry in South Dakota. Why do we want the beet-sugar industry there? We want it, as I have said, primarily that we may diversify our industries, but the indirect beneficial results will be even greater than the direct benefits. Granting that they include eventually a lower price for sugar than now obtains, the added crops— Mr. WALSH. Mr. President, inasmuch as the Senator from

South Dakota has referred to the Senator from Montana, let me inquire of the Senator from South Dakota, with all the advantages which that State possesses in the matter of beet-sugar culture, why should they not have had beet-sugar factories in

that State all these years?

Mr. STERLING. I think the answer is obvious. Our State lies wholly to the west; it is a newly settled State, and the people have been absorbed and interested in the opening up of the farms, the cultivation of wheat, corn, and so forth, and have not as yet established any beet-sugar industry on that account. Capital as yet, so far as that is concerned, has not found that a favorable field for investment, and I think perhaps a doubt as to what eventually might happen to the tariff on sugar has had within the last year or two an influence in preventing the establishment of the beet-sugar industry.

Let me say further to the Senator that, according to Mr.

Shepard, at least two sugar factories were scheduled for South Dakota, and the only thing, as he indicates in another part of his letter, that will prevent their establishment will be the put-

ting of sugar on the free list in three years.

Mr. WALSH. I thought possibly, Mr. President, that it might be due to the same fact that has prevented the multiplication of beet-sugar factories in Montana. I might say, likewise, that we have had at least half a dozen beet-sugar factories scheduled for Montana for 10 years, but we have not got them. When all the preliminaries were arranged for the construction of another beet-sugar factory in the Gallatin Valley, the powers that be in that industry put their veto upon it, and it was not built. Exactly the same conditions exist in the Bitter Root Valley; and I thought possibly some of those influences might have operated to prevent thus far the establishment of factories in South Dakota.

Mr. STERLING. I will say to the Senator that I do not know to what he refers when he says "the powers that be in that industry put their veto upon it." It might be that some such powers would try to prevent for the present the establishment of sugar factories in South Dakota, but I have never heard that they were seeking to prevent their establishment.

Mr. WALSH. For the information of the Senator, then, I will say that if he examines the testimony before the Hardwick

committee, he will learn that the establishment of a beet-sugar factory at Bozeman, in the heart of the Gallatin Valley, than which there is no greater agricultural valley in all America, was prevented by the combination of Mr. Morey, representing the Great Western Sugar Co., and Mr. Havemeyer, the head of the Sugar Trust.

Mr. STERLING. There may be an occasion now and then when that is true, when influences of that kind have been brought to bear against the establishment of any beet-sugar factories; but I will say that I do not know and never heard of any such happening in South Dakota. Further, I will say to the Senator—and I think he will agree with me—that, taking South Dakota as a whole, in the matter of the "lay of the land, the character of soil, and the quantity of land adaptable to beet-sugar raising, it excels his State of Montana, although here and there there may be valleys in Montana well adapted to sugar-beet raising.

Mr. SUTHERLAND. Mr. President-

Mr. SUTHERLAND. Mr. President
Mr. STERLING. I yield to the Senator from Utah.
Mr. SUTHERLAND. Mr. President, I desire to remind the
Senator from Montana as well as the Senator from South Dakota that the sugar-beet industry in the entire country is a new one; it has only been in operation for about 16 years in any part of the country. It began about 1897, as I recall, and has been going ahead very rapidly, more rapidly, as the Senator from Kansas [Mr. Bristow] very well showed in his admirable address this morning, than it has developed in any other civilized country in the world.

It began in my State about the year 1897 with a single small factory. We have now some five or six extensive factories, and but for the threat of the passage of this bill we would have had other factories. The industry has been extended into Idaho within the last six or seven years, and it has been extended into Montana within the last few years, where a single

factory has been built.

The Senator from Montana himself conceded the other day, as I understood him, that but for the pending legislation other factories would be established in Montana; at any rate, he said that, in his judgment, the effect of putting sugar on the free list would be to discourage the establishment of additional fac-

tories in his State.

Mr. WALSH. Mr. President, for the sake of accuracy in the history of this matter, lest any misunderstanding might arise. I desire to state that the beet-sugar factory in Montana has been in operation for seven years. It has been operated during all of that time with most marked and distinguished success-with such success as ought naturally to have invited the establishment of other factories at other places within the State, but they have not been built, and I have indicated one of the principal reasons

why they have not been built.

Lest any error might arise from anything that has been said by myself, I answered the Senator the other day that if the present immense subsidy to the beet-sugar industry is continued as a matter of course factories are more likely to be built than if you take that subsidy away. It would be the height of absurdity for anybody to assert anything to the contrary; but I said, in the same connection-and I have been endeavoring to give some attention to offsetting the cost to the people of this country of protecting this industry against the advantage which accrues—and I said in that connection that it was not a mere matter of a gift to have that beet-sugar factory, but that my State was paying a subsidy—not to speak of the rest of the Nation—in the aggregate, as I calculated, of at least \$250,000 a year to sustain the industry; and I questioned whether, after all, it was wise to continue that subsidy.

Mr. SUTHERLAND. Mr. President, if the Senator from

South Dakota will pardon me just a moment further-

Mr. STERLING. Certainly. Mr. SUTHERLAND. There is not anything in the world more timid than a dollar except two dollars. I think that has been said before. The Senator from Kansas this morning called attention to the effect which Cuban reciprocity had upon the sugar-beet industry in the western part of the country, and he was entirely correct about that. When that measure was pending before the House of Representatives I was one of the Republicans who opposed it, and so was my friend the Senator from Michigan [Mr. SMITH]. I think there were some thirtyseven Republicans who, although we did not go into a caucus, went into a conference, declined to be bound by the judgment of the majority of our colleagues, and refused to follow the importunities of the then President of the United States upon that subject.

I was not afraid at that time that the beet-sugar factories were going to be closed, but I was fearful that the passage of the Cuban reciprocity bill would retard the further development of the industry. That is precisely what happened. In my judgment, if it had not been for the Cuban reciprocity bill, instead of producing in the neighborhood of 700,000 tons of beet sugar per annum, as we are to-day, we would have been producing over a million tons. The industry received a setback of two or three years from that legislation; capital was timid about investing. If you pass this legislation it will cause a setback for a score of years, for, when the Republican Party comes back into poweras it will do in four years from now-and this work is undone still, we can not undo the effect of it and the development of the whole sugar-beet industry will have received a setback from which it will take it many years to recover.

Mr. President-

Mr. STERLING. I yield to the Senator from Utah.

Mr. SMOOT. As my colleague [Mr. SUTHERLAND] well says, Cuban reciprocity had a great deal to do with retarding the growth of the sugar industry of this country. I want also to call attention to the fact that from that time until the present there has been a constant agitation for a change in the sugar duty or for free sugar. In 1911 we had such a proposition pending in the House of Representatives; in 1912 we had it again; we have had it in every campaign, and, of course, men are not going into an industry if they know that by one simple act of Congress that industry can be destroyed. They do not propose to put their money into that or any other industry without at least some chance of ultimate success.

Mr. WILLIAMS. If the Senator from South Dakota will pardon me, I should like to ask the Senator from Utah if he ought not, in frankness, to confess that in spite of Cuban reciprocity and in spite of the agitation, there is not in the world any occupation or any industry that has developed and prospered and has been so profitable in this country as that of beet sugar during the very years he has been talking about?

Mr. SMOOT. No, Mr. President; I do not agree with the Senator; but I can say to the Senator that if it had not been for Cuban reciprocity and the eternal agitation which has been going on all the time, instead of making 700,000 tons of beet sugar to-day we would be making a million and a half tons of

Mr. WILLIAMS. Still, as compared with other industries, cotton and a dozen other things that other people are interested in, that are not bolstered up at all and have not been hurt by the agitation of Cuban reciprocity, people engaged in the raising of beets and making beet sugar have made greater progress

than almost anybody else.

Mr. SMOOT. Mr. President, that comes about from the very fact that as soon as sugar is made it finds a ready market. There is an immense demand in this country for it that in the past it has been absolutely impossible, and is to-day impossible, to fill without importations of sugar. As long as that extreme demand exists, as long as we do not produce the amount of sugar that we consume in this country, there will always be money to invest in this industry if there is a likelihood or a chance of legislation not being passed that will destroy it. I do not mean cripple it; I mean destroy it. No one wants his sugar investment absolutely wiped out. I say to the Senator that just as soon as a sugar mill closes, all it is worth is for old junk, old iron. It can not be used for any other purpose on earth, and it is a total loss. That is why the industry has not increased even more than it has. There is a great, broad field for it to increase now. We are using in this country 4,000.000 tons of sugar every year, and continental America and Hawaii and Porto Rico and the Philippines altogether produce only something like 2.000,000 tons.

Mr. SMITH of South Carolina. Mr. President-

The PRESIDING OFFICER (Mr. James in the chair). Does the Senator from South Dakota yield to the Senator from South

Mr. STERLING. I do.

Mr. SMITH of South Carolina. Will the Senator from South Dakota allow me to ask a question? As I understood his argument, he said that wherever the sugar beet was planted, on account of the cultivation of it and the by-product from it in the form of pulp, there was an increased production of wheat;

the land was greatly enriched.

Mr. STERLING. Yes, sir.

Mr. SMITH of South Carolina. That there was also an increase in cattle feed, and therefore that would encourage cattle raising and cattle production.

Mr. STERLING. Yes, sir.

Mr. SMITH of South Carolina. And a lot of other by-products. Now, if that be true, it view of the high price that wheat is now bringing and the contention on the other side that the consumption is rapidly catching up with the production, and in view of the abnormally high price of meat, does he not think that the beet growers might cultivate the beet for the meat product and the wheat that might grow afterwards?

Mr. STERLING. I will say, as has been suggested here, that it is a pretty dear fertilizer. Here is an opportunity to serve

the two purposes.

Just a few words, in conclusion, Mr. President, in regard to this industry; and here, it seems to me, is the situation, first, from the standpoint of a State: The establishment or the nonestablishment of a great productive industry that will mean, by rotating the sugar-beet crop with oats and wheat and barley, a vastly increased production of those several grains. I think it has been demonstrated beyond doubt that in Germany and France, where they have rotated crops of wheat and barley and oats and rye with sugar beets, the increased yield of these grains has been 80 per cent in a comparatively short period of

So what is involved here? Instead of producing 13 or 14 bushels of wheat to the acre, as the farmer is doing in South Dakota now without the advantage of this rotation of crops or the inducement to it, he will with such rotation produce 25 or 30 bushels of wheat to the acre. Instead of 30 or 35 bushels of oats to the acre, he will produce on sugar-beet ground 50 to 60, or even 70, bushels of oats to the acre.

Mr. SMITH of South Carolina rose.

Mr. STERLING. If the Senator will permit me just a moment, what does that mean? What does it mean in the world's production and in feeding the consumers of the world? greater abundance of these staple crops, the necessaries of life. Will the farmer be any poorer by it? No, no. He will have increased riches. In the additional number of cattle and of sheep he produces, in the added quantity of wheat, of barley, of rye, and of oats he raises, he will be the gainer, and he will make more than at the present higher price because of his increased production, while at the same time the larger supply will mean a lower price to the consumer.

Mr. SMITH of South Carolina. Mr. President, will the Sena-

tor permit me to ask him a question?

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from South Carolina?

Mr. STERLING. I yield; yes. Mr. SMITH of South Carolina. Will those sugar beets grow without the tariff?

Mr. STERLING. Oh, I suppose the sugar beets will grow

without the tariff, but they will not grow—

Mr. SMITH of Michigan. They never have grown before without it.

Mr. STERLING. But the industry will not be encouraged in

our part of the country without it.

Mr. SMITH of South Carolina. According to the Senator's own figures as to the vast increase in wheat and in meat, it seems to me it would be a pretty good compensation to grow beets for increasing the meat and wheat revenue rather than for the purpose of being enriched on the beets.

Mr. STERLING. I grant the Senator that it is some com-pensation—in fact, great compensation—and ought to be some inducement, as I believe it is; but so far it has not proven to be sufficient inducement. I think it is taken for granted that there is nothing which so enriches or conserves the soil as the growing of the sugar beet.

So much for the situation locally and the good the sugar industry will do for a State. What does it mean nationally?

I can not help but think that we are pursuing anything but a farseeing and wise policy when we put sugar on the free list and thus cripple, if not prevent, the further growth and development of this industry.

Mr. BRISTOW. Mr. President-

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from Kansas?

Mr. STERLING. I yield.

Mr. BRISTOW. I will not disturb the Senator; but before he goes on to that branch of this question, I was interested in statement made by the Senator from Montana [Mr. Walsh] that his State was levied upon each year for a subsidy or a contribution of about \$250,000 to maintain this industry. I should like to know how he arrives at that conclusion or how he obtains those figures.

Mr. WALSH. Mr. President—
The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from Montana?

Mr. STERLING. Certainly.

Mr. WALSH. I do not like to duplicate what I said. If the Senator will do me the honor to read an address that I had the honor to present to the Senate here two weeks ago, he will find a direct answer to the question. But I shall be very glad to state it briefly now, if the Senator is desirous of knowing.

Mr. BRISTOW. Yes; I heard the address, but I do not re-

member just what the Senator refers to.

Mr. WALSH. It was a very simple calculation. If sugar goes on the free list the importer will not have to pay a duty of \$1.34 a hundred pounds, as he does now.

Mr. BRISTOW. But if the Senator will just wait a moment, does not the Senator from Montana know that the importer does not pay \$1.34 more per hundred pounds for his sugar than is paid for the same sugar in the European market as a result of this duty? Does he not know that the statistics of importations show that during the greater part of the year he pays only about 60 or 70 cents more than the European parity, and that the Cuban sugar sells far under the European parity in the New York market?

Mr. WALSH. He pays for every pound of sugar he imports 1.34 cents more than he would pay if he did not have to pay

Mr. BRISTOW. Does not the Senator know that the importer in New York gets his sugar for from 60 to 70 cents per hundred pounds less than the European price, plus the \$1.34, for exactly the same quality of sugar in the European market?

Mr. WALSH. He would get his sugar for \$1.34 per hundred

pounds less if he did not have to pay the duty.

Mr. BRISTOW. But the Senator shows that he is not informed upon the price of sugar-its import price in New York and its price in Europe.

11r. WALSH. That may be; but the Senator has been dili-

gently endeavoring to inform himself.

If the Senator will examine the statistics BRISTOW. I submitted this morning, he will learn that there is not paid for the sugar at New York \$1.34 per hundred pounds more than that same sugar will bring in Europe, but it was only about 60 or 70 cents more during the last year.

Mr. WALSH. The Senator can not possibly learn that he will get it for a cent less than \$1.34 more than he otherwise

Mr. BRISTOW. Just a moment. If it sells for but 60 or 70 cents more in New York than it sells for in the European mar-kets on the same day—the same sugar from the same country, Cuba-does not that show that the New York price is but about 60 or 70 cents more than the European price? And does not that represent the additional cost which the New York importer pays, instead of \$1.34?

If it was \$1.34 more in New York than it is in Europe, the exact amount of the duty, I will agree that it would be an increased price of \$1.34; but when quotations in New York and in Hamburg show that instead of being \$1.34 more it is only about 60 or 70 cents more, does not that show that the price is not increased by the amount of \$1.34 per hundred pounds?

Mr. WALSH. There is nothing that can show that the price

paid for the Cuban sugar can be one penny less than it otherwise

would be and \$1.34 per hundred.

Mr. BRISTOW. It simply shows that the Senator from Montana has made his statements without examining the facts, as shown by the prices paid on importations in New York. should advise him to look up the facts before he makes on the floor of the Senate statements that can not be verified by the records affecting a great industry of the people of the United States.

Mr. WALSH. The Senator from Montana has made no statement that the record will not justify, and no statement that can be controverted, namely, that Cuban sugar costs the import

price plus \$1.34.

Mr. BRISTOW. I am willing to leave it to the record and the importer's price in New York, and invite any man who is interested to investigate the statements made by the Senator from Montana and myself. He will find that time after time sugar from Cuba has sold in New York as much as 73 cents

below the European price plus the duty.

If the Senator from South Dakota will pardon me further, the Senator from Montana seems to think that there has been a very slow and sluggish increase in the development of beetsugar production in our country; and he has asked the Senator from South Dakota his opinion as to why, with these wonderful possibilities, there have not been factories established long before this in South Dakota. With the permission of the Senator from South Dakota, I desire to give the number of factories that were manufacturing beet sugar in the United States in 1897, when the Dingley bill was enacted. In 1897 there were 7 factories manufacturing beet sugar in

the United States. In 1898 there were 9. In 1899 there were 15. In 1900 there were 31. In 1901 there were 34. In 1902 there were 39. In 1903 there were 44. In 1904 there were 53. 1905 there were 51; there was a decline when Cuban reciprocity came in and disturbed the development of the industry. In 1906 there were 53, the same as in 1904. In 1907 there were 63. In 1908 there were 63. In 1909 there were 63. In 1910 there were 65. In 1911 there were 63. In 1912 there were 67. In

1913 there were 73. So the number has increased, since the Dingley bill was passed, from 7 to 73.

Mr. WILLIAMS. And yet the same industry has been ruined by the agitation and the passage of the Cuban reciprocity bill. Mr. WALSH. I simply wished to inquire for information

from the Senator from South Dakota why the factories did not come to his State, and I was wondering whether it was for the same reason that they have not multiplied in my State. Per-

haps the Senator from Kansas can inform us as to that.

Mr. BRISTOW. If the Senator from South Dakota will permit me, in the opinion of the Senator from Kansas, since this industry requires a large investment of capital in the establishment and the erection of a mill or a factory, running in the neighborhood of \$1,000,000, it is necessary to present to the minds of men who are to invest their capital in such an enterprise conclusive proof that it is to be profitable. With the development of an industry that has only been of recent origin the Senator must know that it takes time to bring about that degree of certainty in the mind of the investor that the invest-ment will be a safe and a wise thing. The experiment has not been tried extensively in South Dakota, since we have been advancing gradually to ascertain where the soil and the climate will produce beets most successfully. I think it has been alto-gether reasonable that there should not have been any more rapid advancement in the establishment of this industry than there has been. As I said this morning, we have advanced more rapidly in our country since we began than any other country that has ever developed a domestic sugar supply.

Mr. STERLING. Mr. President, it may be well, from a national standpoint, to refer briefly to the average price per pound at wholesale in New York during the years between 1870 and 1910; this simply for the purpose of showing that, comparatively speaking, no great burden is now imposed upon any class of people on account of the price of sugar. It has been cheap-

ening all the while.

In 1870 the price per pound at wholesale in New York-the average price for the year-was 13.51 cents per pound. In 1880 it was 9.80 cents. In 1890 it was 6.27 cents. In 1900 it was 5.32 cents. In 1910 it was 4.97 cents. Take the consumption of sugar in the United States as another proof that the price of sugar is not proving any great burden upon any class of con-sumers in this country. In 1830 the consumption per capita was 10.2 pounds. In 1840 it was 12.9 pounds per capita. In 1850 it was 19.8 pounds per capita. In 1860 it was 29.6 pounds per capita. In 1870 it was 32.7 pounds per capita. In 1880 it was 39.5 pounds per capita. In 1890 it was 50.7 pounds per capita. In 1900 it was 50.9 pounds per capita. In 1910 it was 79.9 pounds per capita of consumption,

The broad assertion is frequently made that each individual in the United States consumes 80 pounds of sugar each year. Literally construed, that would mean that every man, woman, and child in the United States consumed each year 80 pounds of sugar. Of course we realize that this can not be true. from the use of sugar in the manufacture of candies, I think a

little over 50 pounds per capita is consumed.

Mr. SUTHERLAND. Mr. President, will the Senator permit me there?

Mr. STERLING. Yes. Mr. SUTHERLAND. In connection with the figures which he has given showing the decline in price, I wish to remind the Senator that relatively the fall in the price of sugar has been very much greater than his figures would indicate, because while during the last 10 or 15 years the price of every other food commodity has been going up the price of sugar has been going down. So if we were to measure it by the other articles of food, we would find that the fall in the price of sugar has been very remarkable, indeed.

Mr. STERLING. I realize that, and I thank the Senator for

calling attention to that fact.

The sugar industry appeals to me, from the national standpoint, because of the prospect within 10 years from now of producing in this country every pound of sugar we use with the establishment of the beet-sugar industry, or with the retention of the tariff, such as is suggested by the Senator from Kansas, that will afford reasonable protection to the industry. that worth considering? Meanwhile, we shall not have increased the price of sugar in any degree whatever, nor shall we have burdened any part of our population to whom payment for the ordinary comforts of life is any burden at all. On the contrary, if a tariff increases the price at all, this lower tariff proposed by the Senator from Kansas will reduce even the present low price. We shall in no event have burdened the con-sumer with any additional cost of sugar, and the eventual result will be the production of all the sugar we consume and of making sugar cheaper than it is now.
So I can not help but think, as I said at the outset, that here

is one of the finest examples in all the tariff bill of the proper,

just, reasonable application of the protective-tariff principle; and I appeal to the same principle now and to-day that Hamilton and Jefferson invoked in their time.

Mr. SMITH of Michigan. Mr. President, I should like to ask the Senator from Montana a question. I think I understood him to say that the growth of the domestic sugar industry in Montana was prevented by the Havemeyers and some one else whose name I did not quite catch. Is that correct?

Mr. WALSH. That they did intercept the building of a factory at Bozeman I understood to be quite a well-established

historical fact.

Mr. SMITH of Michigan. That they prevented the building of a factory?

Mr. WALSH. That they prevented the building of a factory. Mr. SMITH of Michigan. How did they do it? What was

Mr. WALSH. I shall be very glad to-morrow morning to put the letters again in the Record—letters from Mr. Morey to Mr.

Havemeyer and from Mr. Havemeyer to Mr. Morey.

Mr. SMITH of Michigan. I think they are trying to prevent the growth and development of the sugar industry now, aided by the Democratic Party. My mind was refreshed by the statement of the junior Senator from Utah [Mr. SUTHERLAND], who was a Member of the House, as was my friend from Mississippi [Mr. Williams], at the time reciprocity with Cuba was perfected. I resisted that attempt because I believed it would tend to arrest the development of our domestic sugar industry, which I regarded as of the utmost importance to the economic welfare of the American people. The effect of that legislation, in my judgment, was instantaneous and harmful.

The industry was instantaneous and natural.

The industry was growing rapidly and private individuals were investing in the domestic sugar business. The moment that legislation was passed—indeed, during the preliminary agitation—many of those men took to cover and sold their interest in these local sugar factories. That interest, in many instances, was acquired by the men who had strongly opposed the development of the industry in this country, and by the very trust of which the Senator from Montana complains, until they acquired quite a considerable holding in the sugar-beet industry of

my State; I do not know exactly how extensive.

Mr. WALSH. So that the Senator may understand fully, the Mr. Morey that I spoke of is the president of the Great Western Sugar Co., which is distinctly a beet-sugar company. the Senator understands.

Mr. SMITH of Michigan. What composes the Great Western

Mr. WALSH. The Great Western Sugar Co. is a company that owns a large number of factories in the State of Colorado and adjacent territory. It owns all of the stock of the Billings Sugar Co., which owns the factory at Billings, in my State.

Mr. SMITH of Michigan. Is it connected with the American

Sugar Refining Co. or the Havemeyer interests?

Mr. WALSH. It is connected in just the same way that those in the Senator's State are.

Mr. SMITH of Michigan. By the ownership of a minority

Mr. WALSH. The testimony before our committee the other

day was to the effect that the same interests own 33½ per cent of the stock of the Michigan Sugar Co.

Mr. SMITH of Michigan. That is the Michigan Sugar Co.?

Mr. WALSH. The Michigan Co. In the same way the same interests own 33\footnote{1}{3} per cent of the stock of the Great Western Sugar Co., which owns all of the stock of the Billings factory.

Mr. BRISTOW. Mr. President, will the Senator from Mich-

igan permit me an interruption?

Mr. SMITH of Michigan. Certainly.

Mr. BRISTOW. I have here a statement taken from the hearings of the Committee on Finance, giving the exact interest of the Havemeyer Co. in the beet-sugar plants. It gives the names of the plants, the kind of stock owned, the par value of the shares, the total issue, and the percentage owned by the Havemeyer interests.

Mr. SMOOT. I will ask the Senator the date of that.

Mr. BRISTOW. This is under date of May 23, 1911. I have been informed that the Havemeyer interests have sold quite largely of this stock. I may add, if the Senator will permit, that at the time this stock was acquired it evidently was the purpose of the sugar-refining trust to get control of the beetsugar industry by the purchasing of shares of stock in as many factories as it could throughout the country; but in recent years it has concluded that it would be cheaper and easier to destroy the industry by free sugar than to control it by owning any interest in the stock. So it started on this campaign for free sugar some three or four years ago.

Mr. WALSH. I wish to make a slight contribution to the facts, because the Senator from Kansas might draw an erroneous inference. The representative of the Michigan Beet Sugar Co. testified before our investigating committee only the other day that at the time the Hardwick testimony was taken they owned, my recollection is, 42 per cent of the stock of the Michi-

gan Beet Sugar Co.
Mr. BRISTOW. It is given here as 35 per cent common and 55 per cent preferred. So I presume, as to the average, that is

about right.

Mr. WALSH. Let me finish. He went on to say, however, not that they were dissatisfied with the investment, but they were afraid of the Sherman Act, and they disposed of their stock down to 331-not because they thought they could accomplish any end by getting free sugar, but they were afraid of the enforcement of the Sherman Act.

Mr. SMITH of Michigan. That is just the point I want to When they undertook to pass this Cuban reciprocity they discouraged individual investments in that great enterprise, and as a result the representatives of the refining company set their agents to work and acquired a holding. Michigan Sugar Co., however, does not mean the entire Michigan sugar industry. It means eight factories with an investment of probably \$5,000,000, but there is \$20,000,000 invested

in the sugar industry of Michigan alone.

Mr. WALSH. My recollection is that they own nine fac-

tories in that State.

Mr. SMITH of Michigan. Eight, I think, although I would not dispute the Senator.

Mr. BRISTOW. If the Senator from Michigan will permit

me, I will have this printed in the RECORD.

Mr. SMITH of Michigan. I should like to have it printed in the RECORD.

Mr. BRISTOW. For information I will say the statement shows that of the Billings (Mont.) Sugar Co., referred to by the Senator, the trust owned 26 per cent of the common and 38 per cent of the preferred, the Alameda Sugar Co. owned 49 per cent, the Spreckels Sugar Co. 50 per cent, the Utah-Idaho Sugar Co. 49 per cent, the Amalgamated Sugar Co. preferred 50 per cent, the Lewiston Sugar Co. 37 per cent, the Iowa Sugar Co. common 75 per cent, the Carver County Sugar Co. 80 per cent, the Menominee River Sugar Co. 36 per cent, and the Continental Sugar Co. 35 per cent,

The table submitted by Mr. Bristow is as follows:

TRUST'S INTEREST IN BEET SUGAR.

[From briefs and statements filed with the Committee on Finance, United States Senate, first print, p. 409. See Hardwick hearings, p. 100.]

The American Sugar Refining Co.'s interests in beet-sugar companies May 23, 1911.

	Capital stock.							
Names of companies.	Kind of stock.	Par value of issued.		Owned by American Sugar Re- fining Co.	Per cent owned.

Total			56, 883, 617	23, 183, 990	-41			

Mr. SMITH of Michigan. I am very glad, indeed, that the Senator from Kansas has presented these figures.

I desire to direct the attention of the Senate to this singular coincidence. Those are figures gathered in 1911, and I venture the assertion, although I am not prepared to sustain it in detail, that the American Sugar Refining Co. or any of its owners have not purchased a share of stock in a domestic sugar company since the Democratic Party came into power pledged to free trade in sugar, and they will not buy any of that stock until you have passed your bill and the three years of strangulation depresses its value to the point at which they are willing to buy.

It would not surprise me at all if, discouraged and disheartened as the owners of these industries now are, they should dispose of their stock at any price to any purchaser, whether it be

the American Sugar Refining Co. or anyone else.

I dislike to think that this vast investment of \$20,000,000 of money invested by the people of my State is to be thus dissipated by a bare majority of the Democratic caucus. If that industry is throttled, as I believe it will be, the stock will be picked up by its arch competitor, the Sugar Trust, and competition in the field of domestic sugar production will have disap-

peared entirely.

Mr. WILLIAMS. Mr. President—
The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Mississippi?

Mr. SMITH of Michigan. Yes; of course. Mr. WILLIAMS. I understood the Senator from Michigan to say that the Sugar Trust will pick up this stock at their own price. I have understood him on a previous occasion to say that if sugar went on the free list there would not be any industry. Then would the Sugar Trust have any temptation to take it at nothing?

Mr. SMITH of Michigan. Yes.

Mr. WILLIAMS. Why should they pick it up then?

Mr. SMITH of Michigan. They will be tempted to do it because the country will understand, indeed it is understood now, that the lease of power the Democratic Party is enjoying There will be a reaction perhaps in the is but temporary. value of this stock when the right of the public is again

Mr. WILLIAMS. If the power of the Democratic Party is temporary and we are not going to stay in long enough to bring on this calamity, and it is so certain that the Sugar Trust is going to pick it all up, why spend all this time demurring and debating and talking and describing the calamity and telling what great distress there is going to be, and suffering, and so forth? Why not just pass the bill and then turn us out of power and reestablish your lines and go ahead?

Mr. SMITH of Michigan. The Senator from Mississippi is the last man on the other side of the Chamber who should make

such an observation,

Mr. WILLIAMS. Why?

Mr. SMITH of Michigan. The Senator from Mississippi in a formal statement over his own signature, in which he was joined by the Senater from Texas and several other Senators

Mr. WILLIAMS. Oh, yes; in other words— Mr. SMITH of Michigan. Absolutely promised that the condition we confront to-day in this bill would never exist.

Mr. WILLIAMS. But the Senator says that we are not going to confront these conditions, and it is going to be merely temptation

Mr. SMITH of Michigan. We are confronting it now. The industry is suffering to-day.

Mr. WILLIAMS. Merely a temptation to the Sugar Trust to get rich by picking up beet-sugar factories

Mr. SMITH of Michigan. Yes; you confront that situation

Mr. WILLIAMS. The Senator from Mississippi has a perfectly distinct recollection of what he said. Mr. SMITH of Michigan. I know he has.

Mr. WILLIAMS. But the Senator did not say in one breath that an industry was going to be devastated and in the next breath that there was a bunch of financiers in the country that was going out to buy it up.

Mr. SMFTH of Michigan. The Senator from Mississippi never

says anything in one breath, and I did not accuse him of that

Now, Mr. President, I say that the domestic sugar industry to-day is discouraged; that the value of its stock has dropped from nearly par to less than 50 cents on the dollar because of this unfavorable legislation; and when it gets to the point where the trust conceive it to be to their advantage to pick it up they will do it and thereafter monopolize the sugar business

WILLIAMS. But if it is totally ruined, could it ever

Mr. SMITH of Michigan. Yes; just the moment you dispose of the domestic competition in sugar every intelligent man knows that the trust can regain what it has spent by adding the merest

fraction to the cost of sugar.

I do not believe that the course which our friends upon the other side are urging will give the consumer cheaper sugar, at least permanently, but it will give the consumer one source of supply and the price will depend largely on caprice. The Senator from Mississippi and all other Senators upon that side of the Chamber know that this bill will restrict the field of competition, One of the most consistent men upon that side of the Chamber in his attitude regarding this question is my distinguished friend from Kentucky [Mr. James]. He does not undertake to reconcile what you are about to do with the past history of your party or your individual professions, but he acts upon the theory that there are more sugar users than there are sugar producers. Therefore he will open the door for them to get their supplies from any part of the world, little realizing that the most gigantic Sugar Trust in the world has bent its every endeavor to bring about this result.

Not long ago I was in southern California, and two farmers took me to a sugar factory which had been built at Santa Ana. That factory cost \$700,000, and it was built by the farmers in that vicinity; not only the men who owned the soil from which

the beets could be produced, but other farmers.

They had no relation with any trust in the world. They believed it to be a desirable business and they went into it as an investment. It is not too much for me to say that since the party to which you belong has triumphed and your free-trade purpose has been understood these enterprising men have be-come discouraged and feel that the money they have put into this industry has been largely wasted, at least for the time being. If divisions in our party are reconciled, and I am hopeful they will be, this will be your last tariff law for a generation. and the party of protection to American industry and labor will again assert its dominance in American affairs. How idle it is to curtail the world's sugar production by putting a prosperous and growing industry out of business for the sole purpose of again trying out an old and exploded theory of Government that has never worked successfully in any part of the world. If the world's supply of sugar is diminished those that are left in the business can raise the price to suit their convenience and necessities. The fall of these industries in Michigan and other States will enable the American Sugar Refining Co. to recoup all it spends in achieving the result, and that expense will ultimately be paid by the American people.

Mr. SMOOT. Mr. President-

Mr. SMITH of Michigan. Just one moment and I am going to suspend, because I had no thought of making any extended remarks.

I have just been reading the speech of a distinguished leader of the Democratic Party in the past, the author of the last Democratic tariff bill, one of the most brilliant men and one of the best informed men, I think, who has ever had leadership in your party—I refer to the late Congressman from West Virginia, Hon. William L. Wilson. While Prof. Wilson's economic training tended toward free trade he did not hesitate to say that sugar, above all things, should not be put upon the free list.

He did not hesitate to say that it was a mistake in the tariff bill of 1890 when sugar went upon the free list, even bountyized as it was, and he restored the sugar duties in the Wilson-Gorman bill. Whether he did it because he foresaw that we could produce sugar here, that it would diversify the employment of our people and retain the vast sums that we expended for it from year to year in the circulating medium of the country, thus stimulating other industries, I do not know, but I do know that he deprecated the idea of placing sugar upon the free list, as many Senators on the other side of the Chamber now do in their hearts. If he desired to maintain a duty upon it, either for protection or revenue, he was wiser than the leaders of the Democratic Party to-day, because this vast revenue that you are sacrificing, these industries that you are imperiling, this doctrine that you are establishing, I think, almost for the first time in the history of the Republic, will bring disaster.

While many investors in my State were driven to sell their holdings in sugar factories, I would not have you believe that the American Sugar Refining Co. is a copartner in all these I have a letter before me now from the German-American Sugar Co., of Bay City, in which they say that they have had no representative in Washington; that they are identified with no combination of sugar producers; that they have attended no meetings of such an organization; but that they are intensely and deeply interested in preserving their property.

Mr. President, I think it is idle for us to even hope that the

other side will favorably consider the suggestions made by the Senator from Kansas. His suggestions have not always met my favor. I am not always in accord with the Senator from Kansas. That perhaps is not to his discredit; possibly it is to mine. But upon this proposition, which he has studied with so much care, I think as he thinks, that if Senators on the other side of the Chamber were freed from an iron-bound caucus rule under which they seem to be operating, they would accept

the suggestions of the Senator from Kansas and protect these industries, and thus make certain that a million of dollars a week would come into the Treasury of the United States at a time when, in my judgment, that revenue is most sadly needed.

Mr. WILLIAMS rose. Mr. SMITH of Michigan. No; I am not going to yield to I see in his eye a spirit of deviltry which the Senator now. I see in his eye a so often characterizes him on the floor.

Mr. WILLIAMS. I just want to ask a question.

Mr. WILLIAMS. I just want to ask a question.

Mr. SMITH of Michigan. Yes; I know. In one breath?

Mr. WILLIAMS. Just a plain question, that is all.

Mr. SMITH of Michigan. Oh, I know it will be very embarrassing to me; but all right. What is the question?

Mr. WILLIAMS. Probably it will be. The Senator is now

advising us to take the advice of the Senator from Kansas. understand that the proposition of the Senator from Kansas now is just what it was at the last Congress. I want to ask the Senator from Michigan if he then took the advice of the Senator from Kansas?

Mr. SMITH of Michigan. Yes; I voted with him.

Mr. SMITH of Michigan. 1es; I voted with him.
Mr. WILLIAMS. You did?
Mr. SMITH of Michigan. Yes; I voted with him, and I am
very glad to acknowledge that he displayed great wisdom in
what he did. The Senator surely did not want to embarrass
me by saying I was a recent convert to the teachings of the Senator from Kansas?

Mr. WILLIAMS. If I had not known that the Senator voted for it at the last session of Congress, I would not have asked him the question, to be perfectly frank with him.

Mr. SMITH of Michigan. I voted for his amendment because I saw in it a compromise which I thought would be helpful and would proceed the industry.

would preserve the industry.

I did not intend to say even so much as I have said. for the purpose of putting into the Record a letter written to me by the German-American Sugar Co., of Bay City, Mich. This independent company has stated its case so aptly that I feel I can not add to the discussion better than by having the letter read, and I send it to the Secretary's desk for that purpose.

The VICE PRESIDENT, Is there objection? The Chair

hears none

Mr. SMITH of Michigan. I want merely to say a word before the Secretary reads the letter. I have also a letter, under date of May 31, from the German-American Sugar Co., in which

That this company has never authorized any person other than its own executive officers to represent it at Washington.

That during the pending of the present tariff bill before Congress this company has had no representative at Washington.

That this company is not affiliated in any way with other manu-

It relies implicitly upon the intelligence and patriotism of Congress to protect it in its rights. Now, if the Secretary will

read the letter, that is all I care to say.

The VICE PRESIDENT. The Secretary will read as re-

quested.

The Secretary read as follows:

GERMAN-AMERICAN SUGAR Co., Bay City, Mich., April 26, 1913.

Hon. WILLIAM ALDEN SMITH, Senate Chamber, Washington, D. C.

Senate Chamber, Washington, D. C.

Dear Sir: In protesting against the removal of or a drastic cut in the present sugar tariff the German-American Sugar Co. desires to state that it is a corporation organized under the laws of the State of Michigan. It owns and operates two beet-sugar manufacturing plants, one at Bay City, Mich., with a capacity of 1,400 tons of beets per day, and one at Paulding, Ohio, having a dally capacity of 800 tons. It is absolutely independent of any of the eastern refiners or beet-sugar manufacturers by ownership of stock or otherwise.

With our factory equipment and general organization we believe this company is in a position to manufacture sugar as cheaply as any of the 16 factories in this State or of the 5 in Ohio. During the last eight years the net profits of this company, including all by-products, have averaged per 100 pounds of sugar only a trifle in excess of 50 per cent of the present tariff on Cuban sugar.

Free sugar would absolutely kill the beet and cane sugar industry in the United States, as we can not compete against the cheap labor of foreign sugar-producing countries, where the farm and factory wages are less than one-half of what they are in this country and where the cost of beets per 100 pounds of sugar is from \$1.14 to \$1.23 less than American sugar manufacturers are paying American farmers.

The intense farming necessary to the successful growing of sugar beets improves the land and increases the yield of other crops grown in rotation with sugar beets. This increase is estimated by eminent French and German agricultural scientists to be not less than 50 per cent, and the value of the industry is recognized by foreign Governments by the protection which they give it. The average duties of all European countries on sugar is 4.43 cents per pound. The United States duty on Cuban sugar factory will leave the congested cities and go to the farms to work in the beet fields. A large percentage of these Jaborers purchase farms and become valuable acquisitions to the co

munities into which they move, thus affording substantial assistance to the "back-to-the-farm" propaganda.

There has been no important movement on the part of the people of this country in favor of free sugar. The agitation for free sugar was started and has been continued by the eastern refiners of foreign raw sugars solely for the purpose of annihilating the domestic beet-sugar industry and putting out of business their only competitors.

The elimination of the beet and cane sugar industries of this country would reduce the world's production of sugar by approximately 1,000,000 tons per year, the effect of which must necessarily be for ultimately higher prices to the consumer.

Pound for pound the manufacture of refined sugar from beets in this country is worth infinitely more to our farmers, our laborers, our banking and industrial institutions, and our railroads than is the process of refining the foreign raw sugar imported into this country by the eastern refiners.

Found for pound the manufacture of reined sugar from beets in this country is worth infinitely more to our farmers, our laborers, our banking and industrial institutions, and our railroads than is the process freining the foreign raw sugar imported into this country by the eastern. Domestic beet sugar reduces the cost of sugar to the consumer, as it is always sold at least 10 cents per 100 pounds under the price of eastern refiners. This difference in price frequently is 20 cents, and at times has been as great as 40 cents per hundred pounds. During October of 1911 beet sugar was put on the market at over \$1 less per hundred pounds than the eastern refiners were asking.

In 1898 there were produced in the United States 36,368 short tons of beet sugar. In 1911 the production was 600,033 short tons. The rapid growth of the industry during these years is evidence that the domestic industry, if not stopped by adverse tariff legislation, will soon continuation of low sugar pace. If the part of the part of the price of standard graunited sugar for the year 1880 was 9.8 cents per pound. Willett & Gray, in their Daily Sugar Trade Journal of April 19, 1913, say: "All refiners now asking 4.20 cents less 2 per cent."

The increase in the United States wholesale prices of 33 articles of farm and food products for the 10 years beginning with the year 1900 ranges all the way from potatoes, at 14.4 per cent, to sait pork, at 89.9 per cent, including sugar beets at 26.8 per cent, while sugar, during the same period, decreased in price 7 per cent.

Sugar is only to a small extent a necessity, as about 40 per cent of the asker chemical price. Therefore 40 per cent of the manufacture of the asker chemical price. Therefore 40 per cent of whatever revenue is lost to the Government through a reduction in the praint of sugar rates, free sugar in 1916, and an income tax to make up the deficiency.

The present spear rates, free sugar in 1916, and an income tax to make up the deficiency.

The present spear rates, free sugar in 1916, and

consumer."
Yours, very truly,

E. WILSON CRESSEY, Secretary and General Manager.

Mr. LODGE. Mr. President, in the last Congress, when we were dealing with the sugar schedule sent over as a separate measure from the other House, I discussed the question at length. I then went very elaborately into the history of the sugar industry and gave reasons, which seemed to me conclusive, for the maintenance of a duty upon sugar. I have no in-tention, therefore, of detaining the Senate with a repetition of those detailed arguments; but I do desire, before we take a vote upon this schedule, to summarize the reasons which lead me to believe that it is perhaps—although I am aware this may sound like a very extravagant statement—the most entirely indefensible proposition in this entire bill.

The portion of the country from which I come has no interest whatever in the sugar industry in the United States. By that statement I mean that we have no beet-sugar industry at all there. Therefore my feeling regarding this matter is in no de-gree local; and I shall discuss it simply from the standpoint of proper revenue taxation, of proper protection, and of a wise policy in regard to a great industry.

First, let me speak of the sugar duty as a revenue raiser. Every civilized country in the world, I believe without exception, raises revenue by a duty or by an internal-revenue tax, or both, on sugar. Even England, which is the one free-trade country and which maintains the system to which I assume the Democratic Party desires to attain as soon as possible—even England now imposes a duty of 39 cents per hundred pounds on sugar. The reason for the universal acceptance of sugar as a revenue raiser is because it fulfills all the conditions which economists have laid down as desirable in the imposition of taxation. It is easily collected; it is collected with certainty; it yields a large revenue; it imposes a burden that is but little felt by the consumer; and naturally it distributes the tax with a reasonable approach to fairness over all the community in proportion to the amount that each person is able to pay. these reasons all the civilized world, as I have said, uses sugar as a revenue producer. This bill casts it aside entirely. It not only abandons, in round numbers, \$60,000,000 of revenue, but it declines to raise any revenue from sugar at all. I can see absolutely no defense for the complete abolition of the duty if we are approaching this question merely from the standpoint of taxation upon consumption.

Mr. President, I pass to the question of beet sugar. If all the duties and all the bounties and all the advantages that are given to beet sugar throughout the world were to be abolished and it were to be left in competition with tropical cane sugar, and neither should receive any help from any government at all, tropical cane would extinguish the beet-sugar industry throughout the world in a comparatively few years. The beet-sugar industry can not be maintained without certain tariff advantages or bounties against tropical cane sugar. That has been demonstrated by the experience of a hundred years. Everywhere the beet-sugar industry has been developed either by duties or bounties, or both, and has received and does receive to-day protection wherever it exists and flourishes. Therefore the reason for the establishment of the great beet-sugar industry of the world—for it has become a very great industry, indeed—must be sought elsewhere than in the narrow ground of protection to a domestic industry alone.

It found its origin, as we all know and as has been repeatedly stated here, in the belief of the first Napoleon, that it was absolutely necessary that France should be independent in regard to this great necessary of life. The control of the seas, which had passed into the hands of England, prevented France drawing her sugar supply from the islands of the West Indies, and sugar advanced to a fantastic price throughout France. It was this condition which led the first Napoleon to believe that it was absolutely necessary for the safety of the country, wholly apart from the question of developing an industry, to make the country independent of foreign sugar. There the beet-sugar cultivation began.

After many fluctuations it not only was thoroughly established in France but also in Germany, in Russia, and in other European countries. It was established, as in France, by a system of protective duties and bounties, and in many cases by very large bounties.

It was discovered after a time that the development of the beet-sugar industry led to an immense increase in productivity in the land for other agricultural products; that it had a value which probably was not anticipated by those who started the industry with a view simply to the industrial independence of the country. Only then, by Government aid, either direct, in the form of bounties, or by protective duties, has the beet-sugar industry anywhere been raised to its present proportions.

The only countries which for many, many years gave no assistance to the beet-sugar industry were England and the United States. England, indeed, carried her free-trade principles so far that she permitted the practical ruin of her West Indian Islands by the bounty-fed beet sugar of the continental countries.

In the United States no help was given to the beet-sugar industry until comparatively recent times; or, rather, there was no attempt to benefit it by the sugar duties which were imposed in this country for the maintenance of the sugar industry in Louisiana, and also for revenue; but comparatively recently the beet-sugar industry in this country was taken up and largely developed. The development of that great industry in this country has been thoroughly covered to-day by the Senator from Kansas [Mr. Bristow], and there is no need of my entering upon any repetition of what he has said. It has now come to the point of producing, in round numbers, 700,000 tons of sugar per same

No beet-sugar industry anywhere has ever lived in competition with tropical cane sugar; and if we do not confer any advantage

upon it ours will not live in competition with tropical cane sugar. That is the whole case so far as the beet-sugar industry is concerned. There is no need to go into the details of how much it costs to produce a pound of sugar here or there. The broad, historic fact remains that the beet-sugar industry, unhelped and unprotected, can not live against the competition of the tropical cane sugar. Therefore, if we throw it open to that competition, it is doomed; and, of course, with it goes the Louislana cane sugar, which probably costs more per pound to produce than does beet sugar; and the production of our islands of Porto Rico and Hawaii will be very greatly injured.

To sacrifice \$60,000,000 of revenue; to cause the extinction of a great and valuable industry, valuable primarily to the agricultural interests of our country; to take away that competition which has acted to control the price of cane sugar, surely ought not to be done without representation.

not to be done without very conclusive reasons.

Who will be benefited by it? The consumer will not be benefited by it, and there never has been the slightest indication that the consumers of the country have taken the slightest interest in the movement for free sugar. When there is a popular movement for the removal of a duty or a tax on an article of general consumption, the signs and manifestations of such a movement are entirely unmistakable. If you will take the trouble to turn back to the history of the corn-law agitation in England in the first half of the last century, you will see at a glance what a real popular agitation is against a tax on an article of food of prime necessity. There has been nothing of that sort in this case. There has been no demand from the public in regard to this article.

The reason for the indifference of the public to it is twofold: In the first place, the revenue collected through sugar is but slightly felt by the consumer—so slightly that it would not in the least stimulate him to make any movement against the duty. In the second place, the consumer knows, from the daily purchases of his household, that sugar almost alone has not shared in the great rise which most of the articles of daily consumption have shown during the last 10 or 15 years.

I have here the average wholesale prices of sugar, taken from the Statistical Abstract of the Government, beginning in 1882 and coming down to 1912. The price of sugar, like the prices of all commodities largely dealt in, fluctuates from day to day, from week to week, from month to month, and from year to year, according to the crop conditions; but when you take a period of 30 years, and the average price of the article during each of those years, you get a trend in the price which is unmistakable. It will show you that the price is either rising or falling, and that the conditions of the commodity are such that a rise or a fall in the future may be with some confidence predicted.

If you will examine the figures, which I will print in full, you will see that the whole movement of the price of sugar has been downward. As I have said, it fluctuates; it may rise from one year to another, but the general movement over 30 years is downward. These figures begin in 1882 when sugar was selling at wholesale at 9.35 cents per pound. It has come down gradually to the present time. In 1883 it was 8 cents; then comes a period when it sold at 6 cents, then a period of 7 cents, then of 6 cents; then comes a long period when it was rather more than 4½ cents, on an average. In 1900 and 1901 it went to something over 5 cents. Then it went back again to 4 cents and a fraction; in 1905 it went to a little over 5 cents; then it went down and remained at 4 cents and a fraction until 1911; in 1911 the average price was 5.34 cents; in 1912, 5.04 cents; and the quotation of August 7, 1913, is 4.60 cents.

Mr. BRISTOW. Mr. President—
The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Kansas?

Mr. LODGE. Certainly.

Mr. BRISTOW. I desire to suggest to the Senator from Massachusetts that during this year it has been as low as 4.6 in New York when the domestic beet-sugar supply was being marketed, which is the lowest on record.

Mr. LODGE. Precisely. In other words, it is absolutely demonstrated that the price of sugar has declined; and there is no indication of any substantial rise, which is probably owing to the fact that in good years the production of sugar, both beet and cane, has outrun the consumption, and that it continues to do so. Therefore it is impossible to advance as an argument for placing sugar on the free list that it would tend to lower the high cost of living, for sugar has declined and not advanced in price.

As to sugar being cheapened to the consumer even below the present price, I see no reason to suppose that there will be, or indeed that there can be, any material reduction in the price of sugar under any circumstances.

I do not believe you can push the world's price of sugar very much lower than it is to-day. But what would be the direct effect in our own country? In the course of a comparatively few years you would remove the one competitor within the borders of the United States of tropical cane sugar coming to us through the refineries. Anyone who will study these figures and prices vill see at once the truth of the proposition which was so well stated by the Senator from Kansas to-day, and which I need not repeat, that the moment the beet-sugar crop appears on the market it lowers the price of sugar in the United States.

If this demand for free sugar did not come from the consumer-and it certainly did not-whence did it come? I have been able to discover only one active supporter of free sugar, and that is the Federal Sugar Refining Co. For a long time the American Sugar Refining Co. was the one great refinery, which had absorbed all the small refineries which formerly existed and came to be known as the Sugar Trust, and we are apt to speak of it in that way; but there are now two other great refineries which started up as rivals of the American Sugar Refining Co. One is known as the Arbuckles and the other is the Federal Sugar Refining Co., which, I believe, we owe to the efforts of some members of the Spreckels family.

The interests of those three great refineries-the old American Sugar Refinery Co., commonly known as the trust, and the two other refineries-are identical. So far as the duty on sugar is concerned, there is nothing to choose between them. It is for the interest of every one of those refineries to have sugar come here free, or with a very small duty, to put a stop to the beet-sugar production, or, if they can not extinguish it, to check its growth, and then they will be in command of the

market with the tropical cane sugar.

I do not regard the agitation carried on by the Federal Sugar Co. as being in the interest of the consumer. They have never seemed to me to be philanthropists, but to be engaged in making as much money as possible. In the year 1911 there was a shortage in sugar, and the price rose very sharply. All the sugar refineries advanced their price; but this friend of the consumer, which has been putting in its sugar barrels pathetic appeals in red print, saying how much benefit it would be to the man who bought sugar to have free sugar, put its price higher than that of the American Sugar Refining Co. the American Sugar Refining Co. raised its price to 7.25 cents per pound, while the Federal Refining Co.'s price went up to I suppose that was to indicate its particular affection for the consumer. It was said, and I believe truthfully, that the American Sugar Refining Co. cleared something like \$14,000,000 that year and the other two companies in proportion. The companies making these great increases in the price of sugar were not checked in their disinterested work until the beetsugar crop got on the market, and you can take the price list and see how then the price that they had made dropped under the competition of beet sugar, even in that year of scarcity.

Mr. WILLIAMS. I wish to ask the Senator from Massachu-setts if he is willing to state that he believes that if refined sugar had been at that time upon the free list these refiners

could have effected that increase in the price?

Mr. LODGE. Unquestionably.

Mr. WILLIAMS. Now, I wish to ask the Senator whether he thinks putting refined sugar on the free list will help the refiners of the United States?

Mr. LODGE. I think it will help them enormously. Those three great refineries control all the refining of sugar in the United States.

Mr. WILLIAMS. We have been proceeding hitherto upon the theory that wherever you let in a finished product from abroad as against a finished product in the United States you hurt the producer of the finished product within the United States. Now, the Senator is taking the position that letting the finished product come in free will help the producer of the finished product in the United States.

Mr. LODGE. Mr. President, general economic principles are all very well if you leave out of sight all the conditions. The Senator forgets the Brussels convention; he forgets that all the markets of the civilized world are tied up in conventional territory and nonconventional territory, and that they settle how much shall go into them and what the price of sugar shall be. They do not want to break down the refineries.

Mr. WILLIAMS. I do not think I forget that. If I did forget it, I forgot it unconsciously, nor did I forget the ordinary stock argument of protectionists in connection with questions generally. For example, that it costs so much more for labor in an American refinery than it does in a German or English refinery; that it costs so much more for the standard of living

here, and various other things. This is the first time I have heard the doctrine-and I am not quarreling with it-that the free entrance of a finished product does not necessarily put the American producer of that finished product out of business because of the higher wages that he must pay, and for other reasons.
